Kellys are built to deliver service

"Kelly dealers everywhere —there must be one in your town"

When you go into a store and put down your money for a tire, what you really are buying is not merely a given amount of rubber and cord but the expectation of a certain number of miles of service.

Whether you get it or not depends upon whether the tire you buy is of a reliable make

Kelly-Springfield tires always have been built to deliver the kind of service you hope to get. They always will be built to deliver that kind of service.

Kellys cost *no more* than other good tires.

Rambles of a Pennsylvania Fruit Grower

XV. Arizona Sunshine

SUNSHINE is the long suit of Arizona. Some districts claim an annual rainfall of three inches, three hundred fifty cloudless days a year and an average humidity of thirty. Arizona is high, dry and hot, but the nights are cool. Every other person you meet, apparently, is a "lunger" and most of them have been benefited in this remarkable climate. Personally, I prefer the varied assortment of meteorological phenomena we call Pennsylvania climate. An "ideal climate" would get as monotonous as a wife who is "always just so."

The most amazing thing about Arizona, next to the Grand Canyon, is how a state of only half a million people can maintain so many miles of good gravel roads. The copper mining interests pay fifty per cent of the taxes and play ninety per cent of the politics. The Grand Canyon is a marvel beyond words. It is the hand of God molding the earth thru centuries of time. The Roosevelt Dam, on the other hand, altho equally remarkable in its way, is the work of man. It husbands the snows and rains of the mountains to water valleys hundreds of miles away. One inspires reverence; the other pride.

Arizona, tho primarily a range state, has a unique and expanding horticulture. There are 3000 acres of citrus, mainly in the Salt River Valley and mostly grapefruit. I was much impressed with Arizona grapefruit. It is smaller than the California or Florida product but brighter in color, sweeter and more palatable. It ripens early in November, before California grapefruit, and is taking the early market away from California in the West. It can hardly compete with Florida, as yet, in eastern markets. There are no pests thus far and no spraying.

Two thousand acres of vinifera grapes, mainly Thompson Seedless and Malaga, have been fairly profitable. They ripen in July and are marketed in the East, to be consumed, ostensibly at least, as fresh fruit.

Eastern Lettuce Yields to West

Eastern market gardeners complain bitterly of the rapidly declining market for greenhouse leaf lettuce of the Grand Rapids type in competition with the field-grown head lettuce of the West. Western lettuce has captured, by freight, even the long established heat and ice industry near Boston has had to yield to this lusty competitor. The chief producing areas are the Salt River Valley, Arizona; Imperial Valley, California, and a small district in northern California. The Arizona industry is about fourteen years old and is increasing rapidly. About ten thousand acres were grown this year in the vicinity of Phoenix. Land with water is valued at around $200 an acre.

Extension Man Enters New Field

MR. R. H. BELL, the recently appointed Chief of the Bureau of Plant Industry, Pennsylvania Department of Agriculture, is bringing his work to a close in State College preparatory to assuming his new duties in Harrisburg on July 1st. Since 1920 Mr. Bell has been assistant director of Agricultural Extension at the Pennsylvania State College. His work in this position as an overseer of extension activities has given him an intimate knowledge of agricultural conditions and a wide acquaintance with leading farmers thruout Pennsylvania.

Mr. R. H. Bell

Mr. Bell has been one of the men-behind-the-scenes responsible for the remarkable growth of the State Farm Products Show. He was secretary of the State Show Committee for many years, resigning on May 20 so that the work could be turned over to another member of the Extension Department.

The new Bureau chief was born and raised on a farm at Neff's Mills, Huntingdon County, Pa. He was graduated with honors at the Pennsylvania State College in 1910. After four years of practical experience in fruit growing and experimental work at State College he became county agent in Lycoming County. In 1919 he was made extension fruit specialist at Penn State, and the next year was promoted to the executive position he is now leaving.

As head of the Bureau of Plant Industry, Mr. Bell will be in charge of the state's campaign against the European corn borer, Japanese beetle, Oriental fruit moth and similar pests. The principal activities of the Bureau are classified as follows: apiary inspection; botany, including seed inspection; entomology, including the enforcement of regulations and quarantines against injurious insects; nursery inspection; plant pathology, including plant disease regulations and quarantines

He Is Another "Lucky" Farm-Raised Boy

But It Was More than Luck and a Sandwich That Carried Him to Europe

OPPORTUNITY is as busy knocking at front, back and side doors today as it ever has been. The world's need of character, intelligence, skill and industry grows greater with time. Especially and relentlessly is Opportunity seeking out the young man who has fitted himself for something useful. It is bound to find him sooner or later and rout him out, for find him it must. He is needed; needed more today than at any other time in the history of mankind. All kinds of places are waiting for him. His work is cut out for him.

Senator Capper

A few weeks ago an unknown young man, with a sandwich or two in his pocket, jumped off the Earth "in the dawn's early light," cleared disaster by a hair's breadth and winged his way thru 3800 miles of trackless cloudland void, 1000 miles in blinding sleet and fog, across, to him, an unknown ocean, to unknown shores and strange lands, to a great city and world capital he had never seen before—an innocent abroad in fact and deed. Today the world has no ruler, statesman or citizen so well and favorably known as this same modest, obscure young man.

A Modern Lochinvar Sails Forth

Like a young Lochinvar, Lindbergh came riding out of the West in his little one-man, one-engine monoplane. He alighted in the same airport where two giant planes, and two carefully and expensively outfitted expeditions, had preceded him and were waiting for favorable weather to do what he had determined to do and be the first to do, alone, in his little flier.

News of his purpose also had preceded him and Lindbergh became the butt of much good-humored joshing. He was the joke of the camp. The papers called him "the flying fool."

The young knight of the air took this chaffing good naturedly, smiled a quiet smile and watched his chance. At 2:00 A. M. of a cold, dark morning, a messenger brought him word that weather conditions on the European side of the Atlantic had begun to clear. His chance, as he saw it, had come. It was a mere chance—something less than the condemned man's last flickering hope of pardon. Lloyd's, with a world-wide reputation for insuring anything and everything, had declined to risk a cent on "the flying fool." To step into the cockpit of his tiny plane was very grimly like seating one's self in one's coffin.

Knowing this, but also knowing his own powers and having confidence in them, Lindbergh persisted. This farm-raised boy, undaunted, got out his plane, climbed aboard, set its powerful 200-horsepower motor racing—and "the flying fool" was off, twice just missing death by the fraction of an inch in the take-off, because of his plane's heavily laden fuel tank.

Well, we all know the rest. It was "Lucky" Lindbergh after that.

Success Is Made Up of Many Parts

However, I see no considerable element of luck in it. And here again is proof that wealth, position and "pull" are not component parts of real success. Opportunity had come to an average, clean American youth, brought up in a good American home and having an interest in engines and motors which had prompted him to study mechanics. He was ready to meet the fateful visitor. Young as he was, Lindbergh had prepared himself both by training and experience to carry out this hazardous enterprise, and while the outfitted expeditions waited, he seized the first favorable moment and was off. No wonder the world has roared with applause. It was as gallant and daring and knightly a deed as has been recorded in history or myth.

Then when feted in Paris, this clean, modest youth from prohibition America merely touched with his lips the wine European hospitality and courtesy proffered, doing this in recognition of the spirit in which it was offered him—and set it down.

Could Europe have had a more eloquent and striking demonstration of what prohibition is doing in America or of its fruits?

Let those who despair of the younger generation take comrage. The young man who goes about with a flask on his hip is scarce. He never sets the world afire. Burning a cigarette is about as near as he ever comes to it.

His Father's and His Mother's Son

Young Lindbergh is the product of his bringing up; he had a fine father and a fine mother. In this respect he was well and nobly born.

I knew the father in Washington, and on one occasion he introduced me to his son who was then just verging on manhood. The elder Lindbergh, who died in 1924, was a sincere and able man in Congress. He was first a Roosevelt insurgent, then became a little extreme in his radicalism. For this he suffered political martyrdom as a candidate for governor in Minnesota in a mud-slinging campaign in which he went down fighting fairly and gallantly for the right as he saw it, and he accepted the consequence as manfully. He didn't live to learn that in living he had given to America a son that any land and any home would be proud to claim for its own, a shining example of all that is fine, all that is best, all that is noblest in young manhood. And luck had little to do with it.

Arthur Capper

Young Farmers Spend Week at State

Five Hundred Farm Boys and Girls Work and Play Under Their Own Leaders

THE week of June 13-18 was eventful for over five hundred Pennsylvania boys and girls who attended the Eighth Annual Young Farmers' Camp and the Second Annual Leadership Training school. Both were held at the Pennsylvania State College under the supervision of the Boys' and Girls' Agricultural Club Department.

One of the needs of every agricultural community is active, intelligent leadership. To help meet this need the first annual leadership training school was organized last year, three days prior to the 1926 Young Farmers' Camp. Twenty-one delegates from nineteen counties attended, their expenses in most cases being taken care of by the county organizations. Following their brief period of training several of the boys went home and initiated club work in their community. This year twenty-one counties sent in twenty-four delegates to the three-day leadership school. Mr. Robert B. Foster, in charge of boys' and girls' club work in the eastern states for the United States Department of Agriculture, was present and contributed much towards making the school a success. Among others who appeared on the program were R. L. Watts, Dean of School of Agriculture; E. K. Hibshman, assistant to the president of the College; R. H. Bell, assistant director of extension, and W. [illegible] Gordon, rural sociology [illegible] extension specialist.

By JAMES F. KEIM
Assistant State Club Leader

THE Centre County Poultry Judging Team won the Pennsylvania Farmer Trophy at the Eighth Annual Young Farmers' Camp at the Pennsylvania State College. The members of the team were: Robert Heckman, Earl Zettle and Nervin Stover.

Pictures taken at the Young Farmers' Camp and Leadership Training School will appear in next week's issue.

The program was intended to give the boys a general knowledge of the College of Agriculture and to show them the part they can take in making the College of greater service to the folks back home. The delegates averaged about eighteen years of age, many of them having several years of club work. In the discussions they were able to distribute many ideas of their own which tended to broaden the viewpoint of all.

The Young Farmers' Camp which opened on June 13 gave the young leaders some actual experience in handling groups of boys. Having been previously acquainted with the points of interest on the College grounds they were placed in charge of fifty or more of the young farmers and conducted them on a tour of the College's experimental plots and barns. They proved to be very capable leaders. During the recreational period they also acted as captains of the various groups participating in the games.

Most of the boys attending the Young Farmers' Camp were housed in the Armory. The girls were taken care of at private homes. Registration occupied all of Wednesday afternoon and part of the evening. When the last entry was recorded 414 were "bunked" in the Armory. Besides this group and approximately twenty girls in private homes, there were seventy other boys in private boarding houses.

The opening meeting was held in Old Chapel where the boys and girls sang songs under the direction of Mr. Yoder. Dean Watts related some of his experiences on his recent trip around the world and the meeting ended with several reels of pictures depicting rural progress.

Thursday, bright and early, the various judging teams got under way. By noon most of the work was done and in the afternoon groups of the young farmers headed by members of the Leadership Training School started on tours of the college farms, buildings and (to page 17)

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Tomorrow is the day on which idle men work and fools reform.—Phillips Brooks.

Lime Is a Soil Essential

LIME is one of the most necessary mineral elements of a productive soil. Pennsylvania Farmer has persistently urged farmers to be sure there is sufficient lime in their soil if they would get the most from their labor, fertilizers and manures. Lime, like nitrogen, has a tendency to leach out and be carried away by water, so that even a "limestone" soil becomes deficient in soluble lime after many years of farming. In these days when farmers must get the most out of every hour's work and every dollar expended, we repeat the advice to give the fields an application of lime every five or six years.

Proper Names Hard to Read

WE WISH to urge writers of letters and manuscripts to be especially careful when writing their names and addresses. A common text word may be deciphered, or made out by the context, but there is no way to find out for sure what is the real proper name if it is illegibly written. The name "Pine" may be so carelessly written as to look like "Prune." Whatever may be credited to the present age in the way of educational improvements, hand-writing cannot be included. As a matter of fact, the writing of otherwise well educated people is usually worse than that of the less schooled. We'll try to dig out the meaning in the body of the letter from any style of penmanship submitted, but we will not guarantee to get your name right unless it is written plainly.

Advice and Criticism

PROBABLY for the lack of something else to talk about, there has been during the last few years a great deal of critical advice given to the young people. All of which, no doubt, has about as much effect as pouring water on a duck's back. At least, we can attest to that being true a generation ago. Altho actions, styles and ideals have changed a good deal in that time, we imagine human nature remains just about the same and the young people will continue to work out their own problems as they have always done. June is the month of graduations and is especially prolific in advisory addresses, sermons and articles. About the best and most pointed advice of the kind we have seen or heard comes from the pen of a columnist in the Kansas Industrialist. He says, to the point of avoiding the present-day carping criticism: "I wish to remind those graduating from college that their most serious obligation to alma mater is that of advertising to the world their common sense by their willingness to work for two or three years with their eyes open and their mouths shut."

Will They Agree?

THE three powers,—the United States, Great Britain and Japan,—whose representatives are now sitting in Geneva to find a possible way to reduce armaments have already hit several snags. On the surface they present the appearance of having a sincere desire to limit further expenditure, but underneath it is the evident fear of European countries to do any effectual reducing. The United States representative has presented President Coolidge's definite program, but the others are loath to accept it.

As long as the countries of Europe are so suspicious and jealous of each other, and so long as they continue increasing their land forces, there is little evidence that the "war to end war" actually accomplished much in that direction. Every country, with the exception of Great Britain, is more fully militarized today than it was before the great war. In a thousand years of history the human race does not seem to have learned that calling "preparedness" "peace-insurance" is a misnomer.

Libel or Compliment?

ONE of the latest effusions intended to reassure farmers and create a complacent feeling out in the country is that the young men from the farms can no longer be spotted as "rubes" when they go into the city. The writer says that the boys from the open spaces have quite as sophisticated an appearance, and are as well dressed as the young men born and raised in urban conditions. All of which ought to be comforting, providing one does not stop to analyze the assumption upon which it is based.

But the matter cannot be settled by any such superficial observation. Clothes and manners are not all that is required to make a man. As one who has for more than a generation been in rather close touch with young men from both environments, we can say that young men from the country can be picked out in the city, even if we look no farther than the roster of men holding the responsible and influential positions. Thoughtful people will not be impressed greatly by the discovery of the newspaper writer.

The Patriotic Holiday

OF ALL the holidays celebrated more or less consistently in this country, the Fourth of July is the only one especially devoted to Patriotism. By patriotism we mean a heart-swelling appreciation of our country,—its opportunities and institutions. Every loyal citizen should so appreciate these that he can feel the thrill the poet had when he said:

"Breathes there a man with soul so dead,
Who never to himself hath said,
'This is my own, my native land!'"

Without exhibiting a spirit of offensive nationalism, it is possible to have and exercise a feeling of patriotic devotion to America, her laws, and her institutions, and to dedicate anew your best efforts towards realizing the ideals of those who first conceived of a free land where men could enjoy "life, liberty and the pursuit of happiness." May the spirit of the real America prevail thruout the land on this, our natal day!

Line Fences

FROM the number of inquiries sent to this office concerning line fences we infer that that subject is more frequently a bone of contention between neighboring farmers than anything else. The disagreement usually starts over the unwillingness of one party to build or repair his share of a line fence. Of course, we always counsel arbitration and compromise rather than legal proceedings, but sometimes nothing short of the application of law will bring results.

Where neighbors cannot agree the law provides a plan for building a dividing fence, the cost to be shared equally between the owners of abutting improved property. It does not matter that one of them may not wish or need a fence. If the other does want a fence, both must join in the expense of building and maintaining it. The first step for an aggrieved owner after building his share of a fence is to notify the township auditors who shall proceed to view the situation. If they decide a new fence is necessary, or the old one in need of repair, they shall report their judgment to a justice of the peace who shall order the aggrieving owner to carry out the order. If the work is not accomplished within forty days, the aggrieved party may erect or cause to be erected the fence ordered and the cost may be collected from the delinquent owner.

We devote this space to the subject at this time because there is an evident lack of understanding on how to proceed in such matters.

Editorial Sidelights

WE NEVER cease to marvel at the wonders devised by man in this mechanical and electrical age. It was a gasoline engine of almost unbelievable power, lightness and reliability that made possible Lindbergh's non-stop flight from the New World to the Old (Page 3).

That uncanny something—radio—made it possible for the whole country to hear the speeches and the cheering when Washington welcomed the flier home. But the inventors have gone even further. They remembered those who could neither attend the Washington reception nor hear the ceremonies over the radio.

Attracted by the announcements, we went last evening to a Philadelphia movie theatre where we saw and heard the whole proceedings,—the President's speech and his happy smile, Lindbergh's peculiar handshake and his short talk, the cheering for Mrs. Lindbergh and her obvious efforts to keep back the tears,—all these sights and sounds had been recorded on a narrow strip of film and were reproduced to the very evident delight of the movie fans.

During the ceremonies at the Washington Monument a cage was opened in front of the platform and 48 homing pigeons,—one representing each state,—started their home-ward flight.

Even in these modern days the dove of peace frequently becomes a messenger of war. Army officials in many countries keep tabs on the breeding of messenger pigeons. So even a pigeon show may take on a war-like aspect to persons who use their imaginations. The largest pigeon show in the United States will be held in connection with the State Farm Products Show in Harrisburg next January (Page 7).

BOYS HAVE BUSY WEEK

Nation's Club Champions Meet inWashington—Officials to Boost Better Back Roads—Soil Scientists Start West.

Washington, D. C.

NEARLY 150 farm boys and girls, representing 40 states, were in attendance at the National 4-H Club encampment in Washington during the week ending June 23rd. They were quartered in tents on the grounds of the Department of Agriculture.

These young folks have won distinction in some special line of endeavor, in crop growing, poultry keeping, stock raising, sewing, dressmaking or home-making. They were the successful contestants in contests participated in by the 586,156 boys and girls enrolled in the 2716 4-H Clubs in the United States.

Various Activities Filled Week

The young people put in a very busy week, the day beginning with reveille at 6:00 in the morning and ending with taps at 10:00 o'clock at night. In the morning they had swimming, bird tours, educational tours and addresses in the National Museum Auditorium by eminent speakers. In the afternoon they went on educational tours, during which they visited the various bureaus of the Department of Agriculture, the executive, judicial and other branches of the government, the art galleries, parks and other points of interest, held conferences and attended band concerts and other forms of entertainment.

Secretary Jordan, in welcoming the boys and girls, said: "Boys' and girls' club work is demonstrating better practices in agriculture and home economics, and what is thus being demonstrated is finding its way into the lives of rural people. Thru club work young people are learning how to work together, counsel together, play together, cooperate and achieve. One of the greatest needs of the rural people today is greater cooperation among themselves. Club work trains for such cooperation."

New Road Association Formed

The County Highway Officials' Association is a new national organization formed in Washington for the purpose of securing the improvement of the more than 2,000,000 miles of secondary roads interconnecting the rural communities and connecting the farms with the federal-aid highways. This association, which is sponsored by the American Road Builders' Association, includes in its membership highway officials in every state in the Union. It plans to conduct a campaign for the construction and improvement of roads in rural communities and to provide standardized methods of construction and maintenance which will secure more substantial roads and eliminate waste of money. It is said that more than $600,000,000 is annually spent on these roads, but it is expended in a haphazard fashion. It is believed that the new association can do much to reduce road building costs by standardizing construction, and give a new impetus to the construction of secondary roads.

Scientists Now on Tour

The large company of scientists assembled in Washington from all parts of the earth for the first International Congress of Soil Science, are now on their trip across the country for the purpose of making a study of the soils of the American continent.

Flood Prevention Discussed

It is not true that serious floods are due to deforestation; they occurred when the virgin timber on the Mississippi basin had scarcely felt an axe, says Colonel W. B. Greeley, speaking before the Soil Congress. He adds that it is equally untrue that forests have no bearing upon streamflow. A good deal of concrete evidence shows that they have.

In dealing with the problem of flood prevention, Colonel Greeley says that forestry should be the handmaiden of engineering; but as a handmaiden it has a valuable service to offer. He declares that public forest ownership is urgent and warranted on critical areas of denuded or eroded lands which are direct sources of destructive floods. In connection with a study of flood control measures a survey of the forested, denuded and abandoned farm lands should be made. This survey should set forth the areas where more complete protection from forest fires is needed, where extensive tree planting should be brought about, and where public forest ownership, either state or federal, is a necessary phase of flood control. Forestry is simply a form of every-day land use. It cannot be considered apart from other forms of land use which also afford natural and simple ways of bettering water storage and reducing erosion. —E. E. R.

PROBLEM UNSETTLED

Game Officials to Decide About Open Season on Doe—Urge Early Cutting of Weeds—Japanese Beetle Is Late.

Harrisburg, Pa.

WHETHER there shall be an open season for thinning out does and to reduce the number of deer in several sections of the state will be finally determined by the State Game Commission at its semi-annual meeting within the next week. Nothing affecting game has caused as much discussion on Capitol Hill outside of a legislative session as the proposed arrangement for lifting the ban on does and for special seasons where deer are too numerous.

The Commission offices have heard from both farmers and sportsmen and there have been so many complaints that it is understood the Commission has had some inquiries conducted for information of members of the Board in reaching a conclusion. There have been rumors for some time of a possible change in the membership of the Commission, but nothing has been decided. Three new members are to be named before long, two under an act of this year and one to fill a vacancy.

Weeds in Flower

People at the State Department of Agriculture have urged that farmers where possible cut the daisy, mustard and other nuisance weeds while in flower and that they get ready to chop the "blue devil" before it can seed. Many reports have come to the Capitol of fields infested with the mustard in some of the fairest farming sections of Pennsylvania. State highway officials have asked supervisors everywhere to cut down weeds along roadsides and to make a special drive against those in flower.

Jap Beetle Is Late

Some of the southern counties of Pennsylvania have been well organized against the Japanese beetle, but thus far the beetle has not put in an appearance in several communities where it was feared it would turn up. Weather conditions are being turned to advantage because men in charge of patrol and other work have been perfecting their arrangements and working to obtain cooperation of the local authorities, farmers and business men. The Susquehanna Valley counties appear to be on the alert against the beetle, quite as much as against the corn borer which is now an object of strict quarantine along northwestern county highways.

JOINS MARKET BUREAU

Oley Has Broad Training in New Jersey Agriculture—Growers Favor Irrigation—Newark Market Improved.

Trenton, N. J.

WARREN W. OLEY, for several years manager of the 3200-acre Del-Bay Farms at Bridgeton, N. J., has accepted appointment as Marketing Assistant with the New Jersey State Bureau of Markets. Mr. Oley will assume his new duties August 1st. He comes to the Department with a broad training, including the management of a poultry farm, the position of field assistant in horticulture for the state extension service and later that of extension specialist in fruit growing. In 1915, Mr. Oley was appointed agricultural agent for Cumberland County where he served four years. He was graduated from the New Jersey State College of Agriculture in 1911 and goes to the Department with the backing of a large following of New Jersey producers.

Irrigation Equipment Increasing

A recent study by the State College of Agriculture on irrigation equipment now working on New Jersey vegetable farms shows a total investment by the growers of nearly $1,000,000. In addition to protection against drought, the growers report that they are able to produce from two to five crops of vegetables per year. They also make decided statements in favor of better quality products. Entire satisfaction with their irrigation systems was expressed by 295 growers as opposed to 36 who reported dissatisfaction. Cost of installation per acre in New Jersey was found to be $354. Operating expense, exclusive of depreciation, is $26 and repairs $45. The average length of life of an irrigation outfit appears to be 20 years.

Discuss Newark Market Regulations

Following a conference of Passaic, Essex and Monmouth County Agents with the Newark city market officials concerning complaints of growers over unsatisfactory conditions, the handling of the Canal Street, Newark, farmers' market is more satisfactory to patrons. New rules and regulations laid down by the city of Newark caused delays and inconvenience to the farmer patrons, the North Jersey Market Growers' Association stated recently. The State Bureau of Markets assisted the county agents in bringing the matter to conference and the complaints now appear to have been due largely to misunderstandings. Joint action on the part of growers and cooperation with the city market officials apparently straightened out a situation which was becoming tense.

Chicken Fanciers Tour

The Mercer County Poultry Association in cooperation with the State Extension Service staged a widely attended poultry tour on June 22nd. The poultrymen visited the farm of Clarence Pettit near Rosedale, the farm of Leonard Norcross near Hightstown and the poultry houses of William Longstreet near Trenton. The poultrymen had the opportunity to inspect methods of raising young stock of various breeds such as Barred Plymouth Rock, Jersey Giants and White Leghorns.—W. H. B.

ROADS RENUMBERED

Highway Officials to Standardize Signs—Grangers Will Replace Condemned Cattle—League Reelects Officers.

Ithaca, N. Y.

INTER-STATE highways crossing this state have been renumbered. Those going east and west are given even numbers, and those going north and south, odd numbers. The total mileage numbered in this way is 96,626, the aim being to increase interstate traffic. The American Association of State Highway officials are back of the move, which may be recognized by the shield outline which bears the road number. Standard warning signs are expected to come into general use in time. These are in four shapes, known as United States standards, with yellow as the background. Square warning signs call for caution and call attention to hazards adjacent to but not of the road, as school zones, churches, etc. The diamond shape is also a caution sign, and warns the driver to slow down because of hazards of the road, as curves and turns. The octagon sign commands a stop, the reason being stated in the legend painted on the sign as "state law." Round signs are used at railroad crossings.

To Replace Reactors

Cortland County Pomona Grange has appointed a committee to pool the needs of dairymen and to purchase cows to replace reactors in carload lots. Frank Burnham, of Little York, is chairman of the committee. The demand for tested cows is very keen and the price is $50 above last year's prices. There is a real shortage of cows, heifers and calves in the state with but one crop of calves started as yet to meet the shortage.

Dairymen Reelect Officers

All officers of the Dairymen's League were reelected at its annual meeting on Thursday. New York City was assured of an adequate nearby supply of milk for next fall and winter by enthusiastic delegates. —M. G. F.

THE SILENT FISHERMAN CATCHES THE BIGGEST FISH

Doylestown Straw Cutter and Blower

is an ideal attachment for your Barn Thresher. Saves the labor of moving away the straw and can be placed behind any small thresher. It will cut and blow the straw anywhere up to 60 feet. Attached in 30 minutes.

Especially suited for machines such as: Ellis-Keystone, Little Giant, Messenger, Favorite, etc.

Cut straw packs in less than half the space required for whole straw, makes better bedding, keeps stock cleaner, makes better manure and lightens the draft of the spreader 30 per cent.

Fights Corn Borer —Pays a Profit

Rowell Trojan Ensilage Cutter actually helps fight the dreaded Corn Borer. It blows this pest into the silo, where it can do no harm.

There are a dozen other good reasons why you should own a Rowell Trojan. For example: Cut your ensilage when the corn is right which means better ensilage. Fill your silo at your own convenience, not at someone else's. Save money by doing your own silo filling. Make money by filling your neighbor's silos. You get a cutter with a guaranteed-for-life flywheel, Hyatt roller bearings and other equally important features that assure years of satisfactory service. 10 H. P. engine, or equal power, runs it.

Write for catalog and free copy of valuable Government Silage Bulletins Index.

Important To Employers!

The Workmen's Compensation Act became effective Jan 1, 1916, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1926 and 1925) when their premiums were above the minimum.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

WE HAVE made three plantings of sweet corn during the last seven weeks and it is all about the same size. Whether age alone will make any difference in earing or not remains to be seen. The progress of the corn crop in general up to the first day of summer is anything but heartening. Dairymen and general farmers are beginning to feel shaky about next winter's feed supplies. More soy beans have been planted than is usual in this neighborhood.

✦ ✦ ✦

I WAS much interested in the various makes of motor cultivators exhibited and demonstrated at the New Jersey Experiment Station recently. Compared with the earlier models they are much more efficient. It may be remembered that I said three years ago that the idea was to make Neshaminy Gardens a horseless farm, owing to the kind of business carried on. So far, we have not achieved it. While a small garden tractor was purchased three years ago, and a field tractor added two years ago, we have had use for a horse almost every day it was fit to work. The little tractor is too small and the big tractor too large for general cultivating.

✦ ✦ ✦

THIS must be the general experience since the demonstration referred to showed that several motor cultivators of sizes between our two have been brought out and they seemed to do good work. Our need, and the need of many small acreage farmers is for a machine which will do just the kind of work done by a horse and cultivator. When we find just the kind we shall try it again. But the seller must prove it by a demonstration right on the ground.

✦ ✦ ✦

AS ONE approaches the New Jersey Poultry Experiment Station plant it looks like the Deserted Village must have appeared. There is no sign of life from the outside, and all the ground is green with growing crops. But upon looking into the houses, one finds them filled with chicks and chickens, none of which have ever been outside the houses. We found that the Station is trying to solve the problem of raising poultry so that the fowls will not be afflicted with intestinal worms. This is a growing menace in New Jersey as well as in eastern Pennsylvania, and is threatening the industry unless some preventive plan can be devised. Poultrymen will do well to keep an eye on the Station's work.

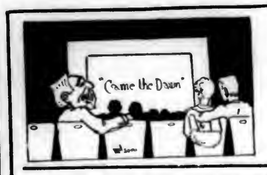
✦ ✦ ✦

A SUBSCRIBER wants to know how "the boys" like their new home on the farm. Judging by their activities and their inclination to stay there, they are enjoying it to the limit. They eat heartily, sleep well, and play hard. What more is necessary? . . . Reporting again on the oil range in the kitchen, nothing more can be said except to repeat the assertion that it is highly satisfactory, efficient and economical. . . The little water heater in the cellar furnishes an abundance of hot water at all times at a minimum cost. . . In searching diligently for the presumable silver lining that is in the cloudy handicap of a cool, backward season we find that there is so far an absence of cabbage worms and a tardy appearance of the Jap beetle. May they be held back so long that they will decide to stay under all season! . . . The chicks are still doing all we could ask. The mortality has been so low so far that we fear to tell what it is for fear of not being believed. The only fly in the ointment is the present low price of broilers. We doubt that poultry raisers can say for the season of 1927 that the broilers paid for the feed used to raise the flock. The price of eggs and poultry this year indicates either that the supply is much greater, or that people are not buying as much poultry products because of lack of money. Well, the poultry business, like every other, goes in cycles.

One on Pa

Father—When Abe Lincoln was your age he was making his own living.

Son—Yes, and when he was your age he was President.



The Cheerful Plowman

Public Courtship

THIS movie show is spoiled for me by other things I have to see! A sprnce young fellow, quite a sheik, with hair greased back all smooth and sleek, with nothing much below the skull, gray matter quite as thin as mull! A giggling girl with shallow face and rather cheap and brassy grace,—not just the kind I used to know when I went courting years ago!

You see, when I get tired and done I like a movie, full of fun; long weary sessions with the cows and weary miles behind the plows make us old busy farmer men need recreation now and then, so movies full of spice and pep restore the vigor to our step! Yes, when I go I would relax, relieve the brain and muscle tax. I would just settle back and grin until my tonsils tumbled in, throw back my head and stretch my arms, forget a while the cows and farms!

But, oh, how can I, tell me true, surrounded by this courting crew? How can I ease my soul and face in such a public courting place? How can I when a loving pair is perched on each adjacent chair? How can I see a movie show when all about me, row on row, a hundred shows are being staged and all my senses are enraged? My education may be queer, the product of an early year, but it is stiff my firm belief that public courting leads to grief; I offer as my brief report the parlor is the place to court!—J. Edw. Tufft.

IT IS really a simple job to make the minor repairs on your cars, trucks and tractors. The principal thing is to have the right kind of tools so that you can do the work conveniently and with the least expenditure of time and effort. The principal advantage that the garageman has is in the good kit of small tools with which to do the work. Go to your "Farm Service" Hardware Store and pick out a set of socket wrenches, a large and small screw driver, adjustable end wrenches, a good pipe wrench, an assortment of files, taps and dies, and a good mechanic's hammer. They will make it easy for you to do your home repair work. Be sure you have a good vise also.

Most important of all—use the best lubricants in your automobile.

These "Farm Service" Hardware Stores—the ones where the "tag" is in the window—are the right places to buy tools that you can depend upon. Take their word when you select tools. It is the surest way to get the utmost value for your money. Most of these hardware stores can also supply your needs in automobile supplies, such as tires, jacks, lamp bulbs, etc., as well as the best grades of oils and greases.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Sometimes It's Wise to Let the Weeds Have a Chance to Live for a While

ONE day this spring a gang was planting celery. The land had been put into condition several days previously. A rain came at night. Planting was started as soon as the soil could be worked, before harrowing was possible. After three hours planting the harrow was started ahead of the planters. Even tho each row had been opened with a marker the gang's time for a "go" across the field dropped from an hour and 25 minutes to 55 minutes, a saving at the rate of $5.70 per acre. In addition the job was much better done. On another occasion cabbage planting was speeded up a third by an extra passage of the tractor with cultipacker, double disc and drag.

Repeated harrowings at intervals of several days will germinate and kill many weed seeds before plantings of the late crops are made. I once grew part of a field of late carrots on low land that was full of weed seeds and practically eliminated hand weeding by this method. The next year the remainder of the same field was by necessity of backward weather plowed and planted immediately. The weather turned dry. The carrot seeds a half inch below the surface waited for moisture while weed seeds several inches down in the soil pushed thru with a rush.

We have been selling transplanted lettuce from a patch that has never been hand weeded or hoed. Practically no weeds are present. This piece has been kept free of weeds for several years. Adjoining is a block on which a good many weeds went to seed in 1925. We now have a job on our hands to keep clean the early beets growing there. In the first case 1927 weeding was eliminated in the years from 1922 to 1926. In the other case weeding which was not done in 1925 will be paid in 1927—or there will be no crop.

Where only green manures or animal manures that have been allowed to heat to kill weed seeds, are used it is possible during a period of years to germinate practically all the weed seed in the soil and eventually garden without weeds. I do not know how many of us shall ever attain such a Utopia but the thing has been accomplished here and there with consequent reductions of large proportions in the cost of growing intensive crops.

Cultivator Adds a "Wallop"

I remember once seeing three men strolling thru an extensive onion field in the Connecticut River Valley. Each carried a sack slung somewhat like an apple picker's rigging. Only rarely did one stoop, pull a weed and place it in the sack. To avoid chance of re-rooting all weeds were carried off the field.

Recently we have been enjoying the additional "wallop" which a two-row, one-mule (or horse) cultivator has been giving to our soil tilling and weed killing campaign. The gang seeder drills four rows at once of beets, carrots, lettuce, etc., the spacings being alternately 16 inches and 20 inches. The mule walks in the 20-inch spaces, the wheels run in the 16-inch spaces and the driver who walks controls the knives with a "tiller" or movable handle. Very close work can be done on small seedlings, two rows at a time.—Gilbert S. Watts.

Products Show Committee Discusses Plans for Next Year

THE first step toward the reorganization of the Pennsylvania State Farm Products Show was taken at the meeting of the Farm Show Committee in Harrisburg on June 20th.

By a provision of the new administrative code, passed by the recent legislature, the responsibility for the Show is placed upon a Farm Products Show Commission. This change will make little difference in the actual administration of the Show. It will simply place the enterprise upon a more sound legal basis and relieve the committee members of the heavy liability to which they were subject under the old loose organization.

Members Will Be Appointed

The Show Committee chose the following representatives of state farm organizations as possible members of the new State Farm Products Show Commission: H. D. Allebach, Mrs. John F. Hice, Miles Horst, John Light, T. E. Munce, Chester Tyson.

From this group the Governor will appoint three as members of the Commission. The other members of the Commission, by virtue of their office, will be: Governor Fisher, Secretary of Agriculture C. G. Jordan, Dean R. L. Watts of Penn State, Director of extension M. S. McDowell. Deputy Secretary Bressler was appointed by Secretary Jordan as the second representative of the Department of Agriculture provided by the code. A member of the Department of Public Instruction, to be appointed by the Secretary of that Department, will complete the Commission.

Because he is leaving the Extension Department to head the Bureau of Plant Industry, R. H. Bell resigned as Secretary of the Show Committee, a position he has held for many years. J. M. Fry, assistant director of agricultural extension at Penn State, was elected to be his successor.

Poultry Exhibit Enlarged

The poultry show at Pennsylvania's mid-winter farm exposition has grown to be one of the largest, if not the largest poultry show, in the United States. This department will be even more extensive next year, as the National Pigeon Show will be held in connection with the 1928 Farm Show. The pigeon breeders will exhibit about 4000 birds. The Harrisburg Chamber of Commerce is planning to make special provision for them.

Secretary Jordan, as chairman of the Show Committee, named R. H. Bell, R. G. Bressler and Miles Horst as a committee to draw up a constitution and by-laws for the Farm Products Show organization. M. S. McDowell and C. L. White were appointed to act with Secretary Jordan as a program committee.

More than twice the usual amount of money is available for the next two years and prospects indicate continued growth and improvement in the annual farm products exposition. The tentative date for next winter's Show was made January 16 to 20, 1928.

FARQUHAR Grain THRESHERS

Do nice, clean threshing of any kind of cereal grain

Easily operated, light running and very strong and durable. Have all modern improvements to save time and labor. Perfect running balance. Quiver Shaking Shoe, hand or self-feeder, plain straw carrier or wind stacker. Send for our beautifully illustrated Catalog 527. Can make immediate shipment.

We also build Engines, Boilers, Sawmills, Hay Balers, Cider Presses, Farm Implements, Boilers for Dairies and Creameries.

AMAZING Cigar Offer

100 IMPORTED, LONG FILLER HAND-MADE, CORONA SIZE, PACIFICOS

For Only $1.95

The regular retail price is 5 cents straight. Don't judge the quality by the price. Test them, with an open mind—at our expense.

WHY THIS AMAZING OFFER:

We are the sole American distributors for certain brands of one of the largest Manila cigar factories. We have contracted to sell several millions a year. To do this, we realize we must first interest individual smokers before we can expect dealer co-operation. Therefore, for the present, we will sell to smokers direct.

100 Pacificos FOR ONLY $1.95

Just think of it! 100 Pacificos for $1.95—a price less than jobbers have to pay for like quality. Smoke 5 or 6 with a desire to be pleased. If you are not perfectly satisfied return the others and we will cheerfully refund your money.

More Facts About PACIFICOS

Mighty few Americans realize that the Philippines are producing grades of cigar tobacco second to none, in mildness, fine texture, pleasing flavor and appearance.

Many of our customers claim that they prefer PACIFICOS to the 5 and 10 cent Domestic cigars. If Pacificos were made of only 50% Cuban tobacco — which is no better—the duty alone would be $3.60 per 100.

Assure the taste for Pacificos and you will be among our hundreds of customers saving 60% on their smoking expense. If you will smoke the first 100 you will appreciate their enticing flavor

ORDER NOW

as this advertisement will not appear again, unless the response justify the expense of another insertion. Fill in attached coupon and mail at once.

NATIONAL CIGAR CO., 112-G
969 Broadway, Brooklyn, N. Y.

Send me 100 of your Pacifico Cigars. I will pay postman $1.95, plus postage. It is agreed that if the first 5 or 6 cigars are not satisfactory, I can return the others and get back my money.

NOTE—If you will send check or M. O. with your order for $2.15 ($1.95 plus 20c postage), it will hasten delivery.

Poultrymen Attending N. J. Field Day Interested in Unusual Methods

THE annual field day held at the College Farm and grounds of the State Experiment Station at New Brunswick on June 15 was attended by over 3500 farmers, a great many of whom were especially interested in the poultry department. During the morning an exhibit was held in the poultry pathologist's laboratory showing the method employed in performing the blood test for white diarrhea. Nutrition experiments also proved of interest.

After lunch an automobile tour was held to the poultry farm a short distance from the main buildings. There Dr. Willard C. Thompson, head of the poultry department, outlined the work that was being done with poultry at the Station, and spoke of plans for experimental work in the future. At present, the birds are under confinement, being supplied with greenstuff by the soiling system. The grounds are seeded down to alfalfa, which furnishes a full supply of green feed thruout the season.

A Departure from the Usual

Among the projects in view are experiments with mash feeding. The method of rearing chicks in confinement for the control of worms and disease proved of great interest to the visitors, who filed thru the brooder house and asked a great many questions about this departure in poultry rearing. The full force of the poultry department was present to answer questions on poultry matters that might be brought up by those present.

During the afternoon Dr. Thompson announced that the Station was breeding a "New Jersey" strain of Leghorns and Wyandottes for experimental purposes.

Learning and Earning at Same Time

Of particular interest were two partially completed houses, donated by the Bankers' Associations of Sussex and Monmouth Counties, designed to hold 120 birds, each flock to be under the management of some deserving student under the supervision of the Poultry Department, and the proceeds to go towards defraying the student's expenses. In this way two poultry students are going to get some very useful practical experience and at the same time earn a part of their tuition. These houses had been stained with creosote, which is a very cheap method of preserving the wood. The creosote gives a good brown color, and Dr. Thompson stated that the method is commonly employed in England instead of painting.

After the brief formal program the visitors spent the remainder of the day in inspecting the various flocks and buildings and in talking over their problems with the departmental experts. The consensus of opinion seemed to be that the poultry interests of the state are in very good hands. — R. L. Scharring-Hausen.

Nest Box Notes

WHEN the hot days come young chicks need shade. I recently saw an ingenious arrangement to provide shade made by a man who had no trees in his lot. He had dragged several old dead peach trees into his yard and covered them over with burlap bags sewed together. This made a shady spot for the pullets during the heat of the day, and it was a simple matter to unfasten the burlap and drag the tree to a new place whenever the ground under it became fouled.

• • •

How is the culling coming on? We look for yellow beak, legs and face. There is also a yellow ring around the eye when the hen is quitting. Another very good sign is a scaly, shrunken comb. We go over the roosts at night once a week and pick out the culls. A hen that has stopped laying usually is wild and pretty foxy about hiding if she thinks there is anything up. A long wire bent into a hook at one end is a good contrivance to snare individuals in the daytime that may have been missed at night, without setting the whole flock in an uproar.

• • •

If hens are fed a lot of yellow corn in the ration they may show more of the yellow pigment that denotes a cull than should be the case. I always examine the vent while culling. A small dried up vent, with the pelvic bones close together is a sure sign of a cull, and can be depended on if in doubt about the other signs.

• • •

As hot weather approaches the mites get in their work. These pests do not stay on the fowls in the daytime, but hide in cracks about the roosts from which they emerge at night to crawl on the birds and suck their blood. Hens that are infested with mites cannot do well. One of the best things to do for mites is to paint the joints of the roosts and the boards about the dropping boards and sidewalls with waste crankcase oil thinned somewhat with kerosene. Do not use too much on the roosts where the hens will get it on their feet. Do the job in the morning, and leave your pipe in the house.

• • •

While we are on the subject of pests, it might pay to examine a few birds for body lice, and if they are found, dust the whole flock with sodium fluoride. The more we can do for the fowls' comfort during the summer months, the more they will do for us at the nestbox.—R. L. Scharring-Hausen.

Bulletin Promised Soon

THRU the planting of unclean seed many troublesome weeds have been spread and are being spread thruout Pennsylvania, according to Dr. E. M. Gress, State Botanist.

Due to the state printery fire and the great demand for information on weed control, the supply of a recent bulletin prepared by Dr. Gress and issued by the State Department of Agriculture on the control and eradication of the worst Pennsylvania weeds, has been exhausted. A revised bulletin on the same subject is now in the hands of the printer. This new publication will carry discussions on the control of wild carrot and ox-eye daisy, which were not included in the original bulletin.

Friendly Talks with Farm Folks

By E. L. VINCENT

ARE we thankful enough for the blessing of work?

Out at sea two ships were caught in the same storm. One of them was carrying a heavy load and had nearly reached the home port when it was overtaken by the tempest. Held steady in its course by the burden it was bearing, this ship met the winds and the waves without being borne out of its way. The other ship was sailing home light. It had carried a load on the outward-bound voyage, but had little to keep it steady on the way home; and this ship, caught by the gale, was swept far out of its course and was driven back to its starting place, which it reached only after risking its very life.

How like is the picture to your life and mine! It seems to us sometimes that we have more than we can stand up under. This very season, cold weather and frosts have done great injury to our berries and other early crops. It has been quite impossible for us to do our work on time. We are inclined to sit down and think, "There is nothing I can do about it. I am beaten for this whole year."

New Work Chases Care Away

But we cannot do that. We must rise and go on. Other work of the farm presses. The very existence of our wives and our little ones demands that we shall be brave; we stumble to our feet and take up the burden that falls upon us, and it proves to be the best thing we could possibly do. Under the pressure of the work we must do, we half forget the berries and other crops that have been hurt by the frost. We plant other things, we change our course of action, and when the year comes to its end we find that after all things have worked out far better than we thought they could earlier in the season.

Powers we do not use soon lose their effectiveness.

A lady I know fell and broke her leg. In the hospital for almost two months she lay with that limb stretched out straight. When at last the bone was knitted together and she was ready to step on her feet once more, she found that every muscle in the leg had been weakened by inaction.

Facing Tasks Wins Life's Battles

It is the strength we use that makes us stronger. A fair load today, a little more tomorrow, and so on thru the days; that is the story of every life that is worth while. If, when the hard days come we were to fold our hands and refuse to rise to the new work of the present hour, it would not be long before all our ability to combat difficult situations would depart from us and we would really be defeated in life's battle.

And the most serious thing about this is that the man who owns up defeat in his physical life soon finds that his spirit life is beaten and broken, too. Just how it is that body and soul are so intimately linked together we are not able to say. But it is a fact that yielding to the tug of hard circumstances weakens and ultimately destroys the powers of the soul itself. If for no other reason than this it behooves us to resist with all our might every inclination to give way to discouragement when things do not go well with us. There is no other way to win than to fight, and to keep on fighting; but we may be sure that if we do, the day will come when we will come off conquerors. For He who watches will not let us fail!

Rambles of a Pennsylvania Fruit Grower

(Continued from page 2)

There are two crops a year. The fall crop is seeded in September and harvested in November and December. The spring crop is seeded in February and harvested in March or April. Only one crop of lettuce is taken off the same field in a year. The most popular rotation crop with lettuce is the cantaloupe; last year the Salt River Valley had 5000 acres of cantaloupes. Cotton is grown somewhat in the lettuce rotation.

Seeding is at the rate of half a pound an acre, the seed costs $4 a pound and is secured from California. The variety is New York Market but it all goes on eastern markets as iceberg. One of the biggest difficulties has been the tendency of plants to run to seed instead of heading. This occurs when the weather gets unseasonably hot. One year six thousand out of eight thousand acres went to seed. Another difficulty is "slime," an obscure and as yet an uncontrolled disease which ruins the heads in transit.

About two thousand Porto Ricans have been brought into the Valley in Arizona and California, mainly near Phoenix and Yuma, only a small percentage of which are bearing. Dates require great heat and dryness; the area suitable for their culture is comparatively limited.

Date orchard near Yuma, Arizona

for harvesting the crop and are paid $2 a day. The crates are packed with alternate layers of lettuce and ice and shipped East in refrigerator cars held at 34 degrees. The crop this spring will total 5000 cars and the fall crop as many more. According to County Agent Colson, the cost of production per crate is distributed as follows: Production costs, 30c; harvesting and crates, 70c; selling charge, 30c. Total, $1.30. The price on April 5 was $2.25 a crate, f. o. b. Phoenix. An average production of two hundred crates an acre gives a net this year of around $200 an acre. Some years the net on certain fields has been over $1000 an acre.

These growers are making money. I cannot see how it is possible for eastern lettuce growers to compete with them except, possibly, in a local and personal market. We must become resigned to the inevitable, which is that eventually all fruits and vegetables will be grown where climate and soil are most favorable for growing a superior product at a low cost; and that distance from market, tho a handicap, no longer is an insuperable obstacle.

Balance of Trade May Change

The most unique feature of Arizona horticulture is the cultivation of the date palm. At present the United States imports several million dollars worth of this delicious fruit annually. Within twenty-five years the balance of trade may be the other way. I visited the date experimental farm of the University of Arizona, near Yuma, and several commercial plantings. There are perhaps two hundred acres of dates

Off-Shoots Not Easily Procured

The chief obstacle to the expansion of the industry is the difficulty in securing trees. The date is propagated by means of off-shoots which sprout from the base of the mother tree and along the trunk. When these are large enough, usually within a year, they are separated from the parent tree and rooted in the ground like a cutting. Until recently most of the off-shoots have been imported for there were not enough old trees in this country to supply the demand. They cost $10 to $50 each, according to age, and are set seventy-five to the acre so that the cost of planting an acre of dates, with land at about $200 an acre, is around $2000. This will limit the size of the plantings of most of us.

The tree begins to bear in three to seven years according to the age of the off-shoot when set; plants five years set often bear one hundred fifty pounds of cured dates, older trees three hundred to five hundred pounds. There are various scale insects, a blight kills some trees, and the wind uproots others since they are shallow rooted, so that the investment is not without hazards.

Date Trees Pollinized by Hand

One of the most interesting features of date cultivation is the pollination. The trees are either male or female. Three or four male or pollen bearing trees are required to fertilize an acre of female or fruit bearing trees. The pollination is done by hand. A small cluster of male blossoms is placed inside each large cluster of female blossoms. The end of the cluster is then tied and the pollen is scattered by wind and insects. Only seven or eight flower clusters on a tree are pollinized. The others are cut off as they appear, to improve the size and quality of the fruit.

The blossoms are pollinated in April and the fruits ripen in July. They ripen in succession and are gathered singly, the trees being picked over seven to ten times. Dates are cured by heating in shallow trays to about 120 degrees, for three days. They are packed in one pound tin cans which now wholesale for about forty cents. They are decidedly superior in quality to the imported date.

Is It Worth $10,000 an Acre?

With possible yields of twenty-two thousand pounds an acre, it is easy to figure out a paper profit of ten thousand dollars an acre. These results actually are being secured, in a very limited way, but the commercial average is much less. It must be remembered that with larger plantings, prices will drop, pests and other difficulties will increase and the late comers will not be likely to find it as much of a "get rich quick" enterprise as it appears to be now. From my point of view, it is worth ten thousand dollars an acre to be obliged to live in a place as hot as Yuma.

The date industry obviously is still in the experimental and exploitation stage. It is reserved for those who are willing to take a big chance in their investments, who have $2000 an acre to invest and who have only pleasurable sensations when the temperature is 120 degrees and upward.

MARTIN METAL HEN HOUSES
Soon Pay For Themselves
with the extra eggs your flock produces during the winter months when egg prices are high. J. C. Friday of Ohio made a test with 200 white leghorn pullets in a Martin Metal House and his profits over feed costs from Nov. 1st to Jan. 1st were 31.7% —25% higher than he ever got before, using same feeding methods in common type wood poultry house.
Fireproof and Sanitary
Martin Metal Hen Houses have perfect ventilation systems. They are fireproof, sanitary, and rat proof as they are screened. Every other hen house on some farm is obsolete. They are the last word in a perfect home for your hens. Write today for free descriptive folder telling all about these BETTER houses. Get our low prices and see how you can soon pay for one out of extra profits.
We also make Brooder and Metal Brooder Houses.

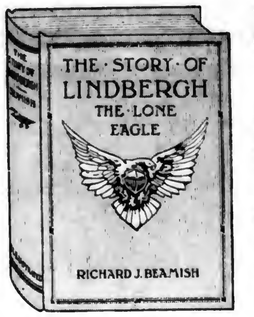
From the Plow to the Plane
Another farm bred boy gains eminence



You will want to read the story of the "Flying Fool," who was far wiser than his critics knew. His non-stop flight from New York to Paris has enrolled his name among the immortals.

The story of Lindbergh, together with the development of aviation, epoch-making flights, and historic efforts to bridge the distance between the Old and New Worlds, is more thrilling than fiction and every word true.

The complete book measures 6 x 8¼ inches and comprises approximately 300 pages, including 32 full pages of pictures. It is bound in rich cloth, with gold and ink stamping on front cover and back. It is written by Richard J. Beamish, whose "History of the World War" had the largest sale, within a given time, of any book ever published.

How to Secure One Free

Send us three yearly subscriptions to Pennsylvania Farmer at 50 cents each—your own renewal will count as one—and we will forward the book to your address postage prepaid. The book will not be given with your own subscription alone. Two other subscriptions must accompany your order.

PENNSYLVANIA FARMER,
261 South Third Street, Philadelphia, Pa.

Mrs. GERTRUDE S. STEWART

Sunny Monday Contest

These Winners Chased Away Washday Blues

First Prize

WHEN I gave up school teaching and took up home-making with my husband, we bought a seventy-acre farm. Soon the purchase of needed equipment and operating supplies forced us into most careful economy.

I started with no washer of any sort—just tubs and a wash-board, and no day of the entire week bored me except wash day. Later we purchased a hand-power washing machine, and strong as I am, I could hardly keep going on Blue Monday. There is no electricity in our vicinity, and we were anxious to remedy this bore in some other way.

One evening we were enjoying our Pennsylvania Farmer, and read an advertisement describing a washing machine that could be run with a gasoline engine. My husband decided

Mrs. Jerre Fahringer

we would give the device a trial at once, and we have been using it ever since. Clothes need no overnight soaking, and but a short time is required to do a very large wash. This trial was indeed the dawning of a new day for me and wash day changed from dread to a joy. My strength has been conserved for the many other duties every housewife should perform, and the clothes last much longer than if rubbed to pieces on a wash-board.

Why wait for electricity? Why wait for anything? My husband and I agree that we put off too long getting this helper and convenience. We use the engine for other farm tasks also. It churns the butter, separates the milk and operates the tools at butchering time. Part of the credit for our awakening must be given to our ever welcome paper—Pennsylvania Farmer.—Mrs. Jerre Fahringer.

Second Prize

"Old Blue Monday," did you say?
Why, the blue's been washed away.
Since my 'lectric washer has been installed
I have discarded the old wash-board.
Just press the button and off she goes,
Rubbing and scrubbing the dirty clothes.
I can tell the world 'tis now no task,
For the dread wash-board is a thing of the past.
Clothes rinsed well and hung to dry
Can flutter and wave to the bright blue sky.
Seeming to say as they whiten and shine,
"Good-bye, Blue Monday, you're none of mine."
I've time for a glimpse of the beautiful sky,
I list to the song of a bird perched high,
At my family of six I gaily smile
And think at last that life's worth while.
When the final duds hang out on the line
All sweet and clean at half-past nine,
I prepare a dinner that's good to eat,
And my husband says "That's hard to beat."
The old wash-board hangs on the nail,
Its very looks echo many a tale
Of that doleful song of "rub-a-scrub-scrub,"
When I bent my back at the old wash tub.
Oh, I thank the Lord who made the man
That invented this wonderful washing plan.
It has washed away the Monday Blue,
And all my worries and troubles, too.
—Mrs. F. L. Coleman, Pa.

Each of the letters which follow has been awarded a prize of one dollar.

Three Aids Serve Me

THREE secrets I gladly pass on to you for so long as I have no modern washing convenience, I could not possibly do without them. The first is a long-handled suction pounder which washes very satisfactorily many garments, and aids greatly in the rinsing process. Next is the idea of using hose and siphon to carry all the water to and from tubs. The third is the most wonderful washing cleanser I have ever used. It works like magic on woodwork, dirty floors, sterilizing milk utensils, bleaching clothes, etc. I could not keep house without it. It dissolves very quickly in hot water and is a powerful disinfectant.—Mrs. B. Judson Spencer, N. Y.

I Rest While Working

A MACHINE to do away with the wash-boards takes the blues out of wash day. Mine is only foot and hand power but I have never seen anything to beat it. It cost me ten dollars and I have used it every week for twelve years. I can sit down and pare potatoes or even rest—with my foot on that pedal, doing the wash. Little children can run it easily.—Mrs. Geo. Whitmyer, Pa.

Another Use for the Car

YOUR children and tourist's accommodations swell the washes and I had two all-day jobs weekly until we harnessed the flivver. A wonderful washer run by power from the rear wheel of our car does this same washing in one and one-half hours. Husband donates 15 minutes in hitching up the auto, and I heartily recommend this arrangement after a whole year's use. It does not seem to hurt the car either, as ours is a 1921 model and does all we expect of it.—Mrs. Harold M. Jeffries, Pa.

Discarded Washboard

MY MESSAGE is for those women who, like me, are waiting for power other than their own arms. To them I say, "Shorten not only wash day but this spell of waiting by getting a good washing machine. In three minutes a tubful of clothes soiled ordinarily comes out clean and sweet. Why rub away at any wash-board?"

Probably you are as skeptical as I was at first, but after seven years of happy wash days, I could wish you no better service than electricity itself.—Mrs. Irwin Doolittle, Pa.

One Help Not Forgotten

TODAY I have an electric washer and also the electric iron, but I have not forgotten the old days when I sought help to make wash day shorter. This one help I pass along to those who must wait another year or so for modern devices.

There is a powder on the market which I used for many years. It eliminates rubbing, and, of course, saves the clothes. One of my neighbors has used this same cleanser for seven years.—Mrs. M. W.

Editor's Note:—The names of the conveniences mentioned above will be given on receipt of a stamped, self-addressed envelope sent to Home Page Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

Not a Drop Spilled

THE greatest help in my laundry work aside from the electric washer is a siphon with a good length of rubber hose. Since I must wash in my kitchen, I bought that electric arrangement which takes up the least room. You will all agree that carrying water is not only back-breaking work, but very sloppy, too. The siphon does away with both. Have hose long enough to reach from water supply to the machine and tubs, and not a drop is spilled. When thru washing, attach the siphon to one end of the hose and place the other end in sink or drain, and this splendid little device will draw and empty all the water for you so easily. What a simple little arrangement, yet it saves needless mopping, saves lifting a drop of water, whether hot or cold, and best of all costs less than five dollars at any good drug store.—Bertha R. deVreis, Pa.

A Thoughful Husband

MY HUSBAND bought a 2½ horse-power gasoline engine for ensilage work and wood cutting, but he soon saw other uses for it and before I knew it, my "hand power" washer was transformed. By removing the big wheel and putting a plow wheel in its place, then attaching a wooden pulley to this engine and using horse reins for belts, I had as nice a washer as any one could wish.

Any man who gave the idea a second thought could do the same thing for his wife, and I hope every one will. The engine can be moved to the barn very easily when needed there, by placing it on a stone boat or similar conveyance.—Mrs. Fred F. Chaffee, Pa.

Power Brings Speed

I INSIST on letting the power "do it all" and would not be caught with a wash-board. Not only my own but my mother's and my husband's mother's washings are done and done quickly and easily with the helps which I wish you all could have. Here they are: a two-horsepower gas engine, built-in fireplace which holds two large iron kettles, a pulley line, and—you may have guessed—a large laundry room with a cement floor and sewer connection.—Mrs. Mabel Hartman, Pa.

A Soap All My Own

AMONG the items that contribute to Sunny Monday at my house you will find a bench the correct height for my back, pulley clothes line, gasoline iron, a ninety-cent suction hand washer, sal soda and my own special brand of home made soap.

I must tell you about the last secret, the soap, for it surpasses all others. All grease not fit for cooking goes into my soap kettle. When I have about five pounds of clean refuse fat including tallow, and pork fat, I heat it to luke warm, and pour very slowly into it one can of lye that has been dissolved and cooled to luke warm in one quart of water. Add one cup each of borax, ammonia and sal soda. Then continue stirring until the mixture is as thick as molasses. Pour into a dripping pan, mark into cakes, and set aside to harden. This soap improves with age.—Corvia A. Christian, Pa

Less Wear and Tear

I AM a very busy person, but love the Home Pages so much that I want to help in this contest. I have been using a 1½-horsepower gasoline engine for fifteen years and it is good yet. My wash is quickly and very easily done, and I hope no one will hesitate to install this method.

If you want to know how to launder lace or any nice curtains in any kind of machine, here is a good method. Place each pair in a pillow case and tie shut. They will be beautifully cleaned and no danger of the usual wear and, many times, tear.

Home made soap is another of my secrets and I like the cold water process. Follow the directions on the can of lye used. If you then add one-half pound pulverized borax and a

Jottings from New Jersey Field Day

THE stout woman should avoid wearing pongee and similar fabrics which lend a bouffant effect. Heavy weight persons look their best in dark colors or black.

• • •

How are the lights in your house? Do you work in your own shadow? That is a fault quite easily remedied. Look into your kitchen, dining-room, living room and bedrooms and study the lights this week. Do you get the light where you need it? If not, then plan to correct the faulty fixtures and placing of fixtures until you have light where you need it, when you need it. Your county agents and demonstration workers will be glad to help you if you ask them.

• • •

Some folks with electricity burn two 25-watt lights in the kitchen. That plan gives the worker but 25 watts of light altho 50 watts are being consumed. Better buy a 50 or 75-watt bulb and use it at the spot where you are working. Then you will not be in the dark and the expense is not increased.

• • •

Canning is the housewife's great delight if she remembers a few important rules. One is to use only perfect products—fresh products.

• • •

If you have no pressure cooker and do much canning, put that on your shopping list for it is today's greatest help.

• • •

Glass jars will not break when put into the boiling bath if it is done very quickly. The care we exercise is too slow. So be very, very quick. —Gertrude S. Stewart.

Purse-Flap Rolls for the Picnic

EMILY'S purse-flap picnic rolls are the sort that spread happiness. No picnic is complete without them.

"Oh, but I value my forty winks too highly to do that!" you'll cry when you hear her method. You wouldn't, if you knew their deliciousness. They are scarcely cold if the dinner hour is punctual, and that is really the secret of their goodness.

Emily sets her sponge the night before just as for bread. Then one hour before the time set for usual arising, she slips to the kitchen and mixes the sponge into dough. She rolls this out in circles, folds each exactly like a purse flap, brushes them over with sweet cream and puts them to rise in pans. They are ready to be popped into the oven and baked at regular breakfast time.

When cool, she opens them and tucks in any desired filling. In the picture shown, the filling is freshly made, salted-to-taste cottage cheese mixed smooth with a dash of mint extract,—just enough to give a faint taste,—placed upon a crisp lettuce leaf. Dainty, colorful, fresh and pleasing—what more?—Gertrude S. Shockey, O.

Letters from Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—My school closed April 19th. On the last day of school we planted trees on the school ground. Each grade planted a tree. Other trees were planted in honor of some men who lived in the community years ago. There were more trees planted, too. Before the planting of the trees we had two recitations by two girls. My teacher, our superintendent and a man from Harrisburg gave addresses. The seventh and eighth grade sang two songs.

During the whole term of school the seventh and the eighth grade met together in the morning for devotional exercises. We had an organ in our grade and there was one in the seventh grade.

We had two entertainments in which each grade took a part. The last one was on Monday evening before the last day of school. I was in a play called "Too Much of a Good Thing."

On April 28 our teacher had a supper for us. We played games and had a very good time. It was in the evening and it was after ten o'clock when I arrived home.—Pauline Myers, (X), Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—At the last Brandywine Play Festival our school won third

BEAUTY, THE RUNAWAY
Olive Nichols, (X), Chester County, Pa.

prize. Every night and morning I milk three cows. Here is a picture of my dog that ran away.—Olive Nichols, (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—Cousin Ruth, please excuse me for not answering your letter sooner but I have been very busy helping mother and taking care of baby sister. I received my membership pin and like it very much.

Our school was out April 27. Our teacher gave us each a book. Some of the books were for merits, for perfect attendance. He gave fountain pens to those who have done all five health rules during the term. My sister and I got a pen. My book that I got was for perfect attendance. I also got a gold seal for perfect attendance.

My sister and I have joined the pig club. We are two of 30 that belong to the Wyoming County Club. We are going to have purebred red pigs. Some of the members will get red pigs, white pigs and black pigs. There are eight more members in our school that belong to the club. The meetings will be held in the Tunkhannock Grange Hall.

While I am writing this letter my mother is reading the story in Pennsylvania Farmer called "Judith of Blue Lake Ranch" to my father. I liked the story very much and so do the rest of us.

Elizabeth has twelve teeth. She is a big girl now and walks all over. She is 14 months old and as cute as she can be.—Bernice Hunsinger, (X), Wyoming County, Pa.

That's fine you've joined the pig club. I hope you'll tell us all about your pig and the meetings you hold. I wish more Forum cousins would tell us about the pig, baby beef and potato clubs to which they belong.

COUSIN RUTH.

Dear Cousin Ruth:—My dog will kill snakes. He killed one this year. He can jump a fence, too. It is not hard for him to do that. We have 35 sheep, 20 of which are lambs. I like to see them play. I wish you could see them when they play.—David P. Knepper, (X), Huntingdon County, Pa.

Dear Cousin Ruth and Forum Friends:—I am going to play in a piano recital. I have to play a duet and a piece. There are about seventeen pupils altogether. I wish you could come to hear our recital because I know you would like it.

We have nine little yellow ducks and they are very cute. This evening a hawk was flying around trying to get them. When my brother went out it flew away.—Mary Collins, (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school closed April 20 so I am glad. My sister took the examination for high school but I didn't because I was only in the fifth

MY CLASS AT SCHOOL
Pauline Shellenhamer, (X), Dauphin County, Pa.

grade. Twenty children took the examination for high school at Hershey.

We live on a thirty-three-acre farm. My father is sowing oats today. I guess we will plant potatoes this week and I will have to help.

I am sending you a picture of my classmates and myself. I am the second one from the left.—Pauline E. Shellenhamer, (X), Dauphin County, Pa.

Dear Cousin Ruth and All:—I have two black cats. They stay most of the time in the barn. When they are not in the barn they are out looking for ground moles. Only one goes out at a time, the other one stays in and keeps house.

We just got our house painted. It is white trimmed with green. We finished planting our flower seeds. We have pretty nearly all kinds of flowers.—Marie Aukney, Westmoreland County, Pa.

Dear Forum Friends:—I will be pretty busy this summer. I will pick strawberries and raspberries and do a lot of other things.

We have started a library in school. We have sixteen books but we expect to get more next year.—Kathryn Ziegler, (X), Lebanon County, Pa.

Dear Cousin Ruth:—I am going to tell you about my hike to McKauley Creek. A few of my friends and I climbed up over our neighbor's hill and we went thru a large forest. It was a hard climb up-hill but at last we came to the top. We went down the other side and followed a ravine. On this one ravine we picked some early flowers.

After a long hike, jumping over streams and crossing ravines over half-decayed logs, we finally came to the creek. The creek was very pretty. We followed an old road in the woods and we found on a tree initials. We came out to the main road about two miles north of home, so we followed this road home.—Florence Johnson, (X), Elk County, Pa.

Dear Cousin Ruth:—I am enclosing a picture of mother taken last spring in peony time. We are both

IN PEONY TIME
Emma R. Rupp, (X), Lehigh County, Pa.

very fond of flowers but will be somewhat handicapped this summer because we moved recently to a new place. Mother and I have transplanted quite a few of our flowers to our new home. We had fourteen different varieties of peonies while we lived on the farm, the place where the picture was taken. Of course, we took some along to our place, too.

We have plenty of work to do around our new home. The yard around the house, and the garden also, take quite a lot of time, till all is as we want it to be. We had the whole house repainted and repapered, also installed electric lights and are getting an electric washer.

Mother worked hard on the farm and raised a family of twelve children, so she certainly deserves the rest.—Emma R. Rupp, (X), Lehigh County, Pa.

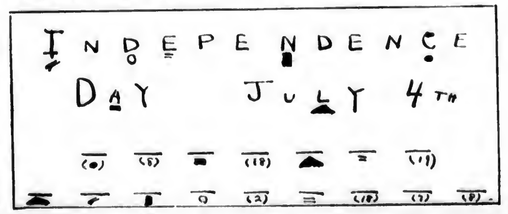
OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You all know why we celebrate Independence Day, and I think you all know the name of the celebrated American which you will find hidden away in this puzzle. What this interesting man did which makes him celebrated is very well known, too, and we all get a fine thrill thinking about it. When you look at the puzzle you will see that some of the letters in the words "Independence Day" and the word "July" have strange little marks under them. That means that you are to place the letter under which the mark is found in the little blank under which the same mark is found in the lower half of the puzzle block. But in this man's name there are letters which do not come in the words "Independence Day" and the word "July," so I have placed under these blanks the number which the letter has if you count up the letters in the alphabet, letting "1" stand for "A," "2" for "B," and so on. When you have spelled this famous man's name, let me have it on a postcard or in a letter so that it reaches me by July 9th. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND IN WHAT COUNTY YOU LIVE. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

P. S.: If any of you do not know what it is that this man did which makes us all so much interested in him and so proud of him, just ask your best grown-up friends to tell you about him. I think that would be one good way to celebrate this particular Fourth of July. Your friend, The Puzzle Editor.

The answer to the maze puzzle published in the June 11 issue is: A DUCK.

The prize winners are: Ronald Bloom, age 9, Kerrimoor, Pa.; Andrew Boomans, age 11, Greenfield, N. J.; Frank Branco, age 10, Brier Hill, Pa.; Ruth Downing, age 6, Tully, N. Y.; Alberta S. Drais, age 7, Wrightsville, Pa.; Elizabeth Gilardi, age 9, Bristol, Pa.; Andy Lecorchick, age 10, Bowes Run, Pa.; Ruth H. Rorher, age 10, Lancaster, Pa.; Gertrude Wagner, age 13, Macungie, Pa.; Rena Zerbini, age 11, Cherry Valley, Pa.



PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—A new thermal spring burst thru the ground recently at Bad Oeynhausen, Germany, spouting 130 feet into the air. Its source is believed to be about 2000 feet underground. The waters of the spring are said to have curative powers and to aid in the treatment of nervous disorders.

2.—The President and Mrs. Coolidge, Mrs. Lindbergh and Colonel Lindbergh on the steps of the temporary White House after the ceremonies in honor of the aviator at Washington Monument on June 11th.

3.—Commander Byrd, the intrepid North Pole flier, getting his plane, the "America," ready for his trans-Atlantic flight.

4.—During the hurricanes in Southern Florida last September, the waters of Lake Okeechobee flooded the farms in the Everglades, causing loss of life and destruction of property. Now the people who were receiving aid less than a year ago are sending trainloads of food to the sufferers in the Mississippi flood regions.

5.—Countess Maria Cristina Bezzi Scali, who last month became the bride of Guglielmo Marconi, the world famous inventor and wireless wizard.

THE Hungry Rope

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

Continued from last week

IT WAS a swamp of big brush—of rhododendrons spreading heavy screens of green, of bull-briar snares, of saplings, massed in bulk, of tall trees bent and over-lapping, of tussocks and oozy bog—a perfect hiding-place—a perfect ambush.

Using his searchlight the Sergeant covered back and forth, back and forth, in that night-black, many-veiled morass, scanning three feet at a time—offering in his own person, as he well knew, the best of targets for the armed outlaw hidden and at bay.

"This is my job. I've got to get him myself. It's the only way," he was thinking as he raked the darkness thru.

And not once did he waste a thought on how easily his difficult task could be reversed—how exceedingly easily the hiding and desperate man could take the life of his solitary pursuer.

But still he saw nothing—nothing but the shapes of leaf and branch and moving shadow—heard nothing but the suck and slide and crackle of his own steps. Almost it seemed as if the cover was blank.

Then suddenly, sweeping under the silvery, sagging rails of an old fence, his light caught on something that glittered—caught and stood fast—on staring eyeballs in a black face.

The Sergeant's gun was up.

"Coon, what are you doing in there?"

But why did he almost whisper the words?

"Ah's de one you's lookin' fer, please, sah!" strangely the negro whispered back.

"Get up."

The negro arose—all of six feet in height, great in bulk. He carried a revolver in his hand, hanging as if he had forgotten it.

"Give that gun here. Have you got another?"

"Yes, sah, please. Here dey is, sah."

Two guns changed hands.

"Now," said First Sergeant Snyder, and still his voice came below his breath, "I'm not going to handcuff you, because I want you to move before me. Just as I tell you. Quietly and quick. If you try to get away, I shall shoot you. But if those people out there once get at you—"

"Yes, sah! Ah know, sah!" The negro's teeth were rattling, altho the sweat stood heavy on his face.

"All right, then. Start. Quiet, remember!" The Sergeant pointed in the direct line back toward his car.

With deliberate pace, as if still searching, he pushed along, the negro before him creeping so cautiously that his captor's footsteps drowned such little sound as he made.

So proceeding, they neared the verge of the marsh. "Duck!" whispered the Sergeant suddenly.

The ray of a headlight lay across their path.

Instantly the negro flattened himself on all fours, to glide like a dingy alligator among roots and underbrush, and thru the black bog water. Unseen, he slid into the night beyond.

MOVING always like a careful searcher, the soldier used the utmost tongue of cover—the farthest string of laurel thicket extending toward the road. Then, where no more shelter offered, he spoke to the prisoner again.

"See that car with its tail-light turned this way? We're after that. Steady, now, no matter what happens. If you break you're done."

"Y-yes, sah!"

With even, rapid, unhasty steps they moved thru the open, in the lessened dark, and had come within sixty yards of the motor before any one but the Trooper standing by the wheel remarked their passage. Then some nearest townsmen detected the two figures, recognized the Sergeant's firm silhouette.

"Hi! Trooper's got him!" he shouted. "Trooper's got him! This way, boys!"

"Hi! yi! Hurrah! Hurrah! Bring the rope! The rope! The rope!"

In an instant the air was filled with shouts, wild laughter, and the sound of plunging footsteps, merging into a shapeless oncoming roar.

"Into the car with you!" the Sergeant snapped.

The negro sprang to obey, crouching on the floor of the tonneau. The Trooper at the wheel had pressed his self-starter. But the engine, it seemed, would balk. First Sergeant Snyder stood quietly at the side of the car, service revolver in hand, when the first man reached him on the run.

"Give him here, we'll fix him!" he panted, and his voice rasped hoarse and hard.

"He is my prisoner," the Sergeant answered coolly. "You will not lay a finger on him."

The man stopped short, an oath on his lips—turned and shouted to his friends.

"Here's the nigger! Here's the nigger that killed Dan Wagner. And the Troopers won't give him up!"

"The rope! The rope!" the gathering crowd howled back, brandishing shotguns and rifles, swinging pitchforks and crowbars and clubs.

FIRST Sergeant Snyder, jumping into the tonneau, stood to face them. It was the situation that he had foreseen from the first.

"Gentlemen," said he, "this negro is under the protection of the State. Not one of you will molest him."

The faces before him, in sharp gleams and distorting patches, half swallowed by the night, seemed almost the faces of a strange people. There were Slavic types among them, Italians, Huns,—miners come in from the coal-fields roundabout. But most of them were farmers—Pennsylvania Dutch. And the good old Pennsylvania Dutch, in mind and in practice, are a law-abiding folk.

But now these sturdy burghers, in a manner of speaking, had seen their dead. Daniel Wagner, honest man and honest neighbor, one of themselves had been brutally slain in the midst of their life—of their almost sacred and honored peace. It was as if the outrage had befallen each man's very hearth. It assailed the balance of their world. It was a thing to be stamped upon—to be strangled—and here, and now.

"The rope! The rope!" they howled. "The rope!"

The Sergeant raised his revolver, slowly swinging it back and forth along the turbulent mass.

"Stop where you are," said he coolly. And his voice, well tuned to be heard and obeyed, reached every man before him as clearly as if it came from the sky. "Not one move more. I shall defend the prisoner of the State."

FOR a moment dead silence succeeded the words. Then came a broken, inarticulate murmur, hesitating, indeterminate—vague. With it mingled a new note—the song of the engine, spasmodic at first, but settling into a steady purr. Men's muscles began insensibly to relax—their eyes to become self-conscious. And the wheels of the car turned.

"Let her go!" the Sergeant threw over his shoulder.

The Trooper let her go, indeed.

Another minute and the lurid scene by the bog was sinking into a blot—a spark—had vanished in the engulfing night.

The First Sergeant turned and looked down, where a big, lumpish bulk crouched shivering and sobbing at his knees. He thrust the revolver back into his holster. He took from his pocket some small thing that chinked.

"Hold your hands up, Wilson," said he. "I'll put the irons on you now."

"Yes, sah! Yes, sah, please!"

Awhile they ran on in silence, the car lunging heavily over heavy roads. The prisoner sat by his captor's side, as limp as if every bone in his great body had turned to paste.

"Wilson," said the Sergeant at last, "how many cartridges have you got on you?"

"Reckon Ah's got about forty, sah!"

"And just what was the reason you didn't try to shoot me?"

"Good Lawd!" The feeling in the exclamation surpassed all feigning. "Ah's jest a common nigger, but, praises be, Ah's no such fool as that! Don't Ah know what happened at Coatesville? Ain't Ah heard tell about you gen'lemans whiles Ah was in the Pen? Didn't Ah know, down there in that bog-hole, that a State Trooper comin' along was my onlies' chance on earth against—against—the slow fire and the stake?"

AGAIN a tremor shook his whole frame as the words chattered thru his teeth.

"Why, the sight of that uniform you-all's got on was the blessedst sight my eyes could see! Ah hadn't never seen one befo', but the fellers in the Pen done often describe it to me when they told what you State's men do. Me shoot a Trooper—and the stake-fire so nigh lit under me that Ah fair heerd it cracklin' and smelled my roastin' meat! Gawd! Oh, Gawd!"

His voice cracked, negro-fashion, and he broke again into shivering tears.

"But why," the Sergeant pursued, "did you shoot Daniel Wagner?"

The sobs stopped short. Silence in the tonneau; after which the prisoner, having reflected, spoke.

"I didn't shoot Dan'el Wagner."

"Why did you shoot Daniel Wagner?"

"Ah ain't goin' to say nothing, because Ah don't want to tell lies."

And in this attitude the black steadily persisted even to the day of his trial, while his own simple vanity carried him in the interval far and farther wrong.

Meantime, First Sergeant Snyder had been quietly pursuing his own devices, building up by faithful research the history of Charles Wilson's life. Shortly it stood on paper, systematically tabulated, with due indications of sources and of corroborative evidence in form.

By this it appeared that until his sixteenth year Wilson had gone to school, taking fairly kindly to study; that he was bright, wrote an excellent hand, and had finished a common education. Thence he was graduated so promptly and thoroly into crime that only a year, more or less, had elapsed before he entered the Penitentiary.

In the Penitentiary his record had been thoroly bad, so that no commutation of his sentence was considered. Released at last, he had moved quickly upon his old hunting-ground, Schuylkill County, his mind filled with the plan that he had sedulously nursed during his long years in prison.

First, he was going to kill Charles Yeager, the man who had refused to plead that he be turned loose upon an unhappy countryside. Then, reenforced by the contents of Charles Yeager's purse, he would complete his program at his ease.

At Schuylkill's very threshold, Port Clinton, he had stopped to lay in material for his campaign. He had already bought a revolver with a store of cartridges, and the purchase had taken almost all his means. Still, by careful calculation, the little remainder would suffice to fulfill his purpose and to make him happy the while.

Food was his first requisite—food enough to carry him, if need be, thru an interval of dearth. In those nine years of prison, woven thru his daily and nightly dream of liberty and revenge, had run a thread of lighter hue—the thought of doughnuts. Doughnuts had been his infant passion. Never in his life had he had his fill of their soft charms. Could he accomplish it now?

HE WALKED into a little thread-needle shop. "Ah want a piece of white cloth," said he.

"What kind of white cloth?" asked the woman behind the counter.

The negro seemed nonplussed—"Why—jest white cloth, Ah reckon."

"What do you want to do with it?" pursued the practically minded shopkeeper.

"Why—why—to make—to make maybe a pillow-case, maybe."

The woman took down a bolt of pillow-case cotton, tore off a length sufficient to cover the sort of pillow that she assumed the negro would possess, rolled it up in a bit of wrapping paper, and handed it to her customer.

He thrust the parcel into his pocket. And, as he turned to leave the shop, she noticed that he was very carefully studying and muttering over the change that she had just laid in his palm.

"Does that darky think I've cheated him?" she exclaimed to herself.

Coming to the door, she watched him move down the street.

Thus watching, she saw him stop short, and stare down an alleyway upon which opened the back doors of certain houses and shops. Then the negro turned into the alley and disappeared, to emerge at once carrying in his hand an old, half-wrecked brown-painted bucket.

"He's picked that up off the rubbish-heap. Must be a looney! I'll get back to my work," concluded the watcher, and gave the affair not a second thought until Sergeant Snyder's inquiry.

A few moments later a comfortable baker of the neighborhood, sitting among his loaves and cakes in an atmosphere sweet to the noses of his patrons, heard his swan-necked doorbell tinkle and saw a negro enter the shop.

"What can I do for you today?" asked the baker urbanely.

"Doughnuts!" breathed the negro—a very large man—and the baker remarked how his great mouth enwrapped and fondled the word. "Is you-all got any doughnuts?"

"Heaps of 'em," the baker responded, with sympathetic unction. "Hot and fresh. How many will you have?"

The negro slapped a handful of silver down upon the counter.

"You don't want all that!" exclaimed the baker, startled out of his tradesman's poise.

"Put 'em in this here bucket, let me see," the other replied.

Handful after handful, the baker cast them in, packing them evenly to save room. Now and again he looked at his customer, to catch the sign "enough."

But always the negro's eyes stared into the filling bucket, while his lips worked accordeon-wise in succulent delight.

At last the level reached the bucket's battered rim.

"You've still got thirty-two cents left," said the baker.

"Heap her up, high's she'll stand. Then we'll tie a piece of paper over the top."

The thing was done. But still some silver remained unconverted into doughnuts.

"Ah'll tote the rest in my pockets," said the negro. And so, with both coat-skirts bulging, and with his precious bucket under his arm, he left the shop penniless, making off in the direction of the railway station.

Then, in short order, came his stolen ride, his adventure with the railroad policeman, his acquisition of a second revolver, and his sudden alarm at the sight of the reception committee awaiting him at Tamaqua Station.

Slipping off his grimy conveyance at this point, and taking to the woods, he had not forgotten to carry his bucket with him. And whenever he turned to fire, his pursuers, from their distance, had seen without recognizing the dark bulk under his arm.

CUTTING across a country once familiar to him, and which had changed in little or nothing during his nine years' absence, Wilson soon emerged in the village of New Philadelphia. Here, entering a saloon, he made talk with the loungers there, incidentally asking, as the bar-keeper later recalled, whether Charles Yeager still did his marketing in the little town.

"Sure," said the bar-keeper; "he comes in on Tuesdays."

"Got his regular day, has he?" the other rejoined.

"Regular as clock-work, Yeager is."

That night the negro slept in the open. Next morning, Sunday, he knocked at the door of a cottage on the outskirts of the village, begging ten cents to pay his fare to Pottsville.

Later in the day the middle-aged woman who had answered his knock and given the alms said to her husband:

"Joe, I've just remembered who that big darky is—him that came begging with the bucket under his arm. It's that rascal Charles Wilson that they sent to the Pen eight or nine years ago. I'll think my ten cents well spent if it takes him away from here, that I will!"

WILSON, in very fact, took the trolley to Pottsville, but alighted at some distance from the town, climbed into the hills and found a lair in an old abandoned shed. Here he lay hidden; and here—for the Sergeant found the exact bits of cotton on the ground—he fashioned his Jack-o'-lantern mask, knotting the cloth together and cutting the holes for eyes, nose and mouth.

Then, in the dark of Tuesday morning, once more he resumed the familiar wood trails over Tuscarora Mountain, toward the road that Yeager must travel on his way from his farm to New Philadelphia. In the first light of Tuesday's dawn a matutinal farmer chanced to see a great negro passing toward the New Philadelphia road, and the farmer noticed that the negro carried in his hand a brown pail.

Knowing that the railroad police must be on his track, Wilson had no fancy to expose himself by light of day. Therefore, having gained the position on the highroad that he sought, he effaced himself there in the tall, dead grass, to await the hour of his revenge. And so, being a true negro, no sooner was he quiet and comfortable than he fell fast asleep.

When he awakened, the sun was high overhead, and he knew that Yeager, if indeed he had gone to market that day, had passed him by.

But, "What goes up must come down." So he lay easily dozing and waiting until after the hour of four.

He was putting a doughnut into his mouth when the creak and rumble of heavy wheels caught his attention. Parting the grasses, peering stealthily thru, he saw coming down the road a wagon such as every farmer in the region drives. Nodding on the box, sat Charles Yeager—the very image of Charles Yeager as he had known him years ago.

The negro's eyes turned red. Snatching at his pocket, he jerked out his mask and fitted it over his head. Then, as the wagon drew abreast, he leaped to the side of the road, firing point-blank at the unconscious figure before him—at the man, as he believed, whose death he had vowed, and whose purse should now finance him.

But his leap and his shot undid the plan. From under his very fingers the terrified horses swept his plunder away, and sped the news of his wickedness.

And now he must have money. From the hue and cry that would soon be sharp on his heels, he must have means to escape, farther and faster than his legs could carry him. Where was he to find it?

He did not suspect that Charles Yeager, with a well-stuffed wallet in his pocket, was jogging straight toward him, down the New Philadelphia road—Charles Yeager, who long years ago had looked as Daniel Wagner looked today. He did not know that his revenge had failed utterly and that he had sold his right to live, by the fruitless murder of a stranger.

And so, racking his brains for help, he thought of his mother, in her cottage down in Pottsville. She, of course, would give him all she had. And, under the cover of night, he could visit her and get away without recognition. Therefore, abandoning his empty bucket, forgetting even a doughnut in his fright, unconsciously leaving the unconscious Yeager close behind him, he cut across the mountain once more, and descended into Pottsville.

Stealing up on his mother's house, he crept thru her chamber window, finding his burglar's skill but little rusted as he noiselessly moved with-

An Officer Knows the Way Home

Troopers of the Pennsylvania State Police Force don't confine their attention solely to bandits, safe crackers, and the like. Sometimes there are lost children to be found and guided to safety.

Did you ever hear this one?—

Caveman Stuff

Mother sent little Harry to take his smaller sister safely to the kindergarten. He was back sooner than she expected.

"Well, dear," she said, "did you treat Mary like a little lady, as I asked you to?"

"Naw," replied the youngster disgustedly, "we canned that lady-and-gentleman stuff, an' I chased her most of the way."

Minor Genious (importantly)—I wonder who that distinguished looking chap is, who's just going out? Been looking at me intently all the evening.

She—Oh, that's Dr. Brown, the insanity specialist!

No Parking

When Noah sailed the ocean blue,
He had his trouble same as you.
For days and days he drove the Ark,
Before he found a place to park.

"De doctah say I got too much lo'n in muh blood."

"Does you eat much po'k, nigger?"

"Sho', whufo' yo' ask?"

"Nigger, you's full of pig-l'on."

Liquid Silencer

"Have you some of that gasoline that stops knocking?"

"Yes."

"Then give my wife a glass."

Shelled Corn—No 2 yellow shelled, $1.08@1.09; No 3 yellow shelled, $1.04@1.07; No 4 yellow shelled, $1.01@1.02; No 5 yellow shelled, 98c@$1.01.

NEW YORK MARKETS

PRODUCE

Butter—Firm; creamery, higher than extras, 42½@43c; creamery, extras, 92 score, 42c; creamery, firsts, 88@91 score, 38½@41½c; packing stock current make, No 1, 34@35c; do, No 2, 30c.

Eggs—Firm; fresh-gathered extra firsts 25½@25½c; do, storage packed, unpacked, fresh-gathered firsts, 24@24½c; do, storage packed, unpacked; fresh-gathered seconds, 23@23½c; do, storage packed, unpacked; nearby hennery whites, closely selected extras, 32@35c; nearby and nearby western hennery whites, firsts to average extras, 28@32c; nearby pullets, mostly hennery browns, extras, 29@33c; Pacific Coast whites, extras, 33@35c; do, firsts to extras, 29@31c.

Cheese—Firm; unchanged; whole milk, flats, fresh, fancy to fancy specials, 24@25c; do, average run, 23@23½c; state, whole milk, flats, held, fancy to fancy specials, 25@28c; do, average run, 23@26½c.

Live Poultry—Steady; trucked quotations; broilers, express, 29@40c; fowls, by express, 20@25c.

Dressed Poultry—Irregular; broilers, fresh, unquoted; chickens, fresh, 29@35c; do, frozen, 20@36c; fowls, fresh, 18@25c; do, frozen, 17@26; old roosters, 12@13c; chickens, 28c; corn, 75c; oats, 50c.—W. N. M., June 20.

Clarion County, Pa.—Corn not doing well on account of wet weather. Oats looking good, potato planting not all done yet. Some farmers plowing for buckwheat. Gardens not doing well. Grass looking fine, a large hay crop expected. Early-sown wheat coming in head. Roads in bad condition. Fresh cows selling for $100 to $150. Pigs of all kinds scarce and hard to buy. Butter, creamery, 56c; eggs, 22c; wheat, $1.20; oats, 50c; corn, 50c; potatoes, $1.50; veal calves, 15c.—C. It., June 14.

Greene County, Pa.—We had a very cold, wet May. Very favorable for wheat, oats and grass. Corn small. Plenty of pasture. All kinds of livestock doing well. Sheep shearing about over. No wool sold, no buyers. Wheat harvest will be late. Very small acreage. Berry crop will be an average one. Butter, 30c; eggs, 25c.—C. M. K., June 16.

Lancaster County, Pa.—Corn is small, uneven stand owing to cool weather and unsound seed. Tobacco about 80 per cent planted, acreage lower by 20 per cent. Weather fine for transplanting. A few are haying. Crop heavy, well mixed with clovers. Harvest will not be before July 4th. Potato acreage larger than last year. Potatoes, old, $3.50; new, $4.50 per bu. Chickpeds, butter, 37@45c; eggs, 22@24c for white, spring chickens, 18@35c; old, 22@25c; wheat, $1.30; corn, $1.10; calves, 13½c.—C. R. E., June 21.

Lebanon County, Pa.—More than twenty young farmers met in a stock judging contest at the Schaefferstown farm, Saturday. The farmers, Galen J. Hartman, S. Annville, Warren Bucher, S. Relstville, and Stanley Smith, Midway, were judges at State College during Young Farmers' Week. Pomona Grange pays expenses. County Agent Berger was the instructor. A poultry disease clinic was held in Lebanon on June 16th. Corn just getting big enough for its second cultivation. Normal years see most corn plowed and out of the way for hay-making and harvesting. Stand averages 50 to 70 per cent. Grass, wheat, potatoes and oats are good. Alfalfa making awaits sunny weather. Wheat, $1.44; oats, 50c; hay, $20; straw, $14; eggs, 26c; butter, 55c. strawberries, 20c box.—R. I. W., June 20.

Mifflin County, Pa.—Had some fine farming weather the last few weeks with a few heavy rains. Corn mostly all planted. Many potatoes to plant; seed very scarce. Owing to continued wet weather wheat, oats and grass are looking fine. Some work being done on public roads which is needed very much on most clay roads. Farmers receiving $2.80 a hundred for 4 per cent milk which is plenty on account of the good pasture. Many farmers interested in raising poultry. Wheat, $1.30; corn, $1.10; oats, 50c; butter, 50c; lard, 15c; eggs, 20c; chickens, 25c; potatoes, $4.50; apples, 80c.—J. H. B., June 15.

Susquehanna County, Pa.—Farmers are planting potatoes and corn. A white frost June 13 did some damage to gardens, early potatoes and flowers. Early oats are not doing well. Grass is good and a heavy crop of hay is expected. Pastures are fine. Fruit prospects not very good. Old potatoes scarce, prices raised from $1 to $1 per bu. New potatoes selling at 5 lbs for 25c. Electricity being installed in many farm homes. Main roads are in very good condition. Cattle buyers driving around $150 for grades. Many dreading the T. B. test this coming autumn as condemned cattle bring only half the price the buyer is offering. A farm without a dairy is a poor proposition. Butter, 50c; eggs, 27c; potatoes, $3 @4.—J. A. G., June 18.

Tioga County, N. Y.—A few nice sunny days between the rains but not enough to dry out the ground for working. Corn made a poor stand; only a limited acreage planted. Potatoes not all planted yet. There was a slight frost the morning of the 16th. Local dealers paying $3 a bushel for old potatoes and selling new ones at $1.80 bu. Eggs, 25@26c; butter, 47@55c. The T. B. test is going on among the dairies. Great arrangements are being made for a celebration of Owego's 100th birthday.—C. A. A. H., June 18.

Union County, Pa.—We are having a fine rain today which is needed to start the corn recently planted or replanted. Other fields from good seed have a fine stand of corn. Old corn has been in demand lately at 90c to $1 a bushel and oats have reached 55@60c. Some alfalfa hay has been cut. The last spraying of apple trees for codling moth and red bug is being made but the set of apples shows only half a crop. An effort is being made to have electric light and power lines extended to different townships of the county. D. W. Mills sold his farm in Gregg Township to the proprietors of the tubercular camp there. They are building a large dairy barn, hennery and hog pens at an outlay of thousands of dollars. Township roads are being put into good shape by scraping and by putting on crushed limestone or gravel and rolling them thoroly.—J. N. G., June 14.

Warren County, N. J.—Potatoes are growing rapidly and developing a very sturdy stock. Even tested corn germinated very poorly and the fields look thin, yellow and short. Wheat and rye short, about three weeks late. A little first crop alfalfa has been cut. Timothy and clover just heading, will be quite late. Milk has been reduced to the producer but not to the consumer and the outlook is not very bright. Cherries are ripening but are rather scarce. Pears and apples are dropping considerably. Strawberry crop about one-third in this section, selling for 20c qt. Corn and wheat feeds have advanced about $4 ton. Veal, 13c; eggs, 22c; butter, 48c.—A. S. P., June 25.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

THIS is the longest day of the year and the first day of summer. Evidently summer means to make up for the cool spring for it is hot this evening. It is hard to believe that last Sunday was so cool that we sat around the fireplace and discussed the vagaries of the weather.

Weather is the basis of conversation. A man is never at loss for something to say if he remembers that. "It's a nice day, is it not?" has started many a conversation on crops, politics or prohibition. As I was sitting here trying to think of something worth while to say the first thing that came to mind was the weather.

You are accustomed to think of weather in relation to growing crops for it may mean success or failure. The man on the produce market thinks of it, too, not only in relation to growing crops but also to those that he has on hand or expects to receive.

The other morning I visited the watermelon yards in Philadelphia. It was around five o'clock and it was cold and damp. I had left my overcoat at home, because it is not supposed to be necessary to wear one in June, but my companion wore a top coat and even he was chilly. When we arrived in the yards we found the dealers standing around in their shirt sleeves, or less, trying to make sales. They were trying to make themselves and the buyers believe that it was warm, for no one seems to want many watermelons when it is cool.

Psychology Sold the Melons

Some of them were wiping imaginary perspiration from their brows while real goose flesh covered their arms. That is what you call psychology and if I could not have seen my breath and felt the chills running up my spine, I'm sure I could have ruined a good cold slice of watermelon. They did not offer us any tho, and they sure cast cold looks at my companion's overcoat.

I used to peddle watermelons and many times the housewives would say, "Don't you have a bigger one than that? It seems so small for 50c." The fellow who was working with me was an old timer at the business and when I came back to the wagon for a bigger one he said, "Take that same melon, put it on your shoulder, don't carry it in your arms and I'll bet she will take it."

"Oh, what a nice large melon, I think I'll take that one. Won't you carry it out to the ice-box?"

I tried that scheme time after time and it almost always worked. Now I doubt if the "old timer" ever heard of psychology but I figured it out, that when I put a melon on my shoulder it looked larger for the woman unconsciously compared its size with that of my head and when I carried it in my arms it looked smaller since she compared it with the size of my body.

Perhaps, too, much may be credited to psychology but then we all practice its rules in one way or other even if we do not call it by that name. Any one who has raised boys knows what it is. Take yourself for instance, suppose your wife says, "Can't you ever see when the wood box is empty? I declare I won't cook a thing 'til you fill it." Then your inborn stubbornness, or whatever you choose to call it, gets to working. But if she says, "I wanted to make strawberry shortcake for supper, Harry, won't you bring in some wood?" Well, it makes all the difference in the world.

Commodity Prices Irregular

Review of the Week Ending June 25

BUTTER.—The markets were generally unsettled and weak with limited trading. Early in the week Chicago prices dropped to the lowest point of the year. Toward the close of the week conditions improved and trading was more satisfactory. The markets closed steady to firm but buyers lacked confidence and were keeping their stocks as low as possible.

LIVESTOCK.—The Chicago hog market improved during the week and prices advanced. Beef steers were unsettled with most classes showing declines. Vealers and heavy calves were considerably weaker while cows and heifers declined. Fat lambs and yearling wethers were lower than last week, while fat ewes held about steady.

GRAIN.—The grain markets were weaker with wheat prices showing a decline of about 3c. Lower foreign markets, more favorable growing weather and heavy receipts of new wheat were largely responsible for the drop.

FEED.—Prices were generally lower. Bran and shorts were considerably lower. Flour middlings and red dog were in good demand. Linseed meal was weaker but cottonseed was practically steady.

HAY.—The markets were irregular with prices generally lower. The best grades were in fair demand but ordinary grades were plentiful and difficult to sell.

EGGS.—Receipts decreased in New York and the market improved. Desirable eggs sold readily and there was a fair demand for seconds and undergrades. Receipts of nearby white eggs dropped sharply and the market was firm and higher on the leading grades.

POULTRY.—Receipts of live poultry in New York were lighter but trading was rather unsatisfactory. This was probably due to the warm weather. Leghorn fowls sold well at relatively low prices while fancy broilers were fairly active.

POTATOES.—The potato market dropped sharply during the week on both consuming and shipping point markets. Heavy shipments were largely responsible for the decline. North Carolina has passed the peak of its movement and Virginia is now the leading producing state. Heavy yields are being reported on the Eastern Shore.

WOOL MARKET

Boston, June 25, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 44½@46c; ¾-blood combing, 43½@44c; ¾-blood combing, 42@43c. Michigan and New York fleeces—Delaine, unwashed, 43c; ½-blood combing, 42@43c; ⅜-blood combing, 42@43c; ¼-blood combing, 42@43c.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 27, 1927. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$33.50@34.00
Spring bran	33.25@33.50
Soft winter wheat bran	35.00@36.00
Mixed winter wheat bran	34.00@34.75
Standard middlings	35.50@36.00
Soft winter wheat middlings	39.50@44.50
Flour middlings	43.50@47.50
Red dog flour	49.50@51.50
White hominy	41.00@41.50
24 per cent cottonseed meal	42.00@42.50
41 per cent cottonseed meal	45.50@45.75
43 per cent cottonseed meal	48.00
34 per cent linseed meal	51.25@51.50

Millfeed in ample supply with demand inclined to lag due to splendid pasturage conditions.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, June 25, 1927

Clover seed, cash, imported, $13.90 bid; October, $16.80 asked; December, domestic, $16.85. Alsike, August, $14.65. Timothy, cash, old, $2.45; new, $2.55; December, $2.75.

CHICAGO LIVESTOCK MARKET

Cattle—Extreme top heavies, $14.10, medium weights, $12.65; 1172-pound averages, $13.25; long yearlings, $13, mixed yearlings, $12.50; grass cows and heifers, $1 lower; bulls, one down, $1 off in two weeks; cutter cows, 50@75c off; vealers, 4c lower.

Hogs—Heavyweight hogs, $8.40@8.80, medium, $8.85@9.20, lights, $8.65@9.20.

Sheep—Fat lambs closing $1.25@1.50 lower; lower grades at full decline; sheep steady; feeding lambs strong to 25c higher. Weeks tops: Fat range lambs, $15.60; fat native lambs, $15; yearlings, $12; fat ewes, $6.50; feeding lambs, $12.75.

WOOL MARKET

Boston, June 25, 1927.

County News and Comment

Adams County, Pa.—The weather has been very cool and wet, delaying farm work and crops. Many corn fields had to be replanted. Most farmers using 1925 tested seed. Wheat has been damaged. Oats doing well on high ground. Peaches are a full crop generally. Apples about half a crop with quite a lot of scab in some orchards. Dirt roads have required much dragging. Pastures are good and cows are giving a big flow of milk. Wheat, $1.35; corn, 90c; oats, 50c; milk, $2.40; eggs, 20c.—A. R., June 21.

Berks County, Pa.—Adverse weather conditions have prevailed ever since planting season started. Most of corn did not germinate. Potatoes have been cultivated twice, making good progress. Very little spraying done. Grass fields look good and promise a good year for both timothy and clover if the right weather conditions exist when the hay-making season begins. Oats has made good progress. Wheat in some places has already lodged while at other places it stands erect and promises to bring a fair yield. Pasture is good. Not much farming done on public roads which is needed very much on most clay roads. Farmers receiving $2.80 a hundred for 4 per cent milk which is plenty on account of the good pasture. Many farmers interested in raising poultry. Wheat, $1.30; corn, $1.10; oats, 50c; butter, 50c; lard, 15c; eggs, 20c; chickens, 25c; potatoes, $4.50; apples, 80c.—J. H. B., June 15.

Carbon County, Pa.—Farmers are planting potatoes and corn. A white frost June 13 did some damage to gardens, early potatoes and flowers. Early oats are not doing well. Grass is good and a heavy crop of hay is expected. Pastures are fine. Fruit prospects not very good. Old potatoes scarce, prices raised from $1 to $1 per bu. New potatoes selling at 5 lbs for 25c. Electricity being installed in many farm homes. Main roads are in very good condition. Cattle buyers driving around $150 for grades. Many dreading the T. B. test this coming autumn as condemned cattle bring only half the price the buyer is offering. A farm without a dairy is a poor proposition. Butter, 50c; eggs, 27c; potatoes, $3 @4.—J. A. G., June 18.

Chester County, Pa.—Corn is small, uneven stand owing to cool weather and unsound seed. Tobacco about 80 per cent planted, acreage lower by 20 per cent. Weather fine for transplanting. A few are haying. Crop heavy, well mixed with clovers. Harvest will not be before July 4th. Potato acreage larger than last year. Potatoes, old, $3.50; new, $4.50 per bu. Chickpeds, butter, 37@45c; eggs, 22@24c for white, spring chickens, 18@35c; old, 22@25c; wheat, $1.30; corn, $1.10; calves, 13½c.—C. R. E., June 21.

Lebanon County, Pa.—More than twenty young farmers met in a stock judging contest at the Schaefferstown farm, Saturday. The farmers, Galen J. Hartman, S. Annville, Warren Bucher, S. Relstville, and Stanley Smith, Midway, were judges at State College during Young Farmers' Week. Pomona Grange pays expenses. County Agent Berger was the instructor. A poultry disease clinic was held in Lebanon on June 16th. Corn just getting big enough for its second cultivation. Normal years see most corn plowed and out of the way for hay-making and harvesting. Stand averages 50 to 70 per cent. Grass, wheat, potatoes and oats are good. Alfalfa making awaits sunny weather. Wheat, $1.44; oats, 50c; hay, $20; straw, $14; eggs, 26c; butter, 55c. strawberries, 20c box.—R. I. W., June 20.

Mifflin County, Pa.—Had some fine farming weather the last few weeks with a few heavy rains. Corn mostly all planted. Many potatoes to plant; seed very scarce. Owing to continued wet weather wheat, oats and grass are looking fine. Some work being done on public roads which is needed very much on most clay roads. Farmers receiving $2.80 a hundred for 4 per cent milk which is plenty on account of the good pasture. Many farmers interested in raising poultry. Wheat, $1.30; corn, $1.10; oats, 50c; butter, 50c; lard, 15c; eggs, 20c; chickens, 25c; potatoes, $4.50; apples, 80c.—J. H. B., June 15.

Susquehanna County, Pa.—Farmers are planting potatoes and corn. A white frost June 13 did some damage to gardens, early potatoes and flowers. Early oats are not doing well. Grass is good and a heavy crop of hay is expected. Pastures are fine. Fruit prospects not very good. Old potatoes scarce, prices raised from $1 to $1 per bu. New potatoes selling at 5 lbs for 25c. Electricity being installed in many farm homes. Main roads are in very good condition. Cattle buyers driving around $150 for grades. Many dreading the T. B. test this coming autumn as condemned cattle bring only half the price the buyer is offering. A farm without a dairy is a poor proposition. Butter, 50c; eggs, 27c; potatoes, $3 @4.—J. A. G., June 18.

Tioga County, N. Y.—A few nice sunny days between the rains but not enough to dry out the ground for working. Corn made a poor stand; only a limited acreage planted. Potatoes not all planted yet. There was a slight frost the morning of the 16th. Local dealers paying $3 a bushel for old potatoes and selling new ones at $1.80 bu. Eggs, 25@26c; butter, 47@55c. The T. B. test is going on among the dairies. Great arrangements are being made for a celebration of Owego's 100th birthday.—C. A. A. H., June 18.

Union County, Pa.—We are having a fine rain today which is needed to start

Warren County, N. J.—Potatoes are growing rapidly and developing a very sturdy stock. Even tested corn germinated very poorly and the fields look thin, yellow and short. Wheat and rye short, about three weeks late. A little first crop alfalfa has been cut. Timothy and clover just heading, will be quite late. Milk has been reduced to the producer but not to the consumer and the outlook is not very bright. Cherries are ripening but are rather scarce. Pears and apples are dropping considerably. Strawberry crop about one-third in this section, selling for 20c qt. Corn and wheat feeds have advanced about $4 ton. Veal, 13c; eggs, 22c; butter, 48c.—A. S. P., June 25.

Young Farmers at Penn State

(Continued from page 3)

experimental plots. Later all assembled on New Beaver Field for the group photograph which was followed by a recreational period under the leadership of Professor W. R. Gordon. The evening program included vesper services in the open air theatre and movies.

Friday morning the groups resumed their tours of inspection. In the afternoon many of the boys and girls accompanied by their teachers and chaperons visited Penn's Cave.

The evening program started out with vesper services in the amphitheatre where Reverend Mackey gave a very inspiring talk. This was followed by the evening session in the Auditorium where the various prizes were awarded. The gathering was in charge of State Club Leader A. L. Baker, who introduced the various speakers.

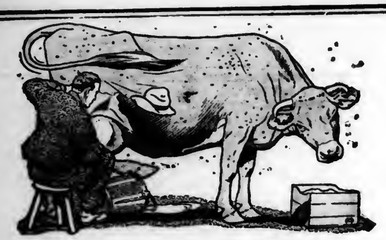
It was of interest to observe the number of girls who won prizes. Louise Edwards, of Cambria County, and Lolita Peffer, of Cumberland County, took first honors as individuals in the club livestock and poultry judging contests. Three other club girls also won honors by placing among the first ten in each of the above contests.

In team awards a team composed entirely of club girls from Cambria County won first in the livestock judging contest, while a team consisting of two girls and one boy from Sullivan County won first in the dairy judging contest.

Three boys from Centre County placed first in judging poultry, thereby winning the Pennsylvania Farmer Cup. Gerald Mowery, of Franklin County, made the high individual score in the dairy judging contest.

The vocational judging contests were also the scene of some very keen competition. The dairy judging honors were won by the Reinerton Vocation High School while Norman Updegrove, also of Reinerton, secured first prize in the contest for individuals. West Newton Vocational High School was the winner in the livestock judging contest and Sam Dave of the same school won first individual honors.

There were twelve teams entered in the county swine judging contest which was won by Northampton County.



Dr. Hess Fly Chaser

makes cows milkable

They relax. They let down. You get the last drop. It is long lasting.

Dr. Hess Fly Chaser has the odor of the pines. Because of this odor it serves a threefold purpose:

First—It is the most effective fly and mosquito repellent known to science—quick in action, long lasting.

Second—It is an excellent disinfectant. Therefore, while it is keeping the flies away, it is also destroying the disease germs that attack your cow's body—disinfecting your barns, and injecting into the atmosphere a most healthful odor.

Third—No herd sprayed with Dr. Hess Fly Chaser ever suffers from warbles, which cause a great annual loss to dairymen and farmers.

It does not blister—does not stain the hair—does not taint milk. Applied to the hands and face, it keeps the mosquitoes away.

If Dr. Hess Fly Chaser does not prevent the milk dump, make your cows milkable in fly-time, save your horse-flesh all summer long, it will not cost you one cent.

DR. HESS & CLARK, Inc., Ashland, Ohio

COW-EASE

Keeps flies away··· Makes cows *PAY!*

Turn your cows' comfort into cash. Spray them with Cow-Ease twice a day and you will get more milk, better milk. Tests prove this. Cow-Ease, applied with a sprayer, won't injure a cow's skin—but it *does* keep flies off. Equally effective on horses or in hen houses.

One gallon sprays 200 cows. Get the can with the blue Cow-Ease label. If your dealer hasn't it, send his name and address and $1.50 ($1.75 west of Missouri River), to Carpenter-Morton Co., Boston, Mass., and we will deliver one gallon, prepaid. Sprayer 60c. extra. *Satisfaction guaranteed.*

If your dealer can't supply you write

Twelve of Montgomery's Twenty-One C. T. A. Herds Go on Honor Roll

Editors' Note.—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a 300-pound butterfat average, whose names appear at the end of the report, will be awarded ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Montgomery C. T. A. finished its third year May 1, 1927, with twenty-one whole year members. There were 373 cows in the association during all or part of the year.

The result for the three years' testing is as follows:

Year	Avge. no cows	Pounds milk	Pounds butterfat
1925	331.65	7563	281.2
1926	330.10	7789	295.9
1927	319.10	7991	305.3

The results for the whole-year members are as follows:

Total average number of cows in the association	319.10
Ave. per cow: Lbs. of milk	7991
Pounds of butterfat	305.3
Percentage of butterfat	3.8
Value of product	$299.10
Cost of pasture	12.06
Cost of roughage	52.12
Cost of grain	60.82
Total cost of feed	125.00
Value of product above feed cost	174.10
Returns for $1 expended for feed	2.39

The following is a grouping of all cows producing over 300 pounds of butterfat: Above 900 lbs., 1; between 600-700 lbs., 1; between 500-600 lbs., 2; between 400-500 lbs., 21; between 300-400 lbs., 111. Total number of cows producing over 300 pounds of butterfat, 136.

A registered Holstein cow owned by Wm. H. Landis, of East Greenville, "Greenhill Bellwood Hengerveld," had the following high productions for the last two years:

Year	Pounds milk	Pounds butterfat
1926	19,707	791.3
1927	22,723	924.9

This is the second cow in Pennsylvania cow testing associations to pass the 900-pound mark in production of butterfat. In 1921 Mr. Young, in Somerset County, had a registered Holstein cow that produced 925 pounds of butterfat.

County Agent, R. G. Waltz; Cow Tester in Charge, F. E. Martin; summary compiled by I. O. Sidelmanu.

Twelve herds with an average of 5 or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Pounds milk	Pounds butterfat
Wm. H. Landis, East Greenville	18.75	R. H.	11,994	428.9
Ursinus College, Collegeville	14.50	R. H.	10,834	374.0
Levi Schultz, Est., Palm	13.92	R. & G. H.	9,685	342.3
Warren G. Schultz, East Greenville	13.25	R & G. H.	9,269	329.3
Owen S. Gerhard, Palm	21.33	R. & G. H.	9,313	323.8
Miss L. T. Morris, Chestnut Hill	11.67	R. J.	5,531	319.7
Hartman & Weinberger, Palm	15.58	R. & G. H.	8,886	319.3
O. M. Woodward & Son, Pennsburg	9.42	R. & G. H., R. & G. B. S.	7,401	318.5
Mrs. W. B. Saunders, Bryn Mawr	18.00	R. & G. H., G. A., G. J., G. G.	8,251	311.4
Mrs. Howard Bieler, East Greenville	13.67	R. & G. H.	8,759	305.1
H. D. Allebach, Trappe	15.17	R. & G. H.	8,630	302.8
A. K. Rothenberger, Lansdale	17.25	R. & G. H.	8,579	300.5

The Hungry Rope

(Continued from page 15)

in. Voices in the kitchen. He would listen, sneaking near. And lo! he himself, his bygone life, and certain unpleasant later details, made the subject of the talk. It was his mother, innocently gossiping with a detective!

What a joke on her! What a joke on every one concerned! Wilson's racial bravado, with his racial spirit of careless laughter, did the best. He could not resist the temptation to speak.

"Ah reckon Ah'll be goin' now," he tossed at the pair, and fled into the outer night.

So much of the story of the negro's latter days at large did First Sergeant Snyder rapidly and exactly build up from sound foundations of fact supported by ample evidence. These facts, orderly presented in form for immediate use, and this evidence, reposed on the day of the trial in the hands of District Attorney Whitehouse, of Schuylkill County.

Charles Wilson, led into Court, walked with a swaggering lurch that told its own tale of restored self-confidence.

As the irons dropped from his wrists he turned deliberately to bestow on Judge-President Bechtel, whose life he had promised to take, a look so boldly evil that a State Trooper quietly moved to the front of the Judge's seat.

Then as the trial opened, the vanity of the prisoner reached its height. Having pleaded, "Not Guilty" on all counts, he now proceeded to discard his able counsel and to conduct his own defense.

But even without that folly, his case was hopeless. First Sergeant Snyder's structure, built on scientific legal lines, in the manner of the State Police, stood like rock. Beginning with the revolver taken from the railway officer on the top of the coal-car at Port Clinton and recovered by First Sergeant Snyder from the negro in the swamp, the series of exhibits was complete. The roster of witnesses showed as handsomely.

It was therefore due solely to an extraneous circumstance that the prisoner escaped with his life. Daniel Wagner, after days in the very doorway of the other world, was getting well—was now safe. Consequently Wilson's sentence, which must otherwise have been the electric chair, became twelve years in prison.

After those twelve years, what?

(The end)

FARM LANDS

SOUTHERN WILAMETTE VALLEY—Ideal conditions. Everything grows. Poultry, dairying, every month. No destructive storms. Write Lenth com-fort prospects, literature free. Johnston, Farmers Realtor, Cottage grove, Oregon.

FOR WHITE PEOPLE ONLY—Valuable land at low prices. Sold on reasonable terms. Fine fruit, truck and farming land. Send for free list of bargains. Mills Land Company, Booneville, Arkansas.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

THRUSH.—Please advise me what to do for thrush in a horse's foot. I have a mule that has thrush in its left front foot.—G. A., Rochester Mills, Pa. Clean the foot thoroly, cutting away diseased tissue and wash with a warm antiseptic solution. If necessary put on a bandage over cotton saturated with a chlorine solution. After a couple of days remove bandage. Keep foot dry and clean.

MULE IS LAME.—I have a mule that gets lame in the right front leg. My veterinarian said it was shortening of the tendons. He blistered it but didn't help it. Is there any cure?—M. S., Fairfield, Pa. The condition described as shortening of the tendon may be relieved by operation. This must be performed by a trained veterinarian. The deeper tendon is severed, allowing the heel to come in contact with the ground. Blistering is customary at first, but failing in this the operation would be indicated.

DOG IS LAME.—I have a very valuable Collie dog that wandered to the home of a neighbor a few days ago. When he returned he was somewhat crippled and after lying down he could not get on his feet without assistance. I think he was struck over the back. What would you advise?—R. L. H., Montourville, Pa. It is very likely that rest will be the best treatment for this dog. See that the bowels move daily, using castor oil, if necessary. Feed a sufficient quantity of food, principally meat and milk, to maintain body vigor. Bathing and massage of the affected part would be indicated.

SOW NOT DOING WELL.—We have a young sow that has had only one farrow (last fall). When pigs were weaned she seemed all right but she has never come in heat. For some time there has been a swelling on her stomach, her coat is rough and appetite poor. On examining this swelling I found a milky-looking fluid exuding and the swelling felt like a hernia. What treatment would you recommend?—F. M. G., Frankford, Del. The failure to come in heat may be due to ovarian changes that will be fatal to future breeding. The administration of certain gland extracts sometimes exerts a favorable influence on this condition. Your veterinarian will be able to discuss this with you. In case an examination reveals a hernia it would be better to discard this animal from your breeding lot.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 5 cents a word each for one, two or three consecutive weekly insertions; 3 cents a word each for four or more insertions. Count each number and initial and send of cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations need must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Herb the Handy Man Tells How—

The SIDE-DELIVERY RAKE IS THE BEST MACHINE FOR CURING CLOVER OR ALFALFA HAY
I'm TELLIN' YA SID-THERE AIN'T NUTHIN' LIKE A SIDE D'LIVERY RAKE FOR CURIN' HAY!
DO YA SPOZE IT'LL CURE HAY FEVER?
Rake hay INTO WINDROWS AS SOON AS IT IS WILTED
CURING IN WINDROWS SAVES THE LEAVES, THE MOST VALUABLE PART!
WHAT TH' HECK HAS MACTAVISH BEEN CHASIN' 'ROUND HIS HAYFIELD THE LAST HALF HOUR? A BUTTERFLY?
NAW! THAT'SA LEAF WHAT BLEW OFF MC'S ALFALFA HAY
If it rains TURN WINDROW OVER WITH THE RAKE AS SOON AS TOP IS DRY
DAGGUM IT ERNEST, AM I GOOFY—OR ARE YOU PUMPIN' UP YER HAY?
CERTAINLY! SOME SMART ALICK LET ALL THE WIND OUTA MY WINDROWS LAST NIGHT
Drive rake IN SAME DIRECTION HAY WAS CUT—(THROWING TWO SWATHES TOGETHER)
IN TURNING WINDROW AFTER RAIN'S DRIVE IN SAME DIRECTION YOU DID BEFORE
HEY! DRIVE THE SAME DIRECTION YE DID BEFORE!
TRY AN' MAKE ME!
JAMES TWIG

DANDRUFF IS INEXCUSABLE—

And now it is avoidable

PUT it up to yourself: could you honestly be attracted for any length of time to a person who had a case of loose dandruff?

This all too common condition is humiliating to the victim, and disgusting to everyone. The pity of it is that often many suffer needlessly.

Now loose dandruff is one of the easiest diseases to combat. If you have the slightest evidence of it, go after it immediately with Listerine, the safe antiseptic.

Here's how you do it: Simply douse Listerine on the scalp full strength and massage thoroughly. Listerine softens dandruff, while massaging loosens it, and permits the tell-tale white flakes to be washed away.

Keep the treatment up for several days. Do it systematically. Except in the most stubborn cases, marked improvement is apparent almost at once.

Lambert Pharmacal Company, St. Louis, Mo.

SPREADING LIKE WILDFIRE

So goes the good news about Listerine Tooth Paste—the dentifrice that gets teeth whiter in quicker time than ever before. The price—25c for the large tube.

ESTABLISHED 1880 — PUBLISHED WEEKLY

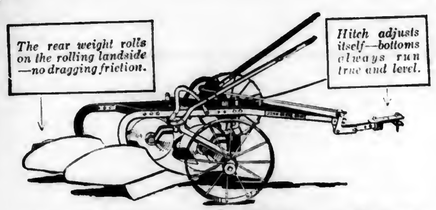
Vol. 96 — PHILADELPHIA, PA., SATURDAY, JULY 9, 1927 — No. 2

EXPERIMENT STATIONS JUL 12 1927

Young farmers at the Penn State leadership training school and annual encampment. See page 2.

Our rambling fruit grower experiences California's two kinds of weather. Page 3.

"Get Your Man"—Another true story of the State Police. Page 14.



The rear weight rolls on the rolling landside —no dragging friction.
Hitch adjusts itself—bottoms always run true and level.

Get Clean Plowing Behind Your Fordson

You know that good, clean, uniform plowing is your most important farming operation—that there is a positive relation between good plowing and good yields—that no amount of subsequent tillage will correct the mistakes of poor plowing—that good plowing requires, first of all, a good plow.

The John Deere No. 40 has the Bottoms Famous for Good Work

Good work by a plow depends primarily upon its bottoms.

The John Deere No. 40—the plow for the Fordson—is equipped with bottoms that are the products of nearly a century of leadership in building plows.

These bottoms scour and do the clean, thorough job that makes the perfect seed bed possible. There's a type for every soil.

The "40" pulls lighter because all of its weight rolls and because the hitch adjusts itself to make the bottoms run true and level at all depths.

It's the husky plow for the Fordson—beams are guaranteed not to bend or break; well-braced frame, with hot-rivited connections, has lasting rigidity.

See it on display in your town.

Write today for full information about the "40", to John Deere, Moline, Illinois. Ask for Booklet FT-536

They Represented Pennsylvania at Washington

HEAD, Hand, Heart, Health. Those are the watchwords of the 4-H Club members who held their national encampment at Washington, D. C., June 16 to 23rd. More than 586,000 farm boys and girls enrolled in club work thruout the country were represented by delegates at the camp. They came from 38 states,—two boys and two girls from each state, accompanied by two extension workers.

Pennsylvania was represented by the following 4-H Club members: James Longenslager, Walter Straw, Grace Thomas, Katherine Wheeler.

James Longenslager, of Liberty, near the Lycoming-Tioga County line, was the leading potato club member of his section in 1924 and 1925. In 1926 he had the third highest yield of any 4-H boy belonging to an acre potato club in Pennsylvania. His father died when he was 14 and since that time James has run a 78-acre farm. He is now 19 years old.

Walter Straw, of Clearfield County, was a potato club member in 1922, 1923 and 1924. He was a leader in the Jefferson-Clearfield County Club Camp in 1925. This year, at the age of 18, he has organized a community potato club, and also a Guernsey calf club which has been very successful.

Katherine Wheeler, of Muhlenberg, Luzerne County, has completed all of the club projects in sewing, cooking and home management. Last year, when she was 15, she finished three years of clothing club work which entitled her to a gold College seal. She has attended two Grange Rural Leadership Camps at Centre Hall and has been instrumental in getting club work started in her community. She will enter the Pennsylvania State College this fall.

Grace Thomas, of Aldenville, Wayne County, will complete three years of clothing club work this year. The residents of her home community were so well pleased with the results shown by this 18-year-old girl that they bought the girls of the club a new sewing machine.

The cost of the trip to Washington was financed for the four Pennsylvania delegates by the banks of their home counties. They were accompanied on their trip by Miss Nitzkowski, home demonstrator of Luzerne County, and A. B. Bingham, of State College, assistant state club leader.

Recent Happenings

Last year six boys in Springfield Township, Fayette County, bought and paid for a combination sprayer. With it they sprayed their own potatoes and then went out to do custom spraying. The average yield obtained by the six boys was 260 bushels per acre. This year each boy plans to grow two acres, double last year's acreage.

♦ ♦ ♦

Nine counties in Pennsylvania are now officially free of bovine tuberculosis: Lawrence, Butler, Cameron, Clearfield, Indiana, McKean, Mercer, Crawford, Jefferson. The last three named have been accredited more than one year.

♦ ♦ ♦

Indiana County is strong for soy beans. In White Township alone 125 acres will be grown this year. Those who have grown the beans successfully have found that they should be inoculated unless they are planted on soil which has previously grown soy beans and that they should be planted shallow so that they can come up quickly and beat the weeds.

♦ ♦ ♦

About 100 men will guard the quarantine lines to keep infested corn from being carried out of northwestern Pennsylvania into the borer-free area of the state. Powell G. Brown will direct the quarantine enforcement from his headquarters at Meadville. He was recently appointed Corn Borer Administrator for Pennsylvania by Secretary Jordan.

This Week's Cover Pictures

THE pictures on the first page of this issue were taken at the Pennsylvania State College during Young Farmers' Week, June 13-18th.

The young men in the oval are club members who attended the Leadership Training School early in the week, and acted as guides and leaders when the majority of the young farmers arrived on Wednesday. The boys in the group are, from left to right:

Front row—James Gearhart, Bucks; Walter Frederick, Westmoreland; Ellsworth Dunn, Fayette; Earl Glasser, Indiana; Robert McLean, Carbon; William Barr, Jefferson; Paul Sandt, Northampton; LeRoy Dunlap, Clinton; Joseph Slottge, Cameron; John McClosky, Centre

Middle row—Samuel Vanscoy, Wyoming; Herbert Fish, Erie; Lester Campbell, Northumberland; Paul Reist, Cumberland; B. Stoner Dietz, Cumberland; Lloyd Phillips, Clarion; Eugene Erb, Blair; Christian Bomberger, Lebanon; William Strong, Cumberland, Floyd Carbaugh, Adams.

Top row—Dean R. L. Watts, J. C. Buef, Assistant State Club Leader; Orvil McAdoo, Washington; Ray W. Fritch, Berks; Harmon S. Wertman, Lycoming; George Luse, Centre; J. F. Keim, Assistant State Club Leader, State College; M. T. Hartman, Cameron County Agent

The three boys are the members of the Centre County Poultry Judging Team. By their skill they won the Pennsylvania Farmer Cup. The boys are, left to right: Robert Heckman, Spring Mills; Earl Zettle, Spring Mills; Nervin Stover, Millheim.

The girls, members of the Cambria County delegation, won first place in livestock judging. They are, left to right: Isabell Jones, Wilmore; Delrose Farabaugh, Loretta; Louise Edwards, Ebensburg.

The York County club boys, shown at the bottom of the page, made the trip to the College in two large buses. Their leader, County Agent Weber, stands at the extreme right.

Rambles of a Pennsylvania Fruit Grower

An Easterner Relieves His Feelings on the Subject of California's Climate

By Dr. S. W. FLETCHER
Staff Contributor and Adviser

I HAVE nothing but admiration for California horticulture and there is no getting away from the census statistics, which show that the Golden State produces about one-third of all the fruit grown in the United States. That is why I am here from the effete East to spy out the land for the unfortunate fruit growers back home. Climate, however, is the most wonderful thing in California. Several hundred people have told me so within a week. It is second only to California scenery, which is wonderful only in a slightly lesser degree.

It seems to be imperative that I shall show the proper degree of enthusiasm about both climate and scenery. The next time I come to California I am going to conceal a small phonograph with a loud speaker somewhere about my person so that I can turn it on when occasion demands and my California guide can hear it say, at appropriate intervals, "Yes, this is perfectly wonderful"; or, "No, I have never seen anything so beautiful"; or, No, we have nothing as wonderful as this in Pennsylvania"; or, "Yes, the climate back East is very trying." This would save me a lot of breath and answer the purpose quite as well.

Bad Weather Is Always "Unusual"

I am becoming gradually resigned to the superior, pitying smile which the Californian bestows on me when I am forced to admit that I come from Pennsylvania. What a wonderful experience it must be to be numbered among the chosen people who are privileged to live in this idyllic spot!

Having gotten these ill-natured remarks out of my system, the accumulation of several weeks of difficult repression, I am ready to talk sanely about California. It should be noted, as an aside, that the weather in southern California this spring has been "very unusual," which means that it has been about as raw as anything we can produce in a Pennsylvania springtime. I learn, on further inquiry, that there are only two kinds of weather in California, perfect weather and unusual weather.

The most interesting thing about California to me is the remarkable change in climate and horticulture within a few miles, as determined by altitude, proximity to the ocean, local topography and other influences. I took an auto trip from Maine to Florida and back again in a single day, or so it seemed to me, and shall try to reconstruct this trip, which well illustrates the amazing contrasts in California horticulture.

> ***Speaking of Warm Weather—***
>
> DOCTOR FLETCHER says, "When I passed thru the Coachella Valley the temperature was merely 110 degrees in the shade, but often it goes to 125 in the shade and 150 in the sun. . . . Some of the natives say it goes above 150 degrees sometimes. My idea is that these people do not know; that after it goes above 120 they do not care—they are unconscious."

We start from sea level at San Diego, amid lemon groves, which require a frostless climate, oranges, avocadoes and other tropical and subtropical fruits; all grown under irrigation. Lemons have not been profitable for several years and the groves show it.

A few miles inland we pass thru the hot, dry El Cajon Valley, once famous for its raisins but the grapes are all sold fresh in these piping times of prohibition. Here, also, are strawberries that are truly everbearing for a crop may be had at any time of the year by manipulating irrigation and runner cutting. Further on, in the foothills, are apricots, peaches and plums with a few apples, mainly Winter Banana and other yellow varieties; for red sorts do poorly in a hot climate.

Sixty Miles Brings Change of Horticulture

Climbing the mountains, another hour brings us into a bit of central Pennsylvania, with clear trout streams, green pastures and pine woods. The rainfall here, at an altitude of 5000 feet, is 40 to 50 inches, as compared with nine inches in San Diego, sixty miles away. The winters are frequently snowbound and the lakes freeze several inches thick. Here are successful apple orchards—Jonathan, Delicious, Stayman, Rome—with cultural problems not unlike our own. Topping the divide we drop down precipitately into the Imperial Valley, which is below sea level. When I first saw it, twenty-six years ago, it was a parched sagebrush desert. Now there are 700,000 acres under cultivation and it is considered one of the richest agricultural districts in the world. It is famous for its cantaloupes, head lettuce, cotton and alfalfa. Last year the Valley shipped 33,000 crates of cantaloupes, beginning to move about May 10th.

Land is $150 to $200 an acre, with water. The annual cost of irrigation is about $12.00 an acre. This was once an inland sea; in places the black silt deposited here by the (to page 17)

Dairymen Discuss Abortion Control

Their Records Indicate That Bang Bacillus Disease Can Be Eradicated

By J. N. ROSENBERGER, V. M. D.

THERE is a proper way of going about the solution of every problem. Many methods and many remedies have been tried and have failed to control Contagious Abortion in cattle. The disease is old. Its control is new. While there is still no cure for the disease, it can be prevented.

Dairy farmers, county agents and veterinarians met some time ago in Doylestown, Pa., to study the progress being made in eradicating contagious abortion (Bang Bacillus Disease) in cattle, under the Pennsylvania Plan by means of the blood test. The meeting was well attended by local veterinarians and breeders. County agents spoke on the importance of eradicating this disease before starting breed improvement programs.

Study Bucks County Records

The first session of the conference was conducted as a round-table forum. Charts and well-kept health, breeding and dairy records on seven outstanding herds in Bucks County were carefully studied. The animals comprising these seven herds numbered 206 of which 19 animals reacted to the blood test. Blood had been drawn from one herd of 20 animals over a period of five years. Six other herds were tested more than five times during a period of one year. In all, 986 samples of blood were tested, from which as above stated 19 animals or approximately 10 per cent reacted positive.

Accurate breeding and calving dates showed that 80 per cent of the 19 reacting cows had aborted at sometime, either before or after reacting to the blood test. Only 1.5 per cent of the cows negative to the blood test aborted from all other non-infectious causes.

In studying these records it was explained and emphasized that these are average results and will vary therefore with results in almost any individual herd, for among the seven herds were three that showed no infection, while among the four infected herds one showed 92 per cent of the animals infected.

Among the 19 cows reacting positive to the blood test, four cows or approximately 20 per cent of the reactors did not abort. Dr. M. F. Barns, in charge of research work on this disease for the Pennsylvania Department of Agriculture, Bureau of Animal Industry, explained in this connection that when the afterbirths of such reacting cows had been fed experimentally to non-reacting animals, the clean animals frequently became infected and subsequently would abort. For this reason, he said, all reactors should be considered "spreaders" of the disease, even tho they themselves sometimes did not abort.

Non-Breeders Found in Affected Herds

The second session of the meeting was devoted to the study of the physiology of the regenerative system, breeding, health and dairy records.

These records showed that in three herds having no infected animals, only two per cent of the cows failed to breed, while 57 per cent of the reacting animals failed to breed.

No accurate means were available for comparing the net profits made in the clean herds with those in diseased herds. However, it is needless to add, cow testing (to page 17)

Vol. 96, No. 2 Phila., Pa., July 9, 1927 Whole No. 1573

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Courage grows by success in little things. Perhaps we need to begin with neglected duties easily within our reach, in order to get courage for larger duties beyond.
—Isaac Ogden Rankin.

Crop Conditions

REPORTS for the last week in June covering Pennsylvania and New Jersey show a general improvement of crops, except in the northwestern part of Pennsylvania where the low temperatures continue to retard progress. There has been sufficient moisture in most places, altho the temperature was slightly below normal. Grass, oats, wheat and potatoes have continued to develop and show promise of fair crops. Corn in every section is small and uneven. The June drop of apples was heavy in nearly every section and the yield this year will be far below the 1926 crop. Berries are and have been good crops in this territory.

How Do You Like the Stories?

READERS may not all know that the stories which are now appearing in Pennsylvania Farmer are history rather than fiction. They are the records of incidents that actually happened to members of the State Police Force in the discharge of their duties, written by a gifted young woman. We were so impressed upon reading them that we felt they would help others to realize the kind of work these efficient guardians of the public welfare are doing, and the hazards which attend the discharge of duty. After getting consent to publish them one of the editors made a personal investigation and found no reason to doubt the authenticity of every story. What do you think of them? We should like to know.

Find a Master Farmer

WE WISH to call to the attention of Granges, farmers' clubs and other organizations the Master Farmer project now being carried on by Pennsylvania Farmer. We believe they will find entertainment and instruction in talking over the matter in their meetings. We recommend the appointment of a committee in each body, after the matter has been discussed, to survey the neighborhood and see whether there is at least one farmer who would be worthy of nomination. The one and only purpose we have in promoting the idea is to give every community a chance to advertise farming by proposing the names of its best farmers, and thus advertise agriculture to the general public. But to do it well we need the cooperation of the farmers themselves. There is no obligation and no expense attached to such cooperation. See the score card reprinted on page 17.

Fewer and Better Acres

REFERENCE to the statistics shows that the farmers of Pennsylvania are tilling fewer acres than they did forty years ago, but that they are producing much more than then. To be specific, the acreage devoted to corn, wheat, oats and potatoes in 1926 was five per cent less than in 1886, yet the total amount of these crops was 40,000,000 bushels greater last year than forty years ago. This should answer emphatically those who ignorantly charge that farmers are slow to learn better methods. It should also be sufficient answer to those who wonder whether it pays to use fertilizers, raise legumes, rotate crops, plant good seed, control disease and pests, says a circular from the Department of Agriculture.

Income and Other Taxes

FEWER and bigger taxpayers seems to be the tendency just now. While the number of people paying federal income taxes under the 1926 law was less by forty-three per cent, there is an increase of over thirty million dollars in the total amount of tax returned in spite of the fact that the rates were lowered. The tax reports show that 207 persons and corporations in the United States had incomes of over one million dollars,—twenty-eight of them being in Pennsylvania. Seven persons had a combined income of $61,000,000, and paid $10,000,000 in taxes. This information is causing renewed demand for lower federal tax rates.

Much of this tax-producing wealth will pay little or no tax when it is relieved from paying federal taxes. This is most unfortunate and unfair at a time when the taxes of the other ninety-five per cent of the people are doubling and trebling. In spite of the fact that federal debts are becoming less, state and local debts are increasing rapidly, making taxes high. These increased taxes are being used to improve the institutions of the country, thus making it easier for the rich to increase their riches. Why should not this ability to pay taxes contribute towards all public improvements?

In 1917 the per capita debt for all the states was $4.39, while in 1926 it had risen to $11.46. Arizona and Nebraska are the only states having practically no state debt. In Pennsylvania the state debt amounts to $8.78 per capita, New York $19.81, and New Jersey $15.76. In addition to this, practically every sub-division, city, borough, township and county, have bonded indebtedness. But it is in bonds that great wealth finds place for investment, hence the lack of agitation against increasing public debts.

The Last Call

THE final date for nominating candidates for the Master Farmer Award is near at hand. All score cards should be mailed within the next week.

Full information about the Awards appeared in the issue of June 25th. A reprint of this information and extra score cards may be obtained from the Master Farmer Editor, Pennsylvania Farmer, Philadelphia.

For the convenience of readers the score card is reproduced on Page 17 of this issue. To nominate a candidate for the Award it is necessary only to fill out and sign the score card and mail it to the Master Farmer Editor before July 15th.

If

IF THE present unfavorable corn weather continues, and IF the crop should be cut short in an immature stage as it was last year, there will be another and worse shortage of seed corn. There is no cause yet for great alarm, but the provident farmer always keeps the IF before him. Anything in the way of intensive cultivation, fertilization, and prevention of weeds that can be done to hasten maturity this year should be done. Soil that is well supplied with lime, and phosphoric acid in the form of acid phosphate, stands the best chance of finishing the race ahead of frost, especially if the seed planted was fully mature and viable.

The Pay-As-You-Go Plan

THOSE who are familiar with the policy of Pennsylvania Farmer in regard to public financial policies know that we do not favor the indiscriminate issuing of bonds for future generations to pay. But neither do we subscribe fully to plans of the pay-as-you-go advocates. There are some forms of public improvements which, if we are honest with ourselves, will serve future generations as well as our own and part of the cost may properly be laid upon them. The pay-as-you-go plan necessarily compels cheaper and less durable construction, hence we not only have less satisfactory institutions for the present, but we bequeath them and the attendant costs to others. The development of the science of building and other construction work makes it possible to make improvements which will last several generations. School and other educational buildings, highways, the development of water power, are some of these possibilities. The establishment of forests and public reservations especially will benefit our posterity and the creation of them entails cost which they should help to bear. We should not forget that mankind is one continuous whole.

Editorial Sidelights

ALTHO they may not be as honest about it, Californians probably talk no more about the weather than we do here in the East. The hot spells and the cold ones, the wet ones and the dry ones, are our conversational standbys. According to Doctor Fletcher (Page 3) our western cousins save energy for other purposes by classifying all weather either as "perfect" or "unusual."

Once when Doctor and Mrs. Fletcher were entertaining a group of Pennsylvania fruit growers in their home a "Yes-and-No" game helped make the evening a lively one. All were warned not to answer plain "Yes" or "No" to any question. Those who were tricked into using those words had to pay a forfeit to the person who caused the slip.

Why not a similar game for Granges? Weak treasuries might be strengthened if a small fine were collected every time an arriving member used such expressions as "Looks like rain," "Nice day," "Pretty warm." And incidentally, everyone might find conversation more varied and more interesting if the weather topic were taboo.

FARM LEADERS CONFER

Brenckman and Gray Discuss Farm Relief with Secretary Jardine—Federal Operation of Air Mail Ends.

Washington, D. C.

WHILE making no claims that the farm relief question can be settled by departmental research, Chester Gray, of the American Farm Bureau Federation, and Fred Brenckman, of the National Grange, in a conference at the Department of Agriculture told Secretary of Agriculture William M. Jardine that the speedy return of agricultural prosperity can be definitely helped by practical methods for the elimination of waste and loss in every phase of production and marketing. The appeal to Secretary Jardine for support of a larger program of fundamental research in agriculture was backed by a delegation representing a large number of farm and trade organizations.

Fred Brenckman, who acted as chairman, said at the conclusion of the conference that the Secretary of Agriculture assured the delegation that while he found it necessary to scrutinize every project proposed, he fully approved the presentation which had been made as to the importance of this program, and the results it might be expected to bring about.

Research Needed in Many Lines

The need for more research work in marketing to eliminate wastes and losses in the distribution of farm products was stressed by representatives of all the organizations.

The dairy interests want the research work in the utilization of skimmilk and other by-products of the dairy industry continued and expanded. They want larger appropriations for the extension of the fundamental research now going on in the Bureau of Dairy Industry to increase the inheritance of high producing characteristics in dairy cattle.

The tanners, thru their organization, are asking for the development of methods to successfully eliminate the ox-warbles which cause heavy damage to cattle hides. The National Canners' Association wants the aid of the Department of Agriculture in ridding the cannery crops of destructive pests, and also in developing pure seed that is true to variety in all characteristics.

Wants Facts in Plain English

It was pointed out by Mr. Brenckman that farmers should be informed of the results already achieved, in plain humanized language that they can understand. He believes there is room in the Department of Agriculture for a man who can translate the findings of scientists into everyday farm English so that farmers can make use of the vast amount of information now stowed away in the Department of Agriculture.

Private Concerns to Carry Air Mail

All the airplanes purchased by the Post Office Department for carrying the mails on the transcontinental routes have been sold by Postmaster General New to private corporations for only a small part of the original cost to the government, and the air-mail field equipment and buildings on seven regular landing fields have been transferred to the municipalities where the fields are located. This will end the government's operation of the air mail service except by contract with commercial flying companies. The action was taken in accordance with an act of Congress, providing for the disposition of government air mail property upon the relinquishment of that service to private initiative.

Will Demand Higher Tariff

Those tariff reformers who are agitating against the tariff will be met when Congress convenes with a strong demand for a revision of the tariff upwards to protect American agriculture and industries from the increasing importation of foreign-made goods, says Representative Wood, of Indiana, who says these increases will be necessary if the tariff is to afford any real protection.

Anti-Dumping Bill Effective

The Produce Agency Law became effective on July 1, with no money available for making investigations of misleading reports and false returns to shippers until Congress makes an appropriation to enable the Department of Agriculture to develop an organization. The proposed appropriation of $25,000 was in the deficiency bill that failed to get thru Congress last winter. The anti-dumping features of the bill, however, may become effective, inspectors of the Bureau of Agricultural Economics being ready to make inspections in case receivers wish to dump produce.—E. E. R.

ROAD CONTRACTS LET

Proposed Improvements Will Link Existing Highways—Owner-Farmers Increase—Gas Tax In Effect.

Harrisburg, Pa.

PLANS of the State Highway Department for summer and fall road construction are causing some dismay among the political chieftains because of the fact many of them are "links" the state's engineers have picked out as the most important to build. In a number of instances the proposals did not fit in with some of the plans of leaders and in consequence there have been protests. However, the list as announced at the Highway Department indicates the improvement of some of the sixty-five so-called "links" or stretches of road which would connect existing concrete or other pavements. Contracts for extensive projects on which bids were opened in the spring have lately been awarded and in the number are several built jointly by the state and counties.

Tenants Decrease

Officials of the State Department of Agriculture have issued a comment upon the tenant farmer situation, calling attention to the decline in the number. At the same time attention is called to the increase in production of various crops. The situation in Pennsylvania has attracted much attention because of the decrease in farms, in the size of cultivated areas and the gradual increase of owner-farmers in many communities. There are stated to be 10,000 fewer tenant farmers than a decade ago.

Beetle Expected Soon

While corn is struggling against adverse weather conditions in western and northwestern Pennsylvania and the borer quarantine is consequently not as active as it will be in a few months, steps are being taken to perfect the Japanese beetle crusade. The weather has retarded appearance of the beetles, but it is now expected they will be abroad inside of the next few days and this week the every-day and twenty-four-hour quarantine will be instituted. The area added to the quarantined district by the new orders is being closely organized and assistance of local authorities has been assured.

Name Show Board

In the next few days it is probable the board to have charge of the midwinter farm show will be chosen. The legislature authorized creation of a commission which would make the Show a state affair and laid the ground work for a permanent exhibition. The first duty of the Commission will be to provide adequate space for the Show which is about to be enlarged and it is likely recommendations will be made to the next general assembly for buildings here.

More Dogs Licensed

Probably more complaints about dogs have come to the Capitol this summer than known for a long time and in many instances they are matters belonging to local authorities. The number of animals licensed is expected to break the record this year and arrests have been numerous in districts where people failed to pay for the dog tags.

Fertilizer Cases Heard

Results of the spring inspection of fertilizers are commencing to appear and of late a score of arrests have been made for the sale of brands not registered. This follows a very close check up and in some instances practices which state officials say are reprehensible have been turned up.

Will Watch Gas Tax

Effectiveness of the new law increasing the state gasoline tax on July 1 is to be followed by launching a close system of inspection, especially in rural districts. The town and city gasoline filling stations are being checked in a manner more satisfactory than heretofore and the plan is to get closer supervision of business of the stations along the roads.

Wheat Cutters Ready

According to reports from southern counties this week will see cutting of wheat, in spite of predictions there would be nothing doing Fourth of July week. In parts of the lower wheat belt the stalks are well developed and dense.—T. C.

LECTURERS ORGANIZE

First Conference of Grange Speakers Will Be Held in August—Potato Experts Fix Seed Requirements.

Trenton, N. J.

THE first annual conference of Grange lecturers of the eastern states will be held at New Brunswick, N. J., August 23 to 25th. The Grange lecturers are called in for this conference from New York, Pennsylvania, Delaware and Maryland. The plan is to organize at this initial meeting an annual conference which will discuss the problems of lecture work and bring about further fraternal cooperation among nearby states. The meetings will be addressed by Governor Moore, of New Jersey, Senator Frelinghuysen, President of the New Jersey State Board of Agriculture, and prominent leaders from New Jersey's agricultural organizations and the State Department and College. Auto trips and an active social program are scheduled.

Plan Uniform Certification

Meeting at Freehold, N. J., on June 20, seed potato certification authorities and plant pathologists from nine states, Canada and Germany considered a uniform plan for the certification of seed stocks grown in eastern and northern United States. Without question this was the most representative gathering of potato experts yet held to work out eventually a national certification schedule. Requirements in various states, altho excellent for the most part, are not identical and confusion is resulting to the disadvantage of both growers and buyers. The problem of uniform qualifications on potato diseases was quite well agreed upon, and there is now definite indication that a uniform schedule will be adopted by all states.

State Club Show Scheduled

Altho early in the season, Trenton Fair officials have already announced their plans in providing for junior club members at the fair this September. Arrangements have just been announced by Prof. A. M. Hulbert, assistant director of extension, to the effect that a cafeteria for club members will be provided on the grounds. The members will have a place to eat as well as tents for housing. Within a year the fair management promises a special boys' and girls' building. Three judges, instead of two as last year, will judge the competitive calf exhibits. All animals shown by the young folks this season must come from herds under state and federal supervision for the eradication of tuberculosis, as there will be no testing of cattle at the fair grounds this season. A forestry exhibit, inaugurated specially for the club members of Ocean and Warren Counties, will be an innovation at the fair.

Million Seedlings Planted

New Jersey land owners have planted this spring more than 1,000,000 tree seedlings of pine, spruce and fir in reforesting approximately 1100 acres of idle and unproductive land, according to the early summer report of the State Forester's Office. This is 700,000 more seedlings than were planted in 1923, the year that the State Department of Conservation and Development first began distribution.—W. H. B.

County News and Comment

Blair County, Pa.—We have had very warm days but many cool nights. There is a fair crop of strawberries this season, most of them sold for 20c a box. Cherries are ripening now but all fruit is scarce. The wheat is looking good at present and is beginning to ripen, some farmers have begun to make hay but most grass is too green. The spring sowing of alfalfa is growing nicely, the corn is not so good a set this year due to the cold wet weather earlier in the season. Some fields had to replant. The writer spent from the 15th to 20th of June in Montgomery County with short drives into adjoining territory and was very well pleased with the fine farms.—H. E. H., June 28.

Cameron County, Pa.—We are getting real summer weather this week. We have had a number of frosts this month and a couple of regular freezes. Corn and potatoes growing well after a bad start. Business slack just now. Mines not working very steadily. The township roads have had quite a lot of work done on them but they are far from good yet. Many deer around here, they will destroy the crops if something isn't done pretty soon. Feed has been high at the mill this month but fell a few cents per cwt. last week. Hay crop very good this year, old potatoes scarce and new ones high priced.—Q. E. T., June 25.

Carroll County, Md.—So far cool weather has predominated during month of June yet we have had some very warm days. All farm work is a week to ten days late. Farmers are busy cultivating corn, making hay and cutting peas and hauling them to factory. Pea harvest is in full swing. Peas are making good yield in lower part of county. Clover stand very uneven. Fine weather now for curing hay. Haymaking will be in full swing this week. Barley is ripening; some has been cut; not a good stand as a whole. Wheat is turning and looking good with good size heads which appear well filled. Late sown wheat is thin on ground; prospects are that none of wheat will be cut before July 4. While usual custom is to be thru cutting by then. There will be plenty of straw as wheat is full. Corn planted first of May or last of May or first of June came up best. That planted middle of May very poor stand. Potatoes growing well, vines have fine color and stand is even.—H. I. F., June 27.

Crawford County, Pa.—Weather so far this summer has been exceptionally cool. Oats and gardens not looking very good, corn slow in coming up and looks yellow. Early potatoes looking fine and late potatoes are planted. Indications of a good hay crop. Many acres being prepared for buckwheat and some already sown. Strawberries quite plentiful with price at 20c per quart, $6.00 per bu. Apples not more than half a crop. Potatoes, old, $2 bu., new 65c peck; butter, 45c; eggs, 25c; milk brings $2.29 per cwt. for 3.6 test.—O. W. G., June 28.

Dauphin County, Pa.—Temperature about normal. Very heavy rainstorms caused damage to cornfields. Corn not growing fast; many farmers had to replant. Much difficulty in getting enough potatoes to plant. Hay crop will be better than average. Strawberry crop light; very few cherries. Prospects for apples are good. Local prices: wheat, $1.40; corn, $1.10; oats, 60c; hay, $18; butter, 50c; eggs, 25c.—I. F. M., June 25.

Lancaster County, Pa.—During the last week many acres of tobacco were planted; acreage somewhat larger than last year. Cool weather still prevails. Hay making is late but in general will be a good crop. Wheat is heading nicely and looks promising. Corn very small. Eggs are scarce, have advanced a few cents in price, now 24c. Butter, 45c; lard, 20c.—H. C. H., June 26.

Fulton County, Pa.—Very unusual weather for the time of year. Corn is not doing well. Harvest will be very late. Hay is an excellent crop; oats looking fine. Potatoes are mostly up and have been sprayed. Strawberries were plentiful, sold at 12@20c. Cherries are ripening. Prices continue low on all farm produce, eggs, 20c; butter, 30c; lard, 14c; bacon, 18c; new potatoes retailing at 70c pk. The early potatoes will be scarce here.—T. H. T., June 27.

Lawrence County, Pa.—Sour cherries ripening, a better crop than was expected. Clover hay is being harvested with promise of a good yield. Timothy hay very heavy and will soon be ready for harvest-

(Continued on page 16)

Fastest, Most Accurate Grader

You have no idea how fast potatoes and onions can be graded until you see a Boggs in action—75 to 550 bushels per hour, according to size of machine. Even the smallest Boggs models will do the manual labor of from 3 to 5 men.

You can dump potatoes into the power machines by the bag or barrel without overloading them. And the Boggs can be operated continuously, for as soon as one bag is full you simply push the deflector over the empty bag at the other side.

With a Boggs you can sort and grade round and long potatoes into No. 1 and No. 2 sizes with less than 3% variation from Government grades. It can't bruise or injure even green stock because potatoes are tenderly carried over our endless patented belt without any shaking. Made in 5 models, $40 and up, to be operated by hand, motor or engine.

BOGGS POTATO GRADER

The Standard Grader

Your Neighbor Has a **PAPEC** *Ask Him*

"The Cutter That Does Not Clog"

"I AM well pleased with the N-13 Papec purchased this year," wrote H. B. Austin, Oct. 8, 1925. "It has never clogged the pipe once and runs so light. It will cut and elevate twice as much as any cutter that I ever saw. The feed roll is a great thing, no stopping of bundles on the feed table."

Light draft, low operating cost and long life make the Papec the most economical cutter. There's a size to fit your power plant, whether you use a 3 h. p. gasoline engine, a light or a heavy tractor. If you have a silo, a Papec will earn you big returns. Let us show you how.

From the Plow to the Plane

Another farm bred boy gains eminence

You will want to read the story of the "Flying Fool," who was far wiser than his critics knew. His non-stop flight from New York to Paris has enrolled his name among the immortals.

The story of Lindbergh, together with the development of aviation, epoch-making flights, and historic efforts to bridge the distance between the Old and New Worlds, is more thrilling than fiction and every word true.

The complete book measures 6 x 8½ inches and comprises approximately 300 pages, including 32 full pages of pictures. It is bound in rich cloth, with gold and ink stamping on front cover and back. It is written by Richard J. Beamish, whose "History of the World War" had the largest sale, within a given time, of any book ever published.

How to Secure One Free

Send us three yearly subscriptions to Pennsylvania Farmer at 50 cents each—your own renewal will count as one—and we will forward the book to your address postage prepaid. The book will not be given with your own subscription alone. Two other subscriptions must accompany your order.

PENNSYLVANIA FARMER,

Please Mention Pennsylvania Farmer When Writing to Advertisers

THE reports from all sections in this locality show that the yield of asparagus this year was much below normal,—some saying that they cut only about half as much as they usually do. No doubt this was due to the uniformly low temperature. Asparagus needs warm nights to grow fast and big. We cut almost every day from April 20 to June 22nd. Then we cleaned up the rows and applied 1000 of a 4-8-6 fertilizer per acre and cultivated it in. We shall now throw about three inches of dirt on the rows and, except for occasional cultivations, leave it until next season.

◆ ◆ ◆

LATE this fall we shall mow the dead stalks and remove them instead of leaving them until spring. We have had considerable trouble in killing the young asparagus plants that grew from the ripened seed. There must have been millions of them, and if we could have had them out where we could let them grow to sell next spring we might have made a small fortune. But in the bed they are as bad as weeds and as hard to kill out.

◆ ◆ ◆

WE HAVE found the new fertilizer distributor which we bought this spring a most useful implement. It is of the wheelbarrow type, and may be either pushed by hand or drawn by a horse. The hopper holds about fifty pounds, and the machine may be set to apply from 200 to 2000 pounds per acre. There are six movable spouts to carry the fertilizer to the ground, and these can be set so as to put it all in the bottom of a furrow, or spread so as to distribute it over a strip twenty inches wide.

◆ ◆ ◆

THERE was only one of the little chicks out of the 500 that proved to be a runt. The others are unusually uniform in size. But this little fellow, altho healthy in appearance and action, grew so slowly that he got far behind and is not over one-fourth as big as the others at eight weeks old. As soon as he became noticeably smaller he began to have a hard time of it. The others crowded, mistreated and starved him until he had to be removed.

All this is not worth telling as chick news, and I would not take the space if the incident did not have in it such a human trait. I have noticed the same characteristic in the human race. Let some one slip morally or financially and he is soon on the toboggan. Those who get behind in life's race find little aid in getting back. The slogan, "The survival of the fittest," seems to be according to Nature's plan, even if it is not in keeping with the sermon on the Mount.

◆ ◆ ◆

BUT I do not believe that it is Nature's scheme to work on the plan of elimination until only one species, the "fittest," is left on the earth. The continual warfare that is going on seems necessary to give healthgiving exercise to body and wits. There is no indication that any one species of animal life, not excepting man himself, is gaining in the effort to be the sole survivor. On the other hand, Nature seems to have provided a system of checks and balances which will keep any one species of animals from becoming the supreme and only representative of life. A doggerel states it thus:

"The bigger bugs have smaller bugs
Upon their backs to bite 'em,
And the smaller bugs have lesser bugs,—
And so on, ad infinitum."

All this may seem a little heavy for hot weather, but they are some of the thoughts an editor thinks as he works to suppress potato bugs, plant lice and peach tree borers.

Tuning in the Microbes

Fussy Old Lady (as radio broadcaster sneezes)—There! Now I'm sure I shall catch cold.

It takes about 1500 nuts to hold an automobile together, but it only takes one to scatter it all over the landscape.

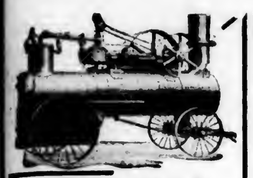
The Cheerful Plowman

The Early Day Rural Nurse

NO HOSPITAL training like nurses have now, just mindful to serve and a native know-how! Just practical wisdom acquired on the side, the call of experience learned and applied! Just love for humanity filling the heart, creating an urge to do life's greater part!

The early day nurse in this section of ours possessed, I am certain, unlimited powers to drive away sickness of every known kind, both illness of body and illness of mind! She had many children to care for at home, a family to wash, and to iron, and to comb, yet time never was when she hadn't a day when all of her hours could be parceled away! Ah, chicken-pox, measles, and "tonsils," and mumps, with all of their spots and their fevers and bumps, small eyes full of spots and small ears full of chimes, were soothed by this nurse in those earlier times! When the stork came along he was certain to find this nurse on the job with her sureness of mind, and dozens of babes in this region of farms spent all their first day in her motherly arms!

I see all about me strong men in their prime, grown bearded and fine in the passing of time, who would not be on earth in their vigor today if the early day nurse had been lax in her way! Rewards may be plenty for statesmen and seers, and Heaven be filled with the judges and peers; great blessings may come to the teachers of men, to physicians and pastors again and again, but I have a feeling that close to the Throne the pioneer nurse will come into her own!—J. Edw. Tufft.



FARQUHAR STEAM POWER

You can depend upon steam to furnish abundant power under all conditions. Farquhar Locomotive Rigs are dependable and have long life. The engine is mounted on Flat Steel Saddles which are riveted to and made a permanent part of the boiler. Farquhar Ajax Center Crank Engine has been built for many years. It has been proven economic and dependable.

Farquhar Boilers are easy and quick steamers. They furnish abundant dry, hot steam. Built in strict accordance with the A. S. M. E. Code.

If you need a dependable engine, boiler or complete rig, write for Bulletin 426

A. B. FARQUHAR CO., Limited
Box 446, York, Pa.

LEADCLAD ROOFS

You Get Sure and Lasting Protection When You Roof With Leadclad

Storms cannot penetrate. Lightning cannot damage. Fire cannot destroy buildings roofed with Leadclad. Your family, your home, your stock and your crops enjoy fullest protection under a Leadclad Roof.

A Leadclad Roof is lightning proof, rust proof and fire proof.

A thick coating of pure everlasting lead seven times heavier than the coating on ordinary metal roofing, provides this lasting protection and keeps rust away years longer.

Leadclad Roofing is obtainable in the form of flat sheets, Ventrimped corrugated or decorative shingles. Shipped direct to you from the factory. We pay the freight.

Friendly Talks with Farm Folks

By E. L. VINCENT

A PEACH stone dropped in our back yard took a notion to see what it could do a few years ago, and today it stands more than ten feet high and still hurrying skyward. If I had my choice I would not have set the tree out just in that place, but there it is, alive and doing well.

And one of the things about that peach tree is its evident determination to put out branches all along the side of its trunk. Every little while I rub these off with my thumb and finger, but soon they are back, or some more just like them. The tree seems to laugh at me for thinking I can get the start of it in this direction, and so we keep the battle up: the tree putting out sprouts and I rubbing them off.

I have sometimes thought this is quite like what we see in some men's lives. Do you not know men who, in the most unfavorable circumstances, seem determined not to give up their struggles for the accomplishment of their desired purpose?

Perpetual Motion Still Unsolved

One of the queerest machines I ever saw was in the back chamber of an uncle of mine who was of an ingenious turn of mind. I used to like to go upstairs and look at that strange piece of mechanism. And this was not the only thing of the kind my uncle had made. His odd hours were put in studying and working on just such peculiar looking machines; but none of them would go a single turn of the wheel. And men are still figuring on perpetual motion.

Down at Washington the Patent Office is littered up with models of machines that never brought their inventors a dollar, and never will. Every day adds to the number of these devices, for men keep thinking and planning and working to make something no one ever before has thought of.

But it is worth while for men to stick to their thinking, their planning and their working. If sprouts are rubbed off, it makes the tree stronger. The dream of today may be the success of tomorrow.

We laugh at the little model of the first reaper and binder that is in the case at Washington. "Seems strange," so we think, "that a man as wise as was Cyrus McCormick could not have made a machine perfect in every particular right on the start." What he was doing when he set up that first machine was to feel his way thru the darkness to the light which something in his heart told him was a little way ahead. And he kept on until today we have the perfected machine.

Failure Points the Way to Success

Failures came to him, as they come to every inventor. The sprouts were rubbed off by the rough hand of repulse, but he persevered and he won, and you and I are reaping the reward of his patience and persistence. It paid him to stick.

This morning I was reading of a man who says: "Our old alfalfa fields killed out more or less. One acre field off which I got six fair loads in three cuttings last year, was entirely killed." And then he adds: "Alfalfa is a wonderful plant food. Why should we let one failure discourage us?" He goes on to tell what his plans are for future crops of this clover. Sprouts rubbed off, but springing out again. It is the story of all worth while life.

What are our failures but lessons to teach us how to master life's problems? It seems hard in the time of it to be compelled to say, "It did not come out as I hoped it would." But, oh, the joy of the other and the bigger and the better dream which brings us in the morning the consciousness that we have done something far more worth while than anything we dared to hope for yesterday!

From the Week's News

SWINE BREEDERS of Pennsylvania will visit Washington, D. C., and the government experimental farm at Beltsville, Maryland, on their fourth annual tour, August 4, 5 and 6. Arrangements are being made by L. C. Madison, swine extension specialist, Pennsylvania State College.

$ $ $

Pennsylvania is a small state, with a population larger than any other state, except one. In spite of that, however, it is one of the most important agricultural states. Moreover, more wild game is killed in "Penn's Woods" than elsewhere in the United States. During the last fiscal year bounty claims were allowed on 253 wild cats, 4648 gray foxes, 4437 red foxes and 37,868 weasels, all classified as "noxious animals" by state game authorities.

$ $ $

THERE WERE 10,000 fewer tenant farmers in Pennsylvania in 1925 than in 1920, reports the Bureau of Statistics, Penna. Department of Agriculture. Taking the United States as a whole 38 farmers in every 100 were tenants in 1925. In Pennsylvania only 17 in each 100 were tenants.

$ $ $

Harry C. Trexler, of Lehigh County, urges farmers to produce in wholesale quantities so that it will be worth while for railroads to run apple trains, milk trains, peach trains and potato trains. With 6000 acres in Lehigh County and many holdings elsewhere, General Trexler is said to have more land under the plow than any other man in America.—G.

$ $ $

THE TESTER of the Clarion County Cow Testing Association, Rudolph Williams, won first place in the dairy cattle judging contest for cow testers held at Penn State on Field Day. Gordon J. Rice, of Allegheny County, placed second. Eighteen testers competed and all made high scores, according to the official judges.

$ $ $

Montgomery County farmers believe that travel is education. At the recent meeting of the Executive Board of the County Agricultural Extension Association plans were made for a dairy tour, a potato tour, a poultry tour, a fruit tour and a county-wide picnic.—G.

$ $ $

MANY CENTRAL NEW JERSEY potato and peach growers are arranging with the State Department of Markets for official shipping point inspection of this year's crops. An inspection certificate is good as evidence in court. It minimizes disputes with receivers over the quality of shipments.—K.

$ $ $

Walter L. Bollinger completed his tenth year as county agent in Schuylkill County on June 14th. Schuylkill's great Pageant of Agriculture was a fitting commemoration of the first decade of the County Farm Bureau's community improvement program.

$ $ $

A LARGE OCEAN PIER at Atlantic City has been leased for the poultry exposition to be held in October in connection with the New Jersey State Poultry Association's Annual meeting. The six major divisions of the exposition will be: a purebred poultry show, a producing stock show, an egg show, a poultry meat show, educational exhibits, model buildings and equipment.

$ $ $

On the first day of their annual pooling period 75 members of the Lawrence County Cooperative Wool Growers' Association delivered 25,000 pounds of wool for grading by W. B. Connell, State College extension wool specialist.

Champions the choice of Farm Owners

Delays in farming cost money.

That's why thousands of money-making farm owners guarantee *dependable* operation of their trucks, tractors, stationary engines and other engine-driven farm equipment as well as their personal cars by installing Champion—the *better* spark plug.

And dependability is not the only benefit they enjoy—they also obtain maximum power, greater engine efficiency plus a notable saving in gas and oil.

Follow the lead of progressive farmowners and millions of motorists by making Championyourchoice.

Champion— for trucks, tractors and cars other than Fords—and for all stationary engines—packed in the Blue Box 75¢

WHENEVER YOU PATCH A TUBE —REPAIR THE CASING . . . . .

Repair Casings as well as Tubes . . permanently

HERE at last is a repair for casings that is as permanent and lasting as any vulcanized repair—as dependable as Las-Stik Tube Patch.

Las-Stik Balloon Tire Casing Plaster enables you to make repair in little more time than it takes to tell about it, but that lasts until you're ready to sell the tire for junk.

It's a repair that plugs up the hole binding the cords of the tire together again, and then reinforces the entire casing around the break.

Las-Stik Balloon Tire Casing Plasters are made in five sizes for all manner of casing breaks. The size to use depends not upon the size of the tire but upon the size of the break.

Your regular garage or accessory shop has Las-Stik Casing Plasters and Las-Stik Tube Patch for you. If you can't get it near you order from us direct.

LAS-STIK PATCH MFG. COMPANY
Hamilton, Ohio

Las-Stik Tube Patch is the time tried repair for tubes. Repairs pin punctures or large blowouts equally well. Self-vulcanizing. Stretches. Won't creep or come loose. 50c for a large sized can.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Blanching Method Depends on the Market

THERE has been a great deal of comment on the possibilities of using ethylene gas to accelerate the blanching of celery. Celery has been blanched successfully by this method but the requirements are such that one should not count on blanching his crop this way without experience. The matter of proper facilities presents further problems, especially where quality is a major consideration. The gas itself apparently has no adverse effect on quality. The fact that 5 to 10 days are required in storage while the crop is being treated makes it difficult if not impossible for celery so handled to equal in quality celery blanched with paper, boards or earth.

Last summer we prepared a compartment in the storage cellar and experimented along this line with the conclusion that the ethylene method affords little or no advantage when celery can be harvested and placed directly on a local market.

The more important requirements are first a fairly tight chamber in order to maintain the correct concentration of the gas. Second, the temperature must be kept around 60 or 70 degrees F. for best results. Free air circulation also must be provided and there must be enough moisture present to prevent wilting.

This one is from a recent numbef of the Journal of the Market Garden Field Station, Waltham, Mass.:

"Judge—You claim the man nearly strangled you and he declares he was on the other side of the street at the time. How do you explain that?

"Plaintiff—He threw a rotten egg at me while I was singing thru a megaphone.

"The farmer who plugs a bunch of asparagus is rotten-egging and strangling his market. Stalks showing more than one-half white will be discriminated against. Likewise crooked stalks, insect injury, spread tips, bunches composed of mixed lots of extremely large or extremely small stalks will wait on the street while graded grass is selling readily and at a premium."

Frequently it is a good proposition to place the boards or paper on part of the early celery before the plants have attained nearly their full size. This is especially true when the crop is sold directly to the consumer at the roadside market or from the truck. To straighten the plants when they are small and spreading the boards are sometimes placed close to the plants at the bottom and sloping slightly away from the row. In a few days the boards are drawn in at the top for the final blanching. —Gilbert S. Watts.

One Ounce Produces Acre

Editors' Note:—The following reply to an inquiry about tomato production may interest other readers.

AN OUNCE of good tomato seed should produce enough plants to set an acre.

The number of tomato plants you may expect to grow per each 3x6-foot sash will depend entirely upon the amount of space allowed per plant. In rows 6 inches apart 3000 or more seedlings could be started. If transplanted 2x2 inches apart the standard sash would cover about 500 plants, at 3x3 the number would be around 275 and at 4x4 about 160 plants could be grown.

You say you have garden loam, blue grass sods, stable manure, saad and leaf mold available for compost-ing into plant growing soil. Judgment will be required to determine the exact amount of each material but I believe I would make up a pile including all of them in alternate layers, that is if the loam has never grown tomatoes. The addition of some ground limestone, or other fine lime, and bone will prove desirable. Keep moist but not soggy, turn several times during the summer and store under cover over winter.

Your Maryland Experiment Station at College Park, Md., can probably supply upon request Bulletin No. 248, "Tomatoes for Canning and Market." Farmers' Bulletins Nos. 1233 and 1338, obtainable from U. S. Department of Agriculture, Washington, D. C., contain valuable information on tomato production. Orange Judd Publishing Co., New York, N. Y., has brought out a very complete book on "Tomato Production" by Prof. Paul Work, of Cornell University.—Gilbert S. Watts.

Del-Mar-Va Offers Variety of Interest for Horticultural Tour

FOR a number of years the Pennsylvania State Horticultural Association has planned its summer trips to study fruit growing regions in adjoining states which compete in the markets with Pennsylvania fruits and vegetables. This year the Del-Mar-Va Eastern Shore Peninsula is to be visited. This region offers an unusual opportunity to study extensive and intensive plantings of fruits and vegetables and at the same time give the family a chance for a day or two at the seashore and a visit to Washington.

The trip will start at the cooperative packing house at West Chester at one o'clock, Monday afternoon, July 11th. From there the Delaware Experiment Station at Newark will be visited. Headquarters for Monday night will be at the du Pont Hotel, Wilmington, Del.

Director McCue, of the Delaware Experiment Station, has arranged the Tuesday trip. It will cover the length of the state on the famous du Pont highway with stops at several fruit and vegetable farms. A group of Delaware growers will join the trip for dinner on a farm in Kent County, a county with a larger acreage of fruits and vegetables than any county in Pennsylvania. The tour will reach Ocean City, Maryland, that afternoon in time for a dip before supper.

Wednesday, until after dinner, the association will be the guest of the Harrison Nurseries at Berlin, Maryland, and then go to Salisbury, Maryland, to one of the largest strawberry nurseries in this country. In both these places the Maryland Experiment Station has interesting experiments and at both places the vegetable men will have opportunities to see intensive truck areas.

Wednesday night can be spent at Ocean City or at Salisbury. The return will start the next morning and be by way of the Claiborne ferry to Annapolis, one of the most interesting cities in the state and the center of a considerable trucking area. From here many of the growers will go to Washington while others will return by way of Baltimore.

Clean Ground Gives Best Control

Will you advise me what to do for little chickens that have gapes?—E. M., New Castle County, Del.

The time honored procedure in the treatment of gapes in baby chicks is to remove the gapeworms from the trachea with a horsehair loop. I see also that gape remedies are advertised in Pennsylvania Farmer.

The worms that cause this trouble are transmitted thru the soil. It would be best to plow up and lime heavily the runs that the chicks have been using, and keep chicks off them for a year or two. It is advisable to rear chicks on fresh ground every year, not only for the control of the gapeworm but for the control of intestinal worms and other parasites, as well as some diseases. I have often noticed that a man will start a poultry plant on a farm where no chickens have been kept, putting up new buildings; and for a year or two everything will go along fine. Then disease will creep in and cause trouble. On most farms, however, it is possible to use clean ground on which to rear the chicks, and doing so avoids a lot of trouble.—R. L. Scharring-Hausen.

Chicks Die in Shell

My eggs and those of my neighbors are dead in shell. Can you tell me why?—Mrs. W. A. N., Allegheny County, Pa.

Chicks dying in the shell just prior to hatching is a very common trouble that causes a lot of loss in incubation. Almost anything that might be the matter with either eggs or incubation methods might be the cause of the trouble, so it is impossible to state any one cause that might be responsible.

Low vitality in the breeding stock or infection with white diarrhea, poor incubators, too much or too little moisture, wrong temperature, failure to turn properly, poor ventilation of the incubator cellar—these are all things that might cause chicks to die in the shell.

I am getting to believe that it pays farmers with small flocks to buy baby chicks or to have their eggs hatched in commercial hatcheries, as men who make a business of hatching have better equipment and more knowledge of the business than is the case where only a small incubator is run under ordinary farm conditions.—R. L. Scharring-Hausen.

Nest Box Notes

CARE OF THE FLOCK—It is not necessary to call your attention to the fact that broilers are cheap and egg prices are low, neither is it any use for you to throw up your hands and say that there isn't any money in poultry any more.

• • •

During the next four months every hird that is laying is producing a reasonable profit. Every bird is laying 20 eggs per month or none. Success with the flock demands careful management which will keep the birds laying and dispose of culls.

• • •

Encourage production by providing the following conditions for the layers:

HOUSE—Cool, clean, free of mites.
RANGE—Succulent green feed.
BIRDS—Good flesh, free from lice.
FEEDING—Scratch feed—12 lbs. to the 100 birds.
4 lbs. at 7:00 A. M. and 8 lbs. at 7:00 P. M.
Mash—Fresh daily, with sufficient hopper space for all birds.
Wet Mash—2 lbs. of laying mash and 1 lb. milk per 100 birds, fed at 2:00 P. M.
Water—Clean, fresh water always available.
CULLING—Every week.

• • •

Care of the growing stock: What efforts are you making to raise better pullets than last year?

1. Are the pullets on new, clean range?
2. Is the young stock away from the old stock?
3. Do flies have access to feeding in the old birds' manure?
4. Do you clean the colony houses each week?
5. Are there sufficient roosts in the colony houses?
6. Does the young stock have plenty of green feed?
7. Have cockerels been removed?
8. Is sufficient mash hopper space allowed?
9. Are the range and feeding equipment kept clean?
10. Have you looked for worms in the young stock?

Bugs Cannot Reach These Chickens

Worms picked up from the soil cause chickens one kind of trouble, and flying insects cause them another. These chick ens in an experimental pen at the Pennsylvania State College are protected from both. They exercise on a concrete platform and wire screens keep the winged insects away.

Mrs. GERTRUDE S. STEWART

Light Desserts Tempt Finicky Hot Weather Appetites

A LIGHT dessert is always advisable, whether it be served in July or in January. The dessert is a final tasty bite that enables the diner to leave the table feeling that it has been good to be there.

The cold dessert, when it is a light one, is ideal for summer. One day it may be ice cream—provided good, pure ice cream may be secured.

Again the dessert may consist merely of a plate of sliced fruit or berries, served with milk or cream and sugar.

Other light and desirable desserts are snow puddings, Bavarian creams, whips, gelatins, tapioca creams and custards. Perhaps tapioca cream is the ranking dessert of all, not only for children but for adults. Without being a heavy dish, this cream furnishes some healthful carbohydrates from the tapioca itself, and if combined with fruit, provides necessary minerals, salts and vitamins.

Blends with Many Other Foods

The chief value of tapioca to many is not due to the fact that it is a very healthful food in itself, but because of its blending qualities. Glance over three or four recipes and you will find that it blends with milk, eggs, fruits of all kinds and berries.

TAPIOCA CREAM

1 quart hot milk
One-third cup quick-cooking tapioca
1 egg
½ cup sugar
Pinch of salt
Flavoring

Cook tapioca and salt 15 minutes in hot milk in double boiler, stirring frequently. Add 1 tablespoon of cold water to the egg yolk and beat well. At the end of 15 minutes stir the egg yolk and sugar slowly into the milk and tapioca. Cook until it begins to thicken like custard.

Remove from heat and whip in the beaten egg white. Add vanilla, orange or any flavoring desired. The white of egg may be used as meringue if preferred.

The above quantities will furnish eight generous portions.

Fruit Adds to the Flavor

This is delicious poured cold over any fruit or berries, either fresh or canned. Raisins, prunes, figs, dates or nuts may be stirred into it while cooling.

ORANGE TAPIOCA

1 quart hot water or milk
¼ cup quick-cooking tapioca
Pinch of salt
¼ cup sugar
1 tablespoon lemon juice
4 oranges

Cook fifteen minutes in a double boiler, tapioca and salt in water (or milk) to which have been added sugar and lemon juice, stirring frequently.

Pour this over oranges, peeled, divided into sections, and cut in rather small pieces and sweetened. Serve cool with sweetened whipped cream.

CHOCOLATE TAPIOCA

4 cups hot chocolate or cocoa made proper strength for drinking
¼ cup quick-cooking tapioca
½ cup sugar
Pinch of salt
Vanilla

Add tapioca, sugar and salt to hot chocolate or cocoa and cook in a double boiler 15 minutes, stirring frequently.

Remove from fire. Flavor with vanilla. Serve cold with sugar and cream. If a thicker consistency is desired, use 3 cups of hot chocolate or cocoa.

Try one, or all of these recipes, and see how eagerly the children will clamor for a second helping and how even the adults will not need much coaxing. When served very cold, they touch the spot on a warm day, as few other desserts do.—Betty Barclay.

Timely Tips

WHEN storing the stove for the summer season clean it thoroly then grease with lard or tallow —this prevents rust.

• • •

Linen towels for kitchen use are more desirable than cotton ones. They absorb moisture more readily and give up stains more easily than their cheaper sister,—cotton. They last much longer and are just as inexpensive. Linen dish towels, too, are much better than cotton ones. They do not leave lint and absorb the moisture from the dishes quickly. —Mrs. L. D. Kerns, Pa.

• • •

The most important point in dyeing is to follow carefully the directions which accompany the dye. All stains, particularly those of grease or acid, should be removed before dyeing. Two tablespoons of ammonia in a gallon of water may be used to remove the acid of perspiration stains tho it does not remove the stain itself. Boiling streaked or partly faded garments with soap and water for ten minutes will distribute the color evenly so that it will dye well.

Winter Flowers Require Care Now

DEAR EDITOR:—Please tell me how to care for primroses and a Christmas cactus during the summer months.—Mrs. D., Pa.

Summer is the period of rest for both plants, and after their blooming season, a little different care may be given with most gratifying results.

Primroses may be removed from the pot in early June or later. Keeping as much of the earth as possible about the roots, transfer the plant to the outdoor flower bed. In the early fall repot again and use the next size larger flower pot each year. General outdoor care is all that is needed to put the plant in excellent health for the winter blooming season.

Starting in early summer it is well to withdraw the generous water supply from Christmas cacti, and give them just enough to prevent the plants from drying out entirely. About September you will notice new growth starting in. At that time gradually increase the water supply again, and a little plant food may be included.—G. S. S.

Leisure is No Longer a Dream

THE farm woman's leisure is no longer a dream. Well arranged kitchens, labor saving equipment and methods and running water have lessened her labors.

Power, whether from water, electricity or gas engines is further helping to make her life easier. Washing machines, electric irons, vacuum cleaners and the like can now be obtained with motors to suit the 32-volt electric plants on many farms.

Linoleum on the kitchen floor needs none of the scrubbing demanded by the old bare pine floor; and stoves, sinks and tables of the right height do away with many backaches. Simple furnishings, dictated by good taste, ease the cleaning and make dusting less of a burden. By following household discoveries the housewife can use her money to purchase the equipment which will be of greatest help to her.

She has time for more than housework but the time freed is not idle. She reads, she studies, she pursues her favorite hobbies, she enters into community and club activities, and by enriching her life thru outside contacts she makes her home happier and greatly increases the pleasure of living.

Modern kitchen equipment has lightened her burdens

TWO OPINIONS

What About Hospitality? Hungry Threshermen Deserve Hot Food

FARMERS and farmers' wives are expressing opinions today as to whether threshers should carry dinner pails or eat at the farm homes where they are at work. Mine is a dissenting voice. If anyone needs a good warm dinner and supper, too, it is the man connected with threshing. It is steady work, dirty work, and is carried on during all sorts of weather.

Sparing the housewife is the reason given for the proposal that threshers eat outside on the lee side of the barn with chaff, dust and flies to make the meal more interesting. This same wife cooks just as much for the relatives that gather at times in her dining-room. She works harder at Ladies' Aid dinners and big picnics. Why not on threshing day just roast a larger piece of meat than the family requires, gather an added supply of fresh vegetables, enlarge the number of potatoes, bake a few more pies and use the largest pudding pans? You can then enjoy the gossip of the big gang during noon hour.

Is the rush of modern life pushing us farther and farther apart? Is that fine thing we call hospitality, —which was the pride of our grandfathers,—is that fine quality departing from our good old country homes?—Mrs. M. C. Smith, Pa.

It's Easier to Cook for Men Than for Women

THAT hungry gang will be here in a short time, and nothing specially ready for dinner. But never mind, a crowd of hungry men is easier to plan for than a group of critical women. These men appreciate plenty of plain food and fancy or unusual dishes are taboo.

Today even the bread supply is low, so we will have a big batch of drop biscuits. The preserve closet is a help with these nice hot biscuits. Fresh, sweet apples are abundant and we will have ready quickly a six-quart kettle. Wash the apples well and cut in half, removing only the cores. Use just enough water to cover and one cup of sugar. When they have cooked tender, the juice will be thick. Serve with the heavy syrup poured over them.

Nothing seems to be more appreciated than salt pork. Chicken is offered to threshers till it has become a joke. Fry the pork slices to a nice crisp brown and serve without any grease. Make a good milk gravy in the remaining pork fat, and they will enjoy that with the biscuits.

Pie is the most popular dessert, but if none is at hand, we can find plenty of help-outs in the fruit cupboard. If the time is too short to prepare fresh vegetables, there are cans waiting for the emergency, and no threshers need go hungry today. —Mrs. E. M. Anderson, N. Y.

Cheese is often used as a substitute for meat in warm weather. The New York State College at Ithaca, N. Y., has a free bulletin on using cheese which gives many good suggestions. A copy may be had by writing to the college, giving number H-133.

Cool Frocks Sponsor New Details of Fashion

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

4827.—Four sizes: 1, 2, 3 and 4 years. A 3-year size requires 2¼ yards of 27-inch material. Price 10c.

5788.—Nine sizes: 38, 40, 42, 44, 46, 48 50, 52 and 54 inches bust measure. A 44-inch size requires 3⅝ yards of 40-inch material with 1⅛ yard of contrasting material for trimming portions on front and facings on cuffs and belt. If made with long sleeves 3⅝ yards of figured material will be required together with the contrasting material. Price 10c.

5776.—Eight sizes: 36, 38, 40, 42, 44, 46 48 and 50 inches bust measure. A 44-inch size requires 3⅝ yards of 54-inch material with ⅜ yard of 27-inch material for facing on vestee, collar and cuffs and ⅛ yard of 36-inch lining. Price 10c.

5432.—Three sizes: 16, 18 and 20 years. An 18-year size requires 3¼ yards of 40-inch plaid and ⅜ yard of plain material 40 inches wide for facing the sleeves, collar and revers, if made as illustrated. If made with long sleeves it will take 3⅝ yards of the plaid. Price 10c.

4828.—Five sizes: 2, 4, 6, 8 and 10 years. A 6-year size requires 1½ yard of 27-inch material. Price 10c.

5792.—Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2½ yards for the dress and 1¼ yard for the guimpe of 40-inch material if made with sleeves. Without sleeves the guimpe will require ⅞ yard. Price 10c.

5778.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 1⅝ yard of 36-inch lining and 4⅞ yards of material 40 inches wide together with ¼ yard of contrasting material. Price 10c.

5772.—Five sizes: 1, 2, 3, 4 and 5 years. A 3-year size requires 1½ yard of 32-inch material. Price 10c.

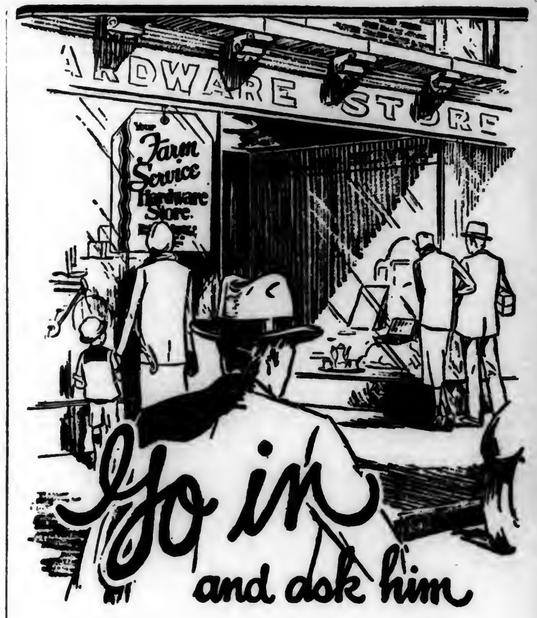
5481.—Four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3½ yards of 32-inch material together with ½ yard of contrasting for facing on collar, cuffs, pockets and belt portions if made with short sleeves. If made with long sleeves and of one material, 4¾ yards are required. Price 10c.

5787.—Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 2⅝ yards of material 40 inches wide together with ⅜ yard of contrasting material for facing on belt and vestee. Price 10c.

5794.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅝ yards of 40-inch material, if the bolero is made with sleeve portions. If without sleeve portions 2¼ yards will be required. Price 10c.

4293.—Five sizes: 6, 8, 10, 12 and 14 years. A 10-year size requires 1⅞ yard for the blouse and 1⅜ yard for the knickerbockers of 36-inch material. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.



Go in and ask him

TAKE the mechanical problems of running your farm to your nearest "Farm Service" Hardware Store. These hardware men have made a life-long study of machinery, tools, builders' hardware, paints, roofing, lubricants and the thousand and one other things that are so necessary in your farm work. If you want to know how much paint it will take for your barn, how much roofing or fencing to buy, the right kind of heating apparatus for your house, or an estimate on builders' hardware, go in and ask him.

The "tag" in the window is your personal invitation to make that store your meeting place when in town. They like to have you ask questions and the information they can give you may be of tremendous value, saving you time, money and disappointment in something which you might buy without thoroughly understanding all about it.

They are quality stores, selling with the idea that price can only be measured by value and that their whole aim is to give you the most for your money and the privilege of "seeing before you buy."

If you are not acquainted with your local "Farm Service" Hardware Man, tear out this ad and take it in to him and give him your name and address. It will be an acquaintanceship that will be well worthwhile and one that will mean a great deal to every member of your family and a help to you in the keeping up of your farm and home. You will find a store, with the "tag" in the window, near you.

Your "Farm Service" Hardware Men.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—Our school closed. I am not very glad because it closed as I like to go to school. I am promoted in the eighth grade for next term. I think I am going to a new school next term. They are going to begin to build it next week. It is going to be a big school. It is going to be built about two and one-half miles from my home.

I think we are going to take a trip to Philadelphia this summer. I will write and tell you all about the trip.

I am sending a candy recipe. I made some of that candy today and I like it so I thought I would send you the recipe.

CHEWING TAFFY

2 cups sugar
2 cups table molasses
2 tablespoons water
2 teaspoons vanilla

Cook until it hardens in water, then put in a pinch of soda. Stir and put on buttered platter. When cool enough dip hands in water and pull until white.—Bernite Goletz, (X), Schuylkill County, Pa.

I shall be glad, Bernite, to have you write me about your trip. Will this be your first visit to Philadelphia? I would like to hear from other Forum friends who have taken trips.

Dear Cousin Ruth:—I have been reading the Forum page for a long time and I think the letters are all very interesting.

TOETOE AND I
Earl May, (X), Fulton County, Pa.

I live on a small farm and the school I go to is called Buffalo School. I would like to become a member of the Forum.

I am sending a picture of my pet dog, "Toetoe" and myself.—Earl May, (X), Fulton County, Pa.

Dear Forum Friends:—I hope you have more contests because I want to join in with the other young people. I am sending a receipe.

TEA CAKES

2 cups pastry flour
½ tablespoon salt
4 tablespoons evaporated milk diluted with 7 tablespoons of water
4 teaspoons baking powder
4 tablespoons fat
Candied cherries, raisins

Sift dry ingredients and rub in the fat. Add the milk and mix like biscuit. Roll on a lightly floured board to one-half inch thickness. Cut into rounds large as a quarter. Put a cherry or raisin on each. Brush with fat and bake in a 450-degree F. oven.—Agnes Durham, thirteen, Burlington County, N. J.

Dear Forum Friends and Readers:

We have a pond and a few miles of creek so when it is real hot we go in swimming and have good fun.

One day our school went on a trip. We went in trucks and automobiles. There were about sixty of us with the teacher and chauffeurs. We first went to a museum about five miles from the school and we then spent the rest of the afternoon visiting a school in another township.—Sadie E. Bachman, twelve (X), Lancaster County, Pa.

THE Forum is for all the boys and girls who read Pennsylvania Farmer. Membership pins are sent to those who send in particularly good contributions of letters, pictures and drawings. Forum friends who have been made members because of especially good contributions to the page have the (X) appearing with their names. All Forum mail should be addressed to: Forum Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa.

Dear Cousin Ruth and Forum Friends:—For my pets I have canary birds. The one is yellow all over and the other one is black and yellow. I like to hear them sing. When you come near to them they won't sing. Nearly the whole day they're jumping up and down in their cage.

On the last day of school we had refreshments and played games. We had to play our games in the school on account of the rain. A week before our school closed our teacher and some scholars went to the woods to take a walk at recess. They picked a lot of flowers.—Florence Deisher, (X), Berks County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a pet chicken. I call it Speckle. It is black with white spots on it and it eats from my hand. When I come home from school she comes running to me. She looks up at me as if to say, "Give me something to eat," and when I talk to her she turns her head to one side and says "cu, cu." One morning she started to follow me to school.

She also follows me in the evening when I hunt my eggs. She lays almost every day.—Pearl Griffith, (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—We cultivated our corn last week and I helped to stand it up. We are starting to make hay in the meadow. We have two strawberry patches. Some are beginning to get ripe. I and my sister go out and hunt wild strawberries. I am taking music lessons, I like it. It is not as hard as I thought it was. I help to milk in the morning and evening. We have seven old guineas and they are laying now. They hide their nests. It's hard to find them. We hatched 23 goslings from 27 eggs but four died. I work in the garden picking out weeds.—Sue E. Swavely, (X), Lehigh County, Pa.

I'm sorry you failed to give your address, Sue, for your letter is very interesting and I would have liked to know where you live. If there had been an address I'd probably have sent you a membership pin.

COUSIN RUTH.

Dear Forum Friends:—Our school closed in April. I guess I will be down to Philadelphia before long. Our school teacher is taking all the scholars that have an average of 90 or above.

My father is a mail carrier. We farm about 23 acres. I help when father is away in the forenoon and in the afternoon he works. We live right alongside of the Conestoga Creek. In the summer we go in swimming.—Irma Brindle, twelve, Lancaster County, Pa.

THREE TWINS
Ruth Heffner, Schuylkill County, Pa.

Dear Forum Friends:—I live on a farm of 128 acres. Our cherries and strawberries are getting ripe. The birds are helping us pick our cherries and the chickens are helping us pick the berries.

We have three kittens. One looks like a tiger, one is black and the other one is blue.—Mildred Hurley, Cumberland County, Pa.

Dear Cousin Ruth:—I received your letter and badge and many thanks. The other children all like it, too.

Grandpa has a big dog. He calls it Jack. I like to play with him. I will throw a stick and he will get it and run as fast as he can so I can't get it.—Edgar Delp, (X), Clarion County, Pa.

A Little Reminder

DEAR FORUM FRIENDS:—I'm glad to see so many of you joining in the Treasure Hunt. The mail man has had a busy time these past few days delivering contest papers. And while we're talking about the contest—let me remind you that all contest papers must be mailed so as to reach the Forum by Saturday, July 9th.

If this is the first time you're read about the hunt and you don't know what it's all about, you'd better look up the June 25 issue and turn to page 12. There you will find the jumbled sentences and the contest rules. There aren't very many rules but you'd better read them to be sure you don't make mistakes. If you want to write a letter to the Forum to send along with your contest please use a separate sheet of paper.

I'm anxious to hear all about your vacation plans and I would like you to tell me too what you would like best on our page. Would you like to turn to the Forum page some day and find there a story just for our corner? Or perhaps, some sort of puzzle. Now there, I've given you a hint and I didn't want to do that. I want you to tell me what you would like on our page. Will you?

THE FORUM EDITOR.

DEAR LITTLE FOLKS:—Did you ever find something when you were not looking for it? And haven't you often found something just staring you in the face after you have been hunting for it for a long time? Well, if you will look carefully at these ten sentences in the little block below and think very hard about something good to eat, I'm sure you will find the name of a kind of food right there all ready for you. The first sentence is printed in that way so that you will know how to go about looking for the other good eats. When you have found all of these kinds of food—one in each sentence—let me have them on a postal card or in a letter by July 16th. (You'll probably be hungry by the time you find the whole list.) BE SURE TO SAY HOW OLD YOU ARE, IN WHAT COUNTY YOU LIVE AND WHEN YOUR BIRTHDAY COMES.

The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

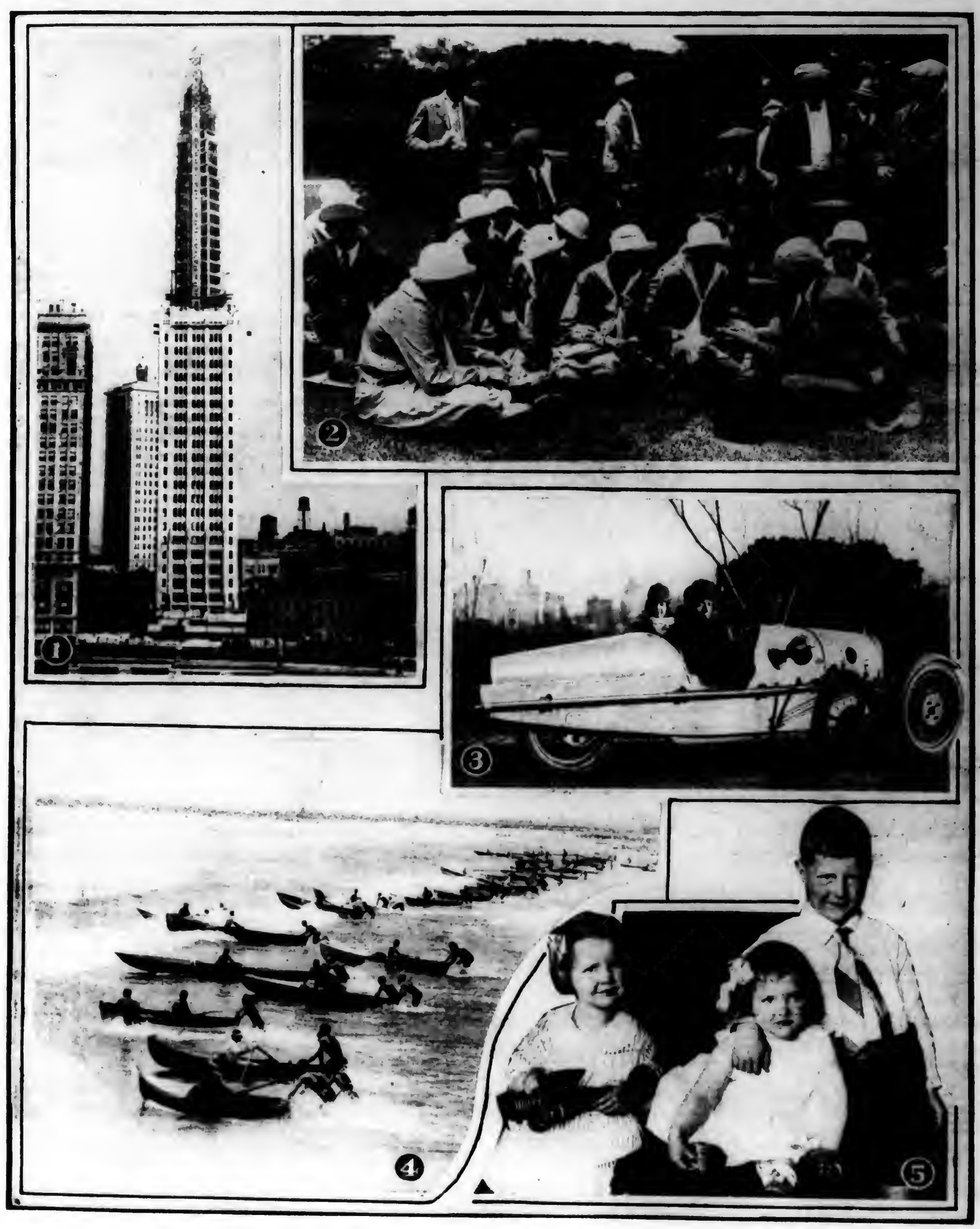
The answer to the puzzle about the collection of "fours" in the issue of June 18 is: 4 times 4, plus 4 equals 4 plus 4 plus 4 plus 4 plus 4.

The prize winners are: Mary Buckey, age 10, Osceola Mills, Pa.; Lester Crawford, age 11, Covansville, Pa.; John W. Frye, age 12, Mt. Pleasant, Pa.; John L. Hunter, age 9, Smithfield, Pa.; Harold Klnter, age 11, Marion Center, Pa.; Helen P. Myers, age 10, Taneytown, Md.; Ethel Sandoe, age 9, East Earl, Pa.; Lilla Smith, age 11, Salem, N. J.; John Edward Snyder, age 11, East Earl, Pa.; Stanley H. Souder, age 10, Telford, Pa.

HIDDEN FOOD

1. The buzzing BEE Flew by.
2. His hand you will grasp in a cheery grip.
3. That keg goes to Williamsport.
4. Aren't you ashamed to be so late?
5. Please get the tub ready for the clothes.
6. Does your house have a pump or kitchen sink?
7. There is a beautiful spot at Orwigsburg.
8. Some people said Mr. Hammil killed his hogs with kindness.
9. Either Mac or Ned must go.
10. Tobacco, coal and wheat can be found in Pennsylvania.

PASSING EVENTS IN PICTURES



1.—One of Chicago's tallest skyscrapers will be completed soon. It towers 538 feet above Wacker Drive.

2.—The boys and girls attending the National 4-H Club Encampment on the Department of Agriculture grounds in Washington during the week ending June 23 had outdoor classes in various subjects. Professor C. P. Close is shown giving a lesson in grafting apple trees.

3.—One of the latest automobile fads of Paris is the three-wheel car. This model is said to make 85 miles an hour and go 45 miles on a gallon of gasoline.

4.—The start of the rowboat marathon from Long Beach, California, to Catalina Island, which drew sixty-eight entries from seventeen different nations. Frank Hagney, sculling champion of Australia, who won the race by covering the distance in 5 hours and 40 minutes, 13 minutes less than his nearest competitor, is seen in the first boat.

5.—Eva, Katherine and Richard, Jr., children of Commander Richard E. Byrd, who hopped off for Paris in his plane, "America," on June 29th.

Get Your Man

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

"When once you start after a man, you must get him."
JOHN C. GROOME,
First Superintendent of the Pennsylvania State Police.

IT BEGAN toward the end of January, when the snow lay deep on the hillsides, and when, as the smut-faced miners came out of the shafts at night, bitter winds caught and belabored them, wearily floundering along their homeward way. Winter, up there in western Pennsylvania, strikes hard, and it is all a man can do to earn his daily bread and take his meagre comfort of it. He needs no extra burden. Life itself weighs heavily enough.

But bad hearts ignore chivalry. Out of some cave of slime had crept men mean enough to rob the poor. For four weeks running, on pay-day night, unidentified scoundrels had waylaid the workmen on the lonely roads, and at the point of knife or gun had taken their envelopes from them. Or, missing their prey in the open, they had entered and rifled the bare little homes. Sometimes, even, they had boldly done their work in the very streets of the villages, snatching the whole fruits of the week's hard toil and departing before their paralyzed victim could recover wits to resist.

United Mine Workers men and laborers in the zinc and chemical plants were the principal sufferers. For a while they bore it sheep-fashion, in the thought that the curse would pass. But when, week after week, their all was taken from them, it became clear that the thing had settled to a steady gait; then they revolted, demanded protection under the law, called for help—help from the State Police.

The Captain of "A" Troop received their complaint and acted according to the way of the Force. Determining at once the practical center of trouble, he fixed a sub-station there. The little town of Langeloth was the point that he chose. To that town he sent three men, Corporal Mauk, with Privates Nicholson and McCormick, under orders to catch the robbers and, while they were at it, to clean up the place.

The three officers settled themselves in their new quarters very much as a bird lights on a new branch. Then they jumped into their job.

Entirely aside from the robberies, they found, the place would take quite a bit of cleaning-up. It was interesting to see how many citizens, whether of the villages or of the open country roundabout, brought to their door tales of wrong and pleas for redress, knowing that succor lay now within reach. This one complained of a purveyor of cocaine, this other of a disorderly house, a third reported a butcher who sold to the people diseased beef. And so on, with pleas and responses, until Saturday came, — pay-day,—bringing with it its special occasion.

Now, what the three Troopers did

"Get Your Man" is another of our series of true stories about the Pennsylvania State Police

in Langeloth on that particular Saturday, the 26th of February, mattered a good deal to the people of Langeloth, but matters to this story not at all.

This story begins with the evening of February 27, Sunday, when the news came screaming over the sub-station wire that Mary O'Hagan, a Langeloth miner's wife, had been brutally assaulted and afterwards beaten by a man unknown; and that she now lay in her own home near death.

CORPORAL MAUK and his two comrades were sitting at supper when the telephone rang. McCormick jumped up to answer, taking the message in the steady, methodical way that the Force employs. But as he returned to report to his Corporal, his eyes gleamed with a cold fire.

Without a word Mauk and Nicholson sprang up leaving the half-finished meal. Snatching their caps all three men tramped out of the room. Five minutes later the drum of their horses' feet had died on the outer dark.

They might have waited to finish their meat? But they wait for nothing, these lads of the "Black Hussars." And besides, the one crime in all the catalogs of crimes that stands out sharpest for their deadly enmity is the crime against women, fouler, as they hold, even than murder itself.

The moon was mounting a sparkling sky. The snow sang under flying hoofs. The keen, dry cold made almost a perfume in the air.

"She mustn't die before we get there, boys," exclaimed Mauk.

As his words smoked a cloud behind his head, the three lifted their hardy little range horses into greater speed.

Into the open country they rode, over routes where few had passed before them since the last deep fall of snow, and so into the street of a tiny "mine-patch" settlement, and to O'Hagan's door.

IT WAS a ramshackle door, in a ramshackle "Company house," down at heel, out at elbow, dirty-faced and unashamed after a long succession of tenants who cared for none of these things. But Mary O'Hagan, decent woman that she was, had kept her place clean, and the room into which the three Troopers stepped was as tidy as one pair of hard-working hands could make it.

That room was full, now—full of keening women, crouching with their aprons flung over their heads; of men, silent, stiff-mouthed, stormy-faced; of frightened children, staring from their mothers' knees.

"Where's O'Hagan?" asked Corporal Mauk, as he crossed the threshold.

It was a gray-haired Scottish foreman who answered.

"O' Hagan's ben th' hoose wi' his wife," said he. "Hurry doon, mon. He's wearied waitin' on ye."

Mauk strode across and knocked at the inner door. It opened quickly and closed after him. Twenty minutes passed before he emerged. Then, with a nod of farewell, he would have left the house.

But women caught at his blouse-skirt, men laid hand on his arm. Doctor and soldier in one they knew all State Troopers to be. They must hear the word.

"Will Mary die?" cried a girl.

The Corporal looked at her strangely. "Maybe it would be better so," said he.

From the women a long, low wail went up. From the men a sort of shapeless curse.

"Do yez know what done ut? Can yez get 'um?" a burly Celt rapped out.

"That's my job," the Trooper replied; and with the ring of his speech every man in the room was his brother.

ONCE outside and alone with his comrades, the Corporal repeated the description that he had been able to draw from Mary O'Hagan's tormented mind.

"It should be fairly easy," was Nicholson's comment.

"Thank God, it's no easier!" Mauk rejoined; "or O'Hagan would be a murderer before this night is done."

No need to tell in detail how they sifted their matter down, or how within two hours they had learned to a practical certainty that one Adolph Ofenloch, an Austrian miner, was the man they sought. The thing is a method—a science. They are doing it all the time. You can pick your man out of a community as a conjurer picks a card from a pack—once you know how.

Ofenloch lived in a miner's boarding-house in a settlement some few miles beyond. Thither the Troopers betook themselves straight.

"Ofenloch ain't in yet," said the sleepy landlord, standing in his doorway, candle in hand.

"But I'll just have a look, all the same," said Mauk.

"Sure!" the other assented, leading the way.

Search revealed that the man had told the truth. Ofenloch was not in that house. But it revealed another point of more cheering character: Ofenloch's trunk was in the house and in that trunk the sum of three hundred dollars in United States currency.

"He's hiding out now," remarked the Corporal. "And he'll try to make his get-away. But he'll never leave without his roll. He'll be here after it later in the night."

So the three settled down in the boarding-house kitchen to wait.

THE place was wretched enough. A faint feather of steam, rising from the spout of a iron kettle on the dilapidated stove made its single livelier note. Otherwise the battered table with its dirty cloth, the crippled chairs, the few ruinous dishes that shared the shelf with the sharp-voiced clock, the foul floor, the scrawled and grimy walls, the two glaring, naked chromos in fly-specked frames, composed its graceless whole. A soot-smudged reflector lamp, its wry wick feebly smoking, revealed the scene, but, as the visitors at once made certain, the window curtains, wrecks tho they were, effectively shut it away from the outer world.

Silently the three men watched, while their host slept, his head on the table buried in his arms. Now and again came a shuffle on the floor. Each Trooper, at the sound, would spring to the sharp edge of readiness. Then the door would open while some drunken miner stumbled in, half blindly seeking his accustomed bed.

Most of them were submerged too far to notice the presence of strangers in the room. Some floundered upstairs to their mattresses. The rest, unequal to the effort, dropped where they stood, succumbed to the heat of the room, and slept. Little by little the air choked with thick, sickening odors, and strange, unhuman noise.

It was the ancient, accustomed finale of the thing that begins on "good old Saturday night." In its midst the three clean-cut young soldiers stood out like three bright steel lances against a heap of mud.

Mauk, almost six feet tall, heavily built and fine-looking, had been a school-teacher in earlier days, after the famous old Lincolnian plan by which a man delves in the lumber camps or on the farm between school sessions, and sits up half the night to read law and the classics the whole year thru. Now the Force had contributed soldierly discipline to the making of an all-around man. Nicholson and McCormick were sturdy variants of the type. And there they sat, watching and waiting, while the clock on the shelf ticked into the smallest hour.

Now and again some sleeper, waking and dimly troubled by the presence of guests so strange, would pull himself up and stumble toward the door.

"Better go to sleep again," Mauk would advise, laying a friendly hand on his shoulder. "None of us are quitting here just yet!"

And so the half-stupefied man, soothed out of his hazy notion, would once more subside. Outward-bound news was contrabrand that night.

THE sharp-voiced clock marked a quarter after one.

"He'll be along soon," muttered McCormick.

Click—click—click—click, snapped the clock, click—click—

On the cold snow outside a step came creaking—a heavy step, but swift and steady, unlike all those others, vague and shambling, that had neared the door before.

The three exchanged glances. Their bodies bent forward as their feet slid back.

A sharp knock.

Automatically the boarding-house keeper shifted his head within the pillow of his arms. His face was creased deep with the pattern of his jersey. His eyes remained tight shut. "Come in," he called in a sleep-drowned voice.

The door opened. On the threshold stood a man—not Ofenloch, not the worse-than-murderer, but a big negro, swinging a most portentous gun.

"Hands up, everybody!" he shouted.

In the first instant, light-dazzled, the newcomer had seen only the sleepers grovelling on the floor.

But as all three Troopers jumped to grapple with him, Nicholson first, he looked up, with an oath, fired point-blank, and sprang backward into the dark.

Two paces distant, and the aim at the heart! Poor Nicholson sank down without even a groan.

The Corporal, behind, scarcely glanced at him.

"Mack, you stay back here and get the man!" he called to McCormick, as he leaped over the body and out thru the door.

But the Corporal's eyes needed also their second of time to adjust themselves. Passing so suddenly from lamp-light into darkness, he tripped on some miserable thing in the ash-pile by the steps, stumbled and fell. As he fell, and rolled, his holster ripped away from his belt, the revolver dropped out, and, in the moment of fumbling that followed, he could not lay hand on the weapon among the deep mass of rubbish into which it had plunged.

Meantime he heard the beat of the negro's steps flying far and farther into the night.

"Better get the darky than the gun!" argued Mauk, and forthwith suited his action to the thought.

The negro, a limber six-footer, was running for his life. And he had a long start. But the Trooper, as it happened, was running for something just a little dearer than life—for the honor of the Force. And he gained on that darky.

THE negro struck a clean, straightaway course, over the moon-flooded plain. Perforce he must trust to speed, for nowhere did any cover offer.

On they raced, the two of them. And tho he took no precious time to look behind, the fugitive knew that his pursuer was gaining.

Suddenly he wheeled.

"Surrender!" called Mauk—Mauk with empty hands to the blood-stained criminal aiming a gun.

"No!" shouted the black man. "I've killed one State Trooper tonight. I'll never be taken alive. You go next!" and he fired.

Mauk dropped to the ground as the trigger fell. The bullet sang over his head. Once more the negro was running.

"He'll have loaded every chamber before he knocked at the door," thought Mauk. "Four shots left."

And the race began again.

Steadily, steadily, the Trooper crept up, with each jump nearing a little. But the big black, tho he could not keep his lead, was good for yet much distance. Nearer, yet a trifle nearer, the voice of the singing snow rose on his ear.

A second time he swung round, threw his gun down at aim, and fired, his stoutish figure outlined clearly by the moon and the luminous snow. A second time, helped by the brilliant light, Mauk seized the nick of the instant to drop, eluding death.

"Three left," the Trooper counted and sped again after his speeding quarry.

But now, with the distance between them ever lessening, came sooner the moment when the quarry dared risk no more. He fired from a range of fifteen paces. But the Corporal, Heaven favoring, dodged and escaped as before.

"Two," reckoned Mauk, scarcely losing his stride's length.

UP TO this point their course had lain straight outward from its starting place. Now, however, across the otherwise featureless field, showed a long, low inequality, the shape of a fence weed-draped and clogged with snow. And the line of that fence running at right angles with the course formed the second side of a triangle.

"He'll take to that for cover," muttered the Corporal. With the notion he somehow let out another link, speeding up. "If only I can get my two hands on him," he thought, "never mind that I have no gun!"

Close to the fence the black man turned again. Mauk, now so near that the powder splashed his cheek, jerked aside, avoiding the bullet. In a flash the fugitive cleared the rail. But the Trooper, leaping after, and almost at grips, by evil fortune caught his foot in a sprawling tangle of snow-hidden barbed wire. He fell heavily.

After the manner of barbed wire everywhere, the tangle spread itself out, wreathed itself, crawled like a live thing clutching and holding with its myriad impish claws, while the victim struggled in the midst of it. When at last he broke free, the negro had already established an ominous lead.

"Which we'll cut again," thought Mauk, and chased after.

Meantime, back at the boarding-house, Private McCormick, no small honor to discipline, sat alert and alone among the prostrate and snorling crew. How little, how very little, he wanted to sit there Heaven knew. But orders are orders. And, moreover, he, too, had to get his man. Afterwards he thought that his ears grew mobile in those long minutes of reaching and stretching after distant sounds.

And where was poor Nicholson's body?

Six feet is short range for a gunman to miss in. Perhaps in the instant of firing, the hand of the negro wavered under his sudden recognition of the uniform of the State. Aimed at the heart, his bullet flew high, striking the left collar-bone, shattering it to bits. The impact had felled Nicholson like a log—crumpled him up on the floor. But before the shrewish clock on the shelf had snapped many seconds away he was up and on his feet again, plunging thru the door.

For a bit McCormick's yearning ears had detected the sound of his footsteps. Then utter stillness succeeded, punctured at intervals by shots.

"One," McCormick counted. "Two. Three. Four."

"Single shots," he pondered. "Now, what's the meaning of that?"

Nicholson, following the two dark figures so far ahead, counted the shots also. Meantime his running was a miracle. Some way that bitter pain in his shoulder seemed only to act as a spur. The jar of each step wrenched like red-hot pincers—and yet, in spite of it, the lad was running his very best.

When the negro, firing his fourth shot, vaulted the fence, Nicholson was already near enough to see the manoeuvre. And so, because he understood it, he instantly changed

Did you ever hear this one?—

No Breakfast at All

There was an earnest conversation in progress in the village inn. Bob Bodger, the village grumbler, was complaining of the meanness of the farmer by whom he was employed.

"Jarge," he said, "he's as mean as ditch water."

"That's terrible," muttered George slowly and thoughtfully.

"Yes," continued Bob. "This morning he asked me how many more eggs I was goin' to eat, and I told him as 'ow I never counted 'em. 'Well,' he says, 'that last one was the seventh.' And it made me so mad that I jest got up and walked off to work without my breakfast."

A clergyman united in matrimony two of his parishioners, a stalwart woman and a small, weak man, not without inward misgivings as to the future happiness of the ill-assorted pair.

Nearly a year later the woman arrived at the parsonage in a state of fury.

"You married us aoout ten months ago," she announced. "Well, my husband's escaped. What are you going to do about it?"

One evening, thinking to test my small son's knowledge of arithmetic, I asked:

"If our next-door neighbor has a wife and baby, how many are there in the family?"

Johnny thought for a while, then answered:

"I know. There are two and one to carry."

POTATO GROWERS:
The Highest Analysis of any Spray on the Market
HYDROXCIDE
A combination of Bordeaux Mixture and Arsenical Poison which contains equivalent of 12 1-2 per cent Metallic Copper and 25 per cent Arsenic Oxide.

Markets

Editors' Note:—Due to the interruption in trading occasioned by the Fourth of July holiday we are unable to present in this issue our usual comprehensive review of the markets. However, the prices and trends cited on this page reflect the general trend of the market for the week.

Pittsburgh Markets

Vegetables—Wholesale Prices

BEANS, bushel hampers, green and wax, Maryland, $2.50@2.75, poor stock low as $2.00. CABBAGE, Ohio, Marietta district, 100-lb. crate, fancy, $1.75@2.00; choice, $1.25@1.50. CUCUMBERS, bushel hampers North Carolina, 50c@$1.25; Arkansas, bushel baskets, $1.50@2.00; Ohio, hothouse, chip baskets, fancy, $1.75@2.00; extra fancy, $2.50@2.75. LETTUCE, per crate, iceberg, California, best, $3.00@3.50; poor stock low as $1.00; Washington, $2.50@3.00; poor stock low as $2.00. POTATOES, new, U. S. Grade No. 1, barrels, Cobblers, Virginia, Eastern Shore, $5.00@5.25; North Carolina, $4.50@4.75; Maine, 150-lb. sacks, Green Mountains, $3.50@3.75.

Homegrown Supplies

ASPARAGUS, per dozen small bunches, 75c@$1. BEETS, per dozen bunches, 50@65c. CARROTS, per dozen bunches, 50c. LETTUCE leaf, per box of 2 dozen, 50@75c. ONIONS, green, per dozen bunches, 15@20c. PEAS, per bushel basket, $3.00@3.50. RHUBARB, per bundle of 1 dozen bunches, 20@30c. SPINACH, per bushel baskets, $1.00@1.25.

Fruits

APPLES, barrels, New York, Baldwins and Russets, $5.00; bushel baskets, New York Baldwins and Russets, $1.90@2.00. STRAWBERRIES, homegrown, per tray of 18 quarts, $3.50@4.50.

Philadelphia Markets

THE homegrown asparagus season is near its close and receipts in Philadelphia are lighter. Some farmers have already discontinued cutting while others expect to cut up until the Fourth of July. Many buyers have turned to other products but prices are holding firm. This morning Pennsylvania grass ranged from $2.00 per dozen bunches for small stock up to $5.00 for large, while New Jersey grass ranged from $1.25 to $4.50, according to the Pennsylvania and Federal Bureau of Markets.

Homegrown currants brought $5.00 per 32-quart crate. Light offerings of nearby huckleberries brought 30c a quart while sour cherries sold at 5@7c per pound. Red raspberries met a moderate demand at $4.80 to $6.00 per 60-pint crate.

The supply of string beans is increasing and there is a fair demand for homegrown stock. Green beans sold mostly at 50c to 75c per five-eighths basket while wax brought 50c to 65c. Beets and carrots were plentiful and weak at 1c @ 2c per bunch. Spinach was dull and sold at 40c to 50c per bushel while cabbage was firm at 25c to 40c per five-eighths basket.

Market Review

Philadelphia Produce

BUTTER—Market ruled easier the price level generally unchanged. Trading very quiet in most quarters in a wholesale way. Buyers not interested unless concessions could have been obtained, especially on undergrades, and in some quarters dealers were inclined to meet buyers' idea. Listings below 90 score nominal in absence of reported sales.

CHEESE—Market ruled about steady with trading spotted and mostly in small to medium sized lots. State flats moving only in small volume as high country cost restricts movement locally.

EGGS—Market steady. On the Produce Exchange this morning there were offerings of firsts in new cases at 25½c, no bid. Firsts, second-hand cases at 24½c, no bid.

New York Produce

BUTTER—Market ruled steady on long lines of top scores suitable for storage. Short lines were not clearing so well and in easy position. Trading generally was only fair. Considerable difference of opinion as to immediate future trend of prices. Medium grades in some accumulation and easy. Car market quiet and steady.

CHEESE—Fresh state flats in full steady position and trading of fair volume. Single daisies finding slow sale and in rather easy position. Held cheese in firm position and bringing full outside prices.

EGGS—Market about steady. On the Mercantile Exchange this morning there was one sale of 75 cases extra firsts at 24½c. Extras offered 26@27c, bid 25@25½c. Extra firsts, 25@26½c; bid 24@24½c. Firsts, 24½c, bid 23½c.

Prices Trend Upward

THE tendency of farm prices was slightly upward in May and June owing chiefly to firmness of grain and cotton markets. Cotton at 17c and corn around $1.00 marked quite an improvement from producers' point of view, contrasting with the almost continuous declines of some preceding months. There were some losses in the market position of various products which are in heavy supply at this season, but the general average of farm prices has tended slightly upward.

Recent gains in a small way included butter and eggs which are passing time of greatest production. Hay is lower, but the crop seems to be large. Beef cattle occasionally reach new top prices, but other lines of livestock, also dressed poultry, continue rather depressed. Crop conditions are about average in most parts of the country, altho the season has been especially backward in the Corn Belt and in the Northwest.

The sharp advances in the corn market afforded an opening for imports of Argentina corn, which is selling at shipping points about 30c below Chicago prices. Freight costs are less from Argentina than from Chicago when shipping to New York or Boston and the price is more than enough lower to offset the 15c tariff. A part of the large Argentina surplus will be likely to come to this country under present conditions. Corn markets have been holding at the same prices the past week or two. Good weather will be needed to push the crop forward to safety.

County News

(Continued from page 5)

Inc. Pasture abundant. Wheat fields which looked discouraging early in the season have developed wonderfully and a fair crop is expected. Corn is small and poor color. Early planted potatoes are coming on in good shape. Strawberries a poor crop on account of weather conditions. Selling at $8 bushel. Great showing for blackberries. Much time and labor has been given the side roads with good results. Good country butter brings 50c; strictly fresh eggs, 35c.—M. L. V., June 30.

McKean County, Pa.—Recently we have had some rain which was badly needed. Meadows are looking good. Corn is backward. The fruit crop will be very small owing to late frosts. Several farms have changed hands this spring. Several new houses have been built in rural districts. Building lots are in good demand along improved highways. Cows are in good demand with good prices offered. Tent caterpillars are a real pest this year. Gardens are not up to the average. Prices: eggs, 30c; butter, 46c; new potatoes, 75c pk.—F. J. H., June 27.

Westmoreland County, Pa.—Good weather now except very cool nights. Corn not very good for this time of year. Most all other crops promising. There was a good crop of strawberries and raspberries are promising. Farmers are making clover and alfalfa hay. Apples will be plentiful but all other fruit scarce. Prices: timothy hay, $18.50; mixed hay, $17.50; oats, 57c; corn, shelled, $1.10; eggs, 40c; butter, 55c; new potatoes, $3; veal calves, 11c, live.—L. C., June 28.

York County, Pa.—Weather for the past day or two has been almost ideal for haymaking. Hay yield somewhat better than was anticipated. Potatoes also have made splendid growth during the last month. Corn still very small for the time of year. Wheat is changing color now and will be ready to harvest in ten days or two weeks. While the stand is thin on a good many fields the straw is of good length and has good sized heads. York County was well represented at Young Farmers' Week, State College, June 15-18, as the county agent and 53 boys attended. Wheat, $1.35; corn, $1.02; oats, 50c; eggs, 23c; old chickens, 24c; straw, $16; hay, $15@18; 4 per cent milk, $2.40.—W. K., June 28.

Slow Demand for Commodities

Review of the Week Ending July 2

POTATOES—The market was dull and weak with heavy shipments from Virginia and North Carolina. Prices continued to decline in all markets. A few of the consuming markets reported slightly higher prices on June 30, but the majority continued draggy. New Jersey has begun to move her crop and motor truck shipments have increased rapidly. On Thursday it was estimated that an equivalent of 5 cars was hauled to Philadelphia. This stock sold mostly at 90c per five-eighths basket with poor lower and fancy as high as $1.00.

APPLES—Summer apples are now on the market and are selling at fairly satisfactory prices. New Jersey Yellow Transparents have sold around $1.75@2.25 per bushel. The strawberry season has about closed. The features of the season were the heavier motor truck receipts, from points as far South as North Carolina. Pennsylvania shipped about 2000 crates to Philadelphia. New Jersey 35,000, while Maryland, Virginia and Delaware hauled 210,100. This means that approximately 1245 carloads of strawberries were hauled to Philadelphia by motor truck.

GRAIN—The more favorable weather thruout the wheat and corn sections benefited these crops and resulted in lower prices. There was a decline of about 4c per bushel in wheat and about 1c in corn. Wheat prices were about 2c lower. Offerings of new wheat were larger.

HAY—The hay markets continued dull with a limited demand. Timothy and clover hay were lower in some of the eastern markets. New crop timothy offered in Kansas City is generally in poor condition and not suitable for shipping. Most offerings in other markets were common and ordinary grades which sold slowly. Top grades were scarce and in active demand.

FEED—Wheat feeds were more plentiful but the demand was slow except for middlings which are selling at relatively high prices. Gluten and hominy feed were firm while linseed and cottonseed meal were more plentiful.

LIVESTOCK—The Chicago hog market was stronger than last week. Beef steers were irregular with choice heavyweights reaching the highest point of the year. Heifers and cows fluctuated while vealers and heavy calves were steady. Stockers and feeders dropped 25c. Fat lambs and yearling wethers were weaker while fat ewes and feeding lambs were higher.

BUTTER—The markets were generally steady. Receipts were liberal but somewhat lighter than last week. The production is heavy and is believed to have reached its peak. The movement into storage is heavy altho the trade appears to lack confidence at present prices.

EGGS—The New York egg market was quiet toward the close of the week. Nearby white eggs met a fair demand and sold readily when of good quality. Light yolked fresh eggs were scarce and brought a premium.

POULTRY—Live fowl showed a firmer tendency in New York toward the close of the week. Receipts of broilers were more liberal and the market slightly weaker.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

"FARMERS do their best to make us crooks," said the commission man.

"How do you figure that out?" I asked.

"Well, if they ship a load of produce in here, say tomatoes for instance, and early in the morning the buyers are shopping around without taking anything, we figure our prices are too high. We drop them and gradually they start to move out at around 75c a basket. Then a little later in the day everybody wants tomatoes and we shoot the price up a quarter. An hour later we raise it another two bits and they move well at $1.25.

"Now, suppose one farmer may have hauled in 100 baskets. We actually sold fifty of them for 75c, twenty-five at $1.00 and the balance at $1.25. I should make out an itemized sales bill for the farmer and send him a check minus my commission. But if I did that he would raise up on his hind legs and kick, he would call me a crook and a bum salesman and other things. He can't see why I didn't sell them all for $1.25.

Price Varies During the Day

"Sometimes the early buyer pays $1.25 a basket, the later buyers have been around more and they won't pay more than $1.00. The next day the fellow who paid $1.25 will come around and kick. He wants a rebate of 25c. If he is a good customer I give him his quarter back rather than lose his trade.

"Some farmers call on the phone every morning and ask what their stuff is selling for. I told this grower that I had moved some of his tomatoes at $1.25. If I return $1.00 a basket for the load he feels sure that there is something crooked.

"If the farmers get down on you they haul to someone else, so we must try to keep them happy. Some commission men strike an average price for the lot. Some don't itemize it but pay so much for the load.

"There aren't many houses that are actually crooked but lots of them have to even up sales to keep everybody happy.

Failed Because He Was Too Good

"You know Jack Miles? Well he had one of the best houses on the street. He handled more than the average two stores, but he quit an old man and has to depend on his son to keep him. He was too good for his own good.

"There are some crooks in this business but they would not have as good a chance to work if the farmer would stick to a reliable house that returned just what it got. If they would only realize that the commission man can't always set his own price and that the price on the same goods may vary a lot in one day.

"Then, too, they think a basket of beans is a basket of beans. They can't seem to realize that while another man's beans bring $1.25 and are worth it, theirs won't bring 50c for they aren't worth that much."

It was a long speech for any commission man but I guess some one had just been raking him over the coals! I do not know that he expresses the general opinion of the produce dealers, but at least he has some ground for argument.

Various dealers have undoubtedly worked out other solutions to this problem and would have different ideas. The farmer views it from another angle. What do you think is the best solution?

Editors' Note:—We invite the opinions of readers on the questions raised by the commission man whom Mr. Whitacre quotes above.

Get Your Man

(Continued from page 15)

his course, darting away on the hypothenuse of the triangle, to head off his man.

Calculating speed and space as he flew, he knew that he should make the finish in time. Already he was halfway across. He fixed his eye on the fugitive, now visible for the upper third of his body beyond the fence. And so gazing and so running, he tailed completely to see a ditch directly in his path.

THAT ditch was eight feet deep and twelve feet wide. It was faced with soft snow. And yet, as Nicholson fell to the bottom, it could not have hurt him worse had it been a pit of jagged stones. The splintered and sharp edges of his broken shoulder ground together under the impact of his whole weight. For a second his eyes saw purple and black in spots. A wave of ghastly sickness swept thru him. Then he was up and climbing, out and away again, his left arm swinging oddly as he ran.

But the interruption had cost too much. Clearly, he could no longer hope to head off the man.

Mauk, tearing down the trail from above, perceived him now—the unmistakable Trooper figure silhouetted against the white. And Mauk's breast, at the sight, even at the tense and preoccupied moment filled quick with the fires of unspeakable wrath.

In Nicholson's head, however, one single idea was burning. "I must get that man! I must that man. If I don't, I'll run till Easter. I'll never go back to the Troop."

There was only one way to get him now. Thru the heart. To wing him would be to lose the trick.

But Nicholson, you see, as member of the Force's revolver team, was one of the four best recorded military revolver shots in the world. He waited till the moment of greatest possible proximity had come. Then, forty yards from the fugitive, he raised his revolver and fired a single shot.

The negro flung up his arms and plunged out of sight.

A MOMENT later, as Nicholson reached the spot, Mauk was already stooping over the body.

"Dead," Mauk growled. "Clean shot, I must say. Thru the heart."

Then he rose to his feet, straightening up stiffly, and turned on his comrade a face of withering scorn.

"McCormick," he began, "you-quitter! You rookie! If any one had told me this morning that you would disobey orders I—what? Good—Lord!—Nick, man, is this your ghost?"

Later that night Private McCormick, still alone, but grimly contented, conveyed the worse-than-murderer, Ofenloch, thru very dangerous waters safe to jail.

In the black of the morning, Dr. McKee, of Burgettstown, extracted a 44-40 flat-nosed bullet from among the debris that had been Private Nicholson's left collar-bone.

Later still, at the Coroner's inquest, the identity of the dead negro was clearly established; he was Charles Smith, of Braddock, Pennsylvania, professional bad man and pay-envelope robber.

"'Twas all he did for a livin', just skinnin' us poor devils," as one grim-faced miner averred.

And the tone that rang thru his speech found open expression in street and slope and shaft-bucket where men slapped each other's shoulders, rejoicing, over deliverance from a curse.

But the Coroner's jury, in the matter of the verdict, took the bit in its teeth.

"Suicide. We find that Charles Smith met death by suicide," that jury continued to insist.

"But Private Nicholson shot him—shot him thru the heart!" protested Mauk. "Verdict must be rendered according to the evidence."

"Of course, of course. That's just what it is—just what we're sayin', ain't it? The deceased attacked a Pennsylvania State Policeman with a gun. Any man that attacks a Pennsylvania State Policeman with a gun commits suicide," insisted the jury in all painstaking seriousness.

Then the Corporal had to argue, to reason, to expound; for he wanted the formal verdict that would clear his comrade. At last the thing came straight.

"Charles Smith," declared the jury, "while in the commission of a felony, met his death at the hands of a member of the State Police. And the said member of the State Police is hereby exonerated from all blame."

Allegheny Co-op Picnic

THE Farmers' Cooperative Association of Allegheny County plans to hold a picnic and field meet in the New Allegheny North Park on August 11, 1927. The new park near Wildwood, Pa., is a place of great natural beauty and is easy of access. The program for the day calls for a ball game between the married men and the single men, old time barn dances, and other amusements. A cordial invitation is extended to everyone to attend and enjoy the outing.

Discuss Abortion Control

(Continued from page 3)

association records showed much greater profits had been made in each clean herd than were made in the diseased herds.

In order to get rid of the disease, closer cooperation between the breeder and the veterinarian was urged. Veterinarians should determine by means of the blood test the health of all animals to be added to clean herds. More attention should be given to cows just before and just after calving. Calving stalls separated from the milking line were recommended.

After each animal is removed from the calving stall thoro cleaning and disinfection should be made before placing another animal in the same stall. No animal, male or female, should be added to an accredited abortion-free herd until after it has passed a properly conducted test and re-test.

The Pennsylvania Bureau of Animal Industry was encouraged to continue its investigations into animal diseases in order that proper methods for their control and eradication may be developed.

Pursuant with the educational policy of the Veterinary School of the University of Pennsylvania, thru its Extension Department, it is continuing to disseminate knowledge gained along research lines. This was well demonstrated by Dr. R. A. Amadon, veterinary physiologist of the school, in his address to the breeders and veterinarians attending this meeting. His outline of the fundamentals of reproduction was considered of great value to both breeders and veterinarians.

Rambles of a Pennsylvania Fruit Grower

(Continued from page 3)

Colorado River centuries ago, is 1500 feet deep, hence there is no fertilizer problem as yet. The last season was a red ink year for Imperial Valley farmers but their courage is still good. Over sixty-five per cent of the farms are operated by tenants, which is not a good sign. This Valley is hot, very hot, after the cool mountain breezes of an hour back, but there are still hotter hours ahead.

Turning north we pass the Salton Sea, formed when the Colorado River broke its banks. This is now a brackish lake, thirty miles long, fifteen miles wide and ninety feet deep, lying 216 feet below sea level. It has ceased to shrink, being fed by the drainage waters of the Valley. Beyond it lies the red-hot stove lid of these United States—the Coachella Valley. When I passed thru it the temperature was nearly 110 degrees in the shade, but it often goes to 125 degrees in the shade and to 150 degrees in the sun.

My brother, who is as nearly truthful about California climate as it is possible for any Californian to be, says he has fried eggs there on a stone, with sun heat. Some of the natives say it goes above 150 degrees sometimes. My idea is that these people do not know; that after it goes above 120 they don't care—they are unconscious.

(To be continued)

The Master Farmer Score Card

THIS score card is to be used in nominating candidates for the Master Farmer Awards. It should be filled out, signed and mailed before July 15th to the Master Farmer Editor, Pennsylvania Farmer, Philadelphia. Further information about the Awards may be obtained by writing to the Master Farmer Editor or by referring to the June 25 issue of this paper.

	Full score	Score
I. Operation of Farm—290 Points		
1. Maintenance of soil fertility	60	
2. Crop rotation	25	
3. Seed used	25	
4. Quality of livestock Alternative—Quality and variety of fruit trees and truck crops	35	
5. Feeding and care of livestock Alternative—Care of fruit trees and truck crops	30	
6. Efficient use of man and horse labor	25

Facts about the De Laval Milker

1. **650,000** cows now milked the De Laval Way.
2. **De Laval Milkers** now in their eleventh year of use.
3. **93.27%** of the users report average saving of 2 hrs., 12 mins. per day.*
4. **97.13%** of the users say they agreed with their cows.*
5. **99.4%** of the users say they get as much or more milk as by hand milking.*
6. **9.49%** average increase in production per cow reported by those who have records.*
7. **94.66%** of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, **14,542**—**93%** report counts of 10,000 and less.*
9. **99.48%** of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

A De Laval Milker Gives You More Time for Recreation

THOUSANDS of families are now able to enjoy themselves in many ways never before possible, for on farms in every section of the country De Laval Milkers have greatly simplified the milking problem. One person, with a De Laval Milker, can do the job just as easily and quickly as can two or three good hand milkers. Father, the boys and the hired man like it for they can "trade" Sundays, holidays and evenings without increasing each other's work in the least. Mother and the girls like the De Laval for they no longer have to pitch in during rush spells, and because of the many pleasant days that it makes possible with the whole family together.

Milking is no longer drudgery where a De Laval is used. It not only makes the work more pleasant but more profitable too, for it saves time and produces more and cleaner milk. Sold on easy terms. See your De Laval Agent or write nearest office below.

How Beltsville Eliminated Abortion

IN CONNECTION with Doctor Rosenberger's article about contagious abortion on Page 3, the experience of the United States Dairy Bureau with this disease is of interest.

Contagious abortion broke out in the herd at the Bureau's experimental farm at Beltsville, Maryland. About 50 per cent of the herd reacted to the agglutination test and one year ago were placed in temporary stables a half mile distant from the main barn. Only two cases of abortion have occurred in the clean herd since that time and they were not reactors.

The calves from the abortion herd are taken away from the dams at two days of age and kept separate for two months. They are then allowed with the calves from the clean herd since it has been found that calves do not harbor the germs for a longer period.

One Cow in Twenty Aborts

Doctor Buck, of the Dairy Bureau, states that contagious abortion is a chronic specific infectious disease of cattle thruout the world. It was estimated by Doctor Williams, of Cornell, in 1918 that five per cent of cows abort. Of these two per cent die and 10 per cent are permanently sterile.

Cows that abort yield 30 per cent less milk than normally, the total loss in dollars amounting to $5,000,000 annually in New York state and $70,000,000 for the entire country. Infection mostly takes place thru the alimentary tract by animals eating feed that may have become contaminated with abortion germs.

There are three ways the disease may be attacked:

1. Agglutination test and disposal of reactors.
2. Agglutination test and isolation of reactors.
3. Sanitary measures and immunization.

If there are only a few reactors in the herd, the first method is probably to be preferred. However, in a larger herd where there is a considerable number of reactors the second method is desirable. This is the plan being pursued by the Dairy Bureau at the present time.

Out of 192 animals, 66 reacted to the agglutination test and were isolated. The clean herd has been tested every two months with the following results: 1st test, 66 reactors; 2nd test, 6; 3rd test, 8; 4th test, 7; 5th test, 2; 6th test, 1; 7th test, 1.

The disease appears to have been almost completely eliminated from the clean herd in one year.

The third method has been used in several herds with fair results. This consists in inoculating calves with live organisms. The calves build up an immunity to the disease and in a majority of cases the results are successful.—A. A. B.

Inter-State Milk Prices

THE Inter-State Milk Producers' Association announces the following Philadelphia prices in effect July 1, 1927: For 3 per cent milk, basic quantity, $3.29 per 100 pounds; 7.1 cents per quart. June surplus price, Class 1, $2.19 per 100 pounds; 4.7 cents per quart. Class 2 surplus, $1.85 per 100 pounds, 3.95 cents per quart. The differential is 4 cents for each tenth point and 2 cents for each half-tenth point up or down in butterfat test.

Indiana C. T. A. Finished First Year with 12 Honor Herds

THE Indiana County C. T. A. finished its first year June 1, 1927, with 21 whole-year members. In addition there were five members in the association only part of the year. There were 391 cows in the association during all or part of the year.

The result for the whole-year members is as follows:

Total average, Number of cows in the association..	262.42
Avge. per cow: Lbs. of milk	7563
Pounds of butterfat.....	305.4
Percentage of butterfat....	4.0
Value of product	$257.14
Cost of pasture	8.75
Cost of roughage	44.81
Cost of grain	53.63
Total cost of feed	107.19
Value of product above feed cost	149.95
Returns for $1.00 expended for feed	2.39

The following is a grouping of all cows producing over 300 pounds of butterfat: Group 1, above 600 pounds butterfat, 1 cow; group 2, between 500 and 600 pounds of butterfat, 3 cows; group 3, 400 and 500 pounds butterfat, 17 cows; group 4, 300 and 400 pounds butterfat, 94 cows. Total number of cows producing over 300 pounds of butterfat, 115 cows. Twenty-one cows produced over 400 pounds butterfat during the year.

Twelve herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge no. cows	Breed	Pounds milk	Pounds butterfat
Elmer Lydic, Commodore	6.33	R. J.	7760	438.4

DAIRY

MAY ROSE GUERNSEYS
Yearling son of Maxim Linda Vista 4530. Two year old son of Lancaster Eastern King 4531. Three sires. Grandsons of Eastern King 4531, 425 and 4530 each. Three bred heifers, $150 to $200 each. Two bred cows $135 each. Two young fall cows, $225 each. Fresh Cow, extra good $300. A. M. KENNEL, R. D. 2, HONEY BROOK, PA.

BUCK & DOE RUN VALLEY FARMS—Hereford Cattle and Poland China Hogs. Sold out on boars; taking orders only for future delivery. THE SAINT AMOUR COMPANY, Martinsville, Pa.

IF YOU WANT practically pure bred Holstein or Guernsey dairy calves, write EDGEWOOD DAIRY FARMS, Whitewater, Wis.

CLOVERKNOLL REG. GUERNSEY COWS $150 and up. 2 weeks calves, $25 and up. Acc. Herd 83652. CLOVERKNOLL FARM, NEWTOWN, PA.

GUERNSEYS—One registered heifer 22 months old bred to May Rose bloodline sire. SPRINGDALE FARM, Bowmansdale, Cumb. Co., Pa.

5 REGISTERED HOLSTEIN HEIFERS, 2 weeks old. Tested Herd. Write us. J. KING, ARONA, PA.

10 GUERNSEY DAIRY HEIFER CALVES—Practically pure from milk milkers. Write us. L. H. TERWILLIGER, WAUWATOSA, WIS.

TWO LOADS OF YOUNG CATTLE, bred grades, for grade or immediate purchase. W. HUNDLEY, BOYDTON, VA.

SWINE

BERKSHIRES—Large and Prolific Strain. One Boar 9 months old $50.00. Ten open Gilts, prime ready also. Spring Boars and Gilts, $20 to select from. Herd tested and guaranteed disease free. DAVIS BERKSHIRE FARMS, Dagsboro, Del.

Big Type Reg. Durocs. A few choice bred gilts, Fall pigs and shipped on approval. G. C. SAUFLEY, R. D. No. 1, Hummelstown, Pa.

Registered Chester White 130 pound Boars and Gilts, $30.00 each. Choice spring stock. Order now. RAINBOW STOCK FARM, CHESWOLD, DEL.

200 CHESTER WHITE AND BERKSHIRE PIGS, 6 weeks old $11.50; 8 to 10 weeks old, $6.50 each; ready to eat. OAKS DAIRY FARM, WYALUSING, PA.

Registered Poland China Boars and Bred Gilts. STANLEY SHORT, CHESWOLD, DEL.

100 HIGH GRADE PIGS, Six to Eight Weeks Old, $5.50 to $6.50 each. HILLSIDE STOCK FARM, CAMPTOWN, PA.

TWO EXTRA GOOD REGISTERED BERKSHIRE BOAR PIGS, 10 weeks old. Quick, big growers. W. F. McFARRAN, FURNESS, PA.

SPOTTED POLAND CHINAS
BITTER STOCK FARM, FREMONT, O.

300 FEEDING PIGS six to seven weeks old $5.50 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Dunbars, Pa.

CHESTER, BERKSHIRE AND POLAND CHINA Pigs, 6 weeks old, $6.50 each. Express Paid. Shoats all ages. I. S. RANGER, York Springs, Pa.

REGISTERED Pure bred big type Poland China Pigs, 12 weeks old. Prices Reasonable. C. L. LEBO, SCHWEBLSDORF, PA.

LARGE TYPE DUROC BOARS, GILTS AND SPRING PIGS at farmers' prices. C. H. WIRE, YORK, PA.

PEDIGREED BIG TYPE CHESTER WHITES—125 fall pigs, 25 service boars, 85 bred sows, priced low, shipped on approval. C. F. Cassel, Hershey, Pa.

SHEEP

TRANQUILITY FARMS—DORSETS—Fall Horn Ram Lambs and Yearling Rams at Farmers' Prices. Available: bred purebred flocks, or production of her choice ewes. Purebred and registered. All stock on approval. ARTHUR DANKS, Mgr., ALLAMUCHY, N. J.

RABBITS

MAKE BIG PROFITS with Chinchilla Rabbits. Real money makers. Write for facts. 448 Conrad's Ranch, Denver, Colo.

GOATS

FOR good health drink goat's milk. World's Best Toggenburg Strain. 145 Registered Purebreds. 175 Kids. $15. Gaidaboro's Goatery, Manheim, Pa.

GOATS Purebred Toggenburg Bills, 10 grade does 4 registered does, bred. GROVER WISE, R. D. 7, West Chester, Pa.

DOGS

SALE OR EXCHANGE—Beautiful Female Collie 17 months old, white markings. Very intelligent and affectionate. Would exchange for pair setting pigs. WILLIAM BECKWITH, Parkerford, Pa.

WILL sell or exchange for Pigs or poultry—Collie, Shepherd Pups, $3.50. Wire Hair Fox Terrier Pups, $8. Irish Terrier, excellent ratter, 10 mo., $6. Rat Puppies, 2 mo. old, $2. Beagles, fine at breeding. MINNIE DAWSON, TUCKERTON, N. J.

LEWELLYN AND ENGLISH SETTERS, also ratter hounds on trial. Pamphlet free. O. K. KENNELS, MARYDEL, MD

COLLIE AND WIRE-HAIRED FOX TERRIER PUP PIES WANTED—Will buy litters. GEORGIE GORDON, Rt. No. 1, Chatham, N. J.

NICE A. K. C. Female Airedale, ten dollars. Also a few females of other breeds. L. E. HINDERER, DENTON, MD.

FORTY BROKEN ENGLISH BEAGLES on trial at the right price. Pedigreed pups all ages. Write your wants. WILSON COFIELD, Upperco, Md.

Veterinary

Conducted by Dr. J. F. Shigley

Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

CALF LOSES HAIR.—I have a calf which is losing its hair on the nose, on top, the inside of hind legs about two inches above hoof and around the navel. The skin looks red at first, then more natural. Can you tell me what causes it?—G. M. B., Berlin, Pa. Loss of hair around the nose, navel and feet may result if the skin is continually moist. Sometimes certain digestive factors enter in. Apply carbolized vaseline every other day to the hairless areas, and give one to two ounces of castor oil when treatment begins.

GARGET.—We have a young cow that has garget. What treatment do you advise?—Mrs. H. M. B., Titusville, Pa. It is always a good policy to separate these cases from others in the herd. Milk this cow last, washing the hands in an antiseptic solution before and after milking. Milk the cow frequently (every two hours). Feed a ration suitable for dry cows until the condition clears up. Bathe the part with warm water several times daily. One pound Epsom salts as a drench may be given. Should this case fail to respond promptly consult your local veterinarian.

HEAVES.—I have a horse about twelve years old that has heaves badly, sometimes refuses his oats and is unable to work. Can you suggest a remedy?—A. R. F., Coudersport, Pa. Heaves cannot be cured, but may be relieved by watching the diet. Feed roughage sparingly, sprinkling the hay each time with lime water or ordinary water to keep down the dust. Hay should be fed at night and grain, alone in the morning and at noon. Add either a handful of linseed oil meal to the grain ration daily or one tablespoon of raw linseed oil night and morning. Fowler's solution in teaspoonful doses twice daily for ten days may be tried.

STEER IS LAME—I have a steer whose feet under the hoofs are scabby and rough. All four feet are stiff. Please tell me what to do for the condition.—O. G., Colden, N. Y. It would be well to confine this steer by use of stocks or by throwing and examining the feet. It is possible that the lameness could be corrected by proper hoof trimming. If there is evidence of sores between the claws, clean the parts out carefully, apply tar and keep the animal on dry ground when outside and in clean, dry quarters if stabled.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate 165 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

POULTRY

JULY PRICES on Quality Chicks—Barred Rocks and Reds, $10 per hundred; S. C. W. Leghorns and Heavy Mixed $8 per hundred; Light Mixed $7 per hundred. Special prices on 500 and 1,000 lots. 25 chicks are 2c more and 50 are 1c more. Free range flocks. Safe delivery. B. W. Lauver, McAlisterville, Pa.

CAPPER SHIPS C. O. D. White, Brown Leghorns; Heavy Mixed 100—$8.00; English White, Buff Leghorns, Anconas $8.50; Reds, Barred, White Rocks, Black Minorcas $9.00; Buff Orpingtons, White Wyandottes $10.00; Assorted $7.50. Capper Hatcheries, Elgin, Iowa.

BABY CHICKS—Reds, $10; Barred Rocks, $10; Heavy Mixed, $9; White Leghorns, $8; Light Mixed, $7. Lots of 50, 1c more. 25, 2c more. Free range, 100% delivery. Circular. W. A. Lauver, McAlisterville, Pa.

S. C. BUFF LEGHORNS $9.00—100. W. Leghorns $8.00—100, Barred Rocks $9.00—100, Reds $10.00—100. White Rocks $10—100. Light Mixed $8.00—100. Heavy Mixed $8.00—100. Jacob Niewood, McAlisterville, Pa.

BABY CHICKS from Ledger and North American contest winning stock. White Leghorns and Barred Rocks. Catalogue. Pine Hurst Poultry Farm, Port Royal, Pa.

MAMMOTH TOULOUSE GEESE and Bronze Turkeys. Breeders and eggs. Twelve leading varieties poultry. Stock—eggs—chicks. List free. Satisfaction guaranteed. Highland Farm, Selinsville, Pa.

CHICKS C.O.D.—100 B. Rocks or R. Reds, $10; S. Leghorns or H. Mixed, $8; Mixed, $7. Delivery guaranteed. Feeding system raising 95% to maturity, free. C. M. Lauver, Box 43, McAlisterville, Pa.

LEGHORNS

WHITE LEGHORN hens and males now half price. Thousands of eight-week-old pullets. Also baby chicks and eggs. Trapnested, pedigreed foundation stock, egg bred 27 years. Winners at 20 egg contests. Catalog and special price bulletin free. 1 ship C. O. D. and guarantee satisfaction. George S. Ferris, 300 Union, Grand Rapids, Michigan.

PULLETS 5000—Are eight weeks and up. Produced from our famous Barron's English White Leghorns that we import direct. We breed English Leghorns only; there is no better egg-bred stock to be had. Get our prices before you buy. Catalog Free. Willaxker Poultry Farm, Box P, New Washington, Ohio.

MARCH HATCHED White Leghorn cullets, produced from 200 Accredited Chicks. Better Poultry Company, Sugarcreek, Tuscarawas Co., Ohio.

TOBACCO

HOMESPUN TOBACCO—Guaranteed. Good flavor. Chewing, 5 lbs.—$1.00; 10—$1.75. Smoking, 5 lbs.—$1.00; 10—$1.75. Pay when received. Farmers Union, Mayfield, Ky.

GUARANTEED HOMESPUN TOBACCO—Chewing 5 lbs. $1.00; 10—$1.75. Smoking, 5—$1.00; 10—$1.75. Pipe Free. Pay when received. United Farmers, Bardwell, Kentucky.

MISCELLANEOUS

MAIL YOUR KODAK FILMS to us; we develop roll, make 6 good prints and return for 25c coin or stamps. Cowie Studio, 109½ Fountain Ave., Springfield, O.

HIDES—WOOL—Best cash prices. Write for quotations and tags. S. N. Livingston, Successor Keystone Hide Co., Lancaster, Pa.

HELP WANTED

IF YOU ARE A MAN worthy of the name and not afraid to work I'll bet you $50.00 you can't work for us thirty days and earn less than $200.00. Think I'm bluffing? Then answer this ad and show me up. Openings for managers. Wonder line sells on sight. The best selling proposition in America today. Write Tom Walker, Dept. 175, Pittsburgh, Pa.

AGENTS—Big profits, easy sales. Free sample offer. Miracle Plant Food to introduce. Write, Ras Products Co., Port Huron, Mich.

BOYS—Make $10 week gathering grasshoppers, crabs, frogs, spare time. Be first, plans free. Day Fish Co., Port Huron, Michigan.

FARM LANDS

FOR WHITE PEOPLE ONLY Valuable land at low prices. Sold on reasonable terms. Fine fruit, truck and farming land. Send for free list of bargains. Mills Land Company, Booneville, Arkansas.

WANTED TO HEAR from owner of farm for sale. O. Hawley, Baldwin, Wis.

PLANTS

CAULIFLOWER, CABBAGE, BRUSSELS SPROUT and CELERY PLANTS—Cauliflower; Catskill Snowball, Long Island Snowball and Early Erfurt, 5,000—$20.00, 1,000—$4.50, 500—$2.50, 200—$2.00, 200—$1.50, 100—$1.00. Cabbage: Copenhagen Market, Danish Ballhead, Enkhuizen Glory, Succession, Surehead, Red Rock and all other varieties, 5,000—$10.00, 1,000—$2.25, 500—$1.60. Brussels Sprouts: Long Island Improved, 5,000—$12.50, 1,000—$3.00, 500—$2.00, 200—$1.50, 100—$1.00. Celery Plants: French Golden Self Blanching, Easy Blanching Golden Plume, White Plume, Winter Queen, Giant Pascal, Fordhook, Kingover, 5,000—$15.00, 1,000—$3.50, 500—$2.00, 300—$1.50, 100—$1.00. All good plants with good roots. Safe delivery guaranteed. Send for list. No business done on Sunday. F. W. Roebuck & Sons, Chester, N. J.

30 MILLION fine field grown "frostproof" cabbage plants. Early Jersey, Charleston, Copenhagen, Succession, Flat Dutch, Danish Ballhead. 500, $1.50; 1000, $2.50 prepaid. Expressed, 10,000, $15. Tomato plants same price. Sweet potato $3 thousand prepaid. Expressed 10,000, $20. Prompt shipments, good plants, satisfaction absolutely guaranteed, or money refunded. 15 years satisfactory service. J. P. Counsell Co., Franklin, Va.

PLANTS—5 Acres, June, July deliveries, Copenhagen market winning stock. White Cabbage, Onion Sets prepaid. 100, 45c; 300, $1.00; 500, $1.25; 1000, $2.25; express, 5000, $7.50. Cauliflower, prepaid, 50, 50c; 100, 75c; 500, $3.75. Partially assorted, when needed. Guaranteed. W. J. Myers, R. 2, Massillon, Ohio.

PLANTS "THAT PLEASE." Postpaid by return mail or your money back. All varieties Celery, Cauliflower, Beets, Mangels, 3 doz.—25c, 100—50c, 500—$2.00, 1000—$3.75. Cabbage, 3 doz.—25c, 100—45c, 500—$1.75, 1000—$3.50. Catalog. Rohrer's Plant Farm, Smoketown, Pa.

CABBAGE PLANTS for fall and winter heading. Flat Dutch, Ballhead, Allseason, Succession, Copenhagen, 300—50c, 500—$1.00, 1,000—$2.00, postpaid. Also have Collard Plants—same price. Ruby King Pepper, 50c—100. Satisfaction guaranteed. Mrs. Barlie Lankford, Franklin, Va.

CABBAGE and Collard Plants. Copenhagen, Ballhead, Succession, Flatdutch, Allseason and Wakefield, 300—25c, 500—$1.00, 1,000—$2.00, 5,000—$7.50, postpaid. 5,000 and over expressed, $1.00 thousand. Sweet Pepper, 25c—100, $1.00, 1,000. Satisfaction guaranteed. V. C. Lankford and Sons, Franklin, Va.

FLAT DUTCH, Ballhead, Allseason, Wakefield and Copenhagen Cabbage Plants, 300—75c, 500—$1.00, 1,000—$1.95, postpaid. Expressed, $1.00 per thousand. If you want good plants and full count send your orders to us. Nollywood Plant Farms, Franklin, Va.

CABBAGE PLANTS for fall and winter Heading—300—75c, 500—$1.00, 1,000—$1.75, postpaid. Expressed, $1.00—1,000. Sweet Pepper, 50c—100. Name variety. Cedar Hill Plant Co., Franklin, Va.

PLANTS—Special July, Hardy Cabbage for late crop, dozen leading varieties: 300—75c, 500—$1.10, 1,000—$1.50, prepaid. Yellows, $1.00—1,000. 5,000—$4.50. 10,000—$8.00. Satisfaction, good order delivery guaranteed. Old Reliable Plant Farms, Franklin, Va.

50 ACRES field grown cabbage and tomato plants. Some of the finest we ever grew. Special $1.00 thousand. Prompt shipments, entire satisfaction guaranteed or money back. Old Dominion Plant Co., Franklin, Va.

CELERY—White Plume, Winter Queen, Giant Pascal, Golden and Easy Blanching; Cabbage, Danish Ballhead, Flat Dutch. Plants ready for field—$1.25—1,000; 10,000—10,000. J. C. Schmidt, Bristol, Pa.

BEAUTIFUL IRIS AND PHLOX. Plant now, 15 choice named varieties, Either, $2.00 Both, $3.50. 10 unnamed miniture, $1.15, prepaid. Stegerdal, Vaegertown, Pa.

MACHINERY

RICH MAN'S Corn Harvester, poor man's price—only $25.00 with bundle tying attachment. Free catalog showing pictures of harvester. Process Co., Salina, Kans.

FIVE FORDSON size Threshers used as dealer's samples and more or less shopworn for sale at big price reduction. Bello City Manufacturing Co., Racine, Wis.

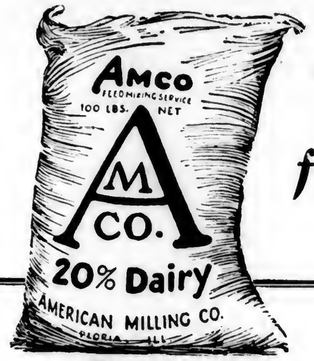
PINE TREE MILKER—2 double units, 3 hp. Edwards Engine, nearly new. Grover Wise, R. D. 7, West Chester, Pa.

WANTED—Potato Digger. Also a Bogg's Potato Grader. John Swope, R. D. 4, Lebanon, Pa.

Mention Pennsylvania Farmer when writing to advertisers.

Herb the Handy Man Tells How—

HERE'S ANOTHER SCHEME THAT IS BETTER THAN GUESSING-
BERT, IS THESE HERE TOADSTOOLS OR MUSHROOMS?
GUESSIN'S TOO RISKY! YOU BETTER EAT ONE AN MAKE SURE.
FRONT END
OTHER END
1. AMOUNT OF HAY IN MOW:
LENGTH IN YARDS X HEIGHT X WIDTH DIVIDE BY 15 IF WELL PACKED, OR BY 18 IF RATHER LOOSE.
answer is tons.
I GOT IT FIGGERED OUT AT LAST, PETE! — IT COMES TO 432 TONS
THAT DONT MEAN NOTHIN' NOW — I JUST THROWED DOWN A FORK FULL O' HAY TO TH' HOSSES.
2. AMOUNT OF HAY IN STACK:
DISTANCE FROM GROUND ON ONE SIDE OVER TOP OF STACK TO GROUND ON OTHER SIDE (IN FEET) X WIDTH X LENGTH
OH, SO YOU JUST CAME OVER TH' STACK, HEY? — HOW FAR WAS IT FROM THE OTHER SIDE?
IDJIOT! STOP T' MEASURE - BUT TWO FEET MULTIPLIED BY HALF A TON O MULE SEEMS TO GIVE THE RIGHT DISTANCE
multiply this answer by
.25 IF STACK IS LOW AND POINTED OR BY .37 IF IT IS HIGH AND MORE NEARLY FLAT ON TOP
WOOSTER, I FEEL IT'S YOUR DUTY TO FIND OUT HOW MUCH HAY THEY'S IN YON BER SCARE CROW
YEAH, THEN GO TO A HOSS SHOP AN' FIND OUT HOW MUCH PAY'S IN THEM OL' CLOTHES



The Right Feed from now until fall

AMCO 20% DAIRY

PASTURE begins to get dry and the grasses more mature about July 15. Cows need some grain before this, but certainly they *must* have grain from July 15 on to hold their production against the heat, the flies, and the natural change in the grasses during late summer and fall.

Cows naturally fall off in production 6 percent each month. That is, cows that gave 50 pounds a day in June will give 47 pounds a day in July and 44 pounds a day in August *if we feed them to hold them up to the highest point.* We cannot help this rate of falling off because it is natural, *but by proper feeding we can keep them from falling off any faster.* Fight the effect of flies, heat, and dry weather with good feed. Keep your cows from falling off more than three pounds daily per month. Amco 20% Dairy will help to do it.

Amco 20% Dairy has 20 percent total protein, 16.4% digestible. The Colleges of Agriculture recommend 16 to 20 percent total protein in the grain mixture to supplement pasture. Amco makes available a 20 percent protein mixture—Amco 20% Dairy—rather than a 16 percent pasture feed because there are reasonably priced ingredients available to furnish protein at this time. *So it is possible for you to get the milk-stimulative effects of the additional protein at an economical price.*

The corn, gluten feed and meal, malt grains, cottonseed meal, hominy, and molasses in Amco 20% Dairy stimulate milk production and keep the cows in good condition. The molasses makes the feed taste good. The bran, cottonseed meal, and bone meal furnish phosphorus; ground limestone furnishes lime. Cows make the best use of these important minerals on pasture.

In this feed you get 1467 lbs. of total digestible nutrients to the ton; seven high producing ingredients; and three mineral feeds. A mixture you would find it difficult to match! The formula comes in every bag. You can see for yourself.

AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY

ESTABLISHED 1880 — PUBLISHED WEEKLY

(Pittsburgh Market Edition)

Vol. 96 — PHILADELPHIA, PA., SATURDAY, JULY 16, 1927 — No. 3

Iount Rainier, Washington, in July. This extinct volcano rises 14,000 feet above the sea.

We take a glimpse behind the scenes—How unheralded research men are solving knotty farm problems. *Page 3.*

Fred C. Nichols, Farmer, makes a discovery

"I decided to try your Mobiloil," writes Fred C. Nichols of Delanson, New York, R.D. 2. "Right here I will say I wish I had decided before, and I would not have had to put in new rings and pistons this spring.

"To say that I am pleased with Mobiloil is putting it mild. Such a change in my motor—I haven't had a plug out since I started using it. She runs so much smoother and so much more power.

"I live on a dirt road, long hard pull and then a very steep hill to get up on the farm, and on this hill I had a chance to notice my extra power—the motor starts as easy again. When you say it is worth a special trip to town you are right, it is, and I would rather make the trip than put any other oil in my crankcase.

"I use a Stewart truck also a Ford motor and draw heavy loads, and think Mobiloil the best oil on earth.

"Just why I am writing this letter I don't know—probably it's because I am so pleased with Mobiloil. I will use it on all my farm machinery next summer. Best wishes to you and Mobiloil."

Similar experiences await you!

Actual use of Mobiloil has opened the eyes of countless farmers to real engine economy and efficiency. Mobiloil costs a few cents more per gallon than ordinary oils. But, despite this fact, *it is the most asked-for oil among farmers today.*

"Extra" power is what you want. It is what you get with the correct grade of Mobiloil in your crankcase. Think what that means in the operation of your tractor!

The continued use of Mobiloil will introduce you to a series of savings that far outbalance the slight extra price. Less wear. Fewer repairs and replacements. Greater freedom from carbon and overheating.

Mobiloil frequently lasts twice as long as ordinary oils in a tractor. And many farmers report that Mobiloil cuts oil consumption in cars and trucks from 10% to 50%.

YOUR guide—*if your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors. And remember that . . .*

609

automotive manufacturers approve it!

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc."), Mobiloil "A," Mobiloil "BB" and Mobiloil "B."

GARGOYLE

Mobiloil

Make the chart your guide

HOW TO BUY— A nearby Mobiloil dealer will gladly offer you a substantial reduction on quantity orders—barrels and half-barrels. This method of buying Mobiloil recommends itself for two reasons, (1) the cash savings, and (2) the convenience of having a long-time supply on hand. Ask your Mobiloil dealer which grades of Mobiloil to use in your car, truck and tractor. He has the Mobiloil Chart which has been approved by 609 makers of automobiles and automotive equipment.

We Take A Glimpse Behind the Scenes

These Firms Say, "The Only Way To Learn What a Hen Wants Is To Ask Her"

THIS is an age of research, which very largely accounts for its being an age of rapid progress. Agriculture has profited greatly because of the modern use of laboratory methods as applied to materials, designs and production methods in the manufacture of equipment, feeds, fertilizers etc. It is probable that commercial research of this kind has contributed as much to the evolution of American agriculture as has the purely scientific and technical research carried on by governmental and educational agencies.

Too frequently we are inclined to discount the efforts of manufacturers along these lines because they are developing products to sell, but it is a mistake to discount the results of honest research whatever may be its source, if those results have an application to our own economic problems. And such application is far more general than most of us realize. We will find it everywhere; in our homes, in the food we eat, in the clothes we wear, in the equipment and materials we use.

Within the past month we have had opportunity to review the research work of two manufacturers in different agricultural lines. In both cases, the research work was carried on with poultry flocks on experimental farms maintained by the manufacturers, under the supervision of trained men who thoroly understood their business. Both put the questions they desired answered directly to the hens. The questions were different, but both got the same "sound" answer—the hens cackled.

Insulating against heat and cold

It Took Years of Research

The first of the two research farms visited was maintained by a barn equipment manufacturer. The questions his experts asked the hens had to do with living conditions and working conditions. The result was the development of a new and radically different type of poultry house, which we saw demonstrated.

This poultry house design is the culmination of some five years of research and engineering work to provide a building in which the conditions can be controlled to make it an ideal habitation for hens. The requirements of such control were determined by carefully studying hens under all conditions.

The results of this study indicated that hens, for maximum health and production, require a temperature between 35 and 75 degrees. They also require fresh air and a reasonable regulation of its moisture content. This new type of hen house was designed to provide this control; to keep the winter temperature from going below 35 degrees and the summer temperature from going above 75 degrees; to keep the air fresh and pure at all times, and reasonably dry in humid weather.

To meet these requirements the house was designed to have a minimum of unused space. It is insulated to prevent excess of heat radiation in winter or heat absorption in summer. Adequate sunlight and ventilation of a scientific type are provided and the interior arrangement is designed for utility and convenience. The floor is insulated as well as the walls. A heating plant is also installed, not for the purpose of providing a "hot house" for the hens, but as a prevention against extreme winter temperatures and excessive moisture conditions.

The basis of this construction is the so-called pointed arch which is the backbone of the building.

These arches and other essential parts of the building are factory-made and quickly assembled in construction on the farm. Matched lumber is used for roofing boards and the whole building is covered with a good quality of roofing felt. Crimped steel ceiling is nailed to the inside of the arches and the space between this ceiling and the roof boards is filled with insulating material, such as mill shavings, coarse sawdust or cut hay or straw.

This new poultry house is the result of five years of intensive research

Hens Reply to Housing Problem

The heating system is a small hot water plant with pipes running under the dropping boards. This poultry house will enable the control of conditions which ordinarily cause greatly reduced egg production, such as abnormal temperature or moisture conditions, and given good hens and intelligent feeding, the results will prove profitable, not only because of increased egg production, but because of the fact that the product will be increased at a period when eggs bring maximum prices.

Another illustration in point is the case of a feed manufacturing company, which, having decided to put out a line of poultry feeds, first organized its research staff to learn the formulas needed, and then worked out the necessary engineering problems. After scouring the country for the best available poultry research men; this company purchased a large farm and equipped it with the necessary buildings, machinery, laboratories and poultry flocks. It was our pleasure recently to inspect the farm and also the mills of the company.

Research work was conducted for nearly five years by these poultry experts before a single pound of poultry feed was placed upon the market. The company had an enviable reputation for its products, and the management would take no chance in introducing its poultry feeds until every vestige of doubt as to their quality was cleared away. So the research staff repeated again and again each phase of their work to make certain that the formulas worked out were correct.

This is the farm where the scientists asked questions about feeds and the hens answered

Biddy Gave Her Opinion on Feeds

The big reason for the farm was to get biddy's opinion of the proposed feeds. Occasionally in this work she would cackle her satisfaction, but frequently she would not. However, all thru the months and years the research men patiently watched her, checking up regularly on her weight, production and condition by every available test known.

Year after year the work went on. These men sought to find the best feed for a laying hen, a molting hen, a baby chick, a broiler. They studied nutrients in every different sort of feed to learn, for instance, whether protein in bran, or meat scrap, or alfalfa hay had the same feeding merit as protein in cowhorns or horses hoofs. They asked if grain should be fed whole or ground; if feed should be given in a (to page 11)

Vol. 96, No. 3 Phila., Pa., July 16, 1927 Whole No. 1574

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The world is good-natured to people who are good-natured.—Thackery

Interesting If Not Flattering

THE president of the National Electric Light Association said in his recent annual address that the entire electric light bill for the United States for all purposes is less than the bill for tobacco and candy. Now it is not to be assumed that if we should cut out the latter the adoption of electricity would be hastened by that much, but it does show that more people are interested in catering to their appetites than they are in serving other and more important physical needs.

The Changing Customs

TIME was, and not so long ago, that holidays and Sundays were occasions for especially big dinners. This was reflected in the markets to a noticeable extent by the need for larger quantities and special products. The custom of holiday feasting is gradually disappearing, especially during the summer and fall seasons. Millions of people now are enabled to "take to the woods" and resort places when they have a day off, and the eatables are principally hot-dog sandwiches, pop, candy and fruit,—these and a supply of gas, oil and tobacco, provide the modern essentials of a good time.

Why People Do Not Vote

THE National Civic Federation has been trying to find out why nearly two-thirds,—about 40,000,000—of the qualified voters did not cast a ballot last year. The 60,000 answers to the questionnaire give all manner of reasons without throwing any light upon the real question. In fact, most of them are excuses rather than reasons.

Aside from the rather large class of people who have no live interest in public questions, or who recognize their own ignorance, there are countless thousands who simply shrug their shoulders and say, "What's the use?" The latter class is convinced that politics is such a cut-and-dried affair that a single vote will make no difference, that the whole thing is slated by politicians beforehand and is bound to go thru anyway. This conclusion is reached from each one thinking as an individual rather than as a citizen of a democracy. Newspapers, altho they loudly decry the apathy of voters, help to create conditions which discourage "the best citizens." They build up men and issues in such plausible manner as to make it certain that the class of regular voters will vote their way, regardless of the real merits of the case. Partisanship is carried to excess by public leaders, and this, as well as the election laws, tends to discourage the most intelligent portion of the voters.

It Takes Efficiency, Plus

PROBABLY most of the farm advisers who have reduced the farm problem to a clear case of the need for greater efficiency know nothing about the farmer's real difficulties. Efficiency as practiced by the banker and manufacturer is not possible on the farm, because the farmer is dealing with so many factors over which he has absolutely no control. Of course, there are features of farming in which the farmer can and should apply efficient methods,—such as securing good seed, keeping profitable cattle, having good rotations, using proper fertilizers, etc., but other and equally deciding factors must remain unsolved if not unsolvable problems. Since a chain is only as strong as its weakest link, those who dismiss the farm problem by recommending greater efficiency would find, if they took up farming, that efficiency in the controllable factors alone would not insure profits and success. There are the questions of weather, total production, market demands, unexpected happenings, etc., which always hit the most "efficient" farmer and which greatly affect the final returns.

Watch the Farm Loan Board

THE new appointees to the Federal Farm Loan Board should be watched carefully until Congress meets to see whether or not they will prove to be sympathetic and fair in their attitude toward the spirit of the farm loan laws. There has been more than a suspicion that the clamor of the opponents of the Farm Loan Act is having more than a little influence with the administration, and that the recent changes were made because of this opposition. The Farm Loan Act may need some strengthening and improving, but it does not need any modification in favor of professional money-lenders. The acts of the new members of the Farm Loan Board should be such as to set the prevailing suspicions at rest.

Highway Nuisances

WE HAVE a long letter from a reader in northeastern Pennsylvania giving in detail the misconduct and misdemeanors committed by people traveling in automobiles. The list includes everything from the cluttering up of the highways by spooning couples to stealing pigs from a lot. We have had similar letters from other sections, showing that, in some places at least, rural sections are suffering from the modern traffic improvements. The writer of the letter referred to wants us or somebody to do something about it, and wants to know whether the state officials are not falling down on the job of protecting rural communities.

To police the 100,000 miles of public roads in the state so as to keep travelers moving and prevent roadside thieving is economically impossible, altho we do believe that the Highway Patrol and State Police forces should be greatly enlarged. Concerning the latter, however, we remember that the State Grange opposed the enlargement of the State Police force. Until it can be done officially it would be a good plan for every community to form a vigilance committee composed of members with sufficient backbone to take the initiative in such matters. Too many people always say, "Let George do it."

The So-called Blue Law Stands

THE case brought by a major baseball organization to test the constitutionality of the so-called "blue law" of 1794 has resulted in a decision which effectually bars efforts to "liberalize" the Sabbath. The unanimous decision of the Supreme Court is that all forms of commercialized amusement, as well as all unnecessary work, are violations of the law and those engaged in them or promoting them are subject to the penalties attached.

Talk at once started by those who oppose the closed Sabbath law, favoring the complete enforcement of the act for the purpose of making it ridiculous and unpopular so public sentiment would demand its repeal. So far, it has not met with approval. The idea of keeping the Sabbath free from exploitation by commercial amusement promoters is so firmly established in Pennsylvania that it is going to require a long and hard fight on the part of the small change gatherers to break it down and inaugurate what is called the Continental Sunday, even if it has been done in some of the nearby states.

A Meaningless "Wet" Plank

THE leaders of the Republican Party in New Jersey, aided by the radically wet wing and abetted by the cowardly element, wrote what is supposed to be a wet plank in their platform. The plank ostensibly proposes a referendum on the Eighteenth Amendment, suggesting that Congress allow each state to decide what are intoxicating liquors. So far the question is a direct one and would give liquor lovers an opportunity to express their disapproval of the present law. But somebody with a grim humor, or maybe with conscience working half time, added the words, "Within the limit set by Congress." This, of course, nullifies the whole thing, by giving the states liberty to set their own percentage of alcohol content so long as it is "within the limit set by Congress." It is like the boy who said he didn't care what color an apple is, just so it's red.

Editorial Sidelights

AGRICULTURE is a great industry in P...l and it has many other great industries working for it. The article on Page 3 gives us a glimpse of the work being done for farmers by two important commercial organizations.

Doubtless these concerns hope to profit by developing a better poultry house and better ration, but that doesn't make their products any less valuable to the men who use them. Probably Edison, Marconi and most other great research men were spurred on by the hope of monetary gain, but we don't begrudge them their rewards.

Most of the great inventions and discoveries that have revolutionized rural life in the last few years have been made by men who were not farmers. Agriculture is so broad and so complicated that farmers have had to rely on specialists who could spend their lives on some one particular problem.

The average farm wouldn't furnish standing room for all the research men and inventors whose discoveries and inventions are put to practical use every day by the modern farmer.

NATION SHOWS THRIFT

Grange Wants Reduction of National Debt—Pennsylvania Affected by Flood Control Plan.

Washington, D. C.

UNCLE SAM set an example of thrift during the fiscal year ended June 30, that is outstanding, with receipts above and expenditures below the Treasury Department estimates.

The year closed with the greatest surplus and the second largest annual reduction of the public debt in the life of the nation. The total ordinary receipts amounted to $4,129,394,441.10 and the expenditures chargeable against such receipts were $3,483,584,519.40, resulting in a surplus of $635,809,921.70, as compared with one of $377,776,816.64 in 1926. The public debt at the close of the fiscal year amounted to $18,511,906,931.85, as compared with $19,643,216,315.19 at the close of the fiscal year 1926, or a decrease of $1,131,309,383.34.

Corporations Want Tax Cut

This vast Treasury surplus has led to a revival of the demand for tax reduction. The corporations and receivers of large incomes are insisting upon a substantial cut in tax schedules. The House Ways and Means Committee will meet on October 31 to begin the draft of a new tax bill.

Will Talk Taxes, Floods, Farming

It is now quite definitely settled that tax reduction, farm relief and flood control will be the outstanding problems which the 70th Congress will have to solve when it meets in December. An effective program of flood control will have to be developed by Congress, and to provide the money to carry out such a program large appropriations must be made. In regard to tax reduction the National Grange and other farm organizations believe that every interest of the nation and a proper regard for the welfare of posterity demand that the national debt should be paid off as speedily as possible. Debt reduction is called a form of permanent tax reduction, the benefits of which extend to all the people and are not limited to the particular few who hope to get special tax reduction.

Tariff Schedules May be Attacked

Powerful financial interests are demanding tax reduction at any cost and regardless of payments on the public debt. It will require the combined strength of all the farm organizations and affiliated groups to win on this public debt paying proposition. The fight for tax reduction is likely to reach into the tariff schedules, and those protecting farm products will be in the front line of attack. Tariff reduction agitation and propaganda are increasing rapidly in volume, with the probability that a loud noise will be raised for a cut in tariff duties on so-called raw materials in which the tariff reformers persist in including farm products.

Hope to Dispose of Muscle Shoals

That the Muscle Shoals disposal problem will be settled early in the next session is the hope of many members of Congress. It seems now to be the opinion of a considerable majority that unless there is a satisfactory bid for the plant for the production of fertilizers Congress will be willing to accept government operation.

Flood Control Plans Affect Penna.

A comprehensive, workable flood control plan should be formulated before Congress meets. This is the belief of leaders in both branches of Congress. They are insisting that the appropriate committees begin work on such a plan early this coming fall.

Representatives most interested in the matter of flood control in the Mississippi Valley, are saying that the stabilization of the flow of the Ohio will be necessary. And regulation of the Ohio means the treatment of several tributaries. Above Pittsburgh they say that storage of water for dry season navigation is part of the flood control problem.

New York Bought 125,000 Carloads

Of the 899,431 cars of apples, cabbage, cantaloupes, celery, grapefruit, grapes, lemons, lettuce, onions, oranges, peaches, potatoes, strawberries, sweet potatoes, tomatoes and watermelons shipped to market last year, 500,152 cars were unloaded in 36 cities, according to the Bureau of Agricultural Economics. The entire contents of the 500,000 cars were not actually consumed in these cities, however, large quantities being hauled by trucks and railroads to the surrounding territory. New York is by far the leading market, the number of cars of fruits and vegetables reaching the metropolis during 1926 was 125,253.

Wheat Exports Larger

Exports of wheat including wheat flour from the United States for the season ending with June 25 1927, reached 215,242,000 bushels as compared with 104,864,000 bushels for the same period last year. The net exports for the season are 202,000,000 bushels.

To Study Tomato and Corn Costs

The United States Tariff Commission will begin field work in ten new cost of production investigations this month. Those of special interest to farmers are on fresh and canned tomatoes, corn and flaxseed. The growers of cherries are asking a flat increase of 50 per cent, making a 3-cent rate on cherries, to equalize the cost of producing cherries in this country and Italy.—E. E. R.

FORCE FIGHT PESTS

Highway Bids Opened—Farmers Post Land—Electric Service Cost Trials Now Being Made.

Harrisburg, Pa

OFFICIALS of the State Department of Agriculture say the field forces engaged in the campaigns against the pests are in excellent shape as the result of the extension of the training period made possible by the cool weather. Experiments have been possible in the Japanese beetle areas and better means of cooperation on inspection have been obtained, according to some of the reports. In the corn borer area the fact no prosecutions were required to secure the clean-up of premises has been reported to Washington. It is believed the results obtained in the first clean-up work in this state will rank high.

More Road Work Planned

In addition to the numerous projects on which the State Highway Department will open bids this month there will be lettings in August and September and perhaps later, all depending upon the amount of money available. Some surveys are being made now to get estimates for cost of work in which counties will join. Indications are that much county work will be done in 1928.

More Posted Areas

The summer automobile season has resulted in more posting of lands due largely to failure of folks to observe requests to stay out of fields. A number of arrests have been reported for tearing up plants and various flowers as well as for breaking branches of fruit trees.

Trying Electric Rules

In half a dozen districts trials are being given to rules for electric service charges and construction cost allotments. If they work out it is possible petitions for amendments to regulations may appear before the Public Service Commission this fall. —T. C.

POTATO CROP MOVES

New Jersey Fruit Men Meet—Old Fashioned Fair to be Staged—Alfalfa Problems Discussed.

Trenton, N. J.

WITH one of the biggest white potato crops in years now reaching maturity, farmers thruout South Jersey are beginning to get the first of the spuds on the market. Early diggings point to a crop of 50 to 70 barrels per acre and of excellent quality. Heavy rains in late June topped off the growing season in fine shape and the tubers grew quickly, ranging from 4 to 7 potatoes per hill. In central New Jersey the same general conditions prevail, indications, however, pointing to probable yields of 60 to 80 barrels per acre. The bulk of the central New Jersey potato area is in Irish Cobblers, the first diggings of which were ready for market in mid-July. The South Jersey Farmers' Exchange is U. S. grading and sacking all of its stock this season.

Fruit Men Will Tour

The annual summer meeting and tour of the New Jersey State Horticultural Society is scheduled for the first week in August. Tentative plans call for the membership to meet on August 3 at 10:00 A. M. at the farm of Earl Dilatush between Yardville and Robbinsville. Stops will be made at the farm of Lemuel Black, of Hightstown; R. S. Terhune, at Princeton; John H. Hankinson at Glen Moore, and R. Barclay Moon, at New Hopewell. Following the mid-day picnic, the society has arranged a one-hour program, with short talks from leading men in the state.

Tri-County Fair Discussed

The county agents of Passaic, Bergen and Essex Counties are developing interest in an old-time farmers' fair to be held at an amusement park in Paterson later in the season. The plan is to stage a real old fashioned county fair, with products exhibits from the three counties and a good time at hand for the tri-county membership. The amusement park has offered to put up temporary buildings to house poultry, dairy, vegetable, fruit, flower and home economics exhibits. Thru the collection of the usual gate receipts the park management agrees to furnish premiums and money for prizes, publish a catalog and advertise the event. The committee in charge will meet again in mid-July to complete details of the plan.

Held Twilight Field Meetings

In order to bring out the farmers, two twilight field meetings were held on alfalfa fields in Somerset County, July 7 and 8th. The first one was scheduled for the farm of James H. Van Dyle, near South Branch, on July 7 while the farmers met at the place of J. V. Baird, near Middlebush, on July 8th. The meetings were held at 7:00 P. M. daylight saving time, for the purpose of discussing alfalfa problems.—W.H.B.

SHIP FIRST LETTUCE

Up-State Public Markets Not Yet Opened—Cash Prize Awarded For Best Alfalfa Field.

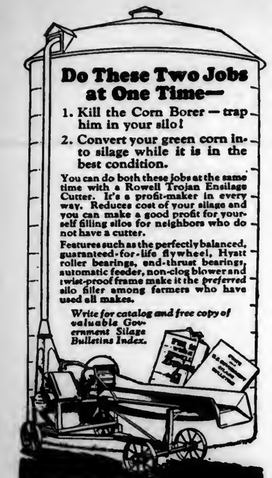
Ithaca, N. Y.

THE Canastota Vegetable Growers' Association has entered upon its season of active shipment of lettuce to New York City. The railroad companies receive annually about $10,000 for handling lettuce alone from the area of this association. Early shipments have run 33 to 35 pounds to the case, indicating a fine quality of lettuce. Curb markets and public markets up-state have not yet opened, as not enough produce is ready. Home-grown cherries and strawberries, asparagus and lettuce, with early broilers, are the only offerings to date, besides dairy and poultry products and home cooking. Most of these find a market at wayside stands and food stores.

Alfalfa in Non-Alfalfa Belt

Tho Cortland County is not in the natural belt for alfalfa growing the Farm Bureau of that county has stimulated its growing until 1500 acres are now established with some fields in every township. A $50 cash prize was recently awarded for the best field in 27 entered. A. H. Stewart of Harford, won it with a six-acre field that represents his first experience with the crop. A great increase in planting to alfalfa is looked for all over the state, to meet the demand for more milk. In non-limestone regions the most successful practice has been: no nurse crop, good drainage, good seed bed free from weeds, hardy seed, inoculation, heavy liming (three tons to the acre), and seeding at 15 to 18 pounds to the acre. Cortland County has an alfalfa growers' committee to aid the Farm Bureau in increasing the growing of this crop.—M. G. P.

LIKE A THIEF IN THE NIGHT



Do These Two Jobs at One Time—

1. Kill the Corn Borer—trap him in your silo!
2. Convert your green corn into silage while it is in the best condition.

You can do both these jobs at the same time with a Rowell Trojan Ensilage Cutter. It's a profit-maker in every way. Reduces cost of your silage and you can make a good profit for yourself filling silos for neighbors who do not have a cutter.

Features such as the perfectly balanced, guaranteed-for-life flywheel, Hyatt roller bearings, end-thrust bearings, automatic feeder, non-clog blower and twist-proof frame make it the *preferred* silo filler among farmers who have used all makes.

Write for catalog and free copy of valuable Government Silage Bulletins Index.

WANTED
OUTDOOR MEN TO LEARN TREE SURGERY

Good pay while you learn

Enroll in new, enlarged classes now forming under Bartlett Associates, recognized authorities in tree life. Earn while you learn, travel expenses paid, meet finest people. Learn highest type, uncrowded, immediately profitable profession. Men between 18-30 years wanted who like outdoor life and work. Write today.

THE BARTLETT SCHOOL OF TREE SURGERY
STAMFORD, CONN.

Only $5 Down buys a WITTE Engine
One Year To Pay—No Interest
Lifetime Guarantee
50 New Features

Write today—for NEW Witte Engine Book telling how you can now buy a WITTE Engine for ONLY $5.00 down, balance small EASY Payments. No interest. Absolutely the simplest engine ever made. Used all over the world. Guaranteed for a lifetime. Runs on all fuels. Mail coupon today for Free Book. Witte Engines 1½ to 50 H.P. Pumping Outfits and Pumpers.

WITTE ENGINE WORKS
2561 Oakland Building, KANSAS CITY, MO.
2561 Empire Building, PITTSBURGH, PA.

CORONA WOOL FAT **FREE**
Wonder Ointment From Sheep's Wool Works Like Magic
The base of Corona is extracted from the Wool of the Sheep. An amazing ointment for Horse, Scalds, Cuts, Sore Teats and Udders; Udder of Cows, or any flesh wound on man or beast, also for Eczema.
FREE SAMPLE. If you are not a user of Corona send for free sample and our 24-page booklet of uses today and at our expense.
Sold by reliable Druggists and Harness dealers.
OUR MOTTO—"Service First—Then Profit."
THE CORONA MFG. CO., 261 Corona Bldg., Canton, Ohio

SAVE MONEY
on Fence, Gates, Steel Posts, Barb Wire, Metal and Roll Roofing, Paints, etc. My Direct-From-Factory-Freight Paid Plan will save you fully ½ the expense. My low factory prices and high quality can't be beat.

THE Fourth of July was observed at Neshaminy Gardens in fitting style,—fitting because our three families spent the day together, and because our home supply of food made us feel independent. Just how nearly independent we were may be gathered from our menu which consisted of spring chicken, potatoes, asparagus, beets, carrots, cabbage, raspberries and cherry pie. We think that fit not only for a king, but for free-born American citizens as well. This may sound like boasting but what is the American Fourth of July but a day of boasting and swelling with pride?

✦ ✦ ✦

THE day was bright and clear, but a cool—almost cold—wind blew all day, making it too unpleasant to eat out of doors. The thermometer registered 55 degrees at ten o'clock that evening and was still lower the next morning. These recurrent cool spells keep us guessing on the corn, tomato and melon crops. The good effect of the occasional hot days is partly offset by following cold spells. Scientists tell us that they are caused by sun spots, but I sometimes wonder whether they may not be the result of a too literal application of the "Keep cool with Coolidge" slogan.

✦ ✦ ✦

A FRIEND of the column, George M. Boyd, of Chester County, writes that he has made ten plantings of sweet corn a week apart, and that they are developing according to the dates of planting. That is as it should be, and it may turn out that our plantings will bring ears in the proper order, but up to this time a stranger could not pick out the different plots by their size, except the last one. Mr. Boyd states that it required three weeks longer for his early-planted peas to mature than it did the later plantings. We made but two plantings, two weeks apart, but they matured only two days apart.

✦ ✦ ✦

A NEIGHBOR woman told us the other day that she was keeping her grape vines pruned back so they would not waste so much energy in growing useless wood, and conserve material for growing and ripening the fruit. That sounds reasonable, but experience shows that it does not work out in a practical way. In the first place, the vine will put out new growth as fast as it is cut off, so that there will be little conservation of energy. In the second place, the leaves of a plant are necessary to convert plant food into the products of the plant. The leaves are little kitchens in which the raw material is worked over ready for use by the fruit. If the leaf area is too small, the fruit will suffer. Summer pruning of grapes is a waste of time and endangers the crop if carried to excess.

✦ ✦ ✦

A WOMAN reader writes, asking what to do for the little green "flies" that infest her rose bushes; there are also little white insects.

These are aphids, no doubt, and are best controlled by thoroly spraying with 40 per cent nicotine sulphate, one-half pint of nicotine solution and some soap suds with 700 or 800 pints of water (or at that proportion) and spray the underside of leaves as well as the top. Kerosene emulsion will also kill them, and whaleoil soapsuds may be used to dip the ends of the affected parts in if only a few bushes are to be treated.

Aphids are unusually plentiful this year. In our town, the maple trees are literally dripping honey dew, a sticky, sweetish liquid which exudes from the leaves when they are sucked by the aphids. Our streets are covered in some places by the fallen leaves and so sticky are they that they stick to one's shoes when walking, and cling to the wheels of vehicles as they pass over them. There are several species of aphis but any of them will succumb to any of the treatments mentioned above.

From the Week's News

THAT Mifflin County leads all counties in percentage of farms having dairy cows, ranks second in percentage raising wheat, corn, potatoes and swine, and is third in percentage raising oats is shown by the last triennial farm census. It is tied with Perry County in percentage of bearing apple trees and is tied with Lancaster County in percentage of farms having chickens.

§ § §

Tattooing hogs is one of the activities of the Virginia Division of Markets. The hogs are marked for farmers so the quality of the meat can be observed when it comes from the packing plant.

§ § §

"SUN SCALD" of foliage in maple trees this season is explained by W. A. McCubbin, plant pathologist of the Pennsylvania Bureau of Plant Industry, to be the result of the abnormal spring. As a result of the cool spring the foliage is too soft and delicate to withstand the hot sunlight.

§ § §

OWNERS OF 85 FLOCKS and 24 hatcheries cooperated with the Pennsylvania Department of Agriculture during the past year to produce approximately 780,000 improved standardized baby chicks under the accredited hatchery plan.

§ § §

The Holstein-Friesian Association of America has allotted the following amounts for prizes on Holsteins exhibited at nearby fairs: Maryland State Fair, Timonium, $530; Trenton Inter-State Fair, $472.75; York Fair, York, Pa., $127.50; New York State Fair, Syracuse, $800 ($250 additional for county herd prizes).

§ § §

THE WORST INFESTATION of potato aphis since 1919 is reported in Philadelphia County by County Agent Charles K. Hallowell. Weather conditions are ideal for the propagation of this insect.

§ § §

Beef and dairy cattle, beef and milk, will be highest about 1931, predicts Dr. G. P. Warren, Cornell economist. The market for heifers will be good until about that date. The swing from high to low prices in the dairy and beef business cycle is about eight years, he says.

§ § §

RECENTLY TWO MEN were arrested in Montgomery County for digging up rambler roses which they claimed they thought were "wild." Their ignorance or disregard for the state law enacted in 1925, which protects flowers, ferns, shrubs and trees on both sides of the road, as well as the farmer's crops in the field, cost these men $100 and costs.

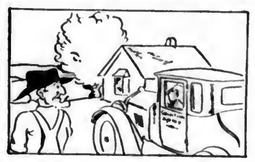
§ § §

PREDICTIONS of a potato crop in excess of 100 barrels to the acre was made by potato growers, dealers and Experiment Station officials on their recent tour of the leading potato sections of Monmouth and Mercer Counties, New Jersey. Over 150 potato men were on the annual tour that ended on the farm of H. E. Hulsart, Allentown, where a digging and spraying demonstration was staged.—K.

Farmers Visit Market

SEVENTY Cumberland County farmers made a study of the handling of produce in the jobbing and retail markets of Jersey City and New York during a two-day trip the first of the month. The trip was headed by H. B. Bamford, Transportation Specialist of the New Jersey State Department of Agriculture, and County Agent D. M. Babbitt, of Cumberland County.

The object of this trip was to aid the New Jersey farmers in the better handling and packing of their produce. By visiting the terminal market and seeing their produce arrive on the street in competition with that of other growers, these men obtained much valuable information. The party left Bridgeton late in the afternoon and was in the receiving terminals when the freight arrived.—A. K.



The Cheerful Plowman
My "Busy" Neighbor

I HAVE one neighbor, Sandy Grimm, and gosh, I have to smile at him! He's always on the tear and go and dashing swiftly to and fro! He is so "busy!" Land of Uz, Jerusalem and Gracious suzz! A wind-mill casting tumbles down, and zip, he dashes off to town, and back again, and down to Grill's election bent o'er vales and hills!

In seeding time he drives his car from dawn till night and near and far on "business" missions, don't you see, connected with his industry! When time is ripe for stacking hay, ah, then he's buzzing night and day; both up and down and here and there, and back and forth he's on the tear! I watched him down at Podunkville rush to a store and then a mill, then down to Larry's blacksmith shop right on the double-sprinted hop; then to a bank and ten-cent store at forty miles, or forty-four; then home at noon and back again, a conference with seven men, to ninety stores all in a row, supremely, swiftly on the go! No, Sandy has no time to chat, he has no time to chew the fat, his "business" uses all his hours, needs all his mind and all his powers!

Now I am very sad to say that Sandy's business for a day could be done up and done up brown without a rushing trip to town, without that tearing all about, but Sandy hasn't found it out! The wasted effort, wasted time, when every minute is a dime, means heavy loss to Sandy Grimm, his profits get away from him, but Sandy doesn't seem to know just where potential profits go! My land, he's "busy," sun to sun; so "busy" getting nothing done!—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

OUR country has been visited in the past few months by some severe windstorms. A Nebraska farmer writes me that some of the top earth of his farm has been blown away, with the seed he had sown in it, taking thereby a big slice out of his prospects for a good wheat crop this year.

But the United States has no monopoly of high winds, judging from a story told by a man traveling not long ago by rail thru a fine farming section of England. Two farmers on the train were talking about their crops and one of them remarked, "We have had some high wind of late." "We have that," was the quiet response of the other, adding that he was not much disturbed by the weather, against which he would make no complaint.

"But," came back the first speaker, "I am afraid that my seed may have been shifted by the gale." "Have no fear of that," his listener exhorted. "I remember a year when my barley seed was blown out of the soil. You could see it lying thick about the hedges and even on the railway siding. But, would you believe it, a high wind sprang up from another part and swept it from the railway siding and hedges back on the field again! It was a bonnie crop as I ever reaped."

Nothing Breaks Their Spirit

No downing farmers with a spirit like that; and I know from the tone of the letter of my Nebraska friend that he was not broken down and discouraged by the wind which blew his wheat crop away. Our farmers have something in them that makes them strong to stand up against adversity, no matter in what guise it may come.

It is worth while to stop long enough to ask what is the characteristic possessed by the American farmer which renders him for the most part wind-proof, storm-proof and able to meet hard luck manfully.

For my own part, I think we may find it in two things. First, a strong faith in himself on the part of the farmer. Our farmers do believe in themselves. They have a right to this faith. Look back as far as we may in the history of our country and we find that no sturdier, more resolute, invincible body of men has existed than those who have tilled the soil. What have they not done to make this land of ours beautiful and successful? And all down thru the years we may trace the same hope and courage and faith in self that distinguished our ancestors.

We Have Kept Faith

And then may we not say that our farmers as a class put their trust in an almighty power that rules and overrules all for the good of His children? We do not satisfy ourselves by stamping "In God we trust" on our coins. It is imprinted on the more enduring tablets of our hearts.

I know there are those who tell us that this is no longer a Christian nation; that our faith in God is today a weak and meaningless thing. But I do not believe it. Show me a man who, when he is in deep trouble, does not send up earnest prayers to heaven for the help he does not find anywhere else, and you will present to me one that I verily believe does not exist. We do believe in God and in His promise to give us seedtime and harvest. Winds may blow and rains may fall, but God is still in His heavens and He will care for His own!

Multiply Your Man-Power By Seven

WHEN you go into the corn with a McCormick-Deering Vertical or Horizontal Corn Binder you are equipped to do the work of from 5 to 7 men with corn knives. And you sit in comfort while you are doing it. Instead of turning standing corn into loose, unwieldy stalks that are hard to load or shock, the McCormick-Deering bundles and ties the corn for fast handling without loss of labor or corn. This saves time at harvest and afterward.

If you feed silage you especially need the fast, sure work of the McCormick-Deering Corn Binder. With the binder in the field and a McCormick-Deering Ensilage Cutter at the silo every stalk can be turned into the highest grade of silage, at minimum cost, because the fast-working equipment handles the corn when it is at its best.

See the latest corn binder improvements in the McCormick-Deering, at the local dealer's store. He will also show you the McCormick-Deering Ensilage Cutter, in a size to suit your acreage. For use in corn borer infested territories, McCormick-Deering Corn Binders can be equipped with a special low-cutting device at slight additional cost.

McCormick-Deering Corn Binders are built in two types, horizontal (shown at the left) and vertical. Both are light-draft, long-lived machines that do hard work quickly and easily.

McCormick-Deering Ensilage Cutters—built in 5 sizes. Capacities, 3 to 25 tons of cut fodder an hour. All sizes have reliable safety devices, force feed, large throat, and heavy, large-capacity flywheels of boiler plate steel. Horsepower required ranges from 4 to 25 h. p.

Important To Employers!
The Workmen's Compensation Act became effective Jan. 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.
Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.
Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

Doylestown Straw Cutter and Blower
is an ideal attachment for your Barn Thresher. Saves the labor of mowing away the straw and can be placed behind any small thresher. It will cut and blow the straw anywhere up to 60 feet. Attached in 30 minutes.
Especially suited for machines such as: Ellis-Keystone, Little Giant, Messenger, Favorite, etc.
Cut straw packs in less than half the space required for whole straw, makes better bedding, keeps stock cleaner, makes better manure and lightens the draft of the spreader 30 per cent.

BUCKEYE BALLOONS

Kelly quality in a moderate-priced tire

THERE are many car owners who do not feel that they need the extra long mileage of a tire such as the regular Kelly-Springfield. To such tire buyers we say;

For the amount of money you want to spend you can buy a Kelly-built tire, the Buckeye, that at its price represents just as great value and just as much quality as the higher-priced Kelly product. Buckeyes are sturdy, full size, full ply tires, built to give honest service. You will find that they compare favorably with many higher-priced tires.

Save Your Corn from Corn Borer
and fight this scourge in most effective way

You can do two things—fight the corn borer—and avoid the loss of corn—by harvesting the corn early, cutting with ½ or ¼-inch cut and ensiling it.

Blizzard Ensilage Cutter

The Blizzard with its clean shear-cut insures effectual killing of the borer in the stalk, as well as the production of even cut silage that will pack well and keep well.

Compare Its Features

Blizzard has the most modern ensilage cutter features; gears run in oil—moving parts are all encased—feeding of ensilage is entirely automatic.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

We Planted Eleven Crops in One Day

THE Department of Agricultural Economics and Farm Management, New York State College of Agriculture, in cooperation with the Bureau of Agricultural Economics, United States Department of Agriculture, has been studying costs and margins in the wholesale marketing of fruits and vegetables in New York City, 1924. Contrary to the more or less prevalent idea that produce firms make exorbitant profits stands the fact that one and one-fifth per cent of gross sales represents salaries and profits of the proprietors.

As I came thru my early cabbage this evening I saw a very tiny sparrow run along the ground, carrying an enormous cabbage worm. A friend indeed.

For the past three years I have been making occasional sowings of radishes from one bag of Charriers seed. Perhaps a dozen different plantings have been made with identical seed. About half have produced beautiful, good type radishes. Several more have given good results while two plantings produced some of the most miserable radishes I have ever seen. How well this illustrates the influence of season and soil. If the worst crop had been produced first perhaps the seedsman would have been blamed unfairly.

Today, June 23, we sowed seed or set plants of eleven different vegetables: Enkhuizen Glory cabbage, Snowball cauliflower, Dwarf Green Curled Scotch kale, Early White Vienna kohl-rabi, Purple Top rutabaga, Black Seeded Simpson and New York lettuce, Full Measure beans, Scarlet Globe radishes, and Southport White Globe onion to make small onions for bunching in autumn.

This is the season when the sprayer must be kept on the job. Systematic spraying with Bordeaux mixture at intervals of not more than a week or ten days is in most sections absolutely necessary in order to produce a first class crop of celery.—Gilbert S. Watts.

Yours for the Asking

THE following free bulletins on the Japanese beetle and its control may be secured from the Pennsylvania Department of Agriculture at Harrisburg.

Bulletin No. 390 entitled, "The Japanese Beetle in Pennsylvania," describes in detail the life history of the insect, gives a list of the plants which are attacked by the beetle, and carries in color an enlarged illustration of the adult.

Bulletin No. 440, "Control of Japanese Beetle Grubs," is a new bulletin which gives the latest methods for controlling the larvae of the beetle in lawns.

Bulletin No. 406, "Sprays for the Japanese Beetle" is still available.

Fifteen Clovers Tried

FIFTEEN different clover strains, including seed from Italian and French sources, as well as different sections of the United States, are being tried in the state under the direction of extension agronomists of the Pennsylvania State College.

Demonstration plots seeded in McKean and Susquehanna Counties last year will be harvested this season. As similarly planted plots in Westmoreland, Adams and Delaware Counties were uniformly destroyed by adverse growing conditions, no results will be obtained from them.

Squash Planting Is Weather-proof

ON THE 12th of May we planted a couple acres of Boston Marrow squash check rowing the hills 8x8 feet so that cross cultivation may be possible. A light rope with a rag tied on every 8 feet was used as a marker. Two large handfuls of high grade fertilizer were broadcasted opposite each rag, scattering the material over a circle 3 feet across, another man followed with a rake, stirring the fertilizer into the soil and preparing a slightly raised hill.

Two boys completed the job by planting about 10 seeds in each hill. They were instructed to barely cover about a third of the seeds. Then three or four were covered about an inch and the remainder were poked down almost two inches.

Insure Against Weather

The idea was to prepare for any kind of weather. Wet, cold weather followed. The seeds very close to the surface were warmed by short bursts of sunshine, were not smothered by too much water, germinated and came up in good order. If very dry weather had set in the deep planted seeds probably would have come thru on the strength of moisture at lower levels.

Another expedient, one with which a great many readers are doubtless familiar, is to mulch each hill with straw or other weed-free material to retain moisture and prevent baking or crusting of the soil surface. The mulch must be removed promptly after the seedlings come thru.

By using the larger opening shoe our horse-drawn transplanter handled large tomato plants in good shape. A sizable ball of root filled soil went in with each plant. When the press wheels had been properly adjusted for angle, closeness and pressure the job was much better than average hand work. Water was automatically applied with each plant.

Transplanter Pleases Boys

The cost, after due allowance for time of team and hire of machine was not much under that for hand planting with a lively, well organized gang of boys. But results will be more uniform, I am sure, and besides the boys thinned a half acre of beets and did a lot of hoeing in the short stretch of good weather then available.

What the boys who have been doing most of our transplanting think of the machine method was revealed when one of them saw the planter in operation for the first time. He was directly behind the outfit as it started a row. Completely absorbed in the very fascinating sight of one well set plant after another coming out from under the rear of the machine in rapid succession he did not realize anyone was near and stood staring with a wide grin of supreme satisfaction. The grin grew broader and broader as he quietly muttered to himself, "Aw H—!" Tickled to death.—Gilbert S. Watts.

Rambles of a Pennsylvania Fruit Grower

XVII Where They Grow Dates as Well As Have Them

(Continued from last week)

WHETHER hot or not, the Coachella Valley is a marvel of productiveness. Like the Imperial Valley, it is the dry antediluvian bed of the Gulf of California Ages ago the Colorado River poured its silt into this basin leaving inexhaustible fertility. This valley has the earliest season of any part of the United States and is capitalizing that advantage with vinifera table grapes, asparagus, cantaloupes and other vegetables, grapefruit, berries, dates and other fruits. It is rather startling to an eastern man to find unplanted land in this Saharan desert selling for $100 to $600 an acre and sometimes $1000, yet they claim that it pays high interest on this valuation.

The Valley has a rainfall of zero to three inches a year. During the last two years it has not rained enough to wet a man's shirt Irrigation is from artesian wells each of which supplies fifty to one hundred acres If the Boulder Dam project now before Congress should materialize it will put a million acres more under water, from the All-American Canal, in addition to its city water supply and power features.

It is difficult for an easterner, remembering the idle acres and abandoned farms back home, to be enthusiastic about a project that will put a million more acres into cultivation, especially in these days of widespread agricultural depression.

Experimental Stage Passed

Date growing in the Coachella Valley has passed the experimental stage and is an assured industry. There are over 1000 acres planted. I saw one orchard of one and a half acres, nine years old, which netted $5000 last year. Another produced 37,000 pounds on two acres, selling for thirty cents a pound. Date land costs $500 an acre, or more, and it costs $2000 an acre to set the orchard, plants being about $25 each There is a strong local cooperative association and a community packing house in which the delicious Deglet Noor dates are packed in tin cans, holding about a pound.

Leaving this fervid valley we climb within an hour to Beaumont which is 2600 feet above sea level, with twenty inches of rainfall and sometimes with snow-blocked roads in winter. Here are the temperate zone fruits again, mainly cherries and pears, grown without irrigation.

Deceived by Well Kept Groves

A sharp drop down the western slope, over the Jack Rabbit Trail, leads us to Riverside, and to subtropical horticulture again. The air swoons with the fragrance of orange blossoms. The well-kept groves seem to indicate that the orange industry is prosperous, but appearances are deceptive. Southern California, from the Los Angeles district to the Mexican line, is primarily a playground rather than an agricultural district. Land is held at a price which practically precludes any possibility of profitable agriculture. The orange groves are valued at $2000 to $5000 an acre. As a production enterprise only, they could not justify a valuation of over $1500 an acre except in rare cases. The balance may be charged to climate and to potential home-making possibilities for those who come here with their "roll" already made.

Very few growers are making any money. The owner who does not work himself but hires everything done barely breaks even. The owner who works may get a fair return on a moderate investment together with a fair labor income. Southern California is no place for a farmer with little capital. It is a delightful place to live if there is an assured income, but its agriculture seems to be permanently submerged in its subdivision development.

After a late dinner at the Mission Inn, the most beautiful hotel in America, we are whirled back to San Diego, having traversed, in one day, over 300 miles of desert mountains and foothills; having started in a sub-tropical climate and proceeded successively thru temperate, tropical, temperate again, and back to subtropical; and having discovered that when a man speaks about California climate he had better be very specific as to locality, for it has more than fifty-seven varieties.—S. W. Fletcher.

Date orchard in the Coachella Valley showing bunches of fruit ready to harvest. This orchard is valued at $5000 an acre.

Syracuse is the Symbol of Longer Life

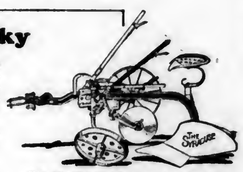
John Deere-Syracuse Chilled Plows resist wear for a longer time in hard, sandy or gravelly soil; they pull lighter and do better work.

Light Draft Sulky

You can plow more acres in a day with the John Deere-Syracuse No. 210 Sulky because the rolling landside makes it the lightest draft plow of its type.

Can be used with either chilled or steel bottoms—suitable for any kind of soil.

Cuts furrows of uniform depth and width even when turning square corners. Automatically governed by front furrow wheel.



The No. 210 is effective in controlling the European Corn Borer. Special corn borer equipment consists of 16-inch bottom, moldboard wing extension, 18-inch rolling coulter, independent jointer and trash wire.

Heads the List

John Deere-Syracuse Plows of the No. 1341-1441 Series take either chilled or steel bottom, making them adaptable to any soil condition. Exceptionally strong and durable. Good penetration. Heavy malleable frog. Rolled foot beam. Bottom parts fit sulky and tractor plows. Right and left-hand.

The No. 1341 Plow heads the Syracuse line of left-hand walking plows. For extremely severe conditions.

Remember, one genuine Syracuse Chilled share will outlast two similar shares of other makes.

John Deere-Syracuse Chilled Plows are long-lived because the Syracuse chilling process makes the hardest metal used in plows. Write today for literature. Address John Deere, Moline, Ill., and and ask for folder TO-536

Galvanized Pans May Poison Goslings

I have young geese one to two months old which are dying. They seem to have a little diarrhea, are weak and do not gain at all. I examined one after death but did not find anything. They are hungry and eat well. I feed 6 parts bran, 2 corn meal, 2 red dog flour, mixed with sour milk, also grit charcoal. Because of bad weather I had to keep them penned up for about a month. Their legs seem to be weak at times, but after feeding they seem better. What do you think might be the trouble?—Mrs. N. P., Lycoming County, Pa.

The ration you are feeding the goslings could be improved by adding 5 pounds of good beef scrap to every 95 of mash, otherwise it is good. Young goslings need a lot of green feed, and sometimes when they are kept up may not get enough. In feeding, sour milk must never be given in galvanized pans, as the acid forms a compound with the zinc that is poisonous. Also, goslings are rather mussy creatures, and need particular attention in keeping their pens warm, dry and clean. If you have them with hens, look for lice.

I am mentioning all these things with the idea that you may be able to discover one that is causing the trouble. You may also care to send a specimen to the Poultry Pathologist, Pennsylvania State College, State College, Pa., asking him to make an examination to see if a disease or parasite is present. The whole trouble may date back to chilling or a wrong condition when they were young. When your next ones come on, I think it would be well to keep them away from these.—S.-H.

Is It Coccidiosis?

My second flock of 200 chicks are four weeks old. When I received them from the hatchery they were rather weak. I started them at 72 hours of age on buttermilk and later gave them a balanced ration. Altho everything has been kept clean and sanitary the chicks began to droop. They became pale around the head, the droppings became watery and in a few days they died. This is spreading to my healthy chicks. Upon examination I find that the gall bladder is larger than in a normal full grown hen. Is it coccidiosis?—Mrs. J. B., Lycoming County, Pa.

I believe that the chicks you bought were infected with the white diarrhea organism. This disease is transmitted thru the egg from infected breeding stock principally, but baby chicks also get it from each other and from infected surroundings. The best way to avoid this is to insist on getting chicks from blood-tested stock known to be free from the disease.

There is not much that can be done to stop its ravages in a flock of baby chicks, as the disease seems to run its course with more or less heavy mortality. You might feed sour milk in an earthen vessel and use enough potassium permanganate in the drinking water to turn it a wine color. Any chicks that seem to be suffering badly had better be killed.

In coccidiosis the blind gut leading off from the intestine is very much enlarged and full of cheesy, pasty or bloody matter. This generally attacks older chicks. An abundance of sour milk or about 40 per cent milk powder in the ration will help correct this.—R. L. S.-H.

Broilers "Off Feed"

Will you kindly tell me how to fatten broilers? I have them in close quarters and feed scratch grain, wet mash and dry mash. They do not seem to get fat as they should.—J. H., Susquehanna County, Pa.

The young cockerels to be fattened for broilers should be fed grain, mash, water and green feed as usual, and in addition should be given a wet mash three times a day composed of the following ingredients: one part growing mash, one part yellow cornmeal, one part condensed buttermilk or thick sour milk, enough water if necessary to make a moist mash. Give what they will clean up in twenty minutes.

This feeding process should not be continued more than ten days, or the broilers will go "off feed." The natural tendency of the young chicken is to make flesh and muscle rather than fat.—R. L. S.-H.

Chicks Reel—Why?

I have 600 White Leghorn chicks which are about 25 days old. I have used the New Jersey Experiment Station formula and the chicks have done splendidly until yesterday. I noticed that one of them had its head crooked around to one side and seemed to be reeling around as if it were dizzy. I removed him from the other chicks and since then I have removed three more from the flock. They grew worse at once and now they fall over on their sides and cannot walk at all.—H. C., Wyoming County, Pa.

I think that the trouble you describe is due to a lack of laxative feed such as green stuff would be. Give these chicks about a tablespoonful of Epsom salts in the gallon of drinking water for one dose, and then start feeding small amounts of greenfeed such as lawn clippings.

If you can get condensed buttermilk, feed this just as it comes from the keg, smearing a quantity that will be cleaned up in fifteen or twenty minutes on the wall of the house where the chicks can pick it off. If these suggestions do not stop the trouble, try feeding poultry yeast in the mash according to the yeast manufacturer's suggestions.—R. L. S.-H.

Higher Education Paid Them

A HIGH school education is worth, on the average, nearly twice as much as a common school education, while a college education is worth two and one-half times as much as a district school education and one-third more than a high school education to a farmer in Tompkins County, New York. This is according to a report of a survey made by the New York State College of Agriculture.

This survey covered 573 farm owners and it showed that the average income for their own labor for those with district school education was $318; for those who had attended high school it was $622, and for those with more than high school education it was $847.

Only five per cent of the farmers having a district school education made a labor income more than $1000 while 20 per cent with high school training and 30 per cent with college training passed this mark. The report says: "Higher education does not mean greater profits in every instance, but apparently the possibilities of success in farming increase with the extent of education just as they do in any of the professions."

A Glimpse Behind the Scenes

(Continued from page 3)

litter or in a trough; if it should be fed wet or dry, raw or cooked, in the morning, or at some other time of day.

Then the whole subject of quantities and proportions formed an endless list of interrogations that faced these men year in and year out. Their answers were all for the single purpose of giving the man who owns poultry a superior feed, and of providing him with the benefits of their knowledge and training even tho he possesses no insight into chemistry, bacteriology, engineering, or a dozen other sciences.

When at last bodily rave le cackle of satisfaction to the formula chosen, it became the task of the engineers of the company to furnish equipment for standardizing these feeds. This again was no small problem. In the company's laboratories the chemists find that scarcely two carloads of bran can be found that test the same for digestible nutrients. One car may be below the average in the percentage of some nutrient and another may be above.

Mix Trainload at a Time

This problem was solved by spreading the contents of each car thinly over a bin large enough to hold a whole trainload of bran. Then the contents of the bin are removed in horizontal sections which blends together portions of the contents of each car. This composition is then thoroly mixed by modern milling machinery. The result is a bran with a normal content of protein, carbohydrates and fibre. The other raw materials used are blended in a similar manner, out to further insure these materials being properly standardized, samples are tested in the laboratories at regular intervals.

Next comes the problem of combining these various raw materials uniformly. The day of our visit, eight different ingredients were being compounded into one of the poultry feeds. Each ingredient was carried from the mixer to a common screw conveyor on a belt about a foot wide and running over pulleys some six feet apart. The material on each belt was continuously weighed. A scale, on which the center of the belt rested, regulated a cut-off which allowed just enough feed to pass onto the belt to keep the scale balanced. If for any reason the variation on one of these belts amounted to more than two ounces, an electrical device would automatically shut down the entire mixing equipment, thus guarding against a wrong mix.

Take Utmost Precaution

The conveyor into which these eight ingredients were deposited carried the material to the final mixer. In leaving this machine the feed passed over a magnetized cylinder which removed every particle of metal that somewhere found its way into the mix. It is surprising the amount of metal removed. This is particularly true of the little fine needle-shaped pieces of steel which would be certain to set up irritation once in the alimentary canal.

As a final check, a sample of feed is taken every thirty minutes at the automatic bagging machine and tested in the laboratories to make certain that the mixture is meeting standard requirements in every respect.

These are some of the precautions taken by one reliable concern to provide poultrymen with a dependable feed. Here are combined for the benefit of the final user all the intelligence and training of the poultry specialist, the bacteriologist, the chemist, the engineer. As one thinks of this and then looks at the long list of materials and equipment needed in farming, the majority of which are the product of research men working under the direction of private capital, he wonders if proper appreciation has been extended to the unknown investigators of which these examples are typical. Further, here is an economic background that calls for a new interest and perhaps closer cooperation between the farmer and the manufacturer.—By Bert Wermuth and I. R. Waterbury.

Bean Beetle Arrives

DAMAGE by the Mexican bean beetle in Pennsylvania so far this year is largely limited to backyard gardens. This insect seems to prefer pole limas and bush and pole snap beans.

The adult beetle can be identified in your back garden as a hemispherical "lady bird" beetle about one-fourth of an inch long. When it has freshly emerged the beetle is lemon yellow in color. Sixteen black spots soon appear on the wing covers and the insect gradually darkens in color until it finally becomes a coppery bronze.

Gives Control Measures

Both adults and larva feed on the under surface of the bean leaves giving them a lace like appearance. Control of the beetle can be accomplished by the use of several dust mixtures recommended by H. E. Hodgkiss, extension entomologist of the Pennsylvania State College, one of which is:

Calcium arsenate..1 part by weight
Hydrated lime....5 parts by weight

The following spray may be substituted for the dust mixture:

Calcium arsenate..... 1½ pounds
Lime ..... 3 pounds
Water ..... 100 gallons

Injury to the pole lima beans may result from the use of these materials. DO NOT USE LEAD ARSENATE. There is no danger from treating beans nearly ready for picking, since rinsing in cold water removes the spray and dust residue.

Customer—Do you really think sardines are healthy?

Grocer—Well, madam, I never heard one complain.

The pointed arch provides lots of head room in this new poultry house

Feed them Larro Egg Mash NOW!

Right now is the time to feed Larro Egg Mash to your hens. Heavy spring production has sapped their strength. They need Larro to build up their health and vigor—to give them body resistance for fighting disease—to furnish the vitality that means steady, profitable egg production when neglected hens will be loafing.

Get the Biggest Profit From Every Hen

Larro Egg Mash is not a forcing ration. It contains the correct amount of buttermilk, and the necessary vitamins and minerals, in a uniform mixture of Larro-blended ingredients in just the right proportions to make hens more profitable all the year round — even when egg prices are low. Grain alone is not enough. It only takes a few pounds of Larro Egg Mash to carry each hen through this important summer period.

Start your flock now on the Larro feeding program. It makes no difference what your birds are eating, or how well they are producing. Not until you feed them the Larro way will they do their best and give you all the profit that's in them.

THE LARROWE MILLING COMPANY, Detroit, Mich.

Larro
EGG MASH
All Larro Mashes contain the correct amount of dried buttermilk—minerals—vitamins. Results prove they have everything necessary in just the right proportions to make an ideal feed.

They Saw the Cream of the Country's Dairy Farms

EARLY this summer a large group of dairy students from the Pennsylvania State College visited fifteen of the most outstanding dairy farms in the Philadelphia district in order to get more closely acquainted with the best modern dairy farm practices. The party traveled in a large touring bus and was under the leadership of Professors A. L. Beam, E. B. Fitts and A. A. Borland.

The first stop was at the Berks Farm near Reading, Mr. Abner Deysher, owner, and Mr. Clark Berry, manager. The outstanding lesson of this fine Holstein herd including about 70 head of cattle was the value of a proven sire. King Tweede of Spring Farm was purchased as a mature bull by Mr. Deysher on account of the excellence of the bull's daughters. Nine of his daughters have produced over 30 pounds of butter in a week on official test and five have produced over 1000 pounds of butter in a year, all the animals being under five years of age. His daughters include a world champion two-year-old. The whole herd of 28 milking cows, several of them being daughters of this bull, averaged over 14,000 pounds of milk last year.

Alfalfa Aids High Production

The next stop was at Sycamore Farm, Douglassville, E. R. Fritsche, owner, and B. D. Harvey, manager. Mr. Fritsche is secretary-treasurer of the Horn and Hardart restaurant company of Philadelphia. The milk from this excellent Ayrshire herd goes directly to the city for restaurant use at a bulk price of 11c per quart. The herd includes 100 head of Ayrshires of which 43 cows are in milk.

Last year 43 cows averaged 7192 pounds of milk testing 3.85 per cent butterfat. The value of the product per cow was $395.73, the cost of the feed $106.87, and the net return above feed cost of $288.86 per cow. Alfalfa hay is doubtless one of the factors in this high average yield per cow since large quantities are grown, over 50 acres being devoted to this purpose in the four-year crop rotation of corn, oats, wheat and alfalfa.

At the William H. Moon Farm, Morrisville, a fine herd of purebred Guernseys is kept primarily to furnish manure for the nursery which has been operated by the Moon family since 1867. While the herd was started a few years ago for this purpose it has grown into a substantial enterprise on its own account.

Produce Highest Grade Milk

The herd includes 90 cows and 55 head of young stock. The milk goes to the Castena Dairy at Trenton at 13c per quart wholesale. The butterfat content averages 5 per cent and the average bacterial count for the past year has been only 4300 per cubic centimeter. When one stops to consider that "certified" milk is allowed 10,000 bacteria per cubic centimeter, it is evident that this is clean milk in the strictest sense of the word.

The cows were housed in a modern dairy barn with special provisions against fire, the hay chutes having steel doors at the top and bottom and the ceiling being constructed of a double layer of boards with asbestos between.

The Walker-Gordon Farm, Plainsboro, New Jersey, H. W. Jeffers, manager, has doubtless the largest certified milk producing herd in the world. Over eleven hundred milking cows are housed in 27 barns, and are producing 15,000 quarts of milk daily. The plant is exactly half way between Philadelphia and New York (46 miles) and the milk goes to these cities and many other nearby towns.

The farm employs 250 men and is operated much like a manufacturing establishment, each workman devoting his entire attention to one particular phase of work. The milkers receive on an average of 6c for each cow they milk.

The farm land is leased out to farmers who grow the crops for the dairy. Five dollars per ton is paid for green corn at the silo. The dairy is given the first chance to purchase at market prices the alfalfa hay grown on the farms. However, if the farmer to whom the land is leased for crop growing purposes can get a higher price elsewhere for the hay he has the privilege of doing so. The farms include 2500 acres of which 1300 are under cultivation.

Hay Drier Creates Interest

The remarkable freedom from flies is the result of using numerous large fly traps and fogging the stables every other day with a commercial fly-killing preparation.

Calves from the best cows are raised to six months of age and are then put out with farmers until they mature, the price paid per pound gain in weight being from 16c to 18c.

The cows average 3800 pounds of four per cent milk annually. One of the largest silos in the world is located near the stables. It is 40 feet in diameter, 50 feet high and holds 1543 tons of silage.

The hay drying apparatus was of much interest. The green material is placed on an open meshed belt and is carried thru an oven 143 feet long, the temperature of the oven being 275 degrees F. This heat drives off the moisture and reduces the water content of the material from 80 to 8 per cent in a half hour. The dry hay is ground and sacked or it may be blown into a storage barn. The outfit has a capacity of 20 tons of dry material daily and looks like a winner for curing hay regardless of weather.

Walker-Gordon certified milk sells for 30c per quart. The farm is evidently being run on a successful business basis since it is paying eight per cent dividends on the stock invested.

Editors' Note:—Next week Professor Borland will tell about other dairy farms visited on this tour.

Guernsey Enthusiasts Take a Day Off

OFFICERS of Jefferson County Guernsey Breeders' Association and some of their guests at the Guernsey picnic held at the home of Dr. F. D. Pringle, near Punxsutawney, June 24th. Breeders from Clarion, Indiana and Clearfield Counties were also guests of the Jefferson County Guernsey organization.

Upper row—J. O. Harding, secretary of the association; S. R. Lounsberry, editor, Guernsey Breeders' Journal; John Warner, Indiana county agent; Miles Horst, W. E. Arnold, assistant county agent of Jefferson County; Dr. H. P. Church, Pennsylvania Bureau of Animal Industry; C. D. Irwin, Dr. F. D. Pringle and K. R. Blerly.

Front row—James Winslow, Jefferson County Agent; S. A. Hunter, John Ruef, State College club worker; A. A. Borland, head of the Dairy Department at State College and Dairy Editor of Pennsylvania Farmer; C. G. Bullers, vice president of the association; William C. Startzell, D. A. Snyder, S. C. Beeman, president of the association.

It Was A Hard Fight, But—

An Early Fall Start Means An Easier 1928 Clean-up

By H. N. WORTHLEY,

Assistant Extension Entomologist, Pennsylvania State College

"DESTROY or bury all corn crop refuse." This slogan was in the minds of all farmers in eight northwestern Pennsylvania counties last spring. To a large extent it dictated their activities during the months of April, May and early June.

They had to gather and burn or shred all unused fodder in the barns, all untrampled stalks at the top and edges of manure piles, and all scattered stalks on pastures and feed lots. Neglected shocks still standing in the fields had to be shredded or destroyed by fire; standing stalks cut or broken off, raked up and burned.

Finally, farmers understood that the stubble land must be cleanly plowed, and the ground carefully examined after ditting and seeding to make absolutely sure that no stray pieces of stalks, which might harbor borers, remained on the surface.

They Don't Like It

THE Japanese resent the name "Japanese beetle" somewhat as the citizens of San Jose, California, did the naming of the San Jose scale.

"The Japanese are a very sensitive people," remarked Dr. L. O. Howard, chief of the Bureau of Entomology, of the Department of Agriculture, a few weeks ago. "I have just had a call from Doctor Kagi, professor in the Imperial University of Kyoto, Japan, now connected with the International Educational Board of the Rockefeller Institute. He entered a pleasant but vigorous protest against using the name Japanese beetle. I argued that it came from Japan, but that the fact signified nothing against the Japanese."

And what a year to select for this first great effort to check the borer! Rain last fall that flooded corn fields, clogging the binders! Corn for the silo cut by hand, and not too low, at that! Ear corn cut by hand and shocked in the mud! How much of it froze in and stood there all winter no one will ever know. Acres of corn allowed to stand and husked from the stalk and this in sections where such husking methods are a rare sight!

They Have Turned the Trick

And then in March came news that all this unusual refuse must be cleaned up absolutely by May 1st! "What a mess! Why hit a fellow when he's down? But we must get this borer. Every one out there in those stalks and stubbles threatens to present us with two hundred or more next July (why can't hens lay like that?). We'll tackle the job, and if the Almighty will help out just a little, we'll put it over."

Again rain—and more rain! Soggy fields, and soggy piles of half-burned stalks. Mid-April, and scarcely any plowing done. Then—sweet Providence—sun; sun and wind. Not more than enough, to be sure, but enough to allow most of the stubble ground to be turned and most of the corn refuse to be dried up and burned.

May first! Not quite done yet, but a few days of grace remain. The borer has not yet wakened from its winter sleep. Rain on the seeded ground, and stalks showing on fields that would have passed inspection yesterday! Those stalks must be picked up, lest some wandering borer find the shelter needed for its transformation to a moth. Those stalks were not plowed deeply enough, or else the spring-tooth harrow was set too deep, and dragged them up.

And in early June, success! The job was finished, done before any corn borer moths took wing. Over ninety per cent of the farmers in the eight counties dare anyone to come up and look for corn refuse. They have turned the trick, and having done it this year, they have confidence that they can do it again in any kind of season the almanac predicts.

Did Not Dodge Extra Work

Why did they go to all this extra work and bother? Of course, they had to—no dodging that. They knew the fields would be inspected. Oh, yes—they got paid for the extra labor—two dollars an acre, if you call that much of an incentive.

These things didn't determine their course of action;—if they hadn't believed the proposition to be reasonable, they surely would have fought it. They did it to kill the borers that were in those stalks, borers that otherwise would have lived safely to produce a greater infestation in the 1927 corn crop. They were trying to protect themselves and incidentally, the rest of Pennsylvania.

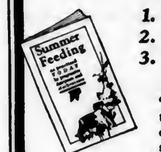
It will have to be done again, to be sure. The most thoro cleanup cannot get all the borers, and a few will soon produce many. But the job will be easier next year. They have learned a few things. In the first place they are not going to have any corn shocked or standing next winter, or spread any stalks in feed-lots or pastures. They will try hard to cut it all, and cut it to the shortest possible stubble. They are going to put all they can into the silo. Then the shocks of ear corn will be moved into or near the barn before freezing weather, and the fodder will be shredded. If it can't all be fed, it will be used for bedding.

Prompt Action Necessary in Fall

In fall or spring, whichever suits best, that short stubble will be plowed as deeply as possible. To make sure the stubble goes to the bottom of the furrow, ten-foot pieces of number nine wire will be used. These will be attached to the bridle, gauge-wheel shank, and beam of walking plows, and at corresponding points on riding and tractor plows, the free ends of the wires trailing under the furrow slice. This is a trick that many farmers picked up for the first time last spring. And some corn growers are talking about the cultipacker and spike-tooth harrow to prepare the oats ground, to get away from the spring-tooth harrow which drags up stubble.

Why bother to talk about it? For two reasons. In the first place it was a hard job, a mean job, that was tackled and put thru with an energy and singleness of purpose that has been an inspiration to all who love a good fight. In the second place, because the rest of Pennsylvania will soon be facing the same thing. This article is in the nature of a hint. Let us start next fall to put these practices into operation all over the state. Then the changes will be made, and the new ways will be familiar before the borer has had any chance to become a serious pest. But we must act intelligently and promptly. We must not wait until we see the damage. The watchword is "Start Now."

3 Ways to Make Money on Summer Feeding



1. *Feeding the Dry Cow*
2. *Feeding the Dairy Heifer, and*
3. FEEDING THE MILKING HERD.

Mail the Coupon for This Free Booklet.

"Feed a grain ration in summer" is the slogan today in the leading dairy districts. And almost invariably these summer rations include Linseed Meal.

Why are these prosperous farmers no longer satisfied with pasture alone, in summer? Because a richer ration — with Linseed Meal — pays immediate profits and gives a double return through building up the vitality of cows for high milk production in fall and winter.

Now is the time that counts! This free booklet shows you how summer feeding affects your whole year's profits. Includes practical summer rations to fit in with other feeds used in your district.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Friends:—I received my membership pin. I thank you very, very much for it. On June 19 we had a Children's Day program in church. It was very interesting. I was in an exercise. I haven't taken any hikes since school closed. I don't know whether I can help Ethyl G. Glicker with a pulled molasses candy recipe or not but I am going to put it in anyway.

PULLED MOLASSES CANDY

1 cup molasses
2 cups brown sugar
1 cup water
3 tablespoons vinegar
3 tablespoons butter

Put molasses, sugar, water and vinegar into saucepan and stir; boil until very brittle when dropped into cold water. Add butter and pour on buttered platter. When cool enough to handle, butter hands and pull until light brown. Pull into oblong strips and cut with scissors.—Mary M. Umberger, (X), Somerset County, Pa.

Dear Forum Friends:—I am going to send a recipe for the Forum page. I write nearly all of the recipes that appear on the Forum page in a tablet and I think someone else might be waiting for a recipe to put in her cook book. The recipe is as follows:

SPICE CAKE

1 cup brown sugar
½ cup shortening
2 eggs
½ cup milk
1¾ cups pastry flour
1 cup raisins
1 teaspoon cinnamon
¼ teaspoon grated nutmeg
2 squares melted chocolate
½ cup shredded cocoanut
2 teaspoons baking powder
¼ teaspoon salt

Cream shortening and sugar and add the eggs well beaten. Sift the flour with cinnamon, nutmeg, salt and baking powder. Add alternately with milk to first mixture. Mix thoroly. Add melted chocolate, cocoanut and plumped raisins. Bake 35 minutes.

Wishing good luck and success to the Y. P. F.—Edith Frownfelter, (X), Perry County, Pa.

Dear Cousin Ruth and Forum Friends:—I guess my school closed earlier than most of our Forum friends. It closed April 20th.

How many of our Forum friends like flowers? I do and I like to care for them. I have many different kinds.

I once had a beautiful yellow angora cat but it died. It would come in the house and sleep on a cushion. If you would make it angry it would bite or scratch you.

Have any of you ever seen Colonel Lindbergh? I saw his airplane as he flew across to St. Louis.

I want to take a trip to the mountains this summer then I will write and tell you all about them.—Louise Ferrel, (X), Washington County, Pa.

Don't forget the promise to write about your mountain trip, Louise. We'll all be glad to hear of your experiences. How many Forum friends are planning to take trips this year?

Alcuna Rhine, (X), Juniata County, Pa.

Gwendolyn Gray, Clearfield Co., Pa.

Dear Cousin Ruth:—Every spring three or four barn swallows build their nests in our barn. I like to watch them feed their children and teach them to fly.

I have taken piano music lessons for two summers and I am very fond of music.—Vesta Mae Dibert (X), Bedford County, Pa.

Dear Cousin Ruth:—I want to tell you about my pet kitty, Spotty. Spotty is grey and black. He can perform some of the funniest tricks you ever saw. One day he threw our ball under the porch and would not go after it so I tapped him and he went at once. He plays like a child. He jumps rope and even tries to play hop-Scotch. Isn't he clever?—Anna Branson, (X), Fayette County, Pa.

Dear Cousin Ruth and Readers:—For pets we have one little dog, two cats, one pet pigeon which goes along with the chickens to roost at night and also two pet rabbits which are very tame.

I enclose a picture taken some years ago. My father is running the planter altho you can't see him. My oldest brother is scouring but he took the picture and my smallest brother and sister are standing at the scour, and the one you see on the horses harrowing is I.—Harold M. Warner, (X), Perry County, Pa.

PLANTING CORN
Harold M. Warner, (X), Perry County, Pa.

Dear Cousin Ruth:—I received my membership pin and I am very proud of it. I wish to thank you very much for it. We are putting up some new buildings which consist of a new out-kitchen and a couple of porches. This takes a good deal of time, especially when you can only work at it about every other day.

We have planted beans, squashes, corn, wheat and nearly all kinds of melons and plants such as tomatoes, celery, cabbage, sweet potatoes, cucumbers, etc. I guess our cherry trees are not going to bear a good crop this year. I am sending a verse I composed myself especially for the Forum page:

Boys and girls of Hustontown
Please do not wait no more
For Cousin Ruth has got for you
Great happiness in store.

And I am glad that I can say
I am a member by the way
Send in a picture, drawing, too,
A real good letter perhaps will do.

And join our circle happy and gay
And do not wait another day
Just come in carloads great and small
And be a member—I guess that's all.—Grace Alice Wilson, (X), Fulton County, Pa.

Dear Cousin Ruth:—One day last summer I went out to the barn and I found two baby pigeons. Their nest had been broken up and they had fallen to the barn floor. I picked them up and carried them to a coop where I made them a nice bed of straw. They were still fuzzy and had no feathers at all. I tried to feed them but they did not know how to pick feed up so I had to open their mouths and stick the feed in. I fed them this way for a long time.

One day they found they could fly and they flew up on the barn roof and never came back any more. They did not remember my kindness to them very long.—Helen E. Stephens, (X), York County, Pa.

It was very good of you to care for the baby pigeons. Perhaps some day they will come back to tell you that they do appreciate all that you have done for them.

Dear Cousin Ruth:—Our school closed on June 3, this school is Central Grammer in Sunbury but I live about a mile and a half east of Sunbury. My brother and I walked to and from school each day.

This school was a change in my school life but I shall never forget how good all the teachers were to the pupils in Central Grammar. All my school life I went to a small red school house and had the same teacher.

On June 25 was my birthday. I baked a cake and am enclosing the recipe for it. I hope some of the Forum friends will try it for it has proven successful.

ANGEL CAKE

Whites of 8 eggs
1 teaspoon cream of tartar
1 cup sugar
¾ cup flour
¼ teaspoon salt
½ teaspoon vanilla

Beat whites of eggs until frothy. Add cream of tartar and continue beating until eggs are stiff, then add sugar gradually. Fold in flour mixed with salt and sifted four times, and add vanilla. Bake forty-five to fifty minutes in an unbuttered angel cake pan. After cake has risen and begins to brown, cover with a buttered paper.—Mildred Duttinger, (X), Northumberland County, Pa.

Dear Cousin Ruth:—I am a Girl Scout and our troop had an all-day picnic today. We made wicker baskets, aprons, holders and animals out of old Turkish towels and wool. We went swimming, too, and had our lunch down in the meadow. Our Scout mistress' home is out in the country and we go out there for our picnics. We usually go there to camp, but this year we are going to Hill Dale on the Brandywine. My father is a farmer and he has a herd of tuberculin tested Jersey cattle on one of our farms. We have three farms. —Emalie H. Marvel, (X), Chester County, Pa.

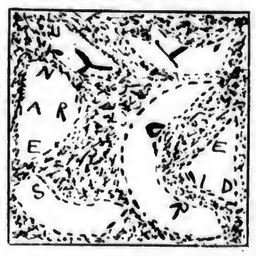
DEAR LITTLE FOLKS.—Some of us think that before long people will be taking trips to Europe over the week-end, and that we'll be able to go around the world on our two weeks' vacation in an airplane—that is, of course, if we have the money and like to travel that way. Some of us hope to get the best of the Japanese beetle before he has had a chance to destroy many more crops. But there is one thing sure to be true for very many of us in July, 1937, no matter whether we fly to Europe or have a summer without beetles. You can find out what this is if you will cut out and fasten together the six little white pieces with letters on them in the dotted square below so that they form a circle. On that circle you will find the answer.

Please let me have your answer—either on a postal card or in a letter—by July 23rd. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND IN WHICH COUNTY YOU LIVE. The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the June 25 issue (the puzzle which had so many letters you didn't need at all) is: ENOUGH IS AS GOOD AS A FEAST.

The prize winners are: David Boyer, age 10, Danville, Pa.; Mary G. Bryan, age 8, Terre Hill, Pa.; Daniel Hubb, age 10, New Freedom, Pa.; Bertha L. Danley, age 8, Mercer, Pa.; Martin Delbert, age 10, Slatington, Pa.; Russell Fidemer, age 11, Curtisville, Pa.; Bertha Lahs, age 13, Oilsville, Pa.; George Lesko, age 10, Hafley, Pa.; Frances Sefelk, age 10, Monongahela Pa.; Margaret Thompson age 8, Spencerville, Md.

WHAT WILL MOST OF US BE IN JULY, 1937?



PASSING EVENTS IN PICTURES

5

1.—Professor K. D. Glinka, director of the Soviet agricultural station at Leningrad, was elected President of the International Congress of Soil Science at its meeting in Washington last month. He succeeds Dr. J. G. Lipman, Soils and Fertilizer Editor of Pennsylvania Farmer. This is the first time since the bolshevist revolution in 1917 that a Russian has been elected head of a large international organization.

2.—Commander Byrd with the sextant he invented, which was one of the numerous navigating instruments used in his flight to France.

3.—The longest bridge in the United States spans Carquinez Straits, California.

4.—Rolf Lium, the twenty-year-old pastor who preached his first sermon before President and Mrs. Coolidge, at the little church in Hermosa, South Dakota, not far from the summer White House.

5.—A new stage has gone into service on California's highways. The bus is equipped with every comfort for long distance travel—kitchen and dining service, lavatories, a radio and an "observation car."

Motor Camping Lures the Tourist

What Better Way to Spend a Vacation?

THE season of motor camping is here. Thousands of car owners are hitting the trail to go gypsying over the country, and thousands more will join the procession every week thru the touring season. Camping was once a sport for men only. Now automobiles have opened up its fun to the entire family.

People who formerly went to summer resorts or hired cottages on lakes now start out in their automobile, pull up by a lake or stream, pitch camp and do their own cooking. They may linger there a few days or stay a month, fishing, swimming and enjoying themselves. Or they may be more ambitious and take a transcontinental trip to the Pacific Coast or to Yellowstone Park. But one way or another they camp out.

Improvement in camping equipment has taken away the traditional discomfort of old-time camp life. Sand in the coffee, ashes on the bacon and the age-worn jokes about mishaps of life in the open have

pretty well petered out as sources of humor.

Compared to the expense of a vacation in hotels or on trains, motor camping is surprisingly cheap. One experienced camper who kept a record of his expenses told me that for a month's camping trip he took with his wife, covering about 1200 miles, it cost him about $175. He divided his expenditures as follows: Food, $50; tire wear and repair, $15; gasoline, $60; oil, $5; incidentals, including occasional restaurant meals, tourist camp fees, films, etc., $15.

Three Meals Cost the Price of One

You can eat three meals in camp for the amount one costs in a dining car or a restaurant. With hotel rates at a minimum of from $1 to $2 a night per person, you can live cheaply enough on a few weeks' trip to pay for whatever equipment you have to buy.

What to take along? That's the big question. The pleasure of your tour can be made or marred by the selection of your equipment. This is a simple matter for old timers who have learned the ropes. But to those who have done little motor camping it is a problem that may cause worry and discomfort.

Food and cooking arrangements are probably the most important considerations. A camping outfit, like an army, "moves on its stomach." Personal choice will determine pretty much what the selection of foods will be. Campers usually eat too much fried food. It is just as easy to boil or broil as it is to fry. Also too much meat, pork especially, is bad in hot weather. Prunes and dried apricots should form a part of the camper's larder. They are excellent when you cannot get fresh fruits. It is well to carry along such supplies as flour, beans, rice and other staples in waxed bags. Bacon should be carried in a greaseproof bag. Tea, salt, pepper and spices come in cans so no other provision is necessary for them.

Cooking arrangements are a problem to many. The area in which the motorist camps sometimes determines what kind of a fire he uses. But in practically every case a camp stove is the best and most convenient.

Good camping equipment is always a good investment. Buy a tent that is sturdy enough to stand hard usage, one that is really waterproof and can be set up and taken down easily.

A Safe Camp Light Is Carried

It is best to get furniture of the folding type—cots of steel frames with canvas tops and chairs and tables of steel. They will save you lots of time and expense because of their compactness. For a camp light you can use the convertible sportlight that comes on most cars, or get a camp lantern that gives as good illumination and is just as safe and firep.of as electric light. For women members of the camping party who have a little laundering to do, I recommend a self-heating gasoline iron which is just as efficient as an electric iron, perfectly safe and wonderfully convenient. It is worth its weight in gold.

The Car's Condition Rules the Trip

Look the car over before you start on the trip. A lot of enjoyment or grief will depend directly on how little or how much trouble the car gives. Worn-out tires take the joy out of many a tour. See that the brakes are in good shape. Some things may be slighted when you put the car in condition and these will only result in petty annoyances and delay.

Here's another tip. Carry a tow rope with you. It will help out of a lot of pinches. Twenty feet of three-quarter-inch rope is what you need. It is handy for airing bedding and makes a fine swing for the kids in camp. It will help to anchor the tent in time of storms, can be used in securing camp equipment in the car and will get you out of the mud if used in lieu of a chain.

Many Will Follow the Trail

The popularity of vacations under canvas has increased the number of motor campers to an amazing degree in the last few years. It is estimated that 6,000,000 cars carrying 18,000,000 motor campers will take to the open road this summer and fall. Motor camping is the cheapest, most enjoyable and independent type of vacation. It puts you back in trim. There is nothing under the sun that gives a person such a complete change. The beauty of it is that you don't have to be tied down to a particular itinerary or place. Just set out and head for any spot that strikes your fancy.—G. A. B.

Note:—We will be glad to assist you with the selection of dependable camp equipment. Write us of your problems and we can put you in touch with stoves specially built for campers—stoves that have stood the test. The camp lantern and gasoline iron are a boon to country folks whether they choose camping for recreation or just prefer their own home farm for summer sport. For campers, a lantern or lamp is indispensable. Send a self-addressed, stamped envelope for your reply to Home Page Editor, Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

Sunshine Cuts the Doctor's Bill

THE youngster who gets his hide tanned regularly may be luckier than he knows; that is, if the tanning is done by the sun and not by father. Sunshine is necessary to good health; when a child has enough of it to develop a tan he is getting what he needs.

Sunlight, when it shines directly on the skin, not filtered thru window-panes or clothes, helps the body to utilize the lime and phosphorus it gets in food to build strong, straight bones and sound teeth. When a child has the right food, particularly milk, vegetables and fruits, and plenty of sunshine, it is likely that doctors' and dentists' bills will be cut considerably.

To get the full benefit of sunlight, children should play out of doors part of every day with bare arms and legs, low-necked blouses or dresses, and short trousers or skirts so that much of the body is exposed to the sun. Extreme sunburn should be avoided, of course, as should playing out of doors in the middle of the hottest days; but a gradually tanned skin is worth a dozen bottles of tonic to any child.

Her "Perfect" Baby Became a Better Baby

AFTER reading your articles on sunshine babies I sent for the bulletins recommended and must tell you my thanks.

Our little daughter was born September 30, 1926, and was an out-of-doors baby thruout the entire winter. I have studied these sun baths. She enjoys them daily. She really is ruddier and healthier than ever and we had thought her perfect all winter. I only wish all mothers realized what wonders the sun works with children.—Mrs. James J. Smith, Pa.

Note:—The bulletin which has helped to inform Mrs. Smith how to make her good baby a better baby was written up in our issue of March 26th. If you did not get it send now to Children's Bureau, U. S. Department of Labor, Washington, D. C. Ask for "Sunshine Folder No. 5."

With warm weather coming, more people will be interested in cool foods such as ice cream. The State College at Ithaca, N. Y., has a free bulletin on making ice cream, sherbets and ices. If you wish to have a copy, ask for E-109 on a postcard addressed to the college.

An Oven Simplifies the Process

SAVE hours of stirring and kettle watching by cooking down fruit butters in the oven. Only be careful the oven is not too hot, lest your fruit butter have a scorched flavor. The butter is first heated on the surface burner, then quickly put into an oven having a heat regulator or a portable thermometer.

Here is a splendid recipe:

1 gallon sweet cider
10 pounds (1 peck) apples
1½ pounds sugar
½ teaspoon cinnamon
½ teaspoon allspice
½ teaspoon salt
¼ teaspoon cloves

Boil the cider on surface burner until one-half its original quantity is obtained. Wash the apples, remove bruised spots and cut into slices.

Hours were spent in stirring and cooking apple butter in this way

When boiling hot put into the oven at once, at a temperature of 250 degrees F. and heat, uncovered without stirring, for 6 hours.

Remove from oven, press thru a colander or strainer. Add the sugar, spices and salt. Stir to mix ingredients, return to oven and cook 1 hour longer. Remove from the oven, pour into scalded crocks, jars or glasses. When cool, cover with paraffin.

"Home Made Fruit Butters" Farmer's Bulletin 900, free from the U. S. Department of Agriculture, Washington, D. C., will help you in making plum, peach and apple butter. Any butter may be oven-cooked if only half the usual amount of liquid is used and not too much spice.

Quilters, Attention!

WE CAN continue to furnish the following quilt patterns at the same price,—15 cents each. The Tree of Paradise, Tulip Wreath, Ohio Star, Double Cross, Grandmother's Basket, Air Ship, Pacific Queen, Maple Leaf, Letter Tray, Star and Shield. Pictures furnished on request. Address all orders to Quilt Pattern Service Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa. Please send a self-addressed, stamped envelope with your order.

Here on my desk are two quilt orders that cannot be delivered. One was returned as unclaimed at the given address. It is for Mary Swank. The other is a recent order sent by a Mrs. Ivens, ordering for a club of women somewhere in New Jersey. If these two quilters will write me promptly, we shall mail their waiting orders immediately.—G. S. S.

The Kitchen Cabinet

Cherry Pie

"I THANK you for that cherry pie. When the girls cut it I knew it was a real one. When I ate a piece, I seconded my own motion. I never ate a cherry pie just like it." A neighbor said those grateful words to me a few minutes ago. I laughed and said, "Well, it does everyone good to make something real occasionally, and since your girls were so busy washing, I thought I'd bake them a pie while I made one for us."

Cherry pies have a way of losing some juice and ruining one's oven, so I used two two-inch-deep cake tins this time. First I seeded two quarts of cherries and tossed them at once into cold water to plump them. After draining well, I placed them in a large bowl and mixed them well with a large tin cup of sugar. After placing the pastry on the tin, I floured it slightly, then spooned in the cherries, juice and all, making an inch layer. Then I sprinkled over them a tablespoon of minute tapioca. Next added another layer of cherries, then another spoonful of tapioca and lastly a bit more of sifted flour. The top crust was placed, and the pies baked quickly to a light brown. Then the heat was lowered to let fruit cook thoroly.—M. S. S.

Fried Spring Chicken

PREPARE a nice springer not over two pounds in weight. Cut up and separate into small pieces, roll each in flour and place in a roaster on top of the stove. Have melted in the roaster a few spoonfuls of bacon fat. Season the chicken with salt and pepper. Slice thinly a small onion and brown it with the chicken. Do this rather briskly, turning frequently to prevent scorching. When the chicken is nicely browned add three tablespoons of boiling water and cover tightly, letting no steam escape. Place the roaster on back of the stove to steam and simmer slowly for one hour. Butter may be used instead of bacon if preferred.

If gravy is desired, add a little flour to the fats in the roaster. Brown and blend, then add cold water and boil up well. Season and serve.—Clarice Raymond, N. Y.

The Out-of-Doors Calls at Meal Time

THOSE of us who do not have a screened-in porch may make a dining-room under the sheltering branches of the nearest tree and there serve meals the summer thru.

Near our back door we have a beautiful apple tree. The man of our house dislikes picnics—picnics where folks whose muscles are no as elastic as they were once must sit in an uncomfortable position on the ground and try to eat. We have an old table in the wash room that we carry out under this apple tree where we may comfortably eat with the birds singing overhead and the sunshine filtering thru the branches of the tree.

Care should be used in planning the meal out-of-doors. Arrange to it in the morning when you do the day's cooking.

One Hot Dish Included

By all means include one hot dish in your menu, and one that will not require any work at the last minute. Let it be ready to merely set on the oil stove for a few minutes so that it will be steaming hot.

Or serve one hot dish in a baking dish. This may be gotten ready in the morning to slip into the oven a half hour or so before the out-doors supper. Of course we cannot get thru the summer without the faithful oven for the oil stove.

It is well to include hearty sandwiches. These may be made after dinner and wrapped in a moist towel until ready to serve. A good big pitcher of cold milk is an indispensable part of this meal. Fresh fruit or a freezer of home-made ice cream is a nice dessert.

Plan to use as few dishes as possible. Paper napkins and paper plates save work. It detracts from the enjoyment of the evening meal to have to come inside and wash dishes.

Leaves the Dishes Until Morning

Why not wash the silver and pile the few other dishes into a pan and leave them for morning? "But," I hear you good housekeepers say, "it is shiftless to leave dishes!" Well, I have deliberately cultivated a feeling of enjoyment doing that very thing. Cover the pan so there are no unsightly dirty dishes to be seen—and it will not take you five minutes longer in the morning to do them—so there! There are tricks in all trades—more in keeping house than in any other profession (I say that thoughtfully).

I have one friend who is a beautiful housekeeper, and she is a real homemaker, too. I always enjoy being in her home, and especially in her kitchen. I never saw a sign of disorder in her kitchen. She told me that she made it a practice never to wash a dish in the evening because the time with her husband was so short anyway. She said that at first it was a real trial to leave the dishes, but it gave her a longer evening and added to the enjoyment of life.

Hide Them in the Oil Stove

Here is the "trick" I learned from her. She carries a large dish pan to the dining-room and piles all but the silver in this pan, and then she puts it out of sight—in the oven of her range. She uses an oil stove all summer. It works fine.

Two large trays will carry all of this yard meal out under the tree, and the remains back again. Be sure to clean up every crumb of refuse or the flies will surely be there waiting for you the next evening you have your supper under the friendly old apple tree.—May H. Mumaw, Ohio.

The Apple Helps Out

WHEN making strawberry, raspberry or blackberry jam, grape or plum marmalade, use one-third strained, unsweetened applesauce to two-thirds of the mashed fruit. It makes the higher priced fruit go farther, jellies more quickly, and requires less sugar. The apple flavor cannot be detected.

In canning applesauce, use the same methods you follow in making fresh applesauce but use no sugar. When wanted for table use sweeten to taste without heating the fruit. This canned sauce is just the thing to use with berries that come along before the apple season.

Fresh apples are on hand for use with grapes, plums and currants and aid greatly, softening the very strong flavor. When used with grapes the formation of tartar is prevented, and you will not find those small hard particles often present thru the fruit.—H. M.

Each Tells a Different Story

"OBSERVATION" is stressed by the Boy Scout organization and many homes could profit by a cultivation of the gift of seeing with the mind as well as with the eye.

At the supper table each night have each member of the family tell of something unusual that he has seen or heard during the day. Someone will say "I never see anything new, I'll have nothing to tell," but from least to greatest, each one of us sees something during the twenty-four hours that others will be glad to hear about, and by the telling we impress it upon our own minds thus enriching them for all time.—L. M. T.

Practical Styles Serve Well

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5824.—Seven sizes: 24, 26, 28, 40, 42, 44 and 46 inches bust measure. To make the dress as illustrated for a 36-inch size will require 4 yards of 32-inch material with five-eighths yard of contrasting material for lining the jabot and facing neck edge and cuffs. Pattern, 10 cents.

5839.—Four sizes: 8, 10, 12 and 14 years. A 12-year size will require ⅞ yard of 36-inch lining, 2⅝ yard of gingham 36 inches wide and ⅛ yard of contrasting material for facings on hip bands, collar, pockets and cuffs. Pattern, 10 cents.

5136.—Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1⅝ yard of 36-inch material with ⅛ yard of contrasting material cut crosswise for vestee and pocket facings. Pattern, 10 cents.

5571.—Three sizes: 6 months, 1 year and 2 years. A 1-year size will require 1⅜ yard of 32-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

When the Threshers Come!

THRESHING days are mighty busy ones without a minute's time to be lost in going to town to get some small machine repair part or supply. Take paper and pencil right now and make a list of the belting, small tools, lubricants, cup greases, packings, bolts and nuts and other things that you are apt to need, and take it with you the next time you are near a "Farm Service" Hardware Store so that you can get these essentials and have them ready when the threshers come. The "tag" store is the right place to buy for there you will get dependable quality and the greatest value for your money as well as helpful and pleasing service.

Threshing also brings its extra work for members of the household, when every pot and pan in the kitchen will be needed. Why not get a few extra ones now and save some of the work and troubles of these hot, hard days. Get them at the "tag" store and you will be sure of serviceable quality at the right price.

Your "Farm Service" Hardware Men.

No Story At All

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

THE Lieutenant stood out on the Barracks steps, in the shining dew of the morning. A sunrise grin illumined big face, and his heels eased rhythmically up from the plane as tho his toes had springs in them. Cold water and soap and a fundamental grooming gleamed from every inch of his body.

"Did you sleep well?" I asked, by way of being preposterous.

"Sleep!" scoffed he; "why, sleep's for breakfast!"

"'Sleep for your breakfast,
Walk for your dinner,
And you're a very poor soldier
If you can't go to bed supperless.'

That's what my old grandmother used to tell me—sister and daughter and mother of soldiers, and a sensible woman, anyway. Look here! See our moonflowers."

Out in front of the Barracks, in the midst of the grass-plot, blooms a bed of roses. But the turf around the bed had suddenly developed a crop related to roses in no sense at all.

There was an ancient tin pail. There was a rickety old fishing-basket. There was a small, sharp-pronged iron trident with a long handle made of fresh-cut hickory sapling still wearing its bark. And, finally, there was a brand-new and wholly anonymous fyke.

In the battered tin pail gasped a dark and slippery mass of suckers and catfish, disturbed occasionally by spasmodic motion. In the old basket lay other suckers, that would never move again. In the clear water of the concrete horse-trough, near by, other catfish, rescued in extremis by some sympathetic Trooper, raced hither and yon with fully restored energy. And then, the fyke.

A FYKE is a thing invented when the god of fishes was sleeping. Its mouth is broad and deep and deadly. Its body is a hopeless abyss. At intervals the body is distended by slender hoops, each with a deadly mouth of its own. And when its tail is weighted fast upstream and its rapacious jaws yawn at its full length below, few are the fish that pass it safely by; nor does any that enters, small or great, return.

A fish's inferno at all seasons, there are times and places when and where the Law of the State also holds the fyke abhorrent. Section 4 of the Act of May 1, 1909, P. L. 353, reads in part:

> It shall be unlawful to use fyke nets . . . from the first day of June to the thirtieth day of June inclusive . . . nor shall such nets be used in any streams inhabited by trout, at any time of the year. . . . Provided further, that each fyke net . . . must have fastened thereon a metallic tag bearing the name and residence of the owner thereof. Any person violating any of the provisions in this section, shall, on conviction . . . be subject to a penalty of twenty dollars, together with the forfeiture of all boats, nets and other appliances used, to the Department of Fisheries.

With another look at the collection on the grass, "Come inside," I begged, "and tell me the story."

"Oh, but it's no story at all," protested the Lieutenant. "We heard they were there and we went and got 'em—just an everyday occurrence."

Just an everyday occurrence, in the manner of the Force, with nothing extraordinary about it—and that is exactly why it is told here, as seen, or gathered from those concerned.

"No Story At All" is another of our true narratives of the Pennsylvania State Police

UP IN the hills of Pittsburgh lies a certain big, well-watered forest tract, at present operated only for ice production. The owners have built large storage houses, they have dammed their generous creek to get broad water surface, and they cut each year great quantities of clear, thick ice, netting a substantial profit.

This stream of theirs is called Dove Run. Dove Run City, consisting of a general store with a dozen houses more or less under its wing, lies all of five miles away from the ice-houses, and is the nearest point of human habitation. So, as the ice dealers, what with their dams, their storehouses, and their hoisting machinery, not to mention their great timber area, have a considerable property to protect, and no neighbors to help them at it, they keep in their employ a private watchman.

The watchman, a good, decent old man, lives alone in the heart of the tract entrusted to his care; and he spends twelve hours of each day, winter and summer, contentedly pottering about the place.

He is a good woodsman, knowing every tree, rock, and runlet in his domain. He would do his duty always, to the extent of reason. But you could not in reason expect him to make much of a fight against ugly marauders, should such appear, nor could you expect him to risk incurring the active ill-will of any one prone to revenge. His home is too solitary and exposed, and, above all, he has only private authority behind him.

THIS watchman, then, had long been a witness to fish-poaching, practised in spite of him. Gangs from a distance would swoop down on his dams out of season, fish their fill, using illegal devices, and be off and away long before he could send word out of the woods concerning them. Incidentally, whenever, in the course of his daily rounds, he came upon these untrammeled sons of Belial, they would offer enthusiastically to throw him either into his dam or into their own camp-fire, with the single alternative that he mind his own business. All this irritated the old man more than a little,—but in point of fact he was helpless,—until the night before the dewy morning that begins this story that is no story at all.

It was an hour after Taps. The Barracks reserves were sound asleep—asleep as fire-engine horses are, with their wits on tiptoe behind their eyelids and their shoulders one jump from the collar. The orderly at the telephone sat with the "Digest of Criminal Law and Procedure" between his elbows, grinding page 26. It is your best chance at hard nuts, when the crowd has gone to the Field of Dreams and the troubled world outside lies at its maximum of peace.

"—'From some lawful act done in an unlawful manner,'" muttered the orderly; "'from some lawful act done—'" and then—Z-zing went the telephone at his side.

"State Police," his clear voice answered before the bell ceased echoing.

Mr. Hopper—Joe Hopper, storekeeper of Dove Run City—introduced himself on the wire.

"Old Mr. Allardyce," said he, mumbling hurriedly, like a man afraid of being overheard—"old Mr. Allardyce, watchman on the Dove Run tract, has just sent out word that a gang of poachers is operating on his dams"—and sharp upon the terse statement came the click of the receiver returned to its hook.

Dove Run City, be it known, was anxious enough on its own account to see the poaching traffic stopped. The local and visiting poachers are amateur ruffians of some standing, drink heavily on their trips, and leave forest fires, robbed farms, and frightened women marking their trail in whatever direction. But Dove Run City, too, was desperately afraid of acquiring the ill-will of such gentry. Their casual depredations were heavy enough, without drawing down their deliberate wrath upon the weak and isolated little community. Better speak low and fast, then, with an eye over either shoulder, or else bear in silence and inform not at all.

"I'll take this job myself," said the Lieutenant, springing out of bed. And as he jumped downstairs, buckling on his holster belt, he named the Trooper to accompany him—named also a four-month Recruit who should profit by a mild taste of experience under his officer's eye.

It is a goodish trip from Barracks out to that forest tract, and time counted. So they took the Troop car, covering the road to Dove Run City at a speed that the hour allowed. But the "General Store" was sound asleep, and Joe Hopper's wife, peering from an upper window in her nightcap, had no views to offer concerning Joe's whereabouts. Joe was "away"—quite as the Lieutenant expected. Joe had done his part, and had no idea whatever of letting himself in for identification with a subject so delicate.

SO THE Lieutenant drove on, climbing the worn wood-roads thru the tall timber, till at last the headlights picked out old Allardyce's cabin, snuggled like a big fungus beneath a wall of rock.

It was half an hour after midnight by now, and Allardyce had turned in. But, whether he had foreseen the moment, or whether by usual habit, he needed only to put on his shoes, coat and hat, to be fully dressed. However, the prospect ahead so excited him that all his energies fled to his tongue. Sitting on the edge of the bed in the midst of a turbulent ocean of patchwork quilt, one shoe on and the other dangling in his hand, he had to rehearse over and over again the story of the day. Each time that he came to his own personal clash with the invaders he grew more truculent.

". . . An' they standin' there, the big, ugly loafers, up to their belts in water, layin' their traps right under my eyes! I says to 'im, I says:

"'Git out o' here. Don't you know you're lawbreakers and thieves?'

"They says, 'Git out yerself, old feller, and git out quick, or we'll drown ye!'

"I says, 'That's what you've been threatenin', you and the likes of you, any time these three years. Now I give ye fair warnin',' I says, 'I'm done with ye. I'll have no more nonsense from ye. No, sir! B'gosh!' says I, 'if ye ever darst to come here again I'll jest slough ye!'

"So then I went off and left 'em. I wouldn't demean myself with argyin' with such no further. And after nightfall a chance come to get word in to the settlemen—"

"Let him put that other shoe on, for Heaven's sake, or we won't get away till daylight," whispered the Lieutenant to the Trooper sitting by the bunk.

The Trooper went outside and counted stars.

They bounced along the wood-roads a mile or so farther, and then, under the old man's guidance, cut in on foot. He displayed a rabbit's knowledge of the place—minute and accurate. Finally, between half-past two and three o'clock, at some distance ahead, thru the underbrush, appeared the dull light of a low fire.

"That fire," said Allardyce, trembling with excitement, "is on the other side of yonder road, on the top of the bank and back a little. Opposite to it, on the side of the road, is an ice-house. Below, to the left, is Hemlock Run, where trout is plenty. That's the place where they've got their fyke net—the villains! But I'll fix 'em this time so I will!"—and he shook his fist ferociously.

THE detail moved quickly up to the ice-house, a big, dim hulk in the darkness. Against the wall away from the road leaned a ladder, reaching to the roof-tree. The Lieutenant climbed the ladder, hoping from that height to get a glimpse of those around the fire. But naught could be seen. The underbrush confused the view, and no one was stirring. To advance on the place, crackling twigs, would merely serve to warn the quarry, who would fade away into leafy nothingness in the twinkling of an eye. So the only course was to sit tight, awaiting developments with the dawn.

At last pale patches began to show between the hemlock-tops overhead. Birds stirred, with broken twitterings. And then of a sudden the fire shot up into a blaze, where some one had kicked it and thrown on a log.

"They're going to make a cup of coffee, then draw their nets and get away before daylight," whispered the Lieutenant, from the depths of experience.

He gath red his forces, made a forward movement, hid again in the underbrush, and waited.

In a very few moments, talking together as men who still have sleep in their throats, three figures, heels first, came lumbering down the slope from the camp-fire. Two of them crashed on along the bank toward the point where Allardyce had said their net was set. The third moved up toward the ambush.

The Lieutenant waited until the pair, wading into the stream, were actually lifting the fyke. Then:

"Go arrest them," said he to the Trooper, indicating that the Recruit should follow.

As the two officers quietly left cover, the third and nearest poacher caught sight of them. Horror-stricken, yet thinking himself unseen, he turned to warn his mates. Not daring to lift his voice, he stood like a disordered semaphore, wildly waving his arms and pointing. Too late. His mates saw him well enough, but they saw the Troopers also. The sight seemed to paralyze both their brains and the legs under them. Net in hand, they stood transfixed.

Then the Lieutenant stepped into the open, moving toward the signaler, who now first became aware of his presence. Big, powerful hulk that he was, the fellow stood lowering, obviously weighing resistance or attack, as he balanced his fish-spear ominously.

AT THAT instant, in the brush just behind him, appeared a strange vision—appeared the detached head of Allardyce, supported by its long gray whiskers even as the heads of the cherubim are supported by their several wings—Allardyce, who, lost to sight for a moment, had been prospecting on his own account and who now fancied himself the only discoverer of the poachers' awakening.

"S'st! S'st! They're comin'! They're comin'!" His whisper rose like the whisper of steam from a locomotive, as, craning his neck over the sheep-laurel thicket, he beckoned the Lieutenant violently.

Just as the words left his lips, he perceived the broad back of the poacher, not ten feet in front of him. His jaw dropped. His face bleached green in the dim dawn of the woods. Then the brush closed softly, softly over him, and before the enemy could fairly turn and locate the sound he had made, he was as invisible as a tree-toad and as harmless.

Said the Lieutenant, walking quietly toward the angry giant: "State Police Officer. I arrest you." To which, after the briefest attempt to return his captor's gaze, the delinquent meekly submitted.

"Now we will walk over and look at your net first," remarked Lieutenant Price affably.

Around the camp-fire lay a lot of fish, some speared, some netted; the ordinary camp supplies, two cases of beer, a more than liberal allowance of whiskey and, end to the blaze, a pile of blankets of unusual size.

Struck by the shape of the pile, the Lieutenant gingerly plucked one corner from the far end of the heap, lifted it a trifle and looked inside—on the face of a sleeper. Automatically his hand dropped. But the outline of that face— He lifted the corner again, for another brief survey of the nose and eyebrow.

"Who is that fellow?" he inquired of his prisoner.

"That fellow," growled the giant, "is my wife."

Very quietly, very gently the Lieutenant retreated, propelling his man down the bank, and handing him over to the detail for safe-keeping. Then he set out on a side-trip of mercy, to make sure that Allardyce had effected his escape and was safely out of sight.

RETURNING, satisfied, his eye encountered a new figure. High on the stream-bank, solitary, stood a young Napoleon gazing upon Waterloo. Arms folded, tight-breeched legs wide apart, hot over eyes, chin on breast, attention fixed in gloomy abstraction, he stood like an image of bronze. But his very solitude screamed for interruption and his contours could not be questioned. The Lieutenant, shying, swung a wide detour, to join the detail at the camp-fire.

"How did you come into these woods?" he demanded of the prisoners.

"By automobile."

"Is the car coming after you?"

"Yes."

"When?"

"Six o'clock this morning."

"Very well. We will take you three prisoners, the fish you have caught, and your fyke and fishing-traps in our car. Your own conveyance can take out your proper belongings later on. Now pick up the stuff. We'll be going.

The two of the fyke-net hastened by obedience to acquire such merit as they might, and, laden with the proof of their sin, started ahead on the outward trail, closely guarded by the Trooper and his eager understudy.

THE Lieutenant remained a moment behind. The fire must be quenched to the last spark; he intended his captive to perform this operation. Sullenly kicking it apart, the giant stamped it over with his great water-boots. Then, some points of red still gleaming, he snatched two bottles of beer from the case on the ground, knocked their heads off, nipped one neck between each thumb and forefinger, and, legs astride, stood with his chin to the sky, draining the first while he emptied the second at full arm's length upon the sizzling embers. The last spark dead, "March!" ordered the Lieutenant, and started his man in the wake of the vanguard.

Then from the steep a hollow shriek, sobs, broken cries, loud weeping; Napoleon had found his voice, and it was no frail organ.

"She's scared!" grumbled the giant with scant evidence of sympathy. "Doesn't like being left alone."

Said the Lieutenant: "Go over and tell her to be patient, to wait here quietly and take care of the stuff, till your car comes in for her."

Which being accomplished and the wails hushed, the rear division fell in, and had soon covered the distance to the waiting Troop motor.

Then the Lieutenant took thought once again of poor old Allardyce, left all alone in those big, dark woods without a neighbor, with nothing but private authority to stiffen him—poor old Allardyce, of a certainty shaking in his shoes at this very moment. What if some suspicion did lurk in these rascals' minds that to him they owed their undoing? Then, indeed, were his fears well-founded. Something must be done to square him. For a moment the young officer considered. Then he called to the man at the wheel:

"Run down to that watchman's shanty, where we stopped coming in."

(To be concluded next week)

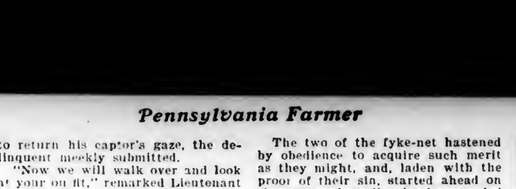
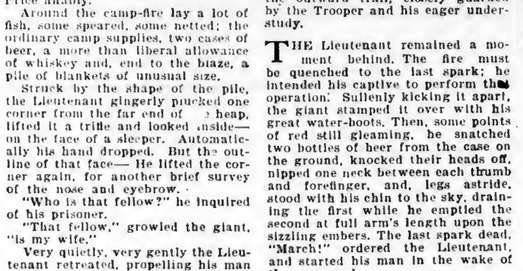
THAT IDEA OF YOURS OF FIDDLING FISHWORMS OUT OF THE GROUND HAS GIVEN ME A HUNCH, SLIM!
I'M GOING TO MAKE A CORNSTALK FIDDLE
WOTCHA GOIN' TO DO WITH A CORNSTALK FIDDLE?
I'M GOIN' TO FIDDLE THE CORN BORERS OUT OF THE CORN PATCH!
OMIGOSH!

Vocational Boys at Penn State





MORE than 120 boys from the 68 vocational schools of Pennsylvania competed for a trip to the National Dairy Show and for other prizes in the livestock judging contests held at State College during Young Farmers' Week. The winning team in the vocational dairy judging contest is shown above at the left. These boys represented the Porter Township Vocational School, Schuylkill County, Pa. They are, left to right; Ivan Hand, Arthur Daub, Norman Updegrove and Elroy Baker, Supervisor of Agriculture.

The three boys in the group at the right above won the general livestock judging contest. They represented the West Newton Vocational School, Westmoreland County, Pa. They are left to right; John Glidick, Sam Dave, Jewitt Smith. Their coach was Charles Reiter. This team judged horses, beef cattle, sheep and hogs in competition with about fifty other boys.

The lower picture gives a general view of the dairy barns at the Pennsylvania State College during the vocational dairy judging contest.

Did you ever hear this one?—

By Way of Explanation

A law suit was recently in full swing, and during its progress a witness was cross-examined as to the habits and character of the defendant.

"Has Mr. H— a reputation for being abnormally lazy?" asked counsel briskly.

"Well, sir, it's this way—"

"Will you kindly answer the question asked?" struck in the irascible lawyer.

"Well, sir, I was going to say it's this way; I don't want to do the gentleman in question any injustice and I won't go so far as to say, sir, that he's lazy, exactly; but if it required any voluntary work on his part to digest his food, why he'd die from lack of nourishment, sir."

"Down where I live," said the Texan, "we grew a pumpkin so big that when we cut it my wife used one-half of it as a cradle."

"Why," smiled the man from Chicago, "that's nothing. A few days ago, right here, two full-grown policemen were found asleep on a beat."

Sometimes It Works

Mrs. Hicks—I don't take any stock in taese faith cures brought about by the laying on of hands.

Mrs. Wicks—Well, I do; I cured my little boy of the cigarette habit that way.

Listening In

Doctor—I can't cure your husband of talking in his sleep.

Wife—But can't you give him something to make him talk more distinctly?

Nurse (to eight-year-old Bobby)—Would you like me to show you the nice, cute, little baby the stork brought your mother?

Bobby—Naw; show me the stork.

Life's Darkest Moment

Slim—When do you do your hardest work?

Fat—Before breakfast, always.

Slim—What do you do?

Fat—Try to get outa bed.

Teacher—What is the matter with your singing, you are simply screeching?

Student—Only hittin' on one tonsil.

Self Diagnosis

The automobile tire collapsed
And said, "Well, I declare!
I think less speed
Is what I need
And entire change of air!"

Doctor No. 1—Did you hold the mirror to her face to see if she was still breathing?

Doctor No. 2—Yes, and she opened one eye, gasped and reached for her powder puff.

From Laughing Gas

"My girl's slow."

"Try feeding her ketchup."

George—Does your wife pick all of your suits for you?

John—No. Just the pockets.

Dorothy—How are you going to vote, dear?

Jeanette—In my new brown tailored suit with fur trimmings. How are you?

PRODUCE

Butter—Firm; creamery, higher than extras, 42@42½c; creamery, extras, 92 score, 41½@41¾c; creamery firsts, 88@91 score, 38@41c; packing stock, current make, No 1, 31@32c; do, No 2, 30c

Eggs—Firm; fresh gathered extra firsts 25½@26c; do, firsts, 24½@25c; do, seconds, 23@24c; nearby hennery whites, closely selected extras, 38@40c; nearby and nearby western hennery whites, firsts to average extras, 28@36c; nearby brown, firsts, 25@26c; nearby hennery browns extras, 28@30c; Fourth Coast whites extras, 35@37c; do, firsts to extra firsts, 29 @33c.

Cheese—Firm; state, whole milk, flats, fresh, fancy to fancy special, 24¼@25½c; state, whole milk flats, held, fancy to fancy specials 27@28c; do, average run, 25@26½c.

Live Poultry—Firm; broilers, by freight, 50@55c; do, by express, 60@65c; fowls, by freight, 30c; do, by express, 30 @35c; roosters, by freight, 17c.

Dressed Poultry—Quiet; chickens fresh 25@35c; do, frozen, 29@35c; fowls, fresh, 28@35c; do, frozen, 26@28c; old roosters, 12@17c; turkeys, fresh, 25@30c; do, frozen, 32@36c.

LIVESTOCK

Cattle—Steady. Steers, $10@13.50; stabulls, $4@7, cows, $2@6.

Calves—Steady. Veals, common to prime, $5@10.50; lightweight culls, $7 @8; buttermilks and fed calves, $6@9.

Hogs—Steady; light to medium weights $9.75@11; pigs, $10.15@10.50; heavy hogs, $8.50@9.25; roughs, $7@8.

Sheep and Lambs—Steady. Sheep, $2.50 @6.50, culls, $2.50@3.50; lambs, spring primes, $16.25@16.75; spring mediums, $12.50@15.50, spring culls, $9@11.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt or thirty-day shipment: City bran, $31.00; middlings, $38 in 100-lb sacks; red dog, $51, nominal; western feed, bran, $33.50, in 100-lb sacks, standard middling, $37.50, flour middling, $40.50; red dog, $50, all in 100-lb sacks; alfalfa or lake-and-rail shipment, white middling feed, $41, nominal, in 100-lb sacks, cottonseed oil meal, 36 per cent protein, $41.25, prompt shipment linseed oil meal, $47.50 per ton prompt.

Hay and Straw—Hay, old or new, large bales, timothy and light mixed No 1, $23; No 2, $21@22; No 3 and poorer, $18 @20. Straw, large bales, rye, No 1, $20.

Grain—WHEAT, No 2 red, c i f, dom, $1.39½; No 1 dark spring, $1.62½; No 2 hard winter, f o b, export, $1.62; No 1 North Manitoba, in bond, f o b, export, $1.81¾. CORN, No 2 yellow, $1.13½, No 3 yellow, $1.12½. OATS, No 2 white, 56; No 3 white, 53@53½c; No 4 white, 51@ 52c; ordinary white, clipped, nominal; fancy white, clipped, nominal. RYE, c i f, export, $1.18¾. BARLEY, malting, c i f, domestic, 95¾c.

CHICAGO LIVESTOCK MARKET

Hogs—Generally steady; quality considered; top, $9.90; bulk, 220@290 lbs, $9.65@9.90; bulk, 220@250 lbs, $9.30@ 9.60; butchers, 260@300 lbs, $8.75@9.10; bulk, packing sows, $7.75@7.90.

Cattle—Compared with week ago, Beef steers, yearlings and fat she stock, 25@ 50c higher, top heavy steers, $14.40, best medium weights, $14.25; long yearlings, $14; lighter yearlings, $13.15; bulk all weights and ages, $10.50@13.75; grass cows, mostly $6@7.50; fed kinds $8.50@ 9.50; grass heifers, largely, $8.50@9.50; fed kinds, $11@11.60; top, $12; mixed yearlings, $12.50 shown, all cutters closing $4.50@5.50; fully 25c higher; bulls, 50c higher; vealers, $1.50@2 higher, bulk, better grades, $13@14; top, $14.50.

Sheep—Fat lambs closing 50@75c higher; culls, $1 higher; sheep strong, feeding lambs strong to 25c higher. Week's tops, fat range lambs, $15.25; natives, $14.50; yearlings, $12; fat ewes, $6.50, feeding lambs, $13.65.

WOOL MARKET

Boston, July 9, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 45c; ½-blood combing, 44@45c; ⅜-blood, combing, 43@44c; ¼-blood combing, 43@44c. Michigan and New York fleeces—Delaine, unwashed, 43 @44c; ½-blood, combing, 43c; ⅜-blood, combing, 43@44c; ¼-blood, combing, 43@ 44c. Wisconsin, Missouri and average New England—½-blood, 37@38c; ⅜-blood, 41 @42; ¼-blood, 41@42c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, July 9, 1927.

Cloverseed, cash, imported, $13.90; October, $16.95; December domestic, $16.85. Alsike, August, $13 asked; December, $10 asked. Timothyseed, cash, $2.50; December, $2.60.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, July 11, 1927. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$34.00@34.25
Spring bran	33.50@33.75
Soft winter wheat bran	35.00@35.50
Hard winter wheat bran	34.00@34.25
Standard middlings	38.00@38.25
Soft winter wheat middlings	40.50@45.50
Flour middlings	48.50@48.50
Red dog flour	51.50@52.50
White hominy	40.50@40.70
Yellow hominy	40.70@41.00
Gluten feed	37.20
36 per cent cottonseed meal	41.00@41.25
41 per cent cottonseed meal	44.25@44.50
43 per cent cottonseed meal	46.50@46.75
34 per cent linseed meal	50.50@50.70

Millfeed in good demand with supplies light.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .41¾	$ ...	$ .40
Eggs, fresh gathered extra firsts (N. Y.)	.25¾	...	.31½
Steers, good to choice (Lancaster)	11.87½	10.75	9.00
Hay, Number 2 timothy, baled (Phila.)	18.00	20.25	26.50
Wheat, No. 2 red winter (Philadelphia)	...	1.53	...
Oats, Number 2 white (Philadelphia)	.59	.61¾	.51¼

Prices Rise Toward End of Week

Review of the Week Ending July 9

BUTTER—The markets were dull at the opening of the week due to accumulations over the holiday and to lack of demand. The market improved slightly toward the close of the week and prices were about one-half cent higher. The movement of butter into storage was greater than during the same period last year.

EGGS—The New York egg market was irregular. Fancy grades and exceptionally fine eggs sold readily while the average receipts moved slowly. The market was firm on strictly fancy light yolked nearby eggs. Some favorite brands were being sold direct to retailers at a premium over regular wholesale quotations.

POULTRY—Live fowls were very scarce on the New York market and there were too few offered to supply trade needs. Leghorn fowls were almost as salable as colored kinds. Broilers were in better demand. Shipments of live poultry were attracted from other cities by the high prices prevailing.

POTATOES—Potato markets were unsettled during the week but prices tended lower. Moderate to liberal supplies were reported at most eastern cities and the demand was generally slow. The movement from the Eastern Shore districts was heavy altho rains toward the close of the week interfered with digging. The crop in southern New Jersey is nearly ready to move and considerable quantities were hauled by motor truck to Philadelphia.

LIVESTOCK — The Chicago hog market was stronger and prices averaged higher on practically all other lines. Beef steers and she stock were higher while vealers made decided advances. Stockers and feeders were steady while heavy calves made moderate advances. Fat lambs and yearling wethers were higher than last week and feeding lambs were stronger.

GRAIN—Unfavorable weather reports resulted in higher prices for practically all grains. Wheat was about 3c higher due to reports of lighter yields of winter wheat and rumors of damage in Canada. Corn prices were also about 3c higher while oats advanced due partly to reports of unfavorable conditions in some sections.

HAY — The hay markets were slightly weaker and the moderate receipts were more than sufficient for trade needs. New crop timothy hay arrived on a number of markets and in general the quality was excellent. Some farmers were storing in anticipation of higher prices. Alfalfa hay was generally steady.

FEEDS—The markets were steady toward the close of the week. Middlings and heavier feeds were slightly higher in the Central West. Linseed meal was steady and quiet. Bran was steady and cottonseed dull. Gluten feed and hominy feed were lower than last week.

Reviewing Wheat Market Prospect

By GILBERT GUSLER

SCANNING the wheat market horizon at the start of the 1926-1927 crop year leads to these tentative conclusions:

1. Domestic and world wheat crops promise to be somewhat smaller than last year.

2. Carryovers from previous crops at the start of the year will be slightly larger than a year ago.

3. Europe will not need to import as much wheat as in the past twelve months, but the decline in demand will not be as marked as the reduction in the crops of exporting countries.

4. The world price level should average as high or higher than in the crop year just closed.

In reality, the wheat growing period is still too young in many of the important areas to make it possible to tell whether the price ultimately will go to $1.25 on the principal central markets or to twice that figure. The foregoing statements must be considered subject to considerable revision up or down, therefore, depending upon the amount of damage from weather, insect pests, rust, drought and the like during the balance of the season. Everyone is entitled to make his own guess as to whether that damage will be greater or less than usual.

All four of the leading exporting countries, the United States, Canada, Argentina and Australia, have prospects for smaller crops than last year. In the United States, there is a chance that the ample moisture conditions in the northwest will enable the spring wheat crop to make up part of the reduction in winter wheat.

The Unknown Quantity Enters

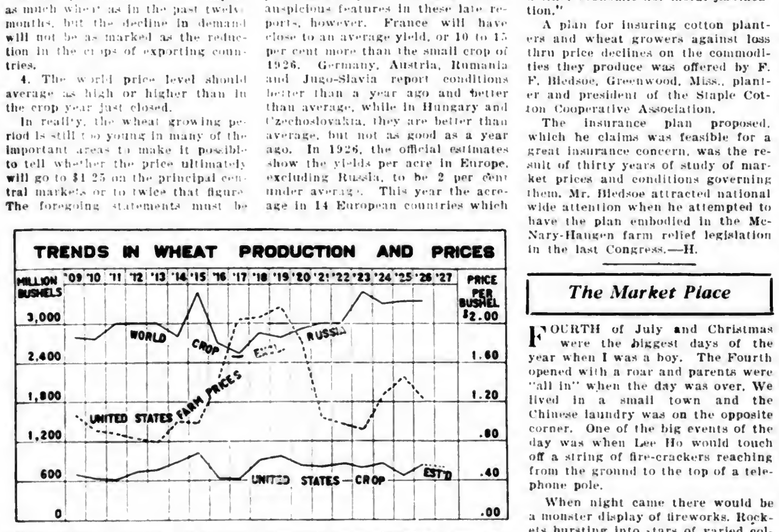
In Canada the uncertainty is greater. The area planted was reduced probably two million acres, or 10 to 12 per cent. A substantial fraction was seeded late, increasing the susceptibility to damage from rust, late summer drought, early frost or a wet harvest. But, the soil was well soaked by the spring rains and with favorable weather henceforth a good-sized crop could be produced.

Passing to Argentina and Australia, the unknown quantity becomes still greater. The crops in these countries are only entering the winter, and the nature of the weather during their growing and maturing season from October to December will tell the final story.

Europe, the great import market on which the offerings of surplus countries converge, probably will produce more wheat than last year. A mid-June report to the United States Department of Commerce from its trade representative at London was to the effect that the European yield would not be enough larger than last year to offset the reduction in the North American crop.

There will be but little change in the crop of the United Kingdom, the principal importer. Early reports indicated a small crop in Italy, the next largest importer, but more recent advices point to about the same yield as last year. There are some auspicious features in these late reports, however. France will have close to an average yield, or 10 to 15 per cent more than the small crop of 1926. Germany, Austria, Rumania and Jugo-Slavia report conditions better than a year ago and better than average, while in Hungary and Czechoslovakia, they are better than average, but not as good as a year ago. In 1926, the official estimates show the yields per acre in Europe, excluding Russia, to be 2 per cent under average. This year the acreage in 14 European countries which have made returns is 0.2 per cent greater than last year.

There are several other wheat producing areas to be mentioned. Russia is most important, but information upon her production has been unreliable and her exports are partially forced as a matter of state policy, so that it is hard to tell how large a part she will play in the world trade. Her winter wheat and rye crops are reported to be average, while spring wheat is below average. The lower Volga region is experiencing drought. North Africa, an exporter of durum types, has an uneven crop with a total yield probably below last year. India has harvested the third small crop in succession, with a yield but little more than her average consumption. If prices are attractive, she may export 10 to 12 million bushels compared with about 8 million bushels shipped from the last crop.



Fluctuations in the size of the total domestic or world wheat crop are small when compared with the size of the price fluctuations which result from them. The small crop in the United States in 1925 caused an advance in prices in spite of a large world crop.

Institute Hears Crop Insurance Plan

"EFFICIENT marketing is as much the farmer's job as efficient production." This was the keynote of the address by William M. Jardine, Secretary of Agriculture, which opened the first week's session of the American Institute of Cooperation. This third annual four-week conference on cooperative agriculture got under way in Chicago, June 20, at Northwestern University.

Centralization in the control and operation of country and terminal elevators by established producers was advocated by Mr. Christensen in the discussion of grain cooperative marketing which took place during the first week. Mr. Christensen is chief of the U. S. division of cooperative marketing.

Considerable heat developed in the session when Judge Lysius Gough, president of the Texas Wheat Growers' Association, made the following accusation, "The Chicago Board of Trade has the sole power to give the farmer a profit or take it away from him. According to reports in the government records the Chicago Board creates a market which is not based on the law of supply and demand for actual grain and the wide fluctuations in price have neither economic nor moral justification."

A plan for insuring cotton planters and wheat growers against loss thru price declines on the commodities they produce was offered by F. F. Bledsoe, Greenwood, Miss., planter and president of the Staple Cotton Cooperative Association.

The insurance plan proposed, which he claims was feasible for a great insurance concern, was the result of thirty years of study of market prices and conditions governing them. Mr. Bledsoe attracted national wide attention when he attempted to have the plan embodied in the McNary-Haugen farm relief legislation in the last Congress.—H.

The Market Place

FOURTH of July and Christmas were the biggest days of the year when I was a boy. The Fourth opened with a roar and parents were "all in" when the day was over. We lived in a small town and the Chinese laundry was on the opposite corner. One of the big events of the day was when Lee Ho would touch off a string of fire-crackers reaching from the ground to the top of a telephone pole.

When night came there would be a monster display of fireworks. Rockets bursting into stars of varied colors, flower pots, Roman candles, pinwheels and colored lights. I'll never forget the thrill when I held my first Roman candle and the great blobs of fire shot into the sky.

Old Way Wasn't Worth the Price

It was great fun while it lasted but it wasn't worth the price. The next day the papers were crowded with the list of dead and injured. This Fourth of July was more quiet and since the markets were closed we took a trip thru New Jersey. The main roads were crowded so we took the back roads, where you can really enjoy the country.

Many farmers seemed to have declared a holiday for comparatively few were working in the fields. Potatoes were in bloom and I never saw them looking greener, or more healthy. Corn on the low ground was a little backward but it looked better than you would expect considering the freakish weather we have been having.

Rye and wheat were ripening and we saw acres and acres of grain in the section thru which we passed. There seemed to be a fair set of fruit in most orchards and some appeared to be in need of thinning. In one section tomatoes were set and peppers were ready to pick. Alfalfa was making a heavy growth and hay fields were generally in good condition.

Roadside Markets Were Busy

I talked to several farmers and one of them seemed to express the opinion of all when he said, "It's been a queer season, cold and damp, but somehow crops are growing good, especially the weeds." We passed thru the cranberry sections and the men there were not as optimistic. Frosts in May after the water had been left off had damaged the crop.

Many of the roadside markets were open and some roads were lined with them. Cherries, blackberries, raspberries and string beans seemed to be the main products offered at most of the farmer's stands. Some were selling pop, hot dogs, candy and most everything imaginable. Some of these roadside markets were inviting, they were well located and seemed to be doing a big business. Others were placed in such a way that it would be difficult to stop, or were dirty and littered with signs.

There was one stand that amused me. There was a big sign across it that read "WE SELL WHAT WE RAISE." Under it were displayed big bunches of bananas, crates of cantaloupes, plums and a pile of watermelons. Even at that the sign might be telling the truth, but it was what you might call a "hair line distinction."

County News and Comment

CLEARFIELD COUNTY, PA.—Following a week of warm weather corn and all warm-weather plants are growing better, tho it looks as tho the season till frost time will be too short to mature some of the crops. Grass is up to the average and some clover hay is in the mow. Very little wheat is coloring yet. It looks very good considering the lateness of the seeding last fall. The oats are short but now make better growth. There are a few fields of good early potatoes and a normal planting of the main crop. Old potatoes are now scarce and bring from $1 to $2, new crop have not moved to market. Cabbage is scarce and retails at 7c. Butter, as a result of good pastures, is on a very dull market. Eggs are in good demand at 30c. There is now an effort by local business men to establish here at a central point a milk shipping station. The prices, terms and conditions suggested by those who are to handle and receive the product, in other words, the usual way.—D. H. W., July 5th.

LEBANON COUNTY, PA.—We are having ideal weather for hay making. Hay promises to be a big crop. Wheat harvest will be somewhat later than in average years but crop appears to be good. Oats and potatoes are growing nicely. Some potatoes have been sprayed two or three times while there are yet a few who do not spray at all. While considerable trouble has been anticipated in getting a good stand of corn in some fields, due probably to poor seed and adverse weather conditions, the outlook is better than it has been for some time. Some corn is big enough to be plowed, while other fields are being cultivated. Pastures are getting short in many instances but the condition of stock is generally good. The strawberry season is about over in the county with the crop being below normal this year. Raspberries and blackberries promise to be a big crop. Early cherries an entire failure. Sour cherries are ripening with about a 50 per cent crop or less. All other fruit not over a 50 per cent crop. Wheat, $1.40; corn, 80c; oats, 50c; eggs, 26c; butter, 55c.—P. L. M., July 1.

FREDERICK COUNTY, MD.—The weather the past few weeks has been dry and warmer following the wet and cool weather of the first part of June. The wet and cold spring has delayed harvesting in most cases a week and ten days. Most farmers are just beginning grain harvest. In most instances it is poor. Acreage is also small this year in this section. Hay is above the average both in quality and quantity. Oats looking good; corn is short; quite a lot of corn was planted the latter part of June. Fruit is looking good and should make an average crop. In general the prospects are not so good for the farmer in this section but with favorable weather for the corn they should brighten as the season advances. Prices are about the same as last month. Poultry and eggs low. Corn, 75c. Wheat is dropping with no stable price.—R. J. W., July 5.

DAIRY

MAY ROSE GUERNSEYS
Yearling son of Maxim Linda Vista, $500. Two year old Son of Lancaster Eastern King, $500. Three calves, Grandsons of Eastern King, $50, $75 and $150 each. Three bred heifers, $150 to $200 each. Two blemished cows $125 each. Two young fall cows, $225 each. Fresh Cow, extra good, $300.
A. M. KENNEL, R. D. 2, HONEY BROOK, PA.

BUCK & DOE RUN VALLEY FARMS—Hereford Cattle and Poland China Hogs. Sold cut on hogs—taking orders only for future delivery.
THE SAINT AMOUR COMPANY, Mertonville, Pa.

REGISTERED GUERNSEY COWS, Heifers, Bull and heifer calves at Farmers' Prices.
C. E. ROUZER & BRO., GUERNSEY, PA.

TWO REGISTERED GUERNSEY BULLS, one old enough for service, both handsomely marked. Write us. JOHN C. SARVER, R. D. 1, Millerstown, Pa.

CLOVERKNOLL REG. GUERNSEY COWS $150 and up. 3 weeks calves, $25 and up. Acc. Herd $3652.
CLOVERKNOLL FARM, NEWTOWN, PA.

IF YOU WANT practically pure bred Holstein or Guernsey dairy calves write us.
EDGEWOOD DAIRY FARMS, Whitewater, Wis.

TWO LOADS OF YOUNG CATTLE, beef grades, low wire for immediate purchase.
W. HUNDLEY, BOYDTON, VA.

10 GUERNSEY DAIRY HEIFER CALVES—Practically pure, from rich milkers. Write us.
L. H. TERWILLIGER, WAUWATOSA, WIS.

3 REGISTERED HOLSTEIN HEIFERS, 2 weeks old. Tested Herd. Write us.
J. KING, ARONA, PA.

100 HEAD OF HOLSTEIN AND GUERNSEY COWS —and 50 grade due to freshen this fall.
THE McCULLOUGH FARMS, White Pine, Pa.

SWINE

BERKSHIRES—Large and Prolific Strain. One Boar, 9 months old, $50.00. Ten open Gilts, price reasonable. Spring Boars and Gilts, 170 to select from. Bred right and guaranteed to please.
DAVIS BERKSHIRE FARMS, Dagsboro, Del.

Registered Chester White 100 pound Boars each. Choice breeding stock. Order now. Spring Boars and Gilts, $30.00
RAINBOW STOCK FARM, CHESWOLD, DEL.

200 CHESTER WHITE AND BERKSHIRE PIGS. 6 weeks old, $5.50; 8 to 10 weeks old, $6.50. All taught to eat.
OAKS DAIRY FARM, WYALUSING, PA.

PEDIGREED BIG TYPE CHESTER WHITES—125 fall pigs, 25 service boars, 85 bred sows, priced low, shipped on approval. C. E. Cassel, Hershey, Pa.

CHESTER, BERKSHIRE AND POLAND CHINA PIGS, 8 weeks old, $8.50 each. Express Paid. Shoats all ages. I. R. TANGER, York Springs, Pa.

300 FEEDING PIGS six to seven weeks old $5.50 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Dushore, Pa.

SPOTTED POLAND CHINAS
RITTER STOCK FARM, FREMONT, O.

TWO EXTRA GOOD REGISTERED BERKSHIRE BOAR PIGS, 10 weeks old. Quick, big growers.
W. F. McSPARRAN, FURNISS, PA.

100 HIGH GRADE PIGS, Six to Eight Weeks Old. $5.50 to $6.50 each.
HILLSIDE STOCK FARM, CAMPTOWN, PA.

GOATS

GOATS—Purebred Toggenburg billy, 10 grade does, 4 matured does, bred.
GROVER WISE, R. D. 7, West Chester, Pa.

FOR good health, drink goat's milk. World's Best Toys, $95. Nubians, $45. Registered Purebreds, $75. Kids, $15. Goldsboro's Goatery, Mohaton, Pa.

RABBITS

MAKE BIG PROFITS with Chinchilla Rabbits. Real money makers. Write for facts. 848 Coerad's Ranch, Denver, Colo.

SHEEP

TRANQUILLITY FARMS—DORSETS—Fall Born Ram Lambs and Yearling Rams at Farmer's Prices, suitable to head purebred flocks, or production of hot house lambs. Purebred and registered. All stock on approval.
ARTHUR DANKS, Mgr., ALLAMUCHY, N. J.

DOGS

FORTY BROKEN ENGLISH BEAGLES on trial at the right price. Pedigreed tops, all sizes. Write your wants. WILSON COFIELL, Upperco, Md.

RAT TERRIERS Fox Terriers. Plate 10c.
PETE BLATER, Box P. F., PANA, ILL.

COLLIE AND WIRE-HAIRED FOX TERRIER PUPPIES WANTED—Will buy litters.
GEORGIE GORDON, Rt. No. 1, Chatham, N. J.

LEWELLYN AND ENGLISH SETTERS, also rabbit hounds on trial. Pamphlet free.
O. K. KENNELS, MARYDEL, MO.

Jack Knife and Chain

HOW TO GET ONE FREE
Call on a few of your neighbors and secure two yearly subscriptions to Pennsylvania Farmer at 50 cents each. Send us the names and addresses together with $1.00, the amount collected, and we will send you one of these knives by prepaid parcel post.

A City Reporter Asks Questions

He Would Solve the Problems of the World

DOCTOR LIPMAN:—I have seen your name in the newspapers, and am taking the liberty to ask you a few questions.

I was impressed by a book whose author proves that a city can live on the products of its own industry. As a student who is trying to solve the unemployment problem, I wish to know how many acres of land are necessary to support a city of about 200,000 inhabitants.

I used to be a reporter on a morning newspaper and it looks to me that the establishment of a daily newspaper—or still better many newspapers in many foreign languages—will in itself pay millions of dollars to keep and to help grow the proposed new city. Of course, it would be advisable to have it close to a large center like New York, Chicago or Philadelphia where there is a big field of readers—of masses unemployed. (This, in my plan, will constitute the majority of the inhabitants). I evolved a plan how to do it, but do not know how many acres it would be necessary so as to have food for the city. The idea is to have this particular city very little dependent on outside food, except varieties or vegetables that do not grow in the particular neighborhood. I hope you'll be so kind to explain things to me, as I intend to organize a society composed primarily of unemployed, to study the problem, and you know of any books on the subject, please advise.—G. M., New York City.

The land requirements for the support of a population of 200,000 city people will vary with the character of the land that might be available, the climatic conditions, the dietary standards of the inhabitants of the hypothetical city, and presumably also the type of occupations in which they are engaged.

Must Consider Many Things

The problem may be discussed in a more definite way if we take as a basis conditions as they now exist in the United States. There are now in this country about 360,000,000 acres of crop land. This represents 3 or 4 acres of crop land per inhabitant. On this land there is being produced food for human beings, domestic animals as well as fibre crops like cotton and flax.

We are producing a considerable surplus of cotton and some surplus of wheat, rye, oats and corn. From year to year there may also be considerable surpluses of vegetables and fruits. On the other hand, we are importing large quantities of such fibres as hemp and jute, large amounts of rubber and likewise coffee, tea, spices and sugar. We are purchasing nearly 90 per cent of the total raw sugar produced in Cuba representing a total of something like 4,000,000 tons.

For the sake of argument, it may be assumed that the land utilized for the production of our surplus crops will be balanced by the land utilized for the production of our agricultural imports, particularly sugar, rubber, tea and coffee. Something should be said also about our consumption of forest products. Trees are essentially a crop even tho we do not regard them strictly as a farm crop. Nevertheless, a large part of our land area is utilized for the growing of forest trees.

Takes Five Acres Per Person

In view of the above, it may be difficult to give a direct answer to the question that would be accurate under all circumstances. It might be entirely safe to assume that 5 acres per person would be required for providing the necessary food, clothing and shelter. This will give us 1,000,000 acres of land for 200,000 inhabitants.

You will find information on the problem in which you are interested in Beuchel's "Agricultural Resources," published by John Wiley & Sons, Inc.; East's "Mankind at the Crossroads," Pearl's "The Nation's Food," Prothero's "English Farming Past and Present," and "The Land and the Nation" constituting Report of the Liberal Land Committee.—J. G. Lipman.

What Is Actual Potash?

Will you give me information about potash in fertilizers? What is the difference between actual potash and potash soluble in water as marked on some fertilizer bags? Which is the better?—E. B., Monroe County, Pa.

Potash is a constituent widely distributed in nature. It is found in rocks, soils, surface waters, the ocean and in vegetation of all kinds. It is present in rocks and soils in an insoluble form. In the chemical changes taking place in the soil, the insoluble potash becomes available slowly. For this reason, it is often necessary to supplement the natural potash supply of the soil by means of material containing potash in readily available forms.

Laws Specify Requirements

The potash found in commercial fertilizers is obtained from salt deposits in Germany, France and the United States. Usually our commercial fertilizers contain potash in the form of muriate or sulphate. The muriate and sulphate of potash are sold on the basis of 50 per cent actual potash. This means that 100 pounds of muriate or sulphate of potash as offered by fertilizer dealers and manufacturers will contain 50 pounds of actual potash.

Other products, like kainite or manure salts, will contain on the average 12 to 14 or 20 to 24 per cent, respectively, of actual potash. Existing fertilizer laws specify that potash in commercial fertilizers must be present in water soluble form. Otherwise, the fertilizer manufacturer receives no credit for the potash which he puts in his product.

There is a difference between actual potash and potash soluble in water. The first stands for potash whether soluble or insoluble; the second relates to materials containing potash in water soluble form.—J. G. Lipman.

Qualify for Clean-up Fee

THE first man in Lawrence County to qualify for the extra labor fee in Pennsylvania's corn borer clean-up was John Elder, Jr., of New Castle. Before the final inspection he cleaned up 28 acres of corn field. James S. McDonald, of Hooktown, Beaver County, and Walter D. Ward of Warren County, each drew pay vouchers on the federal government for cleaning up their eight acres of corn ground.

The first vouchers sent to Washington from five other counties were for W. A. Warnshuis, Edinboro, Erie County, 76 acres; Free Lynn, Espyville, Crawford County, 18 acres; Cassius A. Cunon, Cochranton, Mercer County, 12 acres; and Fred M. Schruers, Cranberry, Venango County, 13 acres.

Central Guernsey Breeders' Picnic

THE Central Pennsylvania Guernsey Breeders' Association held its annual business meeting and picnic at Wolverton Farms at New Alexandria on June 29th. A beautiful day and a large attendance made the occasion a real success. Mr. Charles M. Schwab is the president of the association, which includes Guernsey breeders in Cambria, Somerset, Bedford, Blair, Huntingdon, Fulton, Mifflin and Centre Counties.

The association is doing a fine piece of work in herd improvement and has two men, Mr. David Taylor, and Mr. Frank Lamney, to test the herds of all members as is done in cow testing association work. In this way the members of the organization have been able to reduce the cost of producing milk and butterfat and are weeding out the inferior animals.

The breeders in the association are also in position to give definite information to prospective purchasers of Guernseys concerning the production of the cows in the association and the dams of young stock that might be for sale.

The officers for the ensuing year are: Charles M. Schwab, Loretta, president; J. W. Mayes, Howard, vice president; H. C. McWilliams, Ebensburg, secretary.—A. A. B.

He Won on Her Looks

L. L. Hug, of Potter County, Pa., and the animal whose polished horns and hoofs and fine general appearance won for him the title of Grand Champion Dairy Cattle Fitter at the recent Penn State Dairy Exposition, staged by State College dairy students.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science Pennsylvania State College and Veterinarian in charge of College Livestock.

A force that this department is free to our subscribers. Farm communications should state history and symptoms of the case in full; also the name and address of writer (unless may will be published). We invite readers to make use of this service. Clippings from the column when properly preserved and classified make one of the most valuable medical compendiums a farmer-stockman can obtain.

SWELLINGS ON UDDER.—I have a cow which has swollen glands in her back teats. She will be fresh in about a month. What can I do for this?—A. C. Flanders, N. J. It may be a case of abscess of the udder, altho the condition may be a formation of new tissue. It is possible that these bunches may have to be opened or removed surgically. Until it is determined what the condition is little can be done. You might try massage of the part, using carbolized vaseline as an ointment.

BLOODY MILK.—Can you prescribe a treatment for a cow that gives bloody milk?—E. C., Wattsburg, Pa. It is not always possible to clear up these cases. There may be a permanent injury to the glandular structure which precludes much improvement. Give a full dose (1 to 1½ pounds) of Epsom salts and for a seven-day period a tablespoonful of saltpetre on the grain ration once a day. For a few days milk out the quarters five or six times a day.

ARE TWINS FERTILE?—Have a well-bred Jersey heifer, should have had her second calf June 12, instead gave birth to twins, a bull and heifer. Would it be a paying proposition to raise these calves or should they be vealed?—A. M. S., Jackson Center, Pa. The percentage of fertile heifers is small when the other twin is a bull. There would be no harm in keeping the heifer until breeding age if you can afford to do so, altho it is likely that she will be sterile. The bull would very likely be fertile.

CALVES NOT DOING WELL—COLT IS THIN.—I have three calves four months old. They have big abdomens. I would like to know what to do for them. I also have a young colt of four years. What can I do to fatten him?—G. R., Waterford, Pa. Most cows that develop a large abdomen show no great change until the body increases in proportion. A laxative diet should be maintained and grass should supply the main factor in securing results. Allow access to a mixture of four parts steamed bone meal, and one part common salt. They should be exposed to direct sunlight, possible now because of better weather and available pasture. The teeth of the colt may be causing some difficulty as they are changing at this age. Increase the grain ration except on days when idle. Give the colt the advantage on the pull until he shows some improvement in condition.

Motorist.—How do you know if I was exceeding the speed limit when you haven't a watch or anything?

Ozark Constable.—Well, ye seen that yeller dog a-chasin' ye, didn't ye? When that dog can't keep up with a feller, the feller's a-goin' more'n thutty miles an hour.

Co-op Business Grows

THERE was an increase of 14.0 per cent in the value of products handled by cooperative market milk organizations in Pennsylvania in 1926 as compared with 1925. While this increase was due to an increased volume of business, the 8.1 per cent decrease in sales of fruit and vegetable associations was the result of lower prices in 1926.

Wool which was pooled showed a decrease of 6.7 per cent and cooperative egg sales increased 6.8 per cent during this season.

Membership in all cooperative organizations operating in Pennsylvania increased 6.0 per cent.

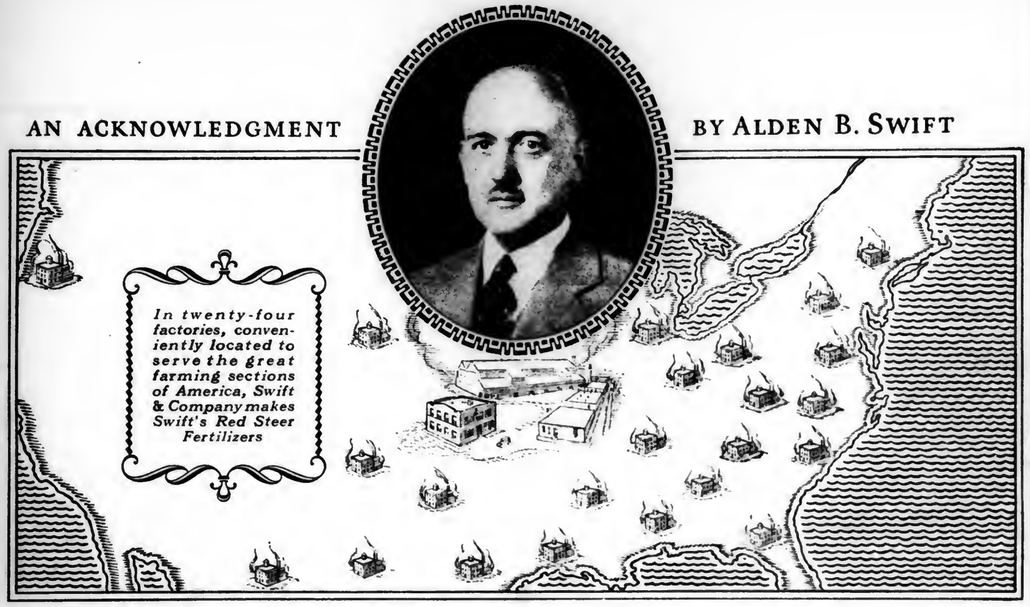
AN ACKNOWLEDGMENT BY ALDEN B. SWIFT



In twenty-four factories, conveniently located to serve the great farming sections of America, Swift & Company makes Swift's Red Steer Fertilizers

To those who have helped us bring another *"best product"* into national use

I think those who have helped us perfect Swift's Red Steer Fertilizers can share with us two satisfactions:

First, in achieving what we set out to do—make the best fertilizers that could be made. We are as proud to have the Swift name on Swift's Red Steer Fertilizers as on Premium Ham, Premium Bacon and the other "best products of their kind."

Second, in giving farmers the means of making more profit—with larger yields *per acre*, with crops of better *quality*. When farmers prosper Swift & Company prospers.

The success of Swift's Red Steer Fertilizers has been possible because of the fine co-operation of many interested agencies with our own. For Swift & Company I make grateful acknowledgment to them all.

* * *

To Swift's own staff of fertilizer experts who have worked out exact formulas, who search the world for the best plant foods, who have equipped twenty-four Swift factories to produce the best fertilizers that can be made.

To the State Agricultural Colleges, the State Experiment Stations and the United States Department of Agriculture, whose scientific tests and wise counsel have aided us.

To thousands of successful farmers whose sound, practical experience has been invaluable.

To the Swift Field Representatives who serve the trade and whose daily contact is with the great farming sections.

To the Authorized Swift Agents in the villages, towns and cities, who sell Swift's Red Steer Fertilizers and who are making farming communities more productive and prosperous.

* * *

With all of these Swift & Company works toward a common objective—to encourage the use of the right kind and quality of fertilizers, to make land more productive with less labor, to make farming in America permanently more profitable.

Allen B. Swift

Vice President, Swift & Company

Advertising pays you!

ADVERTISING brings to millions, at reasonable prices, comforts and conveniences which without advertising would be luxuries that only a few could enjoy

America is an advertising nation. That is one reason why the man with moderate means here enjoys more comforts than most wealthy men abroad.

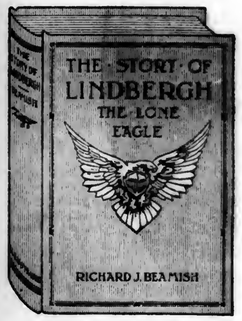
Because thousands on thousands of people ask for a certain article by the same name, which they have read in the same advertisements, it is possible for the advertiser to sell this item at a minimum of effort.

It is therefore possible to manufacture and to distribute this product at a saving which **you share with the advertiser.**

When you figure the number of these items in your daily life built by advertising, you can appreciate that **advertising does pay you!**

Advertisements enable you to buy better things at less cost

From the Plow to the Plane



Another farm bred boy gains eminence

You will want to read the story of the "Flying Fool," who was far wiser than his critics knew. His non-stop flight from New York to Paris has enrolled his name among the immortals.

The story of Lindbergh, together with the development of aviation, epoch-making flights, and historic efforts to bridge the distance between the Old and New Worlds, is more thrilling than fiction and every word true.

The complete book measures 6 x 8¼ inches and comprises approximately 300 pages, including 32 full pages of pictures. It is bound in rich cloth, with gold and ink stamping on front cover and back. It is written by Richard J. Beamish, whose "History of the World War" had the largest sale, within a given time, of any book ever published.

How to Secure One Free

Send us three yearly subscriptions to Pennsylvania Farmer at 50 cents each—your own renewal will count as one—and we will forward the book to your address postage prepaid. The book will not be given with your own subscription alone. Two other subscriptions must accompany your order.

Roadside Dairy Restaurant Markets Guernsey Products

Editors' Note:—Early this summer a group of dairy students from the Pennsylvania State College visited several of the widely known dairy establishments in southeastern Pennsylvania and New Jersey. Our Dairy Editor, Professor Borland, was one of the leaders of this group. In the following article, continued from last week, he tells of some of the interesting things seen on these famous farms.

THERE was an outstanding Jersey herd on Many Springs Farm, New Centerville, Pa., of which W. M. Anderson is owner and J. M. Anderson, manager. Dreaming Sultan, the senior herd sire, was purchased on the Island of Jersey because of the wonderfully fine type of his daughters and was imported by Mr. Anderson. The many type daughters of this bull at Many Springs Farm amply justified Mr. Anderson's selection of the sire.

The milk is sold in bulk on a quality basis. If the bacterial count is under 20,000 per cubic centimeter the price is 12c per quart, if under 10,000 per c.c. the price is 13c per quart and if under 5000 per c.c. the price is 14c per quart.

Breeding Shown by Records

Brookmead Farm, Devon, Frank Graham Thomson, owner, and Charles R. Meyer, manager, showed constructive breeding work in Guernseys, the results of combining the blood lines of Langwater Royal Master with Brookmead Stars and Stripes. The present senior herd sire, Master Fred, by Langwater Warrior and out of Langwater Mary with a yearly record of 669 pounds of butterfat as a 13-year-old and she in turn out of Langwater Hope with 1003 pounds of butterfat, was showing in excellent form for a ten-year-old bull.

The method of disposing of the milk was of especial interest. Brookmead Farm has built a beautiful roadside dairy restaurant and milk plant on the Lincoln Highway near Ardmore. The milk plant not only handles the milk from Brookmead Farms but from nine other Guernsey farms in the community.

Considerable amounts of Guernsey milk, Guernsey ice cream, chocolate milk and other dairy products are consumed in the restaurant, and a retail milk route in Ardmore, Bryn Mawr and other main line towns take the rest of the milk. The boys greatly enjoyed the dairy lunch provided by Brookmead Farm at this attractive roadside market.

Penshurst Farm, Narberth, Percival Roberts, Jr., owner, and Dr. E. S. Deubler, manager, keeps a herd of Ayrshires that is noted thruout the United States for type and production. The herd includes 235 head of which 110 are cows in milk. The herd has been federally accredited as free from tuberculosis for nine years and accredited as free from contagious abortion for three years.

In the Ayrshire herd test last year 90 milking cows averaged approximately 8000 pounds of milk testing 4.1 per cent butterfat. Thirty-six of the cows were two-year-olds with their first calf.

Conquered Contagious Abortion

Doctor Deubler fought contagious abortion for 15 years and finally conquered it by having the herd tested regularly by the agglutination test and then isolating all reactors.

THAT milking machines do not necessarily mean a higher bacterial count for milk is shown by many high grade milk producers. An example of this is cited by Professor A. A. Borland in the accompanying article.

Penshurst Farm at Narberth, Montgomery County, has had an average count of under 1000 per c.c. for the past year. By boiling the parts of the four single-unit milkers each day and by taking special care before milking, this dairy has been very successful with the use of milking machines.

There is one point that should be noted with the agglutination test. That is, infected cows may not react when pregnant. It is, therefore, not safe to add pregnant cows to a clean herd.

The milking machine is used. Three men milk 60 cows in a hour. One man operates four single units while the other two strip the cows and weigh the milk. The bacterial counts have averaged under 1000 per c.c. for the past year, hence, there is no question that low bacterial counts may be secured thru the use of the milking machine if it is properly handled. The machine is taken apart and the parts boiled every day.

Two strips of milk are taken from each teat before attaching the milking machine. This milk is drawn into a strip cup with a fine mesh wire strainer. In this way any cow

(Continued on page 16)

From the Week's News

No Hoe Handles Broken On Our Farm

Modern Machinery Does the Work, Saves Time and Cuts the Labor Bills

By HUGH FERGUS, Butler County, Pa.

I HAWE always figured that man labor is the most costly labor performed on the farm. Next to it comes horse labor. One of the things I remember most vividly in the class in Farm Management while attending State College fifteen years ago was the fact that it cost then $100 a year to feed a horse. Now this has risen to $150. My constant aim has been to keep the amount of man labor to the minimum and to keep down the number of horses and work them every possible day of the year.

With these two things in mind we cropped about 75 acres this past year divided into 33 acres of corn, 24 acres of oats and 18 acres of hay. This is done with three horses, one of which spends half of each day on the milk wagon, and a tractor. Two men in addition to myself do the farming and the milking and feeding of an average of 25 cows with the usual accompanying young stock. Even with the wet harvest season last fall we did this between 5:30 A. M. and 6:15 P. M. Not over half a dozen times were we later than this quitting hour. Oh, yes, we take an hour off at noon.

Twice Our Tractor Did Its Bit

Last year's crops were 189,715 pounds of milk, 1600 bushels of ear corn, two 18'x36' silos filled from 17 acres of corn, 1440 bushels of oats (by threshers measure) and 50 tons of hay. In addition we cemented the under part of the barn, put in new stanchions, did some tiling and lime ing and cleared two acres of rough pasture to make it ready for the plow. Besides this additional work we hauled out manure and did other jobs that come on every farm.

Every year we try to cut down on cost of production thru the use of machinery and at the same time cut down the mortgage.

Our tractor was one of the biggest labor savers. We bought one of the popular makes several years ago and by having it overhauled at a garage every year I think it is good for several more years. It has paid big interest on itself several times over. Every year we are enabled to get our oats in one or two weeks earlier. Everyone knows that year in and year out the earliest oats are the heaviest yielders. With the aid of the tractor we get our corn ground ready earlier. If it were not for its help I doubt if the ground would be prepared as well.

I especially remember of two times it did its "bit." One was the wet spring three years ago. With the help of the tractor we were able to get the oats planted on time and all the corn planted in time to mature a crop. Some of the ground was plowed and planted the same day. The other time the tractor was a big aid was during the wet fall just passed. We have our own 13-inch silage cutter and blower. By cutting the dryer parts of the fields on the wet days and, fortunately, having planted three varieties of corn with three stages of maturity, we got our silage all canned in excellent shape.

Another Surplus On the Farm

On our farm the hoe is practically at rest most of the year. Ground for corn is well prepared before planting. Planting is then done with a check-row planter so that the field can be worked both ways. When the corn is coming thru the ground the field is harrowed both ways with a smoothing harrow. This is followed by the cultivator twice each way. At harvest time the corn is cut with a binder and set up with the use of a "horse." Last fall we cut and set up 16 acres in three days (about 6½ working hours per day in the field). This makes easy handling when it is taken to the barn to husk. The coming of the corn borer has changed our corn harvesting methods, but we have some plans that should save labor on part of the grain crop.

At silo filling time three men constitute the crew. We used to have a complete distributor pipe in the silo with a man in there to keep moving it about, but for the past two years we have used only the "bucket" at the upper end fastened to the blower pipe. In filling the last few feet a man gets in to tramp and level the silage. With this system the silage keeps as well as in the "ancient" days when the custom machine did our filling and the four best men were put in the silo to tramp.

Oats ground is usually plowed in the fall and harrowed with the tractor outfit in the spring while the team is running the drill. We use the tractor to draw the binder. This is one time the horses get a vacation.

Milking Machine Replaces Man

Last summer we used a hay loader for the first time. Needless to say it is not for sale. The hay was heavy enough that the loader took it out of the six-foot swath and elevated it fast enough to keep two men busy loading. We have not yet had to use the side delivery rake.

In handling our cows we tie them up only to milk them. In summer they are on pasture and the remainder of the time they run loose in a 36'x94' shed where hay, silage and straw are easily accessible for feeding and bedding. The only manure that is handled more than once by man power is the manure from the three horses and what little is dropped while the cows are tied up at milking time.

I do not have a milking machine but plan on getting one. I expect this to cut down the work enough that I can dispense with the help of one man during the winter months. The custom threshing machine has been very satisfactory for our oats crop.

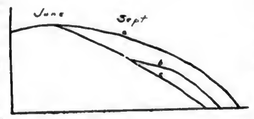
The Cows Cannot Eat Enough Grass

But Summer Grain Will Keep Them In Working Trim During Hot Weather

By R. H. OLMSTEAD
Dairy Extension Specialist, Penna. State College

THIS time of year brings to many dairymen the question whether it pays to feed grain while the cows are on pasture. It is true that grass is a great stimulant for the production of milk. It must be kept in mind, however, that grass contains a high percentage of water which makes it impossible for a good producing cow to eat sufficient to keep her up in milk production and in good flesh, both of which are of vast importance during the pasture season.

The accompanying chart shows the comparative production of cows that are fed grain and those that are not fed grain during the summer months. As soon as the short pasture season appears during July and August cows that do not receive grain drop off very rapidly in production and enter the winter milking period at a much lower level than they should. Line "c" in the chart represents the production of these cows for the year.



Line "a" on the chart shows about what may be expected of cows that are fed some grain all summer. When the short pasture season comes on they stay up fairly well in production and go into the fall and winter at a much higher level of production. A cow may not pay very big dividends immediately on the grain fed during early summer but this will be made up many times over later in the season.

The dairyman who starts feeding grain about the first of September can hold the production of his cows for a while. This is better than not feeding grain until later, yet by that time they have dropped off considerably in production and it is impossible to bring them back. The production of the cows that receive their first summer grain in September is represented by line "b".

Sluce grass is relatively high in protein a high protein grain mixture is not needed on pasture. A 16 per cent protein mixture is very suitable for the early pasture season and about a 20 per cent protein mixture for late summer.

Cows giving less than fifteen or twenty pounds of milk daily need very little or no grain. Cows giving more than this amount should be fed about one pound of grain to each five to seven pounds of milk daily depending somewhat on the individuality of the animal and the test of the milk.

In addition to milk production cows that do not receive grain on pasture go down in flesh very rapidly if they are milking heavily. It is more economical to keep a cow up in flesh than to let her get thin and then try to build her up again in the fall of the year.

Vol. 96, No. 4 Phila., Pa., July 23, 1927 Whole No. 1575

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

When you can do nothing else for a person, one thing you can always do for him: you can listen.
—Ellen Emerson.

Unordered Merchandise

SO GENERAL has become the nuisance of receiving packages of unordered merchandise and the "follow-up" dunning letters that Representative Watson, of Bucks County, will introduce a bill into Congress at the next session to make the mailing of unordered merchandise unlawful. Postmasters shall decline to receive and forward parcels if those who offer them cannot prove that the goods have been ordered. The bill also prohibits the postal authorities from investigating losses of goods, or money for such goods, when lost in the mails.

Mr. Watson introduced such a bill at the last session. A hearing was held, but the public was not well represented, no doubt due to lack of knowledge. The bill was opposed by several religious organizations and by one large manufacturer. Everyone, especially those who have been annoyed by receiving such packages, should write Hon. Henry Watson, House of Representatives, Washington, D. C., at or before the opening of Congress in December, urging the passage of such a bill.

Leader Loyalty Needed

IF WE were asked what is the most crying need in the work of agricultural betterment we have an answer. We have not been asked in a serious way but we shall give it anyway; it is, an honest loyalty on the part of all actual, near, or would-be leaders of agriculture in the country. This would include some public officials, organization officials, institutions and many representatives of every kindred, tongue and tribe. Saying this implies that all these are not loyal to farming, and we mean just that. There is too much carrying water on both shoulders, keeping one eye on something else, striving for personal ends, and in some instances the actual representing of some other interest while nominally representing farmers. Anyone thus leading a dual role in other business would soon be ousted, but farmers have been putting up with this kind of leadership all their lives. But they have it in their power to change it if they will.

Produce Terminal Opens

THE new produce terminal built in southeastern Philadelphia was opened for business on July 5th. The unloadings were the heaviest on record—235 cars made up of 150 cars of vegetables, 85 cars of fruits and 15 miscellaneous cars. In addition, there were 297 cars placed in the team track yard for unloading, making a total of 532 cars offered on the opening day.

Part of the office building is devoted to the Terminal Auction Company in which certain kinds of produce will be sold at auction. On the opening day 40 cars were sold. These were made up of plums, oranges, box apples, grapes, cantaloupes, onions, tomatoes, peaches and watermelons.

Will this wonderfully efficient terminal equipment help or hurt nearby producers?

Intensive Cultivation

THE political field is being assiduously cultivated in preparation for the vote harvest of 1928. The advance copies of public addresses as well as newspaper leaders and editorials all show the activity that is going on in the political field. Since most of it is directed to farmers and is about the agricultural situation, it is apparent that that subject will be uppermost in the coming campaign. Every other question, including prohibition, is forgotten by those who are trying to make hay this summer. True, in a few chronically wet sections the liquor question is kept at the front, but everyone knows it will be a minor matter next year. The general public is pretty well aware that most of the anti-prohibition propaganda is carried on by those who hope to reap a share of the profits from the potential five billion dollar business which would result from a repeal of the law.

Outlook Is for Short Crops

THE crop report for July is not promising. While it is too egrly to forecast the production of late sown crops, such as buckwheat, etc., a general survey shows that crops in general are below the average. For corn, the estimates are for the shortest crop in twenty-six years. Fruits, also, promise to be a short crop, and there has been a material reduction in the acreage of tobacco. In addition to the poor condition of many crops, the total acreage is about 7,000,000 acres less than last year. A good portion of the reduction of acreage is due to the destruction caused by the Mississippi flood.

The unfavorable crop reports, however, do not discourage in the least the political writers. According to them the farmers are reveling in the luxury of bumper crops, and rolling in the consequent prosperity. All that such a writer needs to turn out a rosy picture is a full inkpot and an imagination unhampered by facts.

Game Commission Rulings

THE Board of Game Commissioners for Pennsylvania at its July meeting decided on the open seasons as follows: For pheasants, quail and woodcock, November 1 to 15, inclusive; rabbits, month of November only; bears, November 16 to December 15, inclusive. A force of deputy protectors will be appointed to reduce the number of deer in sections where depredations occur to a point where they will not be a nuisance. The men will be advised to shoot as far as possible the old, barren does, the carcasses to be disposed of to charitable institutions.

While this is a move in the right direction, we do not believe it will result in materially lessening the damage which is being done to farmers and fruit growers in some sections. It will require more drastic measures than this seems to be. Can the state afford to be less amenable to damage claims and corrective laws than is demanded of the private citizen?

Daylight Saving Towns

ACCORDING to replies received by the Pennsylvania Chamber of Commerce in answer to a questionnaire it is found that there are forty-four towns and cities in Pennsylvania using the daylight saving plan. Noting the location of these towns, we find that all of them are in the two ends of the state within about forty miles of the state lines. This shows very plainly the domination of the two big cities,—Philadelphia and Pittsburgh. Those living in a district far removed from big cities cannot understand how difficult it is to maintain standards in anything differing from the standards and practices of the large numbers inhabiting the centers of population.

Editorial Sidelights

AS EVERYONE knows, the horse is becoming an exceedingly rare animal in some places. Yesterday we visited a 400-acre farm which doesn't use a single horse or mule. There are many other smaller farms in the East also without horses. We have a cover picture this week that will remind the horseless farmers that Old Dobbin is still rendering faithful service,—and that there is an oncoming generation of Dobbins to serve the farmers of the future who prefer horsefleah to steel.

In some countries dogs are beasts of burden. Here we keep them mainly as pets and companions. Will the day come when we keep horses for pets, or solely for the luxury of horseback riding? Mr. Fergus would consider a horse an expensive luxury (Page 3), but it does no harm to look forward to the time when every farm family can afford one or more saddle horses.

YESTERDAY afternoon when we wrote the above paragraph our thermometer registered 102 degrees. This morning it is slightly cooler. Every hot morning on our way to the office we see a very old man up at the next corner, sitting on the steps and making himself as comfortable as possible. That is his way of earning a living.

The old man was there this morning. It is his duty to watch four pails of water that stand on the curb near the corner fire plug. Teamsters of dray wagons know that corner is one of the few places in the city where they can water their horses on the street. The old man with his fire-plug wrench sees that the pails are kept full. On each pail are these letters: S. P. C. A. (Society for the Prevention of Cruelty to Animals).

THIS IS THE CRITICAL SEASON for dairymen, according to Mr. Olmstead (Page 3). The feeding of a little grain may not make any great increase in milk flow now, but its effects in keeping up production will be very pronounced later in the summer and fall.

Mr. Olmstead failed to mention one important argument in favor of summer grain feeding. If the pasture is a long way from the barn, and if the cows are contrary by nature, a little grain saves an immense amount of exasperation for the boy who must "go after the cows." Or aren't cows as stubborn now as they were a few years ago? Maybe modern barns, milking machines, etc., have changed their dispositions.

IF YOU are planning a vacation trip to Canada, don't go to Montreal just now. That city, says the United States Health Service, is suffering from an epidemic of typhoid fever worse than any known in a large city in the present century. There have been nearly 500 deaths since the first of March. We pass on this warning for the benefit of those who are going to Canada for the Poultry Congress at Ottawa (Page 16).

WILL AIR RELIEF BILL

R. F. D. Revenues Show Deficit—Discover Outbreak of Foot-and-Mouth Disease—Would Help South.

Washington, D. C.

AN EFFORT will be made to revive the McNary-Haugen bill in the next Congress. This is indicated by the attitude of a group of Middle West farm leaders and politicians. The plan to increase the credit facilities of the farmers and their cooperative marketing associations will have strong support. And the promoters of diversified farming by government assistance has a powerful appeal to many members of Congress.

Diversification is the pet farm relief panacea of the Chambers of Commerce, the banker-farmers, and the city-bred farm reliefer who has acquired a superficial understanding of the farm problem.

It is probable that Congress would readily appropriate many millions of dollars to aid the farmers to diversify, and thereby many members would honestly think that they were doing a great service to the folks on the farms.

Asks New Classification of R. F. D.

Rural free delivery should be classed with such public welfare projects as the Department of Agriculture and other departments of government, according to Congressman Kelly. It was fully understood by Congress when it was established 30 years ago that it would never pay for itself, but that its benefits would be of value to all the people. Last year the appropriations were $105,000,000 for rural free delivery. All the revenues from mail originating and delivered on all rural routes amounted to less than $30,000,000, leaving a deficit of $75,000,000. "No one desires to see any of these services abolished or even curtailed," he says. "All of them serve the common good of America."

Grange Continues to Grow

Notwithstanding its sixty years of active existence the Grange continues to grow at a steady pace. During the three months ending June 30, 42 new subordinate Granges and 36 juvenile Granges were organized, and 17 subordinate Granges and two juvenile Granges were reorganized. Ohio leads with 20 new subordinate and 12 new juvenile Granges organized, and 11 subordinate and two juvenile Granges reorganized. Eight juvenile Granges were organized in Pennsylvania during the three months.

Disease Breaks Out in England

Scarcely had the announcement been made that Great Britain had been declared free from foot-and-mouth disease by a declaration signed by Assistant Secretary of Agriculture Dunlap on July 7, than the news was received of a new outbreak in England.

American buyers are now in England purchasing stock for shipment to this country, and in a few cases shipment has already been made but it is not believed by Department of Agriculture specialists that there is any danger of the disease getting a foothold in this country from these few head of stock for which arrangements have been completed for shipment.

Seek Tuberculin Test Information

A survey is to be made by the state and local agents of the Bureau of Animal Industry and the state and local health officials, designed to secure complete information by September as to the number of cities in the United States now requiring the tuberculin test as a condition of supplying milk, also the percentage of public milk supply now coming from tuberculin tested and non-tuberculin tested cattle.

Will Reclaim South

Definite plans are being completed by the Bureau of Reclamation for an extensive land reclamation movement in the South. It is proposed to establish reclamation colonies, each of which will include at least 150 farms, in seven southern states.

The reclamation work will consist of land clearing and drainage. A portion of the land on each farm will be plowed, limed when necessary, and planted to crops before the arrival of the settlers.

It is stated in the report of the Bureau of Reclamation to the Department of the Interior that the development aims to create a program that a settler with small capital can make an adequate income for the support of his family the first year. The extension of his cultivated area could then be carried on by his individual efforts.—E. E. R.

THE BEETLE APPEARS

Observe Accredited Chick Hatcheries—Show Commission Assumes Duties—Inspect Water.

Harrisburg, Pa.

APPEARANCE of Japanese beetles in sight of the State Capitol in Harrisburg gardens and on farms near the seat of government has afforded an opportunity for first hand observation of the methods of fighting the pest. The quarantine has been made strict in Harrisburg and vicinity because of its being a railroad center and meeting place of highways and a taste of modern methods has been given which attracts much attention. From all accounts the inspection service has been well organized over the territory added to the district under surveillance this year.

Notice Pennsylvania Chick Plan

According to word coming to the State Capitol official notice has been taken in other states of the method of accrediting chick hatcheries adopted in Pennsylvania. It is estimated the chicks supervised this year ran over three-quarters of a million. The amended regulations are in effect this month and vigorous inspection is proposed for the coming season.

Show Commission to Meet

The new State Farm Show Commission is to be asked to expedite its work of making plans for the next show, which will be the first under complete state control. The men named to the commission by the Governor have all accepted appointment. A survey of conditions in Harrisburg will be made next month.

Watching Water Sources

State Health officers are making inspections of water used at all places along highways where it is served or used, it being the effort to prevent pollution, and as a result many springs and water courses are being sampled by state officers.—T.C.

MARKET RE-OPENS

Association Cuts Down Thieving—Erect New Beetle Station—Fund Will Be Returned to Treasury.

Trenton, N. J

THE Burlington Farmers' Market opened for the season on July 6 with C. C. Davenport, of Mount Holly, who has served as Market Director for the past two years, again in charge. Thruout the remainder of the summer the market will be open from 6:00 to 9:00 o'clock every Monday, Wednesday and Friday morning. Farmers rent stalls in which to display their produce at a cost of $4 per month. Daily market reports are issued for the State Bureau of Markets and in turn the Market Director receives prices on other markets for local patrons. Rules and regulations affecting the market are similar to those adopted last year by the Burlington Common Council.

Protective Association Meets

The executive committee of the South Jersey Farmers' Protective Association at its regular June meeting outlined a membership campaign by which it is hoped to bring in many new farmers during the summer. The work of the protective association as well as cooperating agencies, particularly the New Jersey Federation of County Boards of Agriculture, has cut down chicken stealing considerably in the southern part of the state. Recent reports of truck and fruit growers against petty thieving in orchard and field, has caused considerable trouble this season. Wholesale chicken stealing as such seems to have been pretty well attacked, practically all cases of chicken thieving reported recently being of a sporadic and petty nature. Members of the association post their farms with signs from a large detective agency, which announces a reward for conviction of stealing from the members' property and offers other protective features.

Beetle Station Moves

The Japanese beetle experiment station conducted by the government for some years at Riverton is now being moved to Moorestown which is at present the center of the beetle infestation. New buildings will be erected on the new site and the station will be conducted as a permanent fixture, according to L. B. Smith, government entomologist in charge. The Stokes seed farm on Moorestown Pike between Moorestown and Lenola is the site selected for the new station. Some 60 men have been employed in the Riverton work. The program for this coming year aside from further studies of the Japanese beetle, calls for the working out of a substitute for lead arsenate spray.

More Dairymen Apply

The county agent's office in Gloucester County has received 285 applications for the bovine tuberculosis test. This is the largest number from any county in the state to apply within such a short space of time. Some 30 farms in the Williamstown section are also making application and when the herds of the new applicants have been tested there will be over 400 tuberculosis free herds in Gloucester County. On July 30 about $29,000 of the $100,000 appropriation for indemnities for tubercular reacting cattle will be turned back into the treasury. It took a lot of effort on the part of state agricultural leaders to get the appropriation and some disappointment is expressed at Trenton in that farmers did not apply more rapidly. —W. H. B.

THEY BEAUTIFY HOMES

Take Tour to Study Landscaping and Home Furnishings—Surprising Market Features Are Noted.

Ithaca, N. Y.

IMPROVING the home garden and grounds has interested farm women in fifteen localities in Madison County to the extent of holding lectures and tours to attractive gardens. Fall meetings have considered shrubs and trees and spring meetings discuss annuals. Mrs. Henry Burden, of Madison County, an enthusiastic gardener, has done much to stimulate a love of the beautiful among her neighbors and she it is whose lantern slides and talks have popularized the subject. In Rensselaer County the women are to build and furnish a house as the result of their study of the housing project. Fifteen automobiles visited seven homes in Onondaga County to inspect the furnishings as the result of the same study.

Farmers Study Marketing

More than 300 farmers have recently visited New York City markets for a three- or four-day study of methods. County agents and railroad officials conducted the tours, which will be repeated this fall and winter in the interest of better marketing. The summarized statement of their observations is that New York is willing to pay for quality goods and that the sooner farmers learn this and act upon it the greater will be the latter's profits. One surprising lesson was that there are dozens of competing foods in almost all varieties.—M. G. F.

Eastern States Farmers' Exchange

Greater Than Ever

Farmers used 69,018 tons of Eastern States feeds in the first 6 months of 1927; 10,662 more tons than in the same period in 1926, and 19,989 more tons than in the same period in 1925.

The carload orders of feed and grain increased for the same 6 months for 1927—378 carloads over 1926 and 851 over 1925.

These are substantial increases. They show forcefully that eastern farmers find the Eastern States Farmers' Exchange feed service valuable. In no other way can the 1927 increase—the 9th successive increase—be explained.

Eastern States feed and grain is distributed on a cash basis. Farmers know that the feeder who can regularly pay cash for his feed and grain requirements is a better-than-average farmer. This type of farmer knows how to invest his cash profitably and that is the chief reason why he is able to procure his current feed and grain for cash. He may take a trial order through a cooperative once but he standardizes on cooperative feed only if it produces profits for him. The Eastern States Farmers' Exchange feed service must be producing results for eastern farmers when it can show so remarkable a growth in tonnage over a period of 9 years.

Eastern States feeds have made their greatest gains among the feeders who keep track of their costs and of their profits. Where records are kept Eastern States Open Formula Feeds prove their worth.

For information on the Eastern States feed service for poultry and livestock, a service which should not be confused with ear door service offered by private manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange
A non-stock, non-profit organization, owned and controlled by the farmers it serves.
SPRINGFIELD, MASSACHUSETTS

EVERY farm woman takes great pride in her jellies, jams, preserves and the vegetables and other things that she so carefully puts up for next winter's use.

It is real economy to save these delicious things for days ahead when fresh things are not available. It is much easier nowadays, with the new water bath and pressure cookers. The wonderful kettles, steamers, strainers, food choppers, scales, fruit presses, etc., made from aluminum and enameled ware, or skillfully ground iron ware save lots of time and trouble Go to your "Farm Service" Hardware Store and ask to see the newest things for putting up fruits and vegetables. They are always glad to show them and you will be surprised how little money it will take to give you everything you will need to work with.

Ask also to see the new kerosene and gasoline stoves. They make canning and preserving so easy, saving the bothersome labor of carrying in coal or wood. You will no longer have to suffer from the heat of a range fire. You ought to have one of these stoves anyway for they will be the greatest convenience that you ever had in your kitchen.

You will like to trade at a "Farm Service" Hardware Store, for their helpful service, fine goods and low prices will give you complete satisfaction.

Your "Farm Service" Hardware Men.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R.P.KESTER

SOMETIME ago I promised to print a picture of the new house at Neshaminy Gardens, since some readers suggested it. Well, here it is. The view shows the south and east sides of the house, altho it does not stand directly east and west. For this reason, the sun shines in every room in the house at some part of the day. The porch shown is on the southern side, and the Buck Road, (not shown) to Philadelphia runs past the east side.

The style is called Dutch Colonial, and the inside plan has been pronounced a model of convenience and appointment by those who have seen it. There is a kitchen, dining-room, and living room on the first floor, besides a stairway and entrance hall. Upstairs there are three bedrooms and bath, and provision for another room in third floor. Plenty of closet space is provided thruout the house. A good, high cellar extends under the whole house, the walls being built of stone, topped by three courses of cement blocks. It is covered by an asbestos shingle roof. It has water under pressure, electric light, telephone and a radio.

✦ ✦ ✦

WE ARE watching daily, almost hourly, for a possible infestation of aphis on our melon vines. Never have I known aphides to be so pestiferous as they are this season, altho we have as yet found few on anything except the potatoes and not many there. We realize, however, that a few may become millions almost over night. The aphis is a sap-sucking louse, usually green in color, which works on the underside of leaves. The only means of control is to get them as soon as they appear by spraying with nicotine sulphate or by dusting with nicotine dust. The material must reach the underside of the leaves before they begin to curl, and must be applied during a warm, sunshiny day. In our neighborhood, they have seriously injured many cherry trees, and some potato crops are in danger of being destroyed.

The Cheerful Plowman
The Old Church

THEY wish to tear down the old church on the hill, sell off the old lumber and settle a bill; apply it, they say, on the new building's debt, square up on a mortgage that has to be met! The shack is no good, they are telling around, a no good old ruin that's taking up ground; why leave it, they say, when its mission is done, why keep it to wither and warp in the sun?

Perhaps it's all right, it is business I know; its pulpit is empty, its pews, in a row, are falling to pieces, they never are used, its doors they are broken, its windows abused. It's business, oh yes, there is no doubt of that, the money it's worth should be put in the hat, BUT, business or not, 'twill be painful to me to see it torn down from its place by the tree.

'Tis the pioneer building a few of us reared in the earlier days, and its walls are endeared by memories sweet and by memories sad; I worked on its walls as a slip of a lad! From out of its portal they've carried away a hundred of friends of that earlier day, and in at its portal, with blushes and smiles, the countryside lassies and laddies for miles came there to be wedded for years and for years, the daughters and sons of the rough pioneers! From out of its choir loft, in richness and love, sweet voices have pealed that are now heard above. From out of its pulpit three decades of truth uplifted the conscience of aged and youth!

Oh yes, it's good business for wreckers to come and salvage the lumber to sell for a sum. The new church will do what the old one could not as a center of power and a center of thought, but that little shack on the hill by the tree is more than a shack to old-timers like me! —J. Edw. Tufft.

MAKE MORE MONEY With A

Farquhar Cider Press

Apple Growers in your community will keep the cress busy through the entire season—and you will have a profitable income each year. Built to allow up to 400 barrels of cider per day for Roadside Marketing, the Individual Orchardist and Custom Pressing.

New Catalog No. 126 just off the press. Write today and learn how a small investment will benefit you handsomely.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

The Difference Between Profit and Loss Lies at the Top of the Selling Price

MANY gardeners are now in the midst of their season of heaviest selling. How easy it is to become nervous concerning successful disposal of perishable crops! At this season prices are often falling, supplies are increasing. Buyers bring continual pressure for a lower market. It is part of their business to buy their needs at the lowest possible figure. It is equally an exceedingly important part of our business to realize the fullest returns possible under market conditions prevailing at the time we sell.

The dealer knows exactly how much was the cost of the produce which he expects to resell. He holds solidly for a profit and sells at a loss only when competition or depreciation of produce forces him to do so. But, few of us know what our products cost to grow. At selling time a price concession of a nickel or dime per basket looks comparatively insignificant. On the other hand, when prices are low such a small cut may seriously reduce profits.

Need Not Be Uninformed of Prices

If the cost of producing a bushel of any vegetable has been 90 cents and the selling price is reduced only from $1.00 to 95 cents the grower's profit is reduced 50 per cent. Of course, this is all supposition, yet the fact remains that under average growing and selling conditions profits, if they are to be realized, must come with the last few cents at the top of the selling price.

I expect all of us make mistakes at times and sell under the market. Buyers will see to it that we do not sell too high. With U. S. Department of Agriculture daily market news letters available free from the more important markets, and newspaper reports, there is little excuse for being uninformed about prices.

An equally valuable source of market information is some straight and square dealer in the town or city where one sells. It pass to cultivate contacts of this kind, especially when one is selling irregularly and is not in daily touch with market changes.—G. S. W.

Irrigation Helps Control Growth

Will you kindly give me some information on growing celery? I intend to plant between ten and twenty thousand stalks of celery. Would you advise this without artificial watering equipment? Would also like to know a good spray material for celery. Would also like to have some information on the mixing of bluestone and lime for spraying potatoes.—R. L. H., Lancaster County, Pa.

A convenient method in mixing Bordeaux spray is to prepare stock solutions in which one gallon of each solution carries one pound of copper sulphate or lime as the case may be. I slake, carefully to avoid burning or drowning, 50 pounds of lump lime in a 50-gallon barrel. When well slaked, water is added to fill the barrel. Fifty pounds of copper sulphate are suspended in a burlap sack in the other barrel full of water and allowed to dissolve.

When ready to spray my 100-gallon sprayer tank is filled about one third full of water. For potatoes 8 gallons of lime solution are strained in and stirred well. For celery 10 gallons of lime solution. Then more water is run in until the tank is about two-thirds full. Next 8 gallons for potatoes, 10 gallons for celery of copper sulphate solution are added and the tank is filled full, ready for spraying.

In reply to your question on celery growing it is perfectly feasible to grow celery without irrigation, especially when liberal amounts of manure have been used over a term of years. On the other hand overhead irrigation will facilitate plant setting and enable you to maintain continuous growth thruout dry periods. —G. S. W.

He Who Hesitates—

IMAGINE that you are waiting on customers at a roadside market. Your sign reads.

BUTTON RADISHES
5c Bunch—6 for 25c

You have been rushed and the supply is low. A customer approaches and asks for six bunches of radishes. You take a paper bag from the rack and pick up one, two, three, four, five—and that is all there are.

Quick as a flash the customer counters, "How much for the five bunches?"

What would you do? What would you say? Hesitation may lose the customer. To him six for a quarter means an extra bunch for his money. You are at fault in not having the sixth bunch. The only thing to do is to give him the extra anyhow, 5 for 25c.

This very thing happened at our stand not long ago. It never pays to hesitate in giving a customer the benefit of the doubt in a matter of this kind, in adjustment of a claim for unsatisfactory goods or in any other case.

Blackboards with large readable lettering are recognized as an especially effective form of roadside market advertising. An extremely common offense in this connection is to let the blackboard go on advertising some item after the supply on the stand has been exhausted.—G. S. W.

New Market Handles Produce with Speed

THE Hammonton, New Jersey, Municipal Market handled approximately 5800 crates of berries in the two weeks following its opening on June 15th. Market Master Cole praises highly the condition of the new market and the rate at which buying and loading is accomplished. That does not include berries that have been shipped direct from the farms to commission merchants in Philadelphia and New York City. Mr. Cole states that "from 175 to 200 farm vehicles are entering the market each day, and that 50 buyers are now operating on the market. There is a noticeable improvement in the quality of the pack," he said.

Buying Is Over Within an Hour

The market opens every weekday at 2:00 P. M. and as a general rule all buying is over by 3:00 o'clock, and the crates are being loaded for market. On Sunday the market opens at 12:30 P. M. This is to permit early buying so that trucks can be started for market before the heavy Sunday traffic starts back. A government inspector is on the grounds every day, thus giving prompt service to those who require inspection on hauls that are going outside the quarantine.

July 3 the first truckload of berries to go from here to Pittsburgh was sent out by J. H. Davis. It consisted of 150 crates of red raspberries. The drive of 350 miles was made in 21 hours. The berries brought top prices.—C. A. U.

More Rubber Where It Is Needed

THE correct designing of Hood Tires puts more rubber on the road. This insures longer life, greater traction and easier riding. This flat tread on Hood Balloons and High Pressure pneumatics makes them more economical on any kind of road.

If you figure cost per mile, you will use Hoods.

OUR YOUNG PEOPLE'S FORUM

Letters From Forum Members and Friends

Dear Cousin Ruth:—I received my membership pin and was pleased to have it. I thank you very much for it. How many of you Forum boys and girls were ever to Druid Hill Park? On June 9 I went to Druid Hill Park. I saw a hippopotamus, Babe Ruth (an elephant), apes, lions, polly parrots, wild pigs, buffaloes, squirrels, alligators, monkeys and many other animals.

My father gave the squirrel a peanut and it went back and buried it. There was a merry-go-round for the monkeys and it was fun to watch them.—Anna Althoff, (X), Adams County, Pa.

You must have had a splendid time, Anna. Which animal did you think was the most interesting? I wonder how many of our Forum cousins have visited a zoo?

Dear Forum Friends:—Our school closed a nine-month term June 9th. I live on a 70-acre farm. We started to make hay so I am kept very busy. We have two dogs and four small puppies. They are very cute.

I am sending a recipe for the friends who like candy.

NUT CARAMEL FUDGE

3 cups light brown sugar
1 tablespoon butter
1 cup milk
1 or 1½ cup nuts
Flavor with vanilla

Cook sugar, butter and milk until it will thread. Take from fire, add flavoring, nuts, and beat as you would fudge. Pour into buttered pan, cool and cut.—Maude I. Savidge, (X), Schuylkill County, Pa.

Dear Cousin Ruth:—I enjoyed the "Treasure Hunt" contest. I have 22 Muscovy ducks and they are growing fast. I like to feed them.

I have two Maltese kittens. I call them Tippy and Malta. My music teacher is going to have a recital soon and I am practicing a duet to play with Mary Piersol. It is "Progress March."—Ada M. Fleming, (X), Chester County, Pa.

PLAYMATES
Doris Crowell, Broome County, N. Y.

Dear Cousin Ruth:—You can't guess what we have for a pet and it surely is a nice one. It is a little fawn only two weeks old. Our county game protector gave it to us to take care of. We feed it cow's milk out of a bottle. We give it three or four ounces every two or three hours. It is very tame and follows us wherever we go. It certainly is pretty and attracts the attention of a lot of people, especially children. We are going to have our picture taken with it, then I will send you one.—Mabel E. Shaffer, (X), Union County, Pa.

I should like very much to see the picture. If it is clear enough I shall try to use it on our page.

Dear Cousin Ruth and Forum Members and Friends:—I have seen only a few letters from Perry County. Cousin Ruth, wouldn't you come up after harvest and help me to heap hay? I don't like that job anyway, especially when it's very hot. The other day when we were heaping hay we saw a nest with 16 partridge eggs in it. The mower smashed three eggs.

We only have two horses. Their names are Dempsey and John. Dempsey is the one I ride after the cows. We have four old Hanties, their name are Polly, Biggie-bee, Blackjack and Johnny. Blackjack has 11 little Banties now.—Grace Stone, (X), Perry County, Pa.

Dear Cousin Ruth:—I live out in the country where you can have good times. My girl friends and I take hikes over the fields. I like to take my dinner and go out to the fields and eat.

WHEN EVA WAS THIRTEEN MONTHS
Emaline McGeary, (X), Indiana Co., Pa.

You can see for miles from our house across the country. I have a half sister. She is fifteen months old and she sure is cute.

I am sending a picture taken when she was thirteen months old. She weighed thirty pounds. I am also sending a recipe for a cake.

DEVIL'S FOOD CAKE

½ cup cocoa
2 cups brown sugar
½ cup shortening
1 cup sour milk
2½ cups flour
1 teaspoon salt
1 teaspoon soda dissolved in ½ cup warm water

Bake in two layers. Bake twenty-five minutes.—Emaline McGeary, (X), thirteen, Indiana County, Pa.

Dear Cousin Ruth and Friends:—I have ten little chicks and expect more to hatch out soon. There have been two wrens around the house and the other day as I was walking out in the orchard I saw their nest in one of the trees. Here is a good molasses candy recipe.

MOLASSES CANDY

1 cup molasses
2 cups sugar
1 tablespoon vinegar
Butter size of an egg
Flavor with vanilla

Boil ten minutes; then cool it enough to pull.—Mildred Royer, (X), Montgomery County, Pa.

Dear Cousin Ruth:—We have a pet calf, Nellie. When we let her out into the barnyard she wants to play, but I do not like to play with her because I am afraid she will kick me.

For pets I have a cat, Tabby. She is a fine colored cat. In winter time when she wants to get into the house, she will stand up and try to open the door with her paw. When I come home from school she comes to meet me. She likes to play with balls and strings. I have a pet chick, Jim. He follows me every place I go.

We have ten bird houses in our yard. Many little wrens build in them. I often watch them build their nests and wonder how they build them so neatly.

Will somebody please send me a recipe for some molasses candy?—Aletha Deimler, (X), Dauphin County, Pa.

Dear Cousin Ruth and Forum Friends:—Last week we visited the zoo in Philadelphia. We saw many different kinds of animals. But the clumsy grizzly bear, I loved to see him best. We saw snakes over two yards long and a big alligator that came from Florida.

We saw ostriches and their eggs. We also saw many different kinds of birds with very brilliant plumage. The leopard growled so fiercely it almost made me afraid.—Elizabeth M. Eberly, (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—We have a small shepherd dog that is very sly. My father found him and since nobody came for him we kept him. Every evening when we go off he goes along to our neighbors and stays there till we come back and then takes us home so we need not be afraid. When we go swimming he goes along and plays in the water. We all like to go swimming and play games.—Mildred Harner, (X), Schuylkill County, Pa.

Here's A Secret

DEAR FORUM FRIENDS:—You must have had a glorious time scampering for the jumbled sentences. I just wish you could see the pile of contest papers you folks sent to the Forum. When the contest list is published you'll have some idea of the number. As yet I haven't had a chance to correct all the papers so I won't be able to tell you this week the names of the winners. I'll let you know tho just as soon as I possibly can. So many of you have been asking for another contest that I think we shall have one real soon. I'll not give you the details at present for I think we need a little rest after the strenuous Treasure Hunt, don't you? Next week I shall tell you all about it.

It's going to be altogether different from any contest we've had lately. It isn't going to be a word contest nor a drawing contest. Neither is it going to be a Treasure Hunt for jumbled sentences. But, it is going to be a contest that you'll all enjoy—the younger children as well as the older boys and girls, one that many of you have suggested. As I have promised, next week I'll tell you more about it, but in the meantime I'm going to suggest that you sharpen your pencils.

DEAR LITTLE FOLKS:—Did you ever watch a crowd of your friends playing together? Sometimes they run about so you can hardly see which is which. One minute Jack is running beside Ted, and the next minute you see that Margaret and Helen are there instead. Now, in the little square below you will see a lot of letters with figures after them. You are going to find the names of five boys and five girls—if yours is not any of the lot I'm sure you'll find some of your friends' names there. The figures after the letter "A" seven times, the letter "J" twice, and so on. When you have found out the names of these ten little folks who are playing such a lively game together, let me have a list of their names—either in a letter or on a postcard—by July 30th. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND REMEMBER TO TELL ME THE NAME OF YOUR COUNTY. The prizes go to the ten children (no matter whether your name is in this puzzle or not), sending in the correct answer whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

LOOK WHO'S HERE!			
A (7)	J (2)	T (3)	N (1)
M (4)	R (7)	U (1)	C (2)
Y (1)	O (3)	H (4)	E (7)
S (2)	L (2)	I (1)	G (2)
			B (2)

The answer to the puzzle in the July 2 issue is CHARLES LINDBERGH. It surely was a rousing welcome you gave him and I want to thank those Little Folks who sent in such interesting answers. I guess we all think "Lindy" is pretty fine. Many said they were answering for the first time and all of us are glad these new Little Folks have come to Our Corner to enjoy the good times we have together each week.

The prize winners are: Thelma Bradley, age 12, Fredericksburg, Md.; Edith Frankenfield, age 11, Hatboro, Pa.; Allen A. Greene, age 11, Lehighton, Pa.; Mildred H. Harbouch, age 11, Calvin, Pa.; Margaret Langley, age 10, Newfield, N. J.; Mary Osborne, age 12, Forest Hill, Md.; Roy Shenk, age 9, Manheim, Pa.; George Shilludy, age 9, Glenmoore, Pa.; Roberta Snyder, age 9, Ulster, Pa.; Elizabeth Stewart, age 10, Sagaponack, N. Y.

P. A. was made-to-measure for me

PRINCE ALBERT couldn't have suited me better if I had made the blueprints myself, and superintended the entire job from soup to nuts! It fitted my smoke-taste perfectly the first time I tried it. I started right — with P. A. — and I've stayed with it.

I wanted fragrance. I got it . . . both from the tobacco in the tidy red tin and in the smoke itself. Fragrance that reminded me of woodland trails just after a soft, spring rain. I wanted mildness—mildness that would let me smoke from morning till midnight.

But mildness alone was not enough. I demanded a full, rich tobacco body that would satisfy my pipe-hankering on every fire-up. There again Prince Albert had my measure, right to the tick of the tape. Cool, long-burning, free from bite and parch—P. A. was all of these.

You suspect by this time that I am satisfied with P. A. I'll tell the world I am! And I want to get it over to *you* that, if you don't know P. A. by personal experience, you've got something coming to you . . . something mighty good. Try P. A., on the word of a friend!

P. A. *is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.*

PRINCE ALBERT

—no other tobacco is like it!

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Did you ever watch a crowd of your friends playing together? Sometimes they run about so you can hardly see which is which. One minute Jack is running beside Ted, and the next minute you see that Margaret and Helen are there instead. Now, in the little square below you will see a lot of letters with figures after them. You are going to find the names of five boys and five girls—if yours is not any of the lot I'm sure you'll find some of your friends' names there. The figures after the letter "A" seven times, the letter "J" twice, and so on. When you have found out the names of these ten little folks who are playing such a lively game together, let me have a list of their names—either in a letter or on a postcard—by July 30th. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND REMEMBER TO TELL ME THE NAME OF YOUR COUNTY. The prizes go to the ten children (no matter whether your name is in this puzzle or not), sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

LOOK WHO'S HERE!

A (7)	J (2)	T (2)	N (1)
M (4)	R (7)	U (1)	C (2)
Y (1)	O (3)	H (4)	E (7)
S (2)	L (2)	I (1)	G (2)	B (2)

The answer to the puzzle in the July 2 issue is: CHARLES LINDBERGH. It surely was a rousing welcome you gave him and I want to thank those Little Folks who sent in such interesting answers. I guess we all think "Lindy" is pretty fine. Many said they were answering for the first time and all of us are glad these new Little Folks have come to Our Corner to enjoy the good times we have together each week.

The prize winners are: Thelma Bradley, age 12, Federalsburg, Md.; Edith Frankenfield, age 11, Hatboro, Pa.; Allen A. Greene, age 11, Lehighton, Pa.; Mildred B. Harbough, age 11, Calvin, Pa.; Margaret Langley, age 10, Newfield, N. J.; Mary Osborne, age 12, Forest Hill, Md.; Roy Shenk, age 9, Manheim, Pa.; George Shilliady, age 9, Glenmoore, Pa.; Roberta Snyder, age 9, Ulster, Pa.; Elizabeth Stewart, age 10, Sagaponack, N. Y.

P. A. was made-to-measure for me

PRINCE ALBERT couldn't have suited me better if I had made the blueprints myself, and superintended the entire job from soup to nuts! It fitted my smoke-taste perfectly the first time I tried it. I started right — with P. A. — and I've stayed with it.

I wanted fragrance. I got it . . . both from the tobacco in the tidy red tin and in the smoke itself. Fragrance that reminded me of woodland trails just after a soft, spring rain. I wanted mildness—mildness that would let me smoke from morning till midnight.

But mildness alone was not enough. I demanded a full, rich tobacco body that would satisfy my pipe-hankering on every fire-up. There again Prince Albert had my measure, right to the tick of the tape. Cool, long-burning, free from bite and parch—P. A. was all of these.

You suspect by this time that I am satisfied with P. A. I'll tell the world I am! And I want to get it over to *you* that, if you don't know P. A. by personal experience, you've got something coming to you . . . something mighty good. Try P. A., on the word of a friend!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

INTENTIONAL SECOND EXPOSURE

The Greatest Large-Scale Farmer in the World .....

Clearing the jungle for a United States Rubber Company Plantation.

Bud-grafting young stock. Each budded tree must be protected with a shield of leaves.

Picture a group of farms totaling 136,000 acres with 20,000 hands to work them. Consider that these farms had to be cleared from virgin jungle, drained, fertilized, prepared. That 10,000,000 trees have been grown from seed, set out, grafted. Consider, also, that these farms have whole villages within their borders, schools and hospitals. Docks of their own. 80 miles of railroad and 355 miles of motor roads. Picture this and you begin to get an idea of the greatest agricultural enterprise in the world—the Far Eastern rubber plantations of the United States Rubber Company.

This huge development has but one object—to make *certain* of an ever-increasing supply of the finest rubber that can be grown for United States Tires. And so to guarantee the users of United States Tires *quality* right through from the place where quality must start—the rubber from which the tires are built.

Get more for your money!

THE longer wear of United States Royal Cord Balloons begins with rubber *grown for quality*. But plantation ownership is only one of the important steps in producing these better tires.

To obtain tire cord of the quality its specifications demand, the United States Rubber Company operates its own *Cotton Mills* in the heart of the cotton fields.

And every Royal Cord Balloon incorporates three of the greatest forward steps ever made in tire building:

Sprayed Rubber—the purest, strongest and most uniform crude rubber known; *Web Cord*—the framework of the tire structure in which the cotton cords are bonded together with pure rubber latex without friction generating cross-tie threads; and the *Flat Band Method*—which assures a tire equally strong at every point.

Company-owned plantations and mills, new and better materials and methods—all mean *greater mileage* for tires. That is what you are interested in. *Get more for your money*—go to the dealer who sells United States Tires.

Collecting latex (rubber tree milk) from the tapped trees.

Mrs. GERTRUDE S. STEWART

From Baby's Bath to the Evening Meal This Table Will Follow the Housewife

HERE is Baby Mayer receiving her daily bath. Mrs. Mayer uses her kitchen cart for a table, and can move it with ease to the warmest corner of the warmest room while the bath is in progress. When not in use this cart can be folded and requires but little storage space. (But theirs fills so many uses that it is never folded). It is covered with baked enamel so that water does not hurt it.

When this photo came in, the idea captured my interest at once and I started searching the shops to get

all details concerning such a step-saving device. And here they are.

A nearby store will send you a cart for eleven dollars. The trays are finished in white enamel, but the leg and frames come in colors to harmonize with any woodwork or furniture. (White also, like the photo). The disc wheels are rubber-tired and roll silently over your floors. The frame is all-steel, strong and durable. Complete weight, 24 pounds. Height, 30 inches.

What a help in setting the table, serving meals and clearing away the dinner dishes! What a help on the many special days which do visit the farm woman! What a help if there is a bed patient needing refreshment! What a help on big canning days—and when the jelly jars are being filled! Let me send you a folder to convince you that this very useful table on wheels may lighten your labors and perhaps add a few more years of usefulness to your happy life. Send a stamped, self-addressed envelope for folder and dealer's name to Home Page Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia.

Cheese Made at Home

IF ONLY we knew how easy it is to make cheese at home, we would hear less of how to use all the farm milk.

Butchers will save you a calf's rennet for a small amount and that will last a good-sized family an entire summer. Wash the stomach thoroly in several cold waters then put it in a stone crock. I find the gallon size very handy, but a two-quart jar will answer also. Cover the clean stomach with a brine made by dissolving two cups of pure salt in a quart of water. Let set one week, then test it by adding 1 teaspoon of the brine to 1 cup warm sweet milk. If it sets firmly within a half hour, it is ready. If not, let stand a few more days and try again.

If the rennet brine tests O. K., then stir thoroly into five gallons of warm new milk, 1 cup of liquid rennet. Perfectly sweet milk is necessary, and if cooled it must be brought to warm milk temperature before adding the rennet. In a short time it will form a firm curd. Then cut it into about one-inch squares with a long knife that will reach the pan bottom. Scald it then till a piece of curd will squeak between the teeth. Now remove it from the fire and drain. A handy way to do this is to fasten a large cheesecloth over a milk can or large pail and pour the bulk thru the cloth. When it has drained fairly dry, salt it to taste and break it up as fine as possible with the hands. It is now ready for the press, unless you wish to add pimentoes first.

A Tea Pail Furnished the Press

Our press was made by cutting the bottom from a ten-pound tin tea pail. A heavy round piece was cut from a plank just to fit inside the pail. This is called a "follower" and the pail section is named the "hoof." A wide board was set at a slight angle to allow drainage and in it were cut several little ditches to help drainage. The hoof is placed on the drain board, clean cheesecloth placed in the hoof, and the scalded product emptied in. Fold the cheesecloth corners over, place the follower on top, then weight it down well and let stand 24 hours.

Now remove from the press and oil thoroly with sweet lard to prevent too hard a crust. Store away in a warm room to cure for from four to six weeks. You will be delighted and surprised at the new delicacy you have learned to make. Five gallons of good milk will make a cheese that weighs from four to five pounds. —Mrs. E. M. Anderson, N. Y.

Note:—This story makes me feel a bit of longing for the old farm days and the fragrance of cheese day, for my mother made cheese in just this fashion, and it was so good. Some day when we have our very own cow, I intend to follow Mrs. Anderson's recipe and have a good home-grown cheese, too. I well remember carrying the whey to the chickens and pigs. Mother bathed her cheeses in a strong salt solution every few days. Cheese is one of our very choicest protein foods, and most excellent in the summer time and early fall for the many lunches, picnics and sandwiches.—Mrs. Stewart.

Confusion Is Annoying—Why Allow It?

THE following is a simple hint for order and efficiency in any department of the home. Keep only those things which are in daily use out where you can put your hand on them. Such places as the lower kitchen cupboard shelves, the writing table, the upper dresser, buffet, or cupboard drawers, are most likely to become disordered. The idea for convenience of such nooks as these is that they are to be constantly used. If we are careful to eliminate from them everything that is not customarily needed, and reserve them for our most trusty and necessary implements, our problem of congestion in times of hurry will be practically solved.

When one leaves out a lot of books read only occasionally, a number of extra or odd dishes, etc., there is an exasperating confusion that destroys efficiency more quickly than any other one thing. A waste basket (dainty or capacious, as the need may be), installed in every room is another big help toward order.—Marion Cossitt Brackin.

Eggplant Affords Variety

BAKED EGGPLANT

Plug the eggplant like a jack-o'-lantern and remove the seeds, filling the space inside with a cup of breadcrumbs seasoned with pepper and salt, a bit of chopped parsley, a lump of butter and two well-beaten eggs. Put in the plug and dust with breadcrumbs and melted butter, baking half an hour and dredging with a mixture of butter, flour and water.

STEWED EGGPLANT

Cut an eggplant into small pieces and boil for twenty minutes. Make a sauce of two tablespoons butter, two tablespoons of flour, two grated onions, seasoning and one cup of sweet milk. Boil this sauce for five minutes, drain the eggplant, add the sauce, put into a baking dish and bake fifteen minutes.

EGGPLANT FRITTERS

Take one quart of cold boiled eggplant and mash finely. Add two well-beaten eggs, a lump of butter and a spoonful of baking powder and mix thoroly. Drop by spoonfuls in deep hot lard. Let brown and take out and dust lightly with sugar.

FRIED EGGPLANT

Cut the eggplant into thin slices, season and dip in flour, then in beaten egg, then in breadcrumbs. Fry as you did the fritters, but do not have so much grease.

EGGPLANT PORRIDGE

Take two cups of cold mashed boiled eggplant, a tablespoon of butter and two cups of flour, a bit of minced parsley, a little seasoning and two cups of sweet milk. Boil together for three minutes. Prepare some cubes of toasted bread and pour the boiling mixture over the bits of toast.

EGGPLANT CAKES

To a pint of cold boiled mashed eggplant add a pint of cold boiled mashed potatoes, two well beaten eggs and seasoning. Form into small flat cakes and fry till a golden brown. Serve hot.

EGGPLANT SALAD

Dice cold boiled slices of eggplant and add an equal amount of diced pieces of apples, enough sugar to sweeten, a bit of cinnamon and lemon to taste. Mix together and cover with a good boiled dressing. Nuts, raisins or other fruit may be added to the salad for a change.

EGGPLANT RINGS

Cut an eggplant in thin slices and hollow out the inside, so only a ring about an inch in width is left. Dip these rings in beaten egg and bread crumbs and fry till a golden brown. Lay the rings on a platter, garnish with parsley and fill the eggplant with mashed potatoes, which have been flavored with chopped parsley and minced onion. Brush the top with beaten egg and place in the oven till slightly browned.

Paper Supplants Cloth

WINDOWS may be washed with paper as well as with cloths, and papers may be discarded after the windows are clean.

Plain warm water or warm water with a little ammonia or soda in it is better than soapy water to wash windows, whether a cloth or paper is used. Soap leaves a film on the glass that is difficult to remove. Paper, cloth or chamois may be used to polish the glass after it is washed.—N. Y. State College of Home Economics.

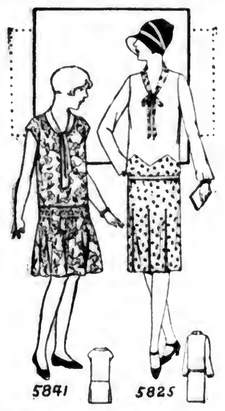
The Oil Stove Oven Offered a Short Cut

DO ALL the housewives know what a wonderful place an oil stove oven is for drying corn, apples, etc.? Light one burner and turn it as low as can be, and there is no danger of your vegetables or fruit burning, even if in the press of other duties you forget it for ever so long. Of course, the vegetable or fruit must be stirred now and then.—Florence C. Hebel, Pa.

Charming Frocks for Summer Days

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5841.—Four sizes: 8, 10, 12 and 14 years. A 10-year size will require 2 yards of 40-inch material with ⅜ yard of contrasting material for the collar. Pattern, 10 cents.



5825.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 2⅝ yards of plain material and 1¼ yard of figured material 40 inches wide. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

No Story at All

By Katherine Mayo

COPYRIGHT B KATHERINE MAYO

EVERY aperture was tight shut in the cabin under the rock; effect of a householder dead to the world, rounding out a ten hours' slumber.

"Pound on that door. Wake him up!" roared the Lieutenant. "I don't leave these woods till I've shown light to that citizen."

In a moment, propelled by the hand of the Recruit, out came the old man, wavering pitifully. The Recruit's gaze was very wide as he towered erect as a white-wood behind his convoy. But his ruddy young face was admirably stony.

"Good! You're the man I found here last night," the Lieutenant bit out in tones of stinging wrath. "Now, listen and understand. The next time a State Police officer asks information of you, take care you tell him the truth and the whole truth, tell it quick, and be civil about it. This is your warning!"

As the speaker finished, his off eyelid closed lightly.

The old man proved no laggard in the uptake. "Yes, sir," he mumbled, sliding rapidly into a sulky slouch.

And all the way out of the woods the Recruit wrecked in his own mind with a foolish illusion that he had seen the shadow of a quiver in the nigh eye of old Allardyce.

"So we got home about an hour ago, put our guests in our safe-deposit box, dumped the exhibits under the roses, got a bath and a shave and breakfast—and now you have the story from A to Z inclusive."

"What's the next move with the pearls in the safe-deposit?"

"J. P."

"When?"

"Now. Want to come along?"

The Justice of the Peace holds his own court in a little one-story pagoda, lately the shop of the village cobbler. His counter is bare, and his shelves once dedicated to shiny-toed shoes, blacking, and laces, now display nothing more than a few odd volumes of old law reports sustained considerably off the perpendicular by a clunky "Compendium of Human Knowledge" and by a "Digest of the Laws of Pennsylvania."

THE Justice, sitting at his desk, returns the salute of the entering officers of the State Police. There are four of them now—the Lieutenant, the Trooper, the Recruit, and the First Sergeant of the troop, who will conduct the prosecution. The Justice is rather a ponderous man, perhaps sixty-five years old, with a kindly, painstaking face and a big, honest nose bestridden by a pair of steel-bowed spectacles.

The prisoners are now seated before the Bar. The two are infinitely more the child the giant, is his face a crimson one. One has the face of a drunkard, one is swain to an ox, and the last, more clearly cut, is in a primitive way handsome. Yesterday's beard bristles on their chins, and their thick, curly locks are tousled. Each man of them must weigh two hundred pounds, variously distributed; and in their stiff, yellow canvas hunting-suits and their big water-boots, they look colossal, every one of them. Eyes on the floor, elbows on knees, they sprawl in their chairs glumly contemplating the battered tin pail planted in their midst.

That pail is full of expiring fish, calling with their last gasps for vengeance!

Attracted by the glimpse afforded thru the uncurtained windows, a passing citizen stops, stares, and then abandons his errand for the entertainment of the moment. He pushes open the door, nods to the Justice and to the State Police officers, and vaults to the counter.

Next the village clergyman and his theologue son, on their way to the post-office, are caught by the scene and enter. The divine bows first to the Justice. Then he goes over and claps the Lieutenant on the shoulder, as he grasps his hand.

A BOY slips in; a farmer glancing down from the box of his Conestoga as he drives by, reins up, hitches his team to the maple tree at the door, and joins the assembly. Two interested citizens follow him and the room is full. Dead silence reigns, persistent, extraordinary. Is it the four stern young figures, grave of face, perfect of bearing, faultless of dress, wearing the sombre uniform of the State, who by their mere presence impose it?

The trial opens. The First Sergeant quiet, erect, soldierly, and utterly competent, stands at the Justice's side. Thomas Stone, Henry Landulik and William Haddon are duly charged with "Using Unlawful Devices in a Trout Stream." "Guilty," pleads Stone, of the drink-sodden countenance. "Guilty," pleads Landulik, twin to the ox.

"Not guilty," growls Haddon the giant.

The Lieutenant doesn't even look bored. The First Sergeant calls him to testify. He tells his tale very briefly and with exceeding clarity both of statement and of diction. But the good old Justice, plodding after him with laborious pen, loses the thread after the first two phrases. Therefore, the officer, with respectful courtesy, goes back to the beginning and repeats his statement, four or five words at a time, pausing at each interval for the gray head bending over the stiff fingers to nod release. The story, as completed, presents all the facts essential to conviction, and presents them in terse and consecutive shape.

"Do you wish to ask me any questions?" the Lieutenant inquires of Haddon.

"No, sir."

Then the First Sergeant calls the Trooper, who, duly sworn, testifies as ably as did his officer, while the Justice, prompted from point to point by the quiet suggestions of the First Sergeant in his capacity of Prosecutor for the State, asks questions whose answers again underscore the vital, incriminating facts. This complaint will never fail in a court of record on certiorari.

Then comes the turn of the fledgling Recruit. Rigid, and blushing furiously under his superior's eyes, the lad yet shows how well he is learning his lessons. He tells his story like the clear thinker he is bound to make of himself, without one extra or reconsidered word.

The Lieutenant cannot repress a movement of pride. "What do you think of my little Recruit?" he whispers. "Promising?"

But now Haddon is being sworn—and takes the oath and fulfils the succeeding formalities with a correct anticipation of requirements that tells its own story. Never, he testifies, notwithstanding—never before has he been under arrest in all his blameless existence. He went out with these friends for a little lawful fishing. He fished with his hands and with a pole. He never saw or heard of a lyke. And when the fish stopped biting, he laid himself down by the fire and slept soundly till morning. At dawn he arose, went down to the stream and examined his poles; and was quietly returning to camp again, when, behold! the State Police jumped out from nowhere, without shadow of provocation, and inexplicably arrested him.

THEN came the turn of the Prosecuting Officer. Without any raising of the voice, without extra emphasis or apparent pressure, the First Sergeant's whole being flamed subtly trenchant, poised to win. His questions, quiet and seemingly simple, drove sharp, direct, incisive, obviously aimed straight at some clearly sighted goal. His material feet assuredly remained on the same spot by the Justice's side, yet you could have sworn that with each close-clipped phrase, — there were not a dozen words in the longest of them,—he crowded the prisoner one pace farther toward the wall. Then came three bullet-like demands, three answering statements well foreseen—and bang; fell the trap—caught beyond struggle in a hopelessly incriminating lie.

The Justice raises his eyes to the officer with the unquestioning confidence of a child. His spectacles slip down on his nose while, without a word, the First Sergeant turns to the shelf, takes down the law book, and lays it, open, before the magistrate, with his finger on paragraph and line.

"In regard to Stone and Landulik," says he, "I would ask, they having pleaded guilty, that you impose a fine of twenty dollars upon each of them, for one violation of the law. In regard to Mr. Haddon, there are three counts—the using of an illegal device in a trout stream, the operating of a net without a metallic tag attached, and the using of a spear out of season in a trout stream. I ask twenty dollars on each charge, or a sixty-dollar fine."

The Squire turned to the prisoners, addressing them.

"Mr. Haddon," said he, "you are found guilty by the evidence given again t you on three charges, and fined twenty dollars each. If you are not prepared to pay the fine and costs, then you are committed to the jail of this county, one day for each dollar, or sixty days in jail. Stone and Landulik are fined twenty dollars and costs each, or twenty days in jail."

THE First Sergeant, the while, had been observing the giant with a critical eye. Now he asked him a question aside, then addressed himself once more to the Justice.

"Mr. Haddon wishes to reopen the case and to be allowed to change his plea from 'Not guilty' to 'Guilty.' If you allow his request, I would ask that he pay the same fine as that laid upon the other two prisoners."

"On your plea of 'Guilty,' Mr. Haddon, I fine you twenty dollars," the Squire responds, without hesitation.

"Now," says the First Sergeant, dropping his State Prosecutor's manner, "what do you men choose, jail or pay?"

The three look dolefully at their boots, speechless. At last Stone sighs out—"I ain't got no twenty dollars. Guess I hafter take jail."

"S'pose so"—"Same here," groan the others.

A pause. Not one sign of sympathy on the part of the powers of the law.

"Well, Stone," observes the Lieutenant dryly, "if you and Landulik have both invested all your money in cash registers and corner property, I think the least that Haddon can do is to save you from jail. He keeps the saloon!"

At which destructive home truth the masks of all three break down. They grin sheepishly.

"Can I go home and get the cash for us?" asks Haddon.

As the canvas-clad trio, now entirely restored to good-humor, lumbered off down the road under the shepherding care of the Trooper, I turned to the Lieutenant with a question or two.

"Why did you threaten to come down so hard on the giant?"

"Because he lied and tried to escape us; to show him that we were perfectly willing and ready to take our case to court, if he desired it; to show that we will fight if they drive us to it; to remind them that we present no charge we cannot sustain.

"Why were you so easy with them all in the end?"

"Because these three, as it happens, are not really bad men, and the penalty we asked was severe enough for them."

"Why did you keep the woman entirely out of the matter? Wasn't she equally guilty with the rest? And you never even spoke of her!"

The Lieutenant's face took on a look of patient martyrdom.

"Yes," said he, "I'll answer that, too. It's like this: We figure that you should spare the women wherever it's possible. And that you can use sense. One in a family is enough to strike. You needn't rub it in."

Later, down at Barracks, he took from his desk a sheaf of manuscript, the first examination papers of the newest probation men. The Lieutenant had framed the questions himself, to test the calibre of his lads.

"Look here," he said, slugling out a sheet. "Perhaps this will help."

Under the typewritten question, "What are the first essentials required of an officer of the Pennsylvania State Police Force?" stood the following words, in the loose, boyish script of the fledging Recruit: "To know the law exactly. To do your whole duty and do it quick. To be gentle and courteous always." And never take any one's bluff."

Toledo, Ohio, July 16, 1927.

Clover seed, cash, imported, $13.90; October, $16.65; domestic, December, $16.60. Alsike, August, $13.75; December, $13.75 bid. Timothy seed, cash, new, $2.45; December, $2.32½.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This Week	Last Week	Month Ago	Year Ago
Butter, 92 score creamery extras (N. Y.)	$ .42	$ .41½	$.—	$ .40
Eggs, fresh gathered extra firsts (N. Y.)	.26½	.25	.—	.31½
Steers, good to choice (Jamesburg)	12.25	12.25	10.75	9.00
Hay, Number 2 timothy, baled (Philadelphia)	18.00	18.00	20.00	20.50
Wheat, No. 2 red winter (Philadelphia)	.—	.—	.—	1.33
Oats, Number 2 white (Philadelphia)	.58	.59	.61½	.51½

Tomatoes Bring Record Price

Review of the Week Ending July 16

BUTTER—The markets opened with a firm tone and continued in that position thruout most of the week. Arrivals were heavy and exceeded those of the previous week. These heavier arrivals and a slight slowing up in demand resulted in larger quantities being sent to the freezers. At the close of the week prices were from 2c to 2c lower on most markets.

EGGS—The hot weather affected the quality of eggs arriving in the markets and the demand was generally slack for average offerings. On the New York market there was a fair call for exceptional fancy stock and prices were somewhat higher than current quotations. Undergrades were quiet. The supply of nearby average quality eggs was liberal and these moved slowly on account of dealers still going to refrigerators for considerable quantities of eggs.

POULTRY—Trading in live fowls was very irregular on the New York market early in the week and prices showed considerable fluctuation. The hot weather curtailed consumption and the slow demand caused the market to weaken. Broilers were more active and the demand continued good. Old roosters were irregular and generally in slow demand.

POTATOES—Supplies in eastern markets were heavy early in the week and the demand was slow with low prices prevailing. Lighter supplies the middle of the week caused the market to strengthen but this was soon followed by another decline. The Eastern Shore of Virginia f. o. b. market was $3.40 to $3.50 per barrel during the week. Supplies from New Jersey increased and there was a gradual decrease in prices received for trucked-in stock on the Philadelphia jobbing market.

LIVESTOCK—The prices for hogs advanced on the Chicago market during the week and beef steers were mostly steady. She stock showed considerable fluctuation in prices. Vealers, heavy calves, stockers and feeders were generally steady. Yearling wethers showed a slight decline while fat ewes were somewhat higher. Feeding lambs were about steady.

GRAIN—Weaker foreign markets forced wheat prices about 6c lower for the week. Less pessimistic crop reports caused future trading in corn to take a sharp decline but cash markets were firm because of limited offerings. Oats lost around 2c for the week.

HAY—The hay markets were dull with an excellent outlook for the new crop. The supply of new timothy is increasing in the markets and demand exceeds the supply. The alfalfa market was easier. Only the top grades of all classes moved readily and common to ordinary hay moved very slowly.

FEEDS—The markets were unsettled. Shorts, middlings and heavier feeds were sharply higher on account of light offerings. Bran was slightly higher. Linseed meal was about steady. The new crop of cottonseed meal was offered more freely at slight reductions.

TOMATOES—New Jersey tomatoes were in moderate supply and have sold at record prices. These high prices were due largely to the scarcity of good quality tomatoes from the distant shipping areas. On the Philadelphia market during the past week most sales of No. 1 stock in five-eighths baskets ranged from $3.50 to $5.50 while extra fancy ripes sold at higher levels. Green tomatoes and sunburnt stock sold slowly at considerable discount.

County News and Comment

Armstrong County, Pa.—Much hay of excellent quality has been made. The crop will be a heavy one. Wheat harvesting is just beginning. The crop will be below normal. The corn has been making a phenomenal growth for the last two weeks. Potatoes are of good color and promise fairly well tho showing too much Fusarium wilt. Oats are heavy and almost in full head. Fruit prospects are very disappointing. Peaches, pears and cherries are a total failure. Apples inclined not over 25 per cent of a stand. Grapes promise a very light crop while berries, black raspberries, elder and huckleberries will be abundant. Less than half of last years acreage of buckwheat will be seeded. Pasturage is only ordinary and the milk flow is not high. Late fall littered and early spring pigs are looking good growth. Egg production low and prices advancing slowly. Prices: wheat, $1.—; rye, $1.—; corn, 90c; oats, 50c; potatoes, none for sale; butter, 45c; eggs, 25c; hay, $24; straw, $15.—W. M. P., July 7.

Carroll County, Md.—Weather continues cool and very pleasant for July. Rye harvest is about over with a good yield of fair quality peas. Grain harvest is very irregular. A few farmers are cutting wheat and the prospects are for a good yield. Most of the hay crop has been stored away. The yield and quality of hay was good. Spring grass seeding is a good stand and is making fine growth. Pastures are about normal for this time of year. Corn is about a week or ten days late. Strawberry and cherry crops were very poor this year due to cold weather. Plums and pears will be a light crop. Blackberries are ripening and prospects are for good yield of good quality berries. Grain is are looking well. Potatoes still have a good color but it is reported that blight is appearing in some sections. Strawberries sold from 7c to 25c per box; eggs, 25c; young hens, 25.—H. I. B., July 9.

Centre County, Pa.—Hay making is two weeks later than usual. Wheat is beginning to color. Cherries are a very short crop. Apples and most fruit will be scarce. Strawberries were a fair crop and brought $6 a crate. Other berries are making a good showing. Wheat, $1.35; corn, $1; rye, $1; oats, 45c; buckwheat, 90c; butter, 45c; lard, 16c; eggs, 25c; hens, 25.—A. Daily II.

Erie County, Pa.—This year's hay crop is estimated at 25 per cent above the average. Potatoes are progressing most favorably. A smaller acreage than usual has been planted, but a bumper crop is in prospect. Oats and corn do not look favorable. The fruit yield is far below the average. Grapes, apples and cherries will be a light crop. Thousands of cherry trees are dying. Many of them laden with fruit which will not mature. Local markets are as follows: Chickens, 35@40c; butter, 47@60c; eggs, 30@32c. Strawberries, 25@30c; cherries, 20@25c; huckleberries, 40@45c qt.; beans, 22c lb.; peas, 10@15c lb.; lettuce, 20@25c lb.; potatoes, basket, 70@75c; tomatoes, lb, 25c; cauliflower, 30c lb.—E. M. F., July 11.

Lackawanna County, Pa.—June continued cool and wet, frost on the 15th. Everything seemed two weeks late. Not very good hay weather. Corn not very good stand in some localities owing to cold wet weather. Truck patches and gardens looking good. Not much early fruit. Cherries and strawberries a poor crop. Some late potatoes coming thru the ground. New potatoes selling for 75c per peck from the stores. Strawberries brought 25c qt.; eggs, 32@35c.—E. A. K., July 11.

Lehigh County (Upper), Pa.—Rye is turning yellow and will be ready to harvest soon. Wheat fields will not be ready before a week or ten days. The wet weather has helped the wheat wonderfully. The yield in general will be low per acre. Rye fields look much better and a fine yield is expected. The hay crop which is just about harvested was an enormous one. The only farmers that are short are those who had alfalfa fields which were winter killed. Potatoes look exceptionally fine. The oat crop looks good. Corn is the only crop that is poor. The fruit crop is very short. Cherries in most sections were scarce. Apples will not be more than twenty per cent of last year's bumper crop. Dairy cows are in great demand and prices very high. More farmers now shipping milk than ever before. Pigs are very plentiful and price is low. The high prices of a few years ago has brought on an over production. Prices: eggs, 24c; country butter, 46c; pigs, slaughtered, 11c; wheat, $1.30; chickens, old, live weight, 24c.—C. J. R., July 7.

Monroe County, Pa.—Cold wave passed over this county. On the Fourth the thermometer registered 30. The tuberculin test of cattle is finished; 1100 herds were tested with 126 reactors. A large number of farmers attended State College Dairy Farmers Week. A. N. Staples, state health officer, discovered the first Japanese beetle on a rose bush at Delaware Water Gap. Over 60 head of pure-bred cattle were bought at auction on July 1 to replace the infected ones. This is the big week for storing hay. Potatoes looking fine. Oats fall and strong, good stand. Buckwheat about all sown. Corn small, but is growing well with good healthy color.—G. S., July 10.

Passaic County, N. J.—Weather for past month has been rather cold. Asparagus is done for the season. It was rather short due to the late spring and cool weather during the cutting season. Strawberries are finished with an average crop. The prices were higher than other years, good stock not going below 20c a quart. Weeds are looking better than any other crop around this section. Early tomatoes and sweet corn are late as are practically all other crops. Raspberries ripening; price about 18c pt. Early cauliflower is nearly done, price for fancy stock, July 9, $4 per doz. Cabbage and lettuce are the poorest sellers on the market just now. Spinach is doing better than last week, the price advancing from $1 to $1.25 bushel.—N. D., July 11.

Potter County, Pa.—Frost at night July 4th. Crops late but growing fine. Apple crop will be short. Many dairy cattle being sold at advanced prices. A branch of the Black Forest Conservation Association held annual meeting June 27th. One hundred and sixteen new members were admitted. Representatives of the Fish Commission and the Department of Forests and Waters, engineers of the Department of Highways, a senator and a representative told of the work of their respective departments as it touched the subject of forest conservation. Members of the Potter County chapter of the Pennsylvania Alpine Club will ask that it grant two thousand acres in Sweden Valley be named Mt. Lindbergh. The valley was settled by Swedish pioneers. Prices: eggs, 25c; butter, 55c; cheese, 24c.—M. C. S., July 8.

Somerset County, Pa.—Crops are growing fine. Corn coming along well. Late planted potatoes looking good. Wheat turning. Farmers starting to make hay. Not much clover to cut, timothy looking fine. Late planted cabbage good. Of the 2885 cattle tested for T. B. only 11 reactors. The price of farm produce is about the same. Building of state roads is progressing.—H. W. B., July 10.

Purchase Ewes

THE St. Amour Company, of Wilmington, Delaware, operators of the Buck and Doe Run Farms at Mortonsville, Pennsylvania, thru their representatives, MacMillan Hoopes and B. H. Wilson, assisted by P. C. MacKenzie, of the Pennsylvania State College, have purchased seventy head of Hampshire ewes from the famous Bonny Leas flock at Johnstown, Pennsylvania. This purchase includes practically the entire flock, whose show record is evidence that it stands second to none in the United States.

Buck and Doe Run have also secured the services of "Jack" Goiter, for a long time identified with Hampshires, and one of the most successful shepherds in the country. He recently sailed for England where he will select several of the best rams available for use on these ewes.

The addition of this flock to the livestock operations of Buck and Doe Run Farms makes it one of the largest in the eastern United States. This firm at present is an extensive breeder of purebred Hereford cattle, purebred Poland China hogs and draft horses.—F. L. B.

COW-EASE

20% more milk!

Cow-Ease, sprayed on your cows twice a day, drives flies away. By actual test, cows protected by it, yield more milk. Applied with a sprayer, it won't blister or gum.

One gallon sprays 200 cows. Our Cow-Ease sprayer does the job. Cow-Ease is repellent to cattle ticks, grubs, horn flies and mites. Equally effective on horses or in hen houses.

Get the can with the blue Cow-Ease label. If your dealer hasn't it, send his name and address and $1.50 ($1.75 west of Missouri River) to Carpenter-Morton Co., Boston, Mass., and we will deliver one gallon prepaid. Sprayer 60c. extra.

Satisfaction guaranteed.

HOLSTEINS for Size

The great size of Holsteins means more salvage value, larger calves for veal and greater production of fat and milk. These combined factors spell profits for the farmer.

The World's Pure-breds Are Shown at Ottawa

LIVE birds from India, Egypt, Spain, Holland, Denmark, Canada and many other countries will help make up an exhibition of ten thousand purebred birds at the Third World's Poultry Exposition which opens at Ottawa, Canada, on July 27th.

The American exhibit, for which Congress appropriated $20,000, will cover more than 4000 square feet of floor space. Portrayal of the growth of the poultry industry by motion pictures will be one of the features of the exhibit. Beginning with the first European fowl brought to this country by Captain John Smith in the seventeenth century, the exhibit will picturize the evolution of the poultry industry up to the present day.

One entire building has been set aside for the exhibits showing the growth of the baby chick industry. Commercial feed exhibits, poultry houses, supplies and appliances, will occupy another building.

Will Discuss Feeding

Poultry leaders and world authorities will discuss feeding poultry for economical production. The importance of minerals in rations for laying hens, various methods of fattening poultry and the importance of the "all mash" method of feeding chickens are other subjects which will receive attention.

Four sessions of the Congress will be given over to the discussion of the distribution and marketing of poultry and poultry products. Over forty papers touching on all phases of the marketing problem will be read and discussed.

Ways and means of more effective cooperation between the United States and Canada in the control and eradication of poultry diseases will be sought by officials of the Department of Agriculture. Elimination of unsound and diseased breeding stock by large dealers in chicks will be a plea of the poultrymen.

According to Secretary of Agriculture Jardine, the holding of this international congress on this side of the Atlantic presents an unusual opportunity for all American producers, distributors and consumers to learn a great deal about practically every phase of the poultry industry.—H.

Nest Box Notes

SOMETIMES when we are rushed with hay and harvest, the poultry houses are likely to get pretty dirty. It is too bad to confine the poultry to dirty, dusty houses in hot weather, and much more so if the roof leaks a little and allows the accumulation to get wet. Our own houses got a good cleaning the first week in July. We spread the old litter on a piece of ground that was plowed for late cabbage and put fresh litter in all the houses. I am sure the hens appreciated it.

• • •

One of the best sources of green feed for the winter is a crop of late cabbage. This is an easy crop to grow, and no poultryman should be without a patch. One of the ballhead varieties will probably keep the best. Hen manure and wood ashes is a good combination for this crop. The hens feed the cabbage and the cabbage feeds the hens—that's efficiency if there ever was one.

• • •

In using poultry manure or litter for fertilizer it should never be spread on ground that chickens of any age run over, as that would simply serve to concentrate worms and disease. Such material should be used on land away from the poultry buildings. We use it on wheat or grass as a top dressing, in the orchard, or harrow it in after plowing for corn.

• • •

The egg yield seems to be falling off and prices are mounting slowly. So are feed prices. The laying flock also has to bear the expense of rearing the young stock, with the aid of whatever is taken in from the sale of broilers. Careful feeding, the sale of surplus males that are not wanted for roasters or breeders, and rigid culling will mean the difference between profit and loss from now until the pullets come into production. Summer boarders in the boxyard are a luxury that most of us can't afford.—H. L. S.-H.

Roadside Dairy Restaurant Markets Guernsey Products

(Continued from page 2)

that is giving abnormal or clotted milk is detected before the milking machine is attached.

The crop rotation is unusual but has been most satisfactory. It is corn two years, wheat one year and alfalfa three or four years. The alfalfa is drilled in the standing wheat when it is about 3 inches high in the spring. A crop of alfalfa is cut the next fall. Only one bushel of wheat per acre is sown but this usually brings a yield of about 30 bushels per acre. The first crop of alfalfa is ground to take the place of wheat bran to a considerable extent in the ration.

Prefers Alafifa to Timothy

Penshurst Farm feeds a home-mixed ration containing about 20 per cent protein. Alfalfa and silage form the roughage. Doctor Deubler stated that he would not attempt to run a dairy if he had to depend on timothy hay for roughage. One pound of grain mixture is allowed a cow for every four pounds of milk she produces but a cow on twice a day milking is never allowed over 12 pounds of grain daily.

The big 800-ton silo was filled last year without tramping the silage except for such as took place by the man who handled the distributor in the silo. The silage kept just as well as formerly when tramped.

The senior herd sire is Penshurst Man of War, sired by Kate's Champion of Penshurst, and out of Garclaugh May Mischief, for many years the world's record Ayrshire milk producer with 25,328 pounds of milk in a year. The junior herd sire is Penshurst Rising Prince, a three-year-old sired by Netherton Statesman and out of Penshurst Champion Princess, a fine type of Ayrshire cow that for 5 years has averaged over 10,000 pounds of milk per year.

Work of Association Explained

H. D. Allebach, president, and R. W. Balderston, secretary, of the Inter-State Milk Producers' Association, 1211 Arch Street, Philadelphia, explained the work being done by the association in marketing the milk produced by its members and in protecting its men in the weighing and testing of their products. The Philadelphia Inter-State Dairy Council with offices in the same building is doing a splendid work in improving the quality of milk in the Philadelphia district and in encouraging the consumption of larger amounts of dairy products.

Dingleton Farm, Newtown Square, Mrs. E. V. Seeler, owner, and Mr. Nelson, herdsman, showed a fine herd of Jerseys. Many of these were excellent daughters of the noted sire Feathers Raleigh and made an interesting class for judging purposes.

(To be continued)

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

MOST every time I have taken a group of farmers or students around the wholesale market they ask the same question: "How does the commission man or dealer get his price? How does he know what to charge?"

I have talked to a dozen or more dealers about this and have done a lot of observing as I have traveled around the market. You will find if you visit fifty stores that the price of a commodity of a certain grade or quality will vary but little, even tho the stores may be three or more miles apart.

The best salesmen have developed their years of experience the ability to judge market conditions, to tell how much produce is on the market and by observing the buyers' actions to determine whether their price is right. Prices may fluctuate from day to day but there always seems to be a price that is "right." It might be defined as the price at which produce will sell best. One dealer said, "I never we know what we got yesterday, and if the buyers seem anxious at that price we shove it up a bit. If they hold off, then we may hold it at that figure for a while and if nothing happens we drop it again.

Selling Sense Guides Dealer

It is the dealer who can sense a changing market who is a real success. When things are running along smoothly his "selling sense" may tell him a drop is about due and the best thing for him to do is to clean up the goods he has on hand. Again he may have reason to expect rising prices and he will take a chance, hold the produce over for a day and sell at a much higher price tomorrow.

How can he tell when a raise or a drop is coming? It is partly by the selling sense that he has developed, and sometimes it is an undefinable something called a hunch. It is the same thing that tells you to get in that load of hay before it rains even when the sun is shining. Hunches sometimes go wrong, so the dealer uses all methods of gathering information. He studies the market reports, shipment figures and other information issued by the government and state. He knows what crop conditions are in various sections and what is likely to affect them.

Prices Based on Facts

The large firms keep men stationed in production centers to report to their crop conditions and to talk to the farmers. They receive private wire from various cities and learn the inside conditions, and while they may get a hunch it is most likely to be based on fact.

I have heard farmers and others criticize market reports and say that the fact that low prices are published tends to keep prices down. It is a narrow viewpoint. In the old days when market reports did not exist, were very primitive you hauled your produce to a dealer. If he figured a dollar a basket you had no idea whether that was the right price; if he returned fifty cents you had no basis for complaint. Now you can get unbiased quotations on various lines of produce in practically every large city in the country. You have the opportunity to be as well informed as the commission man. From the dealer's standpoint it would be one of the grandest things that ever happened if all producers stopped receiving and reading market reports. If the United States Department of Agriculture, the Pennsylvania Bureau of Markets and all other agencies disseminating market information stopped their work, the dealer would still know market conditions and would build up his own private bureaus of information, because he knows it pays.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW IS LAME—My cow slipped on the ice last winter. Since then she can't bring her foot forward at times. It seems to catch in the stifle. She walks all right at times. Can anything be done to cure that catch?—B. L. V. T., Centerville, Pa. If the stifle is injured and the condition has existed for some time little improvement may be secured. The daily application of a liniment with massage may be of value. Bathing with warm water or applying hot packs will assist in stimulating circulation to the part.

LACK O' PROPER RATION.—I have a sow that has pigs about four weeks old. I kept her in hog pen on planks till pigs were three weeks old, then turned her out in hog yard. Now she is down in pen, can't get around and has no use of her hind legs. Is there any help for her?—B. W. C., Watsontown, Pa. This condition is not uncommon in sows following farrowing when the diet lacks the proper balance. There is a lack of calcium in the diet and an increased demand made on the sow because of the suckling pigs. Feed a mixture of 100 lbs. corn, 15 lbs. fish meal, 5 lbs. each of oil meal and ground alfalfa. If a forage crop were available, this would take the place of the alfalfa. For a period of ten days add two tablespoons of cod liver oil to the ration daily. See that the sow gets out into the direct sunlight. Recovery should be expected in a short time.

GARGET.—I have a cow that has garget. Two teats are affected. Please advise what to do for her.—T. S. C., Flemington, N. J. Separate the cow from the others. Milk her every hour, if possible, being careful to wash the hands in an antiseptic solution before and after milking. Bathe udder with warm water. Give cow one pound of Epsom salts as a drench. Cut down the ration for a few days.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

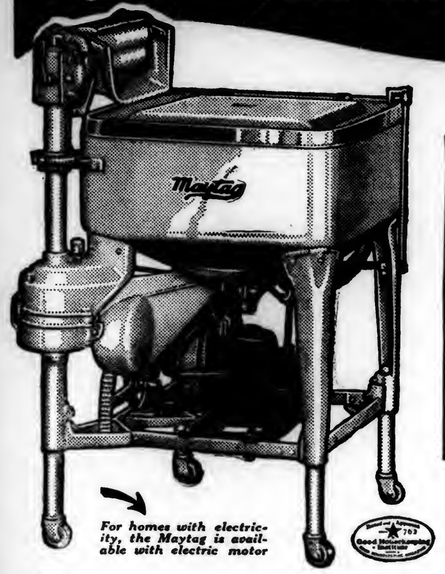
Herb the Handy Man Tells How—

CAKED UDDER IS COMMON IN HEAVY-MILKING COWS.
IS MRS MOOLY STILL TALKING ABOUT HER CAKED UDDER?
OH, MY DEAR- SINCE HER UNCLE DIED AND LEFT HER HIS LONG PEDIGREE, SHE SIMPLY WONT HAVE CAKED UDDER - ITS TOO COMMON!
Milk SEVERAL TIMES A DAY OR LET CALF DO IT. MASSAGE UDDER WITH HANDS.
AH! AT LAST! A CONTENTED COW!
YOU MIGHT EVEN TAKE 'EM OUT FOR A SPIN EVERY AFTERNOON. (YOU MIGHT)
USE THIS OINTMENT:
GUM CAMPHOR—2 TABLESPOONFULS
MELTED LARD—1 TEACUPFULL
EXTRACT OF BELLADONA—1 FLUID OUNCE
HOW DID THAT OINTMENT WORK, ED?
I RECKON IT WOULDA WORKED OK.—BUT GRANDAD TOOK IT FER HIS ANTI-BALO OINTMENT. —NOW HE'S GOT SOFTENING O' THE BRAIN!
OFTEN USED FOR DOGS MANGE.
1 OZ. OF SALTPETER
IN DRINKING WATER TWICE A DAY FOR TWO OR THREE DAYS WILL ALSO HELP
PHOOIE! THIS FLAVOR IS PUNK! HOW ABOUT A SHOT O' EASYPARILY?

A FARM Washing in 60 Minutes with the MAYTAG



For homes with electricity, the Maytag is available with electric motor

Free Trial

You can have a Maytag for your next washing without cost or obligation. If it doesn't sell itself, don't keep it. Phone or write before next washday.

ONE hour with the Maytag Aluminum Washer disposes of 50 pounds of clothes, dry weight—an average family washing.

The Maytag washes so thoroughly clean that no hand-rubbing is necessary, even on collars, cuffs, wristbands or grimy overalls. Think of the time and effort you will save each week—in a month, in a year—time that you can use to advantage.

Powered with Gasoline or Electricity

Whether you have electricity or not, you can enjoy this marvelous washday convenience. The Maytag, for homes without electricity, is equipped with the Maytag Multi-Motor, a compact, in-built gasoline engine as reliable and simple as an electric motor, powerful enough to operate washer and wringer at the same time.

It doesn't tire you to wash with a Maytag. It is so convenient. The adjustable legs make it just your height; the all-metal wringer sets close to the water line, and automatically adjusts the tension for a thin handkerchief or a heavy blanket.

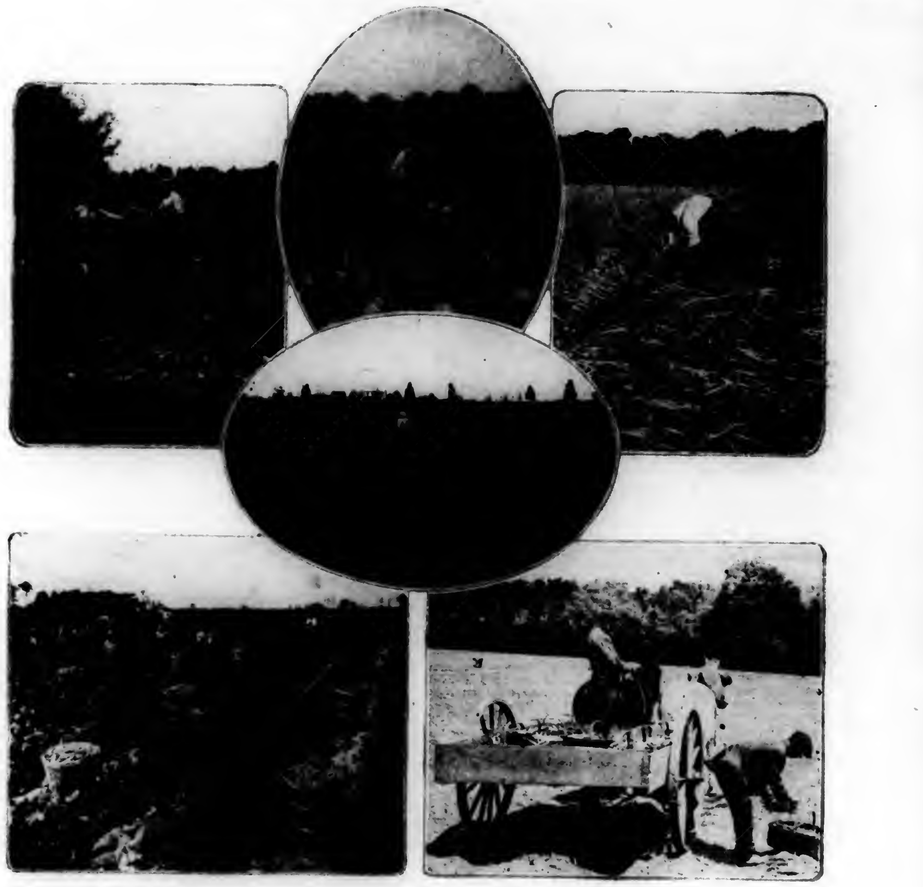
PENNSYLVANIA FARMER

AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY

ESTABLISHED 1880 — PUBLISHED WEEKLY

(Pittsburgh Market Edition)

Vol. 96 — PHILADELPHIA, PA., SATURDAY, JULY 30, 1927 — No. 5



Harvest time in South Jersey. See page 2.

Keep the Men out of the Kitchen—A motto for those who are building or remodeling farm homes. Page 3.

PAPEC
Hammer Type
Feed Grinder
Finer Quality—More Capacity—Feeds Itself
Grinds All Grains, Roughages, etc.

HERE'S a mill built to Papec standards—for Papec guaranteed performance—that has created amazing, ASTOUNDING interest—in its new features, its automatic feed control, its finer QUALITY grinding, its unusual capacity, its low speed design for tractor use—its attractive price.

Customers Delighted — Demonstrations Excel Claims
"Saved me $100 first month grinding alfalfa for 125 hogs" —"rapidly paying for itself Thursdays on custom work for neighbors"—"capacity double my burr mill, feed much finer"—"grinds finer, faster, more capacity with easier power"—"handles cracked corn, soybean hay, clover hay, sheaf oats, cornstalks, etc." Sure death to corn borers. Our demonstrations prove our every claim. Ask for folder No. 20 and prices. Tell us kind of grinding desired—we'll send sample.

Papec Machine Co. 178 Main Street Shortsville, New York

The Name Guarantees The Quality!

DON'T WORRY ABOUT YOUR CORN CROP!

INSTEAD have a reliable Silo in readiness for any emergency. Then if your belated corn fails to mature; is nipped by an early frost, or becomes infested with the corn borer you won't suffer loss. In a Unadilla Silo all such corn becomes succulent, nutritious feed.

The Unadilla is easy to erect and safe to use. Its patented door opening is continuous, with the door fasteners forming a safe ladder all the way up. With a Unadilla, there is no need for the hard lifting or pitching of silage—you simply *push* the silage out at any level.

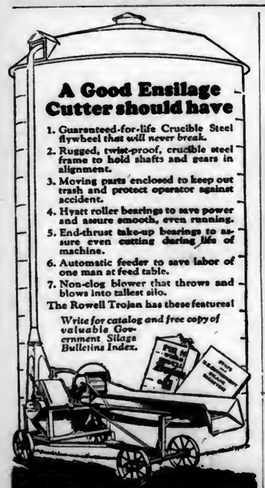
With its great convenience and unique safety features, it is no wonder that the Unadilla is the favorite silo of most leading dairymen.

We have all sizes of Oregon Fir or Spruce silos ready for shipment immediately. The time to order your silo is *now*. Then have it erected and ready to fill at the most opportune time.

You can either take advantage of our liberal cash discount offer or buy a Unadilla on the easy time payment plan. Write for catalog, prices and terms.

UNADILLA SILO COMPANY
Box P Unadilla, N. Y.

UNADILLA SILOS



A Good Ensilage Cutter should have
1. Guaranteed-for-life Crucible Steel flywheel that will never break.
2. Rugged, twine-proof, crucible steel frame to hold shafts and gears in alignment.
3. Moving parts enclosed to keep out trash and protect operator against accident.
4. Hyatt roller bearings to save power and assure smooth, even running.
5. End-thrust take-up bearings to assure even cutting during life of machine.
6. Automatic feeder to save labor of one man at feed table.
7. Non-clog blower that throws and blows into tallest silo.

The Rowell Trojan has these features!

Write for catalog and free copy of valuable Government Silage Bulletins Index.

yes **Judge by Results**

There's one best way to judge anything. That's by *results*. And *that's* the way we ask *you* to judge the Hinman Milker.

You can't tell what a milker can do for you until you try the Hinman.

But you can tell by its *results* that the Hinman is a machine you want on your dairy.

19 straight years of successful results. Not on a few dairies—on *thousands*. Not in one or two localities—*in every good dairy county.*

The Hinman has *proved* itself a milker you can *depend upon* to do that milking job successfully day after day, year after year.

Send for the HINMAN CATALOG

It's a book you'll like. Shows you what the Hinman *has done* and therefore *can do for you*. Page after page of real *experience* —in all climates—under all conditions—on all sorts of dairies. Write for your copy. Drop a card for it today.

Rambles of a Pennsylvania Fruit Grower

XVIII Getting Rich Quick with Avocados

AFTER having witnessed the ups and downs of different fruits for thirty-odd years, I have become rather phlegmatic in the presence of a fruit boom, but I must confess that this avocado boom in southern California gives me pause. It all sounds so plausible and the stories of big profits are so well authenticated that I have had to poke around quite a bit before finding the colored gentleman in the woodpile. There is one, of course, and he turns out to be the same individual who was uncovered successively during the boom days of the apple, fig, peach and other fruits. It appears, in short, that the only man who really makes big money is the one who is in on the ground floor, early in the game. Those of us who come tagging along after rarely get much out of it but experience.

The avocado, improperly called the alligator pear, is a comparatively new fruit in the United States, the long appreciated in the tropics. Twenty years ago it was known to only a few; even now the majority of our millions never saw one. The warty skin of some varieties gives it the name alligator pear. The fruits are roundish or pear shape, greenish or purplish, and range in size from eight to forty ounces. The Mexican avocado, which was introduced in 1863, is distinctively inferior to the Guatemalan avocado, introduced about 1886. The latter is larger, thicker skinned and hence a better shipper, and higher in quality.

The Taste Must Be Acquired

The taste for avocados, like the taste for olives and many other good things, is acquired. Few people like them until after several trials, then they are addicts for life or so long as the pocketbook remains fat. For avocados have been, and still are, a rich man's food. Avocado salad is supposed to be the last word in epicurean delight. The word food is used advisedly for the avocado is as nutritious as lean meat. It contains ten to thirty per cent vegetable oil, which explains why it slips down the throat with such soothing unction. At present prices it would be foolish for any poor man, especially a college professor, to acquire the taste.

About 1910 it began to leak out that the owners of the few seedling avocado trees in southern California were getting $1.50 each for the fruits, and sometimes $1000 a year from a single tree. This fuse set off the explosion. Now there are around 4000 acres between Santa Barbara and San Diego and new plantings are being made or projected every minute. The nurseries are doing a land-office business in trees at $2.50 each which cost about fifty cents to produce. The California Avocado Association, formed in 1915, now has 500 enthusiastic members. These are nourished by Aladdin tales of avocado profits that would make even a conservative Berks County Dutchman wonder whether he is doing the right thing by his family to withhold his hand from his pocketbook. He is told—and it is all true—that Joseph H. Walker, of Hollywood, has a tree that netted $1800 one year and $1500 another year; that many eight- or nine-year trees have returned profits of over $100 a tree; that single trees have yielded 3000 fruits selling for forty cents to $1.00 each; that an acre should yield at least 20,000 pounds; and that the 1925 return of the California Avocado Exchange on 300,000 pounds shipped for its members was forty cents a pound at the packing house for all grades, including culls. In 1926, however, the net of the Exchange was twenty-five cents and some people think it might have been much less if the hurricane had not ruined most of the Florida crop.

Two Views on Future Profits

There is no question about the big profits that have been made by a few growers from single trees. The question before the house, however, is what the owners of these 4000 acres may expect to perceive a few years hence, when all these trees are in bearing. Here is where differences in temperament show up. The sanguine man says, with some justification, that the price will keep up because the area in which the avocados can be grown is very limited. It requires a frostless or practically frostless climate, plenty of water and a deep, well-drained soil. The frostless prerequisite restricts it to a small area in southern California, from Santa Barbara to San Diego, mainly along the coast and in the lower foothills; and to a narrow strip in Florida with Miami as the center. He also argues that the people of the United States do not know the avocado yet and that when the extensive advertising campaign of the Avocado Association gets into full swing it will be only a few years before it will vie with the grapefruit and cantaloupe.

The conservative man, on the other hand, sees the great difficulty in educating the American public to appreciate a new fruit, especially an oily fruit like the avocado. He admits that it can be done, but believes this will take many years and that in the meantime the owners of these 4000 or more acres, representing an investment of over $2000 an acre, are headed for disillusionment, if not for disaster. The truth probably lies between these two extremes.

Climate Included in Price of Land

The most disturbing factor in the avocado situation is the high capitalization. Southern California realtors, notedly of a very sanguine temperament, think nothing of asking $1500 to $2000 an acre for "avocado land." These prices are based, of course, not so much on crop producing value as on the far-famed California climate, which is sold with every acre at a very high figure. They are also based on the high returns that have been secured from avocados up to this time, not on an acreage basis but on the performance of exceptional individual trees. It seems certain that these prices cannot be maintained.

This Week's Cover Pictures

Harvest Time in South Jersey

ALMOST every month in the year is harvest time for the large vegetable growers of southern New Jersey. On the cover page of this issue are some harvest scenes in one of the great vegetable growing sections of the Garden State.

Upper left—Head lettuce, near Deerfield Street, Cumberland County, New Jersey.

Upper oval—Cabbage grown under overhead irrigation, farm of John Marts, near Bridgeton.

Lower oval—Spinach, on Strawberry Farm, near Shiloh. This picture was taken in January.

Upper right—A bumper crop of onions, Cedar Brook Farms, Cedarville. Two acres of this field, under irrigation, yielded 1100 one-bushel hampers.

Lower left—Lima beans on the Page Farm, near Newport.

Lower right—Asparagus on Buttonwood Farm, near Bridgeton.

Keep the Men Out of the Kitchen

Let Mother Solve the Farm Kitchen Traffic Problem When You Build or Remodel

By ARTHUR C. PAGE

IF THE kitchen is the most used room in the farmhouse, the back door undoubtedly carries the heaviest traffic. Sometimes I think, like the tramp who had a button and wanted the lady to sew a coat onto it, that we should build a back door and kitchen first, and then build a house onto it.

We've decided that one back door was not sufficient to carry all the travel that passed thru it in the old farmhouse. Here was mother's work room, where she was hustling every minute, trying to keep it neat, and in spring when the ground was muddy—well, who can blame her for a little impatience. Father was called in from the barn to the telephone—and there across her clean floor—why go on? And when the boys were carrying in wood, the same back door and the same crowding past the stove.

In harvest time when the kitchen was a superheated bake oven, and everything was to be taken up for dinner, here came the men, so mother had to elbow among them for space at the kitchen sink to drain the potatoes and crowd past them as she hurried back to make the gravy. Sometimes they washed out by the pump, and that was a lot more comfortable for everybody. From that came a real idea.

Men Will Have a Special Washroom

In the new house the men are not going to come in by the kitchen door, and they're not going to wash up in the kitchen. There's going to be a separate door and a special washroom. This room will have plenty of space to hang the big sheepskin coats in winter, and will have a bootjack so dad can pull off his boots and put on his slippers at noon. One special place will have hooks for all the boys' work clothes. They drop these most anywhere now, but they solemnly declare that if they had one certain place to put their things, they would always put them there. We'll try it.

This washroom will be remembered when the heating system is planned, and will be warm in winter. There's no health or comfort in leaving coats or boots to get clammy and cold, to chill you as you start out-doors. And there will be water pipes, too, so the room must be heated.

Now that we have diverted the washing up from the kitchen sink, we attack the woodbox problem. That's easy. The woodbox will be built into the wall, so it is filled from the outside. Easier for the boys, more comfortable for everybody. Why didn't we think of it before?

There's another question that centers around the back door, and that's washday. In the old house the washing was done hither and thither, mostly in the kitchen in bad weather. The new house must have a really handy place, with water piped so there's practically no lifting, stationary tubs and a drain pipe for the washing machine.

Laundry Room Will Be Handy and Modern

Lifting is not good exercise for a middle-aged mother. Just where this room will be located is a question. Some people prefer to have it in the basement. This is an advantage in winter, when clothes are hung in the basement to dry, and you remember we are going to have a big clean, dry, cheerful basement. There's some argument for having the laundry room near the kitchen door. For instance, suppose mother has cooking going on at the same time, so she has to keep one eye on the stove and the other on the wash. Suppose she needs to stay close to the telephone. Suppose there's a tiny baby that may wake up and need care. You see, if we were planning a house where there would be a maid and a laundress to do part of the work, these things wouldn't count, but where mother has the whole load as she does in the great majority of farm homes, we have to think of these things.

I've been getting a lot of letters about house planning. One reader says his local builder warned against cement blocks. Said they would crack, etc. That builder should wake up. Cement blocks will not be preferred for every job, but there's no finer building material. Some cement blocks, poorly made, may have cracked. Some biscuits are soggy, but that's nothing against good hot biscuits.

Another wanted to know about insulation. Said his contractor had never heard of it. That's why I'm writing these articles. Insulation of house walls and ceilings is one of the finest new ideas. Saves fuel, adds comfort at little cost.

So here's my suggestion. Some of the best information today is supplied by manufacturers of these products, and you cheat yourself if you don't study it. The old way to start building a house was to begin hauling rocks and driving nails, and make plans as you went along. The modern way—the way to get a good job and your money's worth, is to study the whole job out in advance, and be informed on materials and methods.

I'm glad to help you get any such information if you'll write me.

Remodel Quickly and Easily

WALLboard has increased in use and popularity with phenomenal speed in the last ten years. It deserves to be better known and more used on farms. There is no more useful building material.

There are a couple of dozen trade names and a dozen different grades and qualities of wallboard. All are alike in that they are made in broad sheets, usually 32 or 48 inches to fit over studding set on 16-inch centers. The height of the sheets varies from six feet to 10 feet. There is some light weight stuff put up in rolls, called wallboard. All this is not in the same class that we are talking about.

Some wallboard is made of paper, some of pure wood fiber, some of gypsum plaster with a layer of fiber on the back or in the center. That made of gypsum is usually

Jersey Board of Agriculture Meets at Member's Home

THIS picture of the New Jersey State Board of Agriculture was taken at the home of Laton M. Parkhurst when the regular monthly meeting of the Board was held recently at his home in Hammonton.

At this meeting a dinner was given in honor of Henry Jeffers, of Plainsboro, and Fred Lippincott, of Moorestown, retiring members of the board, both of whom have served continuously for 12 years.

In the picture, front row, left to right: Laton M. Parkhurst, Hammonton; Clifford P. Snyder, vice president, Plainsboro; George Roberts, Keyport; William Tomlison, Kirkwood; William Duryee, secretary, Trenton; Fred Day, Passaic.

Back row: Henry Miller, Princeton Junction; Fred Lippincott, Moorestown; Joseph Frelinghuysen, president, Raritan; Elmer Wene, Vineland.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

"Consider what the wise would think, not what the foolish would say."

The Corn Borer, and Others

AT THE close of the corn borer clean-up season the Department of Agriculture estimated that more than ninety-five per cent of the corn borers had been destroyed. We sincerely hope that the conditions next month will verify this estimate. There was a very general spirit of cooperation evinced by the farmers in the affected districts, and a total of $3,000,000 or $4,000,000 will be paid the farmers who voluntarily aided in carrying out the plans.

It is fortunate that the borer in its larval stage is located where it can be gotten at and destroyed. Many of our pests, as for instance the Japanese beetle, pupate under ground where they are safe from attack and destruction. When they appear as a flying insect they can then migrate to new fields and thus invade new territory.

But even if only five per cent of the corn borer larvae escaped destruction there will be enough to make compulsory a continuation of the war against them next year. There must be no let-up in the effort to control this pest. Corn is the most valuable crop of American farms and anything which would make it impossible to produce corn would be a national calamity.

Keep Awake When Reading

SOME very adroit articles are and have been appearing in presumably high class journals and magazines which, if taken at their face value, will mislead the uninformed. We have reference to the articles which ostensibly discuss agricultural conditions, prospects and practices. A few would-be farm magazines may also be found in the list.

The articles referred to pretend to be exhaustive and authoritative studies of agricultural matters such as cooperation, political conditions, farm practices, agricultural economics, etc., when as a matter of fact some of them are anything but exhaustive and authoritative, or even truthful. It looks as if there may be a studied purpose in printing them. While farmers cannot prevent their publication, they should at least not be led astray so as to reach wrong conclusions.

The Battle with the Aphids

WE DO not remember of ever having seen the aphids so numerous and ravenous as they have been this year. In some places all kinds of trees, roses and vegetables have been attacked, resulting in curled foliage and injured twigs. Many potato fields suffered, also. The makers of nicotine liquids and dusts no doubt profited as this is the only practical material with which to combat them. We have heard some complaints that even this material was ineffective, but in every instance coming under personal observation the cause of failure was in the lateness of application. The dust or spray must be applied when the temperature is right and before any leaves begin to curl. Otherwise, the insects will not be killed.

Roadside Stand Drinks

FARMERS who conduct roadside markets and sell home made drinks should be careful to conform to the state law on such matters. Ice must not be put directly into soft drinks to cool them, drinks sold as fruit juices must be the juice of real fruit, and the water used must be from an uncontaminated source. The legal restrictions are nothing more than sensible precautions and can and should be cheerfully met by everyone who conducts such a stand.

In this connection it may be stated that many stands would find a ready sale for fruit juice drinks if properly made and cooled. Sweet cider, raspberry and grape juice are especially appreciated by the thirsty, but it requires a knowledge of how to make them, and care in serving them. They are not only healthful and nourishing but are more palatable than much of the bottled stuff that is made and peddled thru the country. Many of these are synthetic stuffs containing no nourishment whatever.

Plow Early for Wheat

THERE is small chance of raising a bumper crop of wheat if it is seeded immediately after plowing. The soil should have time to settle and "knit" so that the capillary movement of moisture is reestablished. No crop is more dependent upon a firm soil for a good, quick start than is wheat. For these reasons the wheat ground should be plowed immediately after harvest, and harrowed occasionally until seeding time. This and the pulverizing effect of the weather settles the soil, putting it in ideal condition for giving the plants a quick start.

In this connection, we wish again to emphasize the importance of lime. There is no better time to lime soil than when it is seeded to wheat and grass. If this were followed religiously, most farmers would not be under the necessity of preparing the ground and seeding grass alone. If the soil is prepared as suggested and the timothy sown with the wheat, followed by the clover seed in the spring, it is all that is necessary to secure a hay crop. In some parts of the country no other method is ever practiced.

An Unfortunate Event

FEW thoughtful Americans will not regret the occurrence which transpired the other day in Nicaragua when a clash between the United States Marines and the natives resulted in the killing of about three hundred Nicaraguans. The relations between this country and Latin America have been strained for a good while and this latest happening will not tend to mend matters. The immediate reaction may be glimpsed by reading the speeches made the next day in the Pan American Congress of the Federation of Labor then in session in Washington. It is yet too soon to speak with authority on this matter, yet we can but express our hope that some other way will be found to settle the differences in Central America so as to spare human life and conserve friendly relations.

A Good Old Fashioned Game

ONE of the oldest, simplest, and yet most interesting of outdoor games is quoits, better known as "pitching horseshoes." No arrangements for picnics or other summer gatherings of farmers should be considered complete without plans for this game. It is all the more exciting if contests between men or teams of known ability can be arranged. We shall be glad to publish the pictures of expert quoit pitchers who have won victories that establish reputations. It is not necessary to say in urging this game that no inducement other than the glory of victory should be offered or allowed.

Editorial Sidelights

"THEY won't hurt you. I ought to know; I live with them." The young lady to whom this was addressed was walking down the street ahead of us a few minutes ago. We had noticed the peculiar action which prompted her companion's remarks. Every few seconds she brushed the back of her dress, as if to sweep away any insects that have been stealing a ride. She was trying to keep off the Japanese beetles.

At the next corner a half dozen clerks were playing a new game. It might be called "beetle ball." As the beetles flew by, the players attempted to hit them with a folded newspaper. The winner was the one who knocked the most beetles to the street.

When one of our fellow workers returned to the office from lunch yesterday he brought in eight Japanese beetles on his hat. Straw hats and women's dresses are the favorite perches of the city-dwelling beetles. An occasional scream no longer starts chivalrous men running to the aid of distressed maidens. For now the scream means only that some beetle has attempted to crawl down a maiden's neck.

All of which indicates that the Japanese beetle is a nuisance to city people as well as a menace to farmers. It wasn't so long ago that entomologists seemed rather pessimistic about controlling this invader. The bug seemed so infernally wise that it was difficult to trick him into eating anything not good for his health.

But things look brighter now. The use of coated arsenate of lead has proven a positive method of protection. On Page 13 we are publishing something about the use of this material for the benefit of readers in southeastern Pennsylvania and New Jersey.

FEW DAIRYMEN can have, or would want, a cow barn worth $84,000 or $50,000. Nevertheless, when a man spends that much money on a barn it is interesting to see what he gets for his money and how nearly he is able to approach the hypothetical perfect dairy barn. This week Professor Borland concludes his article about some of the show places of southeastern Pennsylvania and New Jersey (Page 14), two of them equipped with buildings costing the sums mentioned above.

WE PRESENT this week a group photograph showing the members of the New Jersey State Board of Agriculture (Page 31). Since this picture was taken the Board held another meeting, when the president and vice president were re-elected to the same offices for another term. At this meeting, too, the new members, Joseph Walter Miller, of Mercer County, and William I. Tomlinson, of Camden County took up their duties.

CANAL PROJECT RESTS

Enforce Prohibition—Radio Commission Criticised—Diversified Cropping is Widespread.

Washington, D. C.

RECENT developments indicate that a definite agreement between the United States and Canada looking to the construction of the St. Lawrence ship canal will be in the far distant future, if ever. It is found that there is much opposition in Canada to the project. The Canadians are strongly opposed to the internationalizing of their part of the St. Lawrence River.

Secretary of State Frank B. Kellog recently forwarded a note to Canada in which he proposed that the two governments enter into negotiations with a view to reaching an understanding in regard to the improvement of the St. Lawrence River for ocean ship navigation.

In reply, M. L. Mackenzie King, the Canadian premier, stated that the Dominion government preferred to await the report of its own advisory commission before discussing the question with the American government.

At the Canadian Embassy in Washington it is held that Canadians are more interested in the settlement of the Chicago drainage canal problem than they are in the St. Lawrence ship canal.

Liquor Traffic Decreases

At a conference of prohibition enforcement officials in Washington it was shown that the efforts of the government to enforce the law were effecting more satisfactory results than in recent years, and it was announced that the work of enforcement would be pushed forward with still greater vigor.

Dr. J. M. Doran, commissioner of prohibition, declared that the unlawful traffic in alcohol is to end. Assistant Secretary of the Treasury Lowman said that absolute prohibition will be a long, slow fight, but the country eventually will be dried up. He saw indications of a steady improvement in conditions, because of the lessening of the supply of smuggled liquor, rapid diminution of private stocks and the fact that most liquor available for beverage purposes contains more or less poison and is very injurious to the health of the person using it.

Need Revision of Radio Law

The radio law needs revision as to nondiscrimination against minority parties, control over assignments of licenses, trading in licenses and trust features, according to Charles E. Rowe, of New York, who says that one station has a monopoly of broadcasting from the nation's capital.

At a recent conference in Washington Norman Baker, owner of a station at Muscatine, Iowa, discussing the fate of independent broadcasting stations, said that the Muscatine station, which is the only one in America positively connected with a farm organization, the Iowa Farmers' Union, had been cut down without any excuse or justification by the new Radio Commission.

Oppose Publicity of Firms

Should the Federal Trade Commission make public the names of firms or persons charged with unfair practices and who sign an agreement when complained of to quit their unlawful practices? This is a question on which the commission itself is divided. Commissioner Nugent has just dissented from the orders accepting the stipulations and dismissing nine firms on the ground that the cases should be tried in order that the public might be informed of the unfair practices adopted by the respondents and their law-abiding competitors be benefited by increased trade. The majority of the members oppose publicity.

Assist in Taxation Problem

A nation-wide campaign to assist state and local communities in efforts to reduce taxation is being forwarded by the "Better Understanding Between Industry and Agriculture" movement in cooperation with the National Grange, the American Farm Bureau Federation and other organizations.

The course followed is the utilization of mass activity by important state groups. The first step was to interest state farm organizations and state industrial executives, and to obtain their pledges of cooperation. To date signed pledges have been received from 26 states. In each instance the state farm organization leaders and the state industrial executives not only have approved the plan, but have announced their willingness to assist in putting it into practical operation.

There Would Be No Corn Famine

If Illinois and Iowa had no corn crop whatever there would be a shortage but no corn famine in the United States, according to a Washington crop specialist. While there is a well-defined Corn Belt in the Middle West, the South is becoming a leading center of corn production, and prospects are favorable for a large crop of corn in that part of the country. Today the southern states are producing more diversified crops, outside of cotton, than were produced in the entire United States in 1900.—E. E. R.

REALIZE THE DANGERS

Weeds Are Spreading—Peach Trees Are Removed—Will Link Up 60 "Gaps"—Thresh Grain Early.

Harrisburg, Pa.

THE Japanese beetle has made its appearance on both sides of the Susquehanna. As rapidly as circumstances permit demonstrations of spray and other methods of control will be held in the Philadelphia district and then extended into southeastern counties. For the first time people up-state appear to be fully alive to the dangers of the beetle and this is having its effect in areas where the corn borer is expected to appear for more cooperation is being given in the federal-state plans to halt the borer. This will come to a test during the summer's close.

Warns of Roadside Weed Nuisances

Attention is being called by agents of the various branches of the State Department of Agriculture to the manner in which certain weeds have spread from roadsides to fields where they have been unknown for years. Organized and volunteer cutting down of weeds before flowering ends is being urged. The chicory and other weeds have spread in central counties and mustard and buttercup are now subject of warnings in some of the big wheat-growing counties.

Attain Test Record

According to an official announcement by the State Department of Agriculture, 630,000 cattle, or half those in the whole state, have been tested for tuberculosis, some of them more than once. The work is going ahead at a faster rate than ever known in Pennsylvania. This is possible owing to the fact more money has been made available by the state than ever before. The waiting list is away beyond anything ever known, amounting to tens of thousands.

May Offer Farms for Experiments

It is said some of the farms owned by the state institutions may be offered in part for demonstrating methods of handling cattle and plant pests. Success attending forestry operations on such lands has attracted attention to possibilities.

Inspectors Attack Yellows

Inspectors from the State Bureau of Plant Industry have gone into virtually every big peach-raising county this year in the attempt to check yellows and inspecting parties are now covering farm orchards. The inspection is said here to be considerably closer than heretofore and to have caught many isolated trees on farms and even in boroughs. Little difficulty in securing removal of infected trees is reported.

To Build Missing Highway Links

It is estimated $5,000,000 will be required to work out the State Highway Departments' project of linking up the 60 "gaps" between unimproved roads. The latest figures call for the building of 130 miles and the plan is to get the greater part of it under control before Thanksgiving day. When completed this building will benefit 120 towns in 36 counties by opening up better facilities.

Wheat Is Very Late

Wheat harvest in some of the central counties is later than known in years and the amount of threshing in the field is unusual owing to desire to get as much work as possible done before oats are cut. A survey of corn conditions is now being made for revision of previously issued figures.—T. C.

RUN MARKETING TRAIN

Cape May Is Reported Clean from T. B.—Dairymen Will Take Trip To Washington, D. C.

Trenton, N. J.

STARTING on July 18, the New Jersey State Department of Agriculture is running an educational market train on a four weeks' schedule in central and southern New Jersey. The train is furnished with equipment for giving demonstrations on the grading and packing of fruits and vegetables. It has data, charts and exhibits showing how to ship products with minimum damage. The first stop was made on July 18 at Mullica Hill. All of the principal Reading and New Jersey Central loading points will be covered, the last stop being at Port Norris on August 13th.

First County Passes Test

Cape May is the first county in New Jersey to report a complete cleanup under the area plan of T. B. testing in this state. Under this announcement it is declared that every herd in the county has passed the test with every reactor removed.

State Dairy Trip Announced

Dairymen thruout New Jersey will gather as county and local groups to take part in a state dairy tour leaving Trenton August 9 for a three-day run thru the southern part of the state, Wilmington, Del., and to Washington, D. C. Milk producers and breeders from the southern counties will join the tour as it passes thru Mount Holly, Woodbury, Woodstown and Pennsgrove. The tourists anticipate being in Washington at seven in the evening. The United States Department of Agriculture, government experiment farms and other points of interest will be taken in during the following two days. Some counties have engaged large touring buses for the journey. The county agents in each county have charge of the organization of local groups.—W. H. B.

GRANGE LEADERS MEET

Stress Cooperation Among Farmers—Dairy Production Increases Above Year Ago June.

Ithaca, N. Y.

GRANGE leaders from Pennsylvania and Ohio recently met New York State Grange leaders at Syracuse College of Agriculture to consider ways of doubling the latter state's membership and to increase the number of active workers. J. Audley Boak, state master of Pennsylvania, pronounced Grange work the best kind of community work and recommended wider cooperation between farmers, particularly in marketing. C. A. Dyer, overseer of Ohio State Grange said that Ohio is 20 years ahead of New York in cooperative activities. He sees great things in common in the three states and believes that if they work together they could dominate the agriculture of the East. He believes farmers must know more of the facts relating to their business and must work together if they are to avoid peasantry.

Dairymen Respond by Production

Production of Dairymen's League members in the Madison-Onondaga sub-district showed an average production increase of 10 pounds per dairy over June of last year. If this can be held all thru the fall months over League territory more than the needed amount of milk to meet increased demands will be secured and the New York City Board of Health will not need to admit western milk. A ten-county inspirational meeting is being planned for dairymen of central New York to be held in Syracuse August 27th.—M. G. F.

County News and Comment

Adams County, Pa.—The weather has been very favorable for all crops during the past month. Corn has made rapid growth, not more than one week late now. The fly was very bad in our county and wheat is poor. Some farmers cutting it for hay. Hay crop very heavy. Oats good. Milch cows are holding up well as pastures are good. Potatoes promise a good crop. Apples and peaches doing well except considerable scab on apples due to wet weather in the spring. Prices: corn, $1; wheat, $1.25; oats, 50c; milk, $2.20; eggs 22c.—A. R. July 19.

Gloucester County, N. J.—The first hot wave of the season struck the county this week and caused considerable damage to early tomatoes. Other crops have suffered from the intense heat and the continued drought but the loss will not be large. Tomatoes are high, growers still receiving $4 per crate, an unknown price at this time of the year. The crop is the lightest ever known in South Jersey. The apple crop is ripening and the growers are receiving the highest prices in recent years. Some of the fancy fruit has been moving into market at $3 per bushel. Late fruit gives promise of a large crop this fall. In many orchards the set is as heavy, if not heavier, than last season. The sweet potato crop gives evidence of being the poorest in the last twenty years. Despite unfavorable weather and crop conditions, prices on most commodities are good and the growers are rather optimistic over the situation.—A. K., July 15.

Greene County, Pa.—Very little rain in July to date. Water in streams very low. Early potatoes suffering. Corn growing nicely, but very short for time of year. Wheat nearly all cut, yield good. Hay very good. Cutting began early. Oats probably will be above the average. Wool all sold, price 40c. Much activity in oil and gas fields.—C. M. K., July 16.

Lebanon County, Pa.—On July 14 a wheat field meeting was held at Wayne Keller's farm, Millbach Springs, and on the 15th one was held at John Umberger's farm, Fredericksburg. Different varieties of wheat were pointed out, condition of stand, resistance to disease and insects, straw, etc., by H. B. Musser, crop specialist of Pennsylvania State College. Hay now all in; was of fine quality and quantity. Wheat harvesting is in full swing. Crop mostly good. Oats a splendid crop, is yellowing. Feeder cattle being brought in. We have just had a week of record breaking heat which was followed by much needed showers. Heat made corn jump ahead. Early potato tops going back. Late, in fine condition. Blackbirds pulled much sweet corn out of patches. Farmers help each other during hay and harvesting seasons. Labor hard to get and strange hands need watching. Eggs, 24c; new hay, $15; fat butcher calves, 12c; feeder cattle, 8c; corn, 80c@$1; duck eggs, 40c; goose eggs, $2.40; young roosters, 18c up.—E. L. W., July 19.

Mifflin County, Pa.—Good weather for drying hay which is a large crop. Wheat cutting is in full blast and several days more will put it all on shock. All indications are there will be a large yield. Corn is very much back, few fields have corn over twelve inches high but nearly all fields have a good stand. Bratton Township T. B. testing has been on since July 5th. So far all herds have passed except one of Swiss, which were all reactors and will be moved tomorrow. Prices: wheat, $1.30; corn, $1.10; oats, 50c; butter, 45c; lard, 15c; chickens, 20@25c; potatoes, $1.50.—J. H. B., July 14.

Salem County, N. J.—South Jersey is on the eve of digging one of the biggest white potato crops in recent years. Indications now point to an average yield of 60 barrels an acre. Wheat is turning out a big yield with many fields going beyond 40 to 45 bushels per acre. This is the second bumper crop in succession. Prices continue high with millers offering $1.50 per bushel from the field. There seems to be plenty of labor for all harvest requirements, even the prices are high. Most of the farmers are paying up to $5 per day for help to shock wheat and to help with the threshing. Corn is the poorest in many years.—E. M. B., July 15.

THERE is no more delightful music to the ears of a farmer than the sound of falling rain after a scorching dry spell. Such music we listened to on the evening of the sixteenth, and Oh, how joyfully we heard it! For three weeks we had none to speak of, and for the last week the thermometer registered in the 90's every day. The surface soil was dry as powder and some of the small plants stood still. But on the evening mentioned we had an inch of rain, followed by continued warm weather and vegetation fairly jumped.

✦ ✦ ✦

WE WERE thankful during the hot, dry spell that we had not put manure in the bottom of the melon hills, as usual, else the plants would have dried up. As it was, they grew right along. Melons root rather deeply, and they had sent down a tap root into the moist, decaying alfalfa sod and grew rapidly. We have sprayed them twice so far with Bordeaux. There have been some beetles (cucumber) but the spray acts as a deterrent and they have done little damage. A pinch of nitrate of soda was placed on each hill near the plants, and the rain did its part at once.

✦ ✦ ✦

WHEN the temperature reaches ninety-four and over I cannot work with any satisfaction any more. Probably age has something to do with it, but I would like to think that atmospheric conditions have changed. During the intensive heat I have an uncontrolable urge to sneak off into the shade and stay there until the shades of evening bring relief. Even thinking is too much, so I "just sit." Food for hot weather should be composed chiefly of fruit and vegetables, and drink should be limited to fresh water from the spring or well. Swilling large quantities of iced drinks during a heated spell is not only foolish but dangerous.

✦ ✦ ✦

WE PUT up a good mow full of timothy and alfalfa hay the week before the hot spell began. It was cured in cocks and put in without any rain. I am old fashioned enough to believe that the old way of curing any kind of clover hay is best, altho it is a little slower. As soon as the clover or alfalfa is well wilted in the swath, rake it up and put it in well-built cocks of about 100 pounds each. Leave it so until it "sweats out," then haul it in. You will have nice green hay containing all the leaves, and little danger of mow burn or spontaneous combustion. This was the thirteenth time the field has been mown since it was seeded and we had about two tons to the acre.

✦ ✦ ✦

THE CUTHBERT raspberries have been yielding a good crop of fine, big berries. They have fooled us somewhat, because we believed that the frost which occurred while they were in bloom had injured the blossoms. The dry weather we have been having was in their favor. Nothing makes raspberry harvesting more precarious than a period of moist, sultry weather. The berries will "go down" at such times very quickly. I have seen them "grow whiskers" in six hours.

✦ ✦ ✦

SO FAR, we have seen no Jap beetles, altho we had a few last year. I knock on wood as I make the statement, because they are on the job in droves of millions in many places. I read many brave words about the fight the official inspectors are conducting, but in the same paper I read of the persistent spread of the pest. It is casting a lot of money to do something which is not being done,—viz., stop the spread of beetles. However, it is not the officials' nor the inspectors' fault. The thing is impossible. I well remember man's fruitless efforts to stop the spread of the chestnut blight several years ago.

From the Week's News

THE government's annual budget provides only 10 cents per man, woman and child in the United States for research and extension work of the United States Department of Agriculture, whereas "promotion of marine transportation" gets 54 cents and "national defense" gets $4.65 per capita, says Charles J. Brand, executive secretary and treasurer of the National Fertilizer Association.

$ $ $

Roadside stands and small drink-dispensing places must meet the requirements of the state beverage laws the same as large bottling plants. Stands dispensing drinks are being given special attention by the Pennsylvania Bureau of Foods and Chemistry to make sure that the drinks are free from ice and that polluted water is not used.

$ $ $

IN AN ATTEMPT to prevent forest fires starting along railroads, the Pennsylvania Department of Forests and Waters, in cooperation with the Pennsylvania Railroad, planted evergreen seedlings this spring on four hazards along their right-of-way.

It is thought that by the time sparks from locomotives have filtered down thru the thick mat of green needles all life to start a fire will have burned out. If this experiment proves successful many more plantings will result.

$ $ $

FOREST TREE seedlings will be furnished to Pennsylvania farmers by the State Department of Forests and Waters at $2.00 per thousand and transplants at $5.00 per thousand. An order of less than 500 trees of any one species will not be shipped. Trees cannot be secured for use as windbreaks or Christmas tree planting. A penalty of three times the value of the trees sold is imposed on anyone selling the trees for ornamental purposes, but all owners are at liberty to dispose of thinnings as they see fit.

$ $ $

THE GIFT of a 1750-acre forest to the Department of Forestry of Cornell University has been made by the heirs of the late Matthias H. Arnot, of Elmira. The tract which will be known as the Matthias H. Arnot Forest is only 21 miles from the Ithaca-Elmira State Highway. It will be used by the university for forest research, instruction and demonstration.

$ $ $

Ice cream consumption per person showed a decline from 2.83 gallons in 1925 to 2.77 gallons in 1926. Cool weather last year is the reason given for the lower per capita consumption. Estimates by the Bureau of Agricultural Economics show an increase in total ice cream production for the year even tho less was consumed by each person.

$ $ $

PROBABLY THE FIRST tribute tree planted in honor of Colonel Lindbergh is a white pine tree planted by the Children's Alpine Club on June 4, in the Bald Eagle State Forest of Pennsylvania. Miss Rae Phillips, age 10, president of the Children's Alpine Club, recited an original poem, and Forest Ranger Wentzel prepared an appropriate sign to fasten to the tree.

$ $ $

That the bee is a worker is no myth. The value of bees to Germany has been estimated by Professor Enoch Zander, Erlanger University, to be $70,000,000 annually. He bases his valuation on the fact that billions of blossoms are fertilized every year by the bees of which there are said to be 65 billion in Germany. Fruits, flowers and vegetables all owe their fertilization to the work of the bee as it carries pollen from one blossom to another.

$ $ $

TO PRODUCE a "ton litter" with six pigs is a feat being attempted by A. A. Feighner, of Cambria County, Pa. This has never been accomplished in the United States. Last year one of Mr. Feighner's "ton litter" pigs weighed 365 pounds on the 180th day. To win the award this year with only six pigs in the brood, the porkers must average 334 pounds.

✦ ✦ ✦

Cash prizes offered at the twenty-first annual National Dairy Exposition which will be held at Memphis, Tennessee, this fall total $29,250.00. Prizes of $5240.00 are offered by the National Dairy Association in each of the five dairy breeds—Jersey, Ayrshire, Brown Swiss, Guernsey and Holstein. The Holstein-Friesian Association of America has in addition offered $2500.00 in special prizes for that breed, and the Brown Swiss Cattle Breeders' Association will give $550.00 in special prizes. Entries in all classes will close September 24th.

The Cheerful Plowman

Old Ephrim Gray

SOME folks make fun of Ephrim Gray, he has his own peculiar way; he wears old fashioned beard and hair and drives a queer old fashioned mare. He's stiff and formal in his talk and stiff and formal in his walk. He has about him first and last the flavor of the dying past; he has about him, I would say, credentials of a former day! Boys call him "Whiskers," "Moral Law," "Elijah," "Job," "Methuselah."

Some folks make fun of Ephrim Gray, and smile at all he has to say when at a meeting any place he rises in his ancient grace. They smile when in an olden style he lays down figures by the mile to show this or that is true and states his most emphatic view. They smile at poor old Ephrim Gray, they smile at all he has to say, but listen—when at last he's thru and hearers vote on what to do, nine times, I reckon, out of ten, both older folks and younger men, do as old Ephrim Gray suggests—he seems the host and they the guests!

Why is it? Well, that's plain to me! In spite of ancient dignity old Ephrim Gray is true as steel and straight and square in every deal! Tho folks may smile at all his ways they know his judgment never sways, they know he thinks before he speaks, and tests the bridges on the creeks before he tries to drive across; they know he thinks of gain and loss in cool, unbiased, earnest way before he has a word to say. Some folks make fun of him, 'tis true, they smile when he proclaims a view, yet smile or not, they know the MAN and when he's thru accept his plan!—J. Edw. Tufft.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

The Mother-in-Law of Successful Business Applied to Gardening

WITH all that fertilizer experiments and soil researches have taught us about maintenance of fertility we are still going a great deal by guess when we try to decide what course is safe or best on our own particular farms. Experience has been termed the mother-in-law of successful business. It cannot be questioned that this is doubly true as applied to farming.

Liberal applications of stable manure long have been the backbone and often all the rest of the fertility program in vegetable production. Experience in growing vegetables without stable manure is for the most part more recent. Growers here and there and some few gardening sections have come to place their main reliance upon commercial fertilizers, lime and green manures.

A new patch of asparagus which is now in its second year tells a very interesting story of the effects of past cropping. In 1922 the whole plot was in sod. Early in 1923 the sod was turned and the piece was planted to cabbage. Rye was sown following the cabbage and the plot was worked in two parts beginning in 1924. The rye was turned down on part of the area and market garden crops were grown in 1924 and 1925 using commercial fertilizers only with one green manure crop each year.

On the other part, the rye was cut for grain and this piece remained in sod during 1925. In April, 1926, asparagus was planted over the greater part of the area. This season, a year and three months later, the asparagus following annual cropping with vegetables, plus green manures, was 50 per cent larger and more vigorous than that following the sod. We are entitled to our own conclusions but it looks very much as tho the soil built up faster where it was well fertilized and used for vegetables every year. The green manure crops then licked up surplus plant food and returned this balance the next year along with added organic matter.—G. S. W.

Yours for the Asking

THE following timely publications may be secured free of charge by sending a request to the Pennsylvania Department of Agriculture, Harrisburg, Pennsylvania:

Circulars No. 1, Sprays to Control Garden Pests; No. 6, The Common Bean Weevil; No. 19, The Grape Spray Schedule; No. 29, Raspberry Diseases; No. 33, Tomato Leaf Spot; No. 37, The Squash Bug; No. 42, Cabbage Maggot Control; No. 47, To Eradicate Ants in Houses; No. 50, Cucumber Pests and Diseases; No. 56, Late Blight of Celery; No. 57, Peony Blight; No. 59, Cherry Leaf Spot; No. 78, Summer Sulphur Sprays to be used in Peach Spray Schedule; No. 83, White-marked Tussock Moth.

The Snail's Pace Kills

A "SNAIL'S PACE" may cause speedy destruction of vegetable crops. Snails have descended upon some of the gardens around East Stroudsburg, Pa., in such large numbers that the crops are almost entirely destroyed. Altho slow they may destroy the foliage of lettuce, beans and other vegetables in a very short time.

A dusting of the foliage in the evening when it is wet with dew with fresh air slaked lime is the remedy given by County Agent R. M. Decker. This will dry up the snails as well as greatly benefit the plants.

Cooperatives Discuss Milk Balance

THE woman of the farm is cooperative agriculture's greatest ally, according to D. J. Carter, of the Dairymen's League. "Women are active partners on our farms, and why shouldn't they be also in our cooperative marketing work?" he asked as he outlined the membership projects of the Dairymen's League during Dairy Week at the American Institute of Cooperation which was held at Chicago from June 20 to July 16th.

H. D. Allebach, president of the Interstate Milk Producers' Association, described in detail the Philadelphia selling plan for marketing the members' milk and discussed the necessity of producing enough milk to meet the demands of the market and the curtailing of unnecessary surplus.

B. F. Beach, secretary of the Michigan Milk Producers' Association, told the Institute that the chief problem of the milk cooperative is that of adjusting the balance so there is neither too much nor too little milk. The power of the fluid associations to dictate world prices is very limited.

The Man Who Tells the Public Sells

OLD fashioned sugar peas, the edible podded kind, are scarce on many markets. They are proving a great attraction on the roadside market and are indeed a delicious vegetable. It is important that they be picked before becoming old and woody. The variety Mammoth Melting Sugar has done well. It grows tall. Support is usually provided altho good crops may sometimes be grown without support if the land is well drained and rows are spaced four feet apart.

Daily newspapers in many of the larger towns and smaller cities carry so-called "Local Reader" advertisements on the last page. Rates are not high in proportion to circulation. Copy received up until 11:00 A. M. is usually acceptable for the same day's evening paper and may be sent in by phone. This speedy service is a real attraction to the roadside market operator. In the middle of the forenoon he knows what he will have in quantities that will demand extra punch in order to sell out. Perhaps something is new that day or an especially fine lot or favored variety has come in. The old argument of drawing trade by good merchandise is as sound as ever. However, the fellow that tells the general public what he has to sell is usually a jump or two ahead.

There is a good deal of evidence that a modest advertisement appearing rather regularly on a certain page is a better investment than sporadic splurges. Folks acquire the habit of looking for the regularly appearing advertisements of things which interest them.

The Vegetable Growers' Association of America will hold its annual convention in Syracuse, New York, August 22 to 27th. Pennsylvania growers can scarcely afford to miss with this meeting within a day's motor drive.

At a busy season one can scarcely afford to leave his business. On the other hand, I have never met a grower at these conventions who was not enthusiastic over new things he had learned, new friends he had made. On to Syracuse!—Gilbert S. Watts.

Health propaganda based on the discovery of vitamins has been a boon to the dairymen in the opinion of Henry H. Woolman, Philadelphia dairyman. He paid tribute to the work done by the National Dairy Council, in the public schools and other institutions that private agencies could not reach.

"In the future if the world's dairy production is to be maintained and expanded on a profitable basis, more attention will have to be given to the development of markets. Producers must concern themselves more with the most economical methods of distributing their products and with increasing the demand for dairy products," was the closing message given by Lloyd S. Tenny, chief of the Bureau of Agricultural Economics, Washington, D. C.

Visit Rip's Country

A MONUMENT will be erected in honor of the Jonathan apple tree at the place of its origin, Woodstock, New York, when the New York Horticultural Society meets there on August 12th.

Nestled at the foot of the Catskill Mountains only ten miles from Kingston, Woodstock is near the haunts of Rip Van Winkle. The state of New York is this year celebrating the one hundred and fiftieth anniversary of the battle of Saratoga and the maneuvers in the Hudson River Valley. The whole region provides an unusually interesting setting for this annual gathering of fruit growers.—H. B. T.

Governor Completes Show Commission

GOVERNOR FISHER recently designated the three persons who will complete the nine members of the State Farm Products Show Commission.

The Commission now includes: Governor John S. Fisher; Dr. C. G. Jordan, Secretary of Agriculture, chairman; R. L. Watts, dean of the School of Agriculture, Pennsylvania State College; M. S. McDowell, director of agricultural extension work, Pennsylvania State College; Raymond G. Bressler, Deputy Secretary of Agriculture; H. C. Petterolf, Pennsylvania Department of Instruction; H. D. Allebach, president of the Interstate Milk Producers' Association; Miles Horst, secretary of Pennsylvania Potato Growers' Association; John H. Light, secretary of Pennsylvania State Grange.

The duties and powers of this Commission are: (1) To formulate plans for, conduct and manage the State Farm Products Show; (2) To lease buildings for holding the Show until such time as the Commonwealth shall acquire a permanent site; (3) To lease a space to exhibitors after the Commonwealth has acquired a permanent site; (4) To use the proceeds from subletting or leasing space to exhibitors to pay the expenses of holding the annual show; (5) To arrange for the holding of agricultural and educational meetings in connection with the annual exhibition.

Tested Stock Replaces Reactors

FOUR dairymen of Bucks County recently received a carload of 10,000-pound cows from Tioga County, Pa., to replace those lost in the tuberculin test. The stock, selected by Dr. J. N. Rozenberger, was shown to be free from both tuberculosis and contagious abortion. This is one of the first large shipments into southeastern Pennsylvania of cattle that were subjected to both the tuberculin and the abortion tests.

There were twenty-five cows and three bulls in the shipment, all of them Holsteins. Twenty of the cows are purebreds and have an average production of 10,000 pounds to their credit.

They Are Better in Every Way

Materials that wear longer, workmanship that is faultless and performance that is efficient under any condition—these are the qualities which contribute to the superiority of the

John Deere-Syracuse No. 821 Hillside Plows

Do equally good work in level land.

White iron or tempered steel moldboard—adaptable for a variety of soils. Two-piece spring-steel truse-style beam, guaranteed not to bend or break.

Ample throat room and close-fitting joints prevent clogging.

Body swivels on chilled bearings—locks and is released by foot latch.

Renewable shoes protect standard and serve as landside.

JOHN DEERE

Important To Employers!

The Workmen's Compensation Act became effective Jan 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedules.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—I help with the out-door work. We have ten head of cattle. I have lots of fun when I leave the young bull out. He is real frisky. We call him Barney.

We have four horses but two aren't able to be used. Diamond is a riding and driving horse. In the summertime I ride him after the cows. One morning he jumped off all four feet. Our driving horse was on the race track once and is an expert pacer. At times he won't let any car try to pass him.

We have a cat that plays most all the time. It has a squirrel's tail to play with.—Marian Heckbotham, Mercer County, Pa.

Dear Cousin Ruth, Forum Members and Friends:—We just had Chautauqua here in our town and it was just great. It is coming back again next year.

I suppose that some of you people are busy picking strawberries or helping to plant? We have our planting all done. We are going to make hay this week and I'll be glad for I just love to work out doors.—Dorothy Hess, (X), Sullivan County, Pa.

Dear Cousin Ruth:—I am a farm boy. For pets I have a dog, which I call Ted, and two lambs. For work I hoe in the garden and help milk. I like to read the Forum page.

I have twin sisters, their names are Helen and Harriet and they would like to write, too. They are six years old.—Robert Knepper, (X), Fulton County, Pa.

Dear Cousin Ruth and Forum Friends:—I live in the country and like it almost better than I would in the city or town. We have ducks, chickens and rabbits. Sometimes

MY BROTHERS AND NIECE
Helen J. Fauser, (X), Lancaster Co., Pa.

my brothers have as many as 70 young rabbits. They enjoy feeding and tending them.

I am sending a picture of my two brothers and my little niece.—Helen J. Fauser, (X), Lancaster County, Pa.

Dear Cousin Ruth:—I am glad we have a page all to ourselves. It is so nice to read the letters sent in by the Forum friends. I am going to send a recipe for peach ice cream. I am sure you are hungry for some.

PEACH ICE CREAM

1½ cup of peach pulp
1½ cup of sugar
The juice of one lemon
1 quart of cream and a little milk

Mix together and freeze.—Sylvia Spencer, Clearfield County, Pa.

Dear Cousin Ruth:—I received your letter and am very much pleased with the pin. Thank you very much.

Just outside the window Mr. and Mrs. Wren are very busy feeding their little family. They have built their nest in a small hole above the window for several years. One day an English sparrow found their little home and tried to destroy the nest but the hole was too small for it to enter. The wrens seemed very much excited. They flew at their enemy and tried to peck the sparrow and at last drove it away.—Faith Lehigh, (X), Adams County, Pa.

Dear Cousin Ruth and Forum Friends:—I wish some of you folks who do not see many flowers could have been here a week or two ago to pick some that I saw around my home.

I am sending a recipe for the cake I baked for our school picnic.

SPANISH CAKE

½ cup butter or lard
1 cup sugar
2 eggs
1¾ cup of flour
3 teaspoons baking powder
1 teaspoon cinnamon
½ cup milk

Bake in greased pans from 35 to 40 minutes. Cover with your favorite icing.—Mary Maher, twelve (X), Clearfield County, Pa.

Dear Cousin Ruth:—My brother has a bicycle and I can ride it. I just learned to ride it this year.

My smaller sister and I went with my brother Saturday when he was going to work.—Corinne Taylor, (X), Lackawanna County, Pa.

Dear Cousin Ruth:—I like to work in the fields. Last summer my sister and I cultivated the corn and potatoes. I rode the horse and my sister guided the cultivator.—Mary Phillippi, thirteen, Lawrence County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm. We have two horses, one is black and one is white. It is about time to make hay. I like to drive the horse in the hay fork to put the hay in the mow.

I received my Forum membership pin and I thank you very much for it. It is very pretty. We are erecting some new buildings around our home now.—Maria Wilson, (X), Fulton County, Pa.

Dear Cousin Ruth and Forum Friends:—For pets I have a Collie dog, his name is Dash. He is very pretty. He will run after crows or anything he sees flying in the sky. I have a pet kitten. Its name is Cubby. I called him that because he looks like a bear. We have over a hundred little chicks and forty-one little turkeys. They are all growing. At our church on June 12 we had Children's Day Service. It was very good.—Doris E. Witter, Fulton County, Pa.

Dear Cousin Ruth:—The last day of school my teacher and my class went to Watkins Glen, New York.

For pets I have a dog named Driver and a pair of doves. When the doves are hungry they will fly and light on my shoulders. I also have seventeen little ducklings. Six are beginning to feather.—Thomas Fenner, (X), Bradford County, Pa.

Dear Cousin Ruth and Forum Friends:—I was on my vacation last month. I had a nice time. We are going to start to make hay soon. Then I will be glad for the nearly wagon and hauling it to the barn. We had a lot of strawberries but they are almost done. We are going to have a lot of raspberries.

We have one cow, two horses and a bulldog with a black eye.—Velma V. Richardson, thirteen, Beaver County, Pa.

Dear Cousin Ruth:—As some of the cousins tell about their trips, I will tell about my trip to Altoona. One Sunday morning this summer we drove to Altoona to Mr. Park's chicken farm, where we ship our eggs, to see his chickens. We saw about 9000 of all sizes. We ate our dinner at the Park home on the lawn. After dinner we motored on to Day Side Park. I was on the sky rocket and in a boat. After we were there a while we started for home. We had a very nice time.

I am taking sewing lessons this summer. We all belong to a sewing club. We named our club "The Clearidge Hikers." We go once a week. I took piano lessons last summer but I haven't taken any this summer. I like to take music lessons.—Madeline Pepple, (X), Bedford County, Pa.

Dear Cousin Ruth:—We live on a farm eight miles north of Bedford

DAN
Mary Dively, (X), Bedford County, Pa.

I am sending you a picture of our bird dog. He likes to swim.—Mary Dively, (X), Bedford County, Pa.

Dear Forum Friends:—I live on a farm near Greenmount. We started to cut wheat on July 9th. We finished one field and started on a field of six acres.

Our school closed June 10 and I was glad when I saw that I passed into the seventh grade.—Diantha Zumbrun, Carroll County, Md.

Dear Cousin Ruth and Forum Friends:—I live on a farm of 167 acres. We have a peach orchard and apple orchard. Our little White Rock peepies are surely cute. In the mornings and evenings I help to milk. Our cows are to be tuberculin tested the end of the month.—Chloe Stever, (13), Huntingdon County, Pa.

Announcing Another Contest

DEAR FORUM BOYS AND GIRLS:—Last week I promised to tell you a secret, didn't I? Well, I'll try not to keep you in suspense any longer. You all know at least that we're going to have another contest. I asked you a few weeks ago what kind of contest you like best. Many of you asked for an original story contest so that's what we're going to have. The subject of our contest will be

How I Would Like to Spend My Spare Time

All of you have something special that you'd like to do. Now you can tell the Forum cousins of your plans and it will help us get better acquainted.

I shall not limit your composition to a certain number of words. However, in selecting the winners I shall consider general interest and neatness. There will be six prizes, three for Forum friends over twelve and three for those twelve and under. There won't be many rules for you to follow but I'll ask you to read the few we do have carefully.

In the upper left hand corner of your paper write the word "contest." In the upper right hand corner write your name, age and address (including county).

Please do not fail to tell me the name of the county in which you live.

Should you write another letter to the Forum at the same time please use a separate sheet of paper.

All contest contributions should be addressed: The Forum Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa., and should reach me on or before the 20th of August.

OUR LITTLE FOLKS PUZZLE CORNER

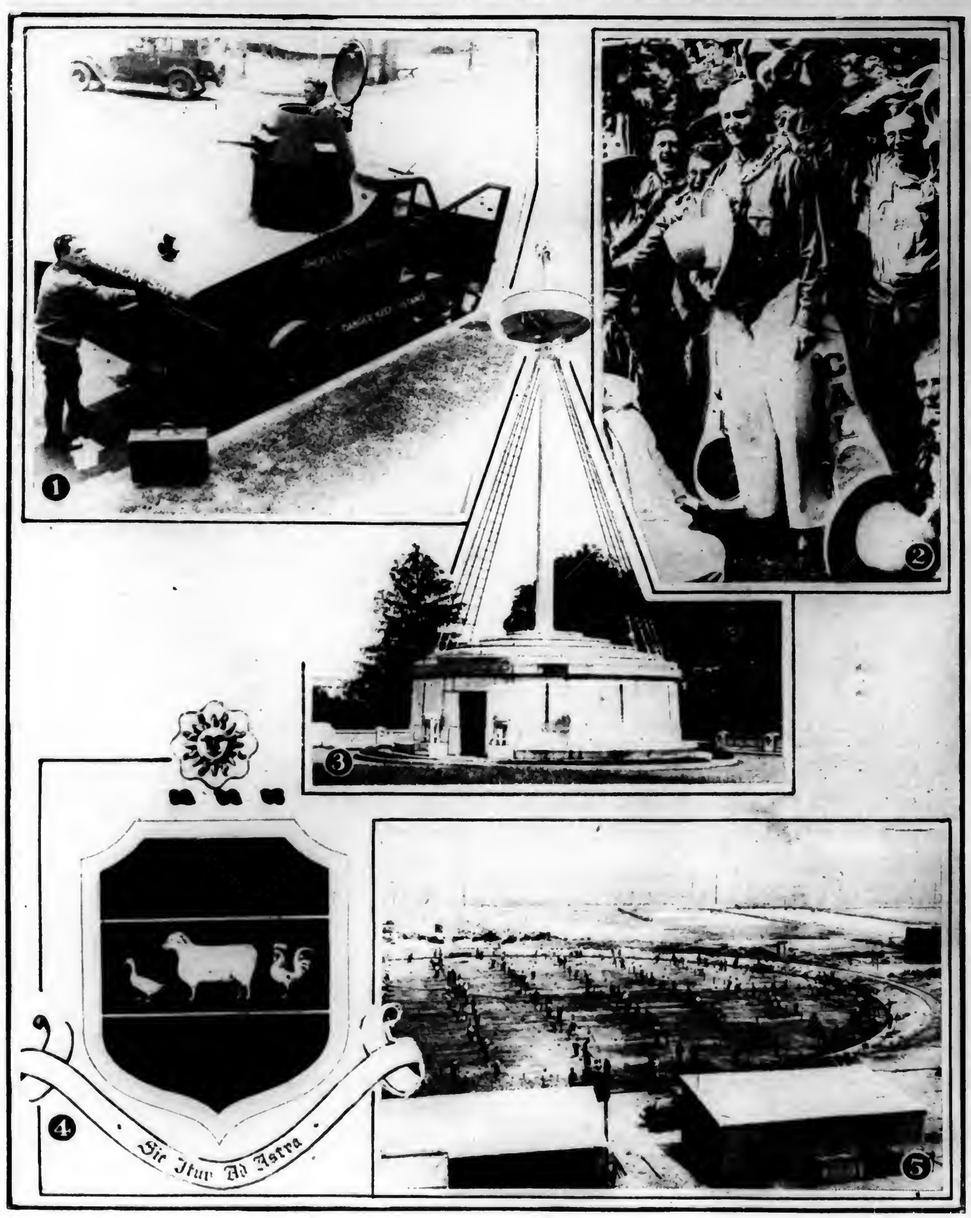
DEAR LITTLE FOLKS:—There are drowsy days in summertime even if at other times we are very busy indeed. Sometimes when one is just dropping off to sleep words and thoughts come into one's mind all turned around almost any way, and the next thing we know is that we have slipped into the land of dreams where our everyday thoughts dance about just as they please. It looks as tho I must have dozed off to have thought of this strange little verse. But if you are wide awake—and, from the answers you send in, I believe you are—you will soon notice some familiar words which will give you a hint what it's all about. When you have arranged all these words (and no more than these words) into a little verse you all know, let me have your answer on a postcard or in a letter by August 6th. BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

A Christmas thumb and a Jack he
A little pie Horner out said
In plum what his eating and pulled boy
A corner sat I put am good in

The answer to the puzzle about the hidden food (in the July 9 issue) is: BEEF, SPINACH, EGG, HAM, BREAD, PORK, POTATO, MILK, CORN, COCOA.

The prize winners are: Lois Burlingame, age 11, Spartansburg, Pa.; Timmie Case, age 10, Milford, Pa.; Marjorie Dibble, age 11, Tunnel, N. Y.; Adeline Fatley, age 13, Wilmington, Del.; Ruth Long, ago 10, Almont, Pa.; Dorothy V. Myers, age 12, Westminster, Md.; Charles Pugh, age 11, Oxford, Pa.; Ethel Rogers, age 13, Ulster, Pa.; Hilda M. Stauffer, age 12, Vernfield, Pa.; Frank C. Thomas, age 9, Aspers, Pa.

PASSING EVENTS IN PICTURES



1.—One of the newest types of armored cars used by banks for the transportation of valuables has windows of bulletproof glass, tires with sponge tubes which cannot be punctured, and a revolving turret from which the guard can throw the car out of gear at any time. In addition, the armor of the car is electrically charged so that any thief will get a severe jolt.

2.—President Coolidge in the cowpuncher's costume which was presented to him at a recent celebration.

3.—The mast of the battleship "Maine" stands in Arlington Cemetery, Washington, as a memorial to those who died when the famous vessel sank in Havana harbor before the Spanish-American War.

4.—The Balloon Corps of the Army paid a belated tribute to the first passengers of a lighter than air craft by selecting them as part of its coat of arms. A duck, a sheep and a rooster ascended at Versailles, France, in 1783.

5.—When this huge 370-ton foundation for a municipal gas tank was lowered into place in Long Beach, California, 280 men labored with 250 jacks for five hours.

Color and Design Will Transform Shabby Walls

NONE of us feels well-dressed merely because we are clothed to suit the weather. Neither should we be satisfied because the rooms of our home have painted walls. While it is desirable and up-to-date to have painted walls, it requires some real regard for decoration to make them pleasing.

Colors are very subtle things. Design is equally important. When these two considerations are as closely combined as they are in interior decoration, we are confronted with quite a problem. Its solution may mean much to make or mar the appearance of home surroundings and the comforts of home life.

The farm woman whose home is suitably furnished and decorated will have little trouble in maintaining a neat appearance at all times, while the woman who works hard at housecleaning may have little to show for her efforts if the finish of the walls is unattractive. Attractive wall finishes frequently transform an ugly room into a thing of beauty.

Second Tone Applied Over the First

One of the newest ideas in farm home decoration, popular because of the multitude of effects that may be obtained with it, is the two-tone figure finish, which is quickly, easily and economically produced.

After deciding upon two desirable colors, the walls are painted with one of them. When dry the second color is applied over the first in sections about four feet wide; then a large sheet of newspaper, crumpled into an elongated wad and held in both hands, is placed against the wet paint and rolled over and over down the wall. In this manner small portions of the wet coat are removed so that the color of the undercoat shows thru.

When the four-foot painted strip has been so treated, another strip is painted and the same method repeated. The process is continued until the room is finished. The resulting design is original, spontaneous and free from formality. Somewhat similar effects may be secured by using a coarse cloth or a sponge instead of the paper.

Cracks and Stains Disappear

Extremely important from a dollars and cents standpoint, when it comes to redecorating, is the fact that a single coat of paint will give a new color scheme. In this way, at a very small cost, a room may be easily redecorated and the result will be three-tone finish, the fresh paint being applied over the old two-tone effect and rolled as described. The unsightly effects of cracks, spots and stains are thus removed without doing over the entire room.

Three-color finishes are attracting much attention. After the colors have been decided on, the ground coats are applied and allowed to dry. Then a sponge is dipped in the second color and is tapped all over the wall at wide enough intervals to permit of a third color. The third color is next applied in the same manner with another sponge, in the spaces between the second color. Both tints can be applied one after the other without waiting for the preceding coat to dry, and a room can thus be finished very quickly.

These are but a few of the great variety of new methods of wall decoration, attractive from an esthetic standpoint as well as from a practical one. Beyond their durability, sanitation and beauty, painted walls are easily and quickly cleaned. Fire-cracks so bad that no plain coat of paint will hide them do not show thru the two- or three-tone figured design.

It is false economy for housekeepers to spend much time and trouble and go to great expense in cleaning a house, and then decorate it in a cheap, unattractive manner.—F.P.H.

› The Kitchen Cabinet

FRUIT SANDWICHES

Raisins, figs, dates and prunes, when stoned and put thru the food grinder, are then made into a paste with sweet cream. This filling spread on thinly sliced bread makes delicious sandwiches which always please children, and older folks, too.

TOMATO SANDWICHES

Cook into a jellied paste either ripe or canned tomatoes with sugar to please your taste. Spread between slices of buttered whole wheat bread.

COTTAGE CHEESE SANDWICHES

Cottage cheese, blended with pulverized sugar, using half as much sugar as cheese, makes an unusual filling, on buttered bread. Another nice cottage cheese blend is made with using sweet cream to make a paste of the cheese. Season to taste with salt, paprika and pepper with a dash of mustard. A third variety featuring cottage cheese combines the mashed yolks of four hard-boiled eggs with one-half cup of cottage cheese. Mixtures combining any tart marmalade with seasoned cottage cheese may be spread on well buttered slices of good bread.

LEMON AND ORANGE SANDWICHES

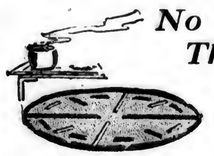
Make fruit butters just a bit thicker than for lemon or orange pie. Chill thoroly. Delicious with bread or split biscuits.

SALAD SANDWICHES

Chopped celery or finely diced cabbage makes a cooling sandwich. Blend the celery or cabbage with mayonnaise dressing till a nice spreading consistency. You may add also a few spoonfuls of ground boiled ham, or other left-over meats may be ground and blended.—Clarice Raymond, N. Y.

Note:—Mothers of children who are looking forward to the first day of school in September will do well to preserve this list of sandwich ideas for the time that is drawing near. Put variety in the lunch box, and better children will do better school work.—Gertrude S. Stewart.

No Scorched Food if This Plate is Used



THE other day when the sun was as boiling hot as the stove, I wondered how many of you oil range users had ever noticed the hot plates which are of such value to busy farm home-makers.

When my oil range was new, my sister said to me, "Now watch yourself or you'll burn everything until you become accustomed to cooking with such heat." That was wise advice and I kept on guard, and continue to do so. My hot plate relieves such anxiety, for it prevents scorched food and ruined utensils. It does not allow the food to burn. I find it especially helpful in making preserves and marmalades, puddings and cereals and finishing fresh vegetables. The cost is small (one dollar) and the benefits are countless these busy days. If your dealer does not carry them, drop me a line enclosing a stamped, self-addressed envelope and I'll send you a descriptive folder together with a city dealer's address, from whom you may order by mail.—Gertrude S. Stewart, care of Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

WHY NOT RELAX?

Diversion Helps Store Up Nervous Energy Needed for Strenuous Work

AS A MEANS of conserving nerve energy, we take advantage of every small opportunity of relaxing. For instance today, July 15, we are haying with five extra men and two teams out at the farm. Not exactly an ideal setting for a picnic, yet that is what we make of it, for those men must be fed. Two loaves of bread have been made into a variety of delicious and nutritious sandwiches, and there is a big kettle of potato salad generously garnished with eggs. There will be an abundance of hot coffee and cold tea and a big bag of home made cookies.

Tomorrow afternoon the haying will be finished early and we will be able to attend a Sunday school class party which will furnish delightful entertainment, and be very restful in its diversion.

We country folk should take advantage of every quieting influence of the summer to divert our hearts and minds from the strenuous toil that each day brings. Otherwise, this season will leave us heavy and depressed.—Mrs. E. M. Anderson, N. Y.

Permanent patterns are ever gaining in popularity, and their use is now nearly nation-wide.

The Sports Costume Expresses Style

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5858.—Five sizes: 34, 36, 38, 40 and 42 inches bust measure. To make the blouse for a 38-inch size will require 1⅞ yard of 40-inch material. The skirt will require 2 yards of 40-inch material and 1 yard of 32-inch lining for the underbody. Pattern, 10 cents.

5872.—Three sizes: 2, 4 and 6 years. A 4-year size will require 2⅛ yards of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

Babe

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

BABE is Corporal Metcalf's horse. But when, knowing the circumstances, you phrase it that way, the words strike your ear as misleading. Babe is a horse only in the sense that your own precious first-born, lying in your arms, is a primate mammal—you cannot deny the fact, nevertheless its assertion is ridiculous.

Babe, if you ask Corporal Metcalf, is the finest horse in the Squadron. And Corporal Metcalf, as Troop farrier for twelve years, as Regular Army farrier before that time, and as graduate of the Mounted Service School at Fort Riley, ought to know. But there are two hundred and thirty-one other horses in the Squadron, not one of whom, if his master were by, you could comfortably assign to second place. So it is better not to begin on comparisons.

Babe, then, in Corporal Metcalf's eyes, is the dearest thing in the world. And in that, if you knew all the Corporal knows, you would gladly understand him.

The points are all there, of course. So much goes without saying. And, equally of course, anything and everything that human skill and care can do for the comfort, health and beauty of a horse, Corporal Metcalf does for Babe, with tireless devotion. But, beyond all that, he has loved Babe's very soul up out of that pit where all souls lie asleep till some love so awakens them; which in itself makes a deathless bond that binds the roots of loyalty.

Babe and the Corporal do not take the open road together quite as much as they would like, for the reason that the Corporal is busy in his shop—to what purpose is best proved by the beautiful condition of all of "B" Troop's horses. But now and again comes a stretch of work that gives these two their fling in the world, hand in hand with happiness.

Such a stretch was on in the spring of 1916, when conditions of disorder distracted Luzerne and Lackawanna Counties, when the entire Troop was busy, the round of the clock, in maintaining peace and preventing bloodshed. The Corporal, to be sure, had all his ordinary work to carry, and more also; but, with every Trooper working twenty hours a day, and liable to call for emergency duty in the remaining four, he could count on his turn in the field with reasonable certainty.

So came the 26th of March—a balmy Sunday afternoon, when the air was gay with the scent of spring when a big blue sky full of sunshine and floating fleece smiled down on the broad blue river, while the river, twinkling back again, sang a new song to the sky and the world.

All the people in the districts outlying, had been charmed into the open by the heavenly magic of the day. In the town hummed a ceaseless rumbling roar, low and heavy—the sound of motor-wheels on the bridges, as the crowds streamed out and in. Beyond, each road teemed with traffic. Every person who owned a car, or who could borrow or hire a thing that resembled one, had produced the vehicle, filled it at least to capacity with his family to the third and fourth generation, with his friends, with his slightest acquaintances, and had voyaged abroad to view the earth. There seemed no end to them, nor any beginning either. From numbers alone they presented a traffic problem. And at this particular time—a time of disorder, of ferment, of abnormal idleness among the masses, that problem was complicated by an always attendant phenomenon—the excessive percentage of more or less drunken drivers bringing to naught the best care of the sober rest.

Within city limits the city police were struggling with the situation. Beyond that circle the State Police handled the work. And, to their common delight, Corporal Metcalf and Babe, on this perfect afternoon, had been assigned to service.

They were detailed to traffic duty and general patrol in Midvale, adjoining Wilkes-Barre, where the main highway, emerging from the city, skirts the edge of a steep embankment. At the bottom of the embankment run the tracks of the Lehigh Valley Railroad. And it is well, in using the highway into Midvale, to remember that pitching down lofty embankments hurts.

CORPORAL METCALF and Babe had been busy for half the afternoon persuading the public to safety and order. And the public still dawed on, like the waves in the sea, ever self-replacing, ever stranger to law. It was steady, sharp, lively work, this curbing the holiday world, and Babe and his Corporal had needed all their eyes, all their skill and alertness to manage it; which was why it was fun.

Now they were pacing at the city-ward end of their beat, looking in upon the concentrated mass.

"We can show 'em, Babe, can't we?" whispered the Corporal, stroking the silky neck; color and gloss of a chestnut just out of its burr. Babe put one small ear back to listen, then arched his neck a little higher, to show that he understood. And just at that moment something happened.

About six hundred yards ahead, and within the city limits, lay the entrance to a cemetery. A funeral had been in progress within, and now the carriages were emerging on their homeward road. One by one, decent and dingy, they jogged out, turned this way or that as they passed thru the gate, and joined the general flood; until suddenly, heralded by a broken chorus of screams and shouts, surrounded by futile commotion, appeared the last of the cortege, a great, old fashioned hack, moving not at a decorous funeral pace, but at full gallop.

As it cleared the cemetery gate, the team whirled, turned to the left, away from the city, and broke into a dead run. At that the driver, who had been standing in his box, flung down his reins and jumped.

THE runaway team came thundering on. As it approached the city line the natural trend of the traffic forced it to the extreme right, to the sheer and perilous edge of the embankment. And on the very line itself, where their field began, the Corporal and Babe hung ready.

They had headed, of course, in the direction in which the team was traveling; they held to the far right—to the outer edge of the road; and, as the runaway neared, Corporal Metcalf snatched one glance at the windows of the coach. Faces, faces, all the faces there was room for—a man, an old woman, four younger women, a little girl—all blanched and distorted with terror—and the man madly and vainly struggling to open the door.

Corporal Metcalf seized the off horse's bridle.

Now, Babe knew as well as his master, every whit, the work cut out for the two of them that day. While the Corporal kept his steady restraining pull on the runaway's mouth, shoving the while away and away from the abyss, Babe, stretched out to a run, still shoved away and away, bearing his shining shoulder against the rusty black withers of the maddened beast.

But the team had acquired a terrible headway. And it was crazed. Meaning the slightest veer would send it crashing over the brink, dragging the coach and its helpless prisoners after.

The prisoners screamed, shrieked, implored. The people in the crowded road screamed, shrieked and shouted. The poor, frightened runaways, surrounded by Bedlam, could have no thought but flight. The sheer embankment waited—with its railway down below. And between all this and death flew Babe and Corporal Metcalf—those two.

Babe was traveling on twelve inches of free ground, now, no more. And of that the outer quarter crumbled. As they passed each successive telegraph pole, the Corporal had to snatch his foot out of the stirrup lest his right leg be smashed in the sweeping impact. Always the drive of the team was toward the brink; always the Corporal's grip, dragging at the bridle, at the same time shoved inward; and always Babe, stretched to the run, sure-footed as an antelope, his delicate nostrils blown wide with excitement, drove his silky shoulder in and in against the shoulder of the fear-crazed runaway.

At last grip and pressure began to tell. The off horse began to understand. "They're coming, Babe! Keep it up!" whispered the Corporal—and again the little ears turned to catch the words.

But then swooped calamity out of the blue. As the off horse yielded, the other, pulling forward still unchecked, snapped a trace. With that it forged ahead, and, in its effort to escape the oncoming traffic, must in another moment have dragged its mate, coach and all, over the bank.

For the fraction of an instant, while his hand flew to his holster, the Corporal considered shooting that nigh horse. But with the very thought came its answer:

"That would pile the whole thing up in a wreck."

Meantime the people in the coach, seeing all, yet helpless, raved in their terror.

"Save us! Save us!" they screamed. "Help us! Save us!"—and clutched with their hands at the empty air.

The whole highway screamed, jammed, swore, shouted, would have stampeded, but that, literally there was no place to go.

But Babe and Corporal Metcalf heard none of this emptiness. Their mind was on the job. A touch had given Babe his cue. As the Corporal released the off horse's head, Babe slowed up just a trifle, let the hack reel by, and then with a spurt shot forward on the inside, till the Corporal could seize the nigh runaway's bridle.

NOW for a fight for the lives of the multitude, a fight against wholesale slaughter.

Down the long road ahead wound a thick, black stream of traffic. Wagons, buggies, surreys, motors of every size and kind, all packed with humanity,—with men, women and children,—following each other, paralleling each other, with scarce a wagon's length between at best. On one side, the sheer embankment, with the railroad track below. On the other, no egress. Charging into the heart of it all rushed the big ark of a hack, with its helpless freight, dragged by the crazy pair. And to save the day bloodless, if perchance it could be saved, just Corporal Metcalf and little Babe—those two.

Corporal Metcalf's hand, instinct with knowledge and reassurance, steady in grip and pull, kept the nigh runaway's bridle. Babe, holding the pace, was doing his part with a will. But the crowd ahead behaved, crowd-like, insanely. Instead of clearing a lane for the bolt to shoot thru, each driver thought for himself alone—and thought wrong. Darting hither and yon as they guessed the team would veer, they left no fair space anywhere, so that Corporal Metcalf, lying along Babe's neck, must throw all his strength, as Babe threw all his weight, to guide their death-fraught projectile in and out the rapidly twisting course thrust upon them. Uncountable times, by the barest

Yellow hominy	41.50@42.00
56 per cent cottonseed meal	40.00@41.50
41 per cent cottonseed meal	43.00@44.50
43 per cent cottonseed meal	45.00@46.50
34 per cent linseed meal	51.25@51.50

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .41½	$ .42	$ .41
Eggs, fresh gathered extra firsts (N. Y.)	.26	.26½	.30½
Steers, good to choice (Lancaster)	11.50	12.12½	8.12½
Hay, Number 2 timothy, baled (Phila.)	18.00	18.00	25.50
Wheat, No. 2 red winter (Philadelphia)	1.40¾	...	...
Oats, Number 2 white (Philadelphia)	.57¼	.58	.53½

Markets Show Irregularity

Review of the Week Ending July 23

BUTTER—The markets opened weak and this condition did not change until Wednesday when buyers started purchasing heavier supplies for storage purposes. At the close of the week most markets were firm. Receipts were lighter in city markets than during the previous week. Production has passed its peak and is showing the usual seasonal decline.

POULTRY—On the New York market receipts were lighter towards the end of the week and this, coupled with the cooler weather, was responsible for a better tone to the market. The large sizes and better quality broilers were in good demand while the small sizes were draggy. Fowls sold somewhat better at the close of the week. Old roosters were also wanted and sold at higher prices.

EGGS—On the New York market mid-western eggs continued dull and the market was weak and irregular. Most of the fresh-gathered stock is more or less affected by the heat. Many dealers continue to use their storage holdings and as current arrivals are not desired for storage these are offered at lower prices. Pacific Coast whites were steady with very light movement. The receipts of nearby white eggs were liberal and the quality irregular.

LIVESTOCK—The Chicago hog market was slightly stronger at the end of the week. Beef steer prices were lower. Heifers were about steady while cows and heavy calves were uneven. Vealers were weaker and prices declined. Stockers, feeders and fat ewes continued steady. Fat lambs and yearling wethers declined while feeding lambs were slightly higher.

HAY—Early in the week the hay markets were dull. Supplies accumulated at some eastern points. Prices on top grades were reported nearing lowest point for past three years. The alfalfa markets were quiet with offerings ample for trade needs. With continued light receipts and some improvement in demand there was a firmer tone to the hay markets by the end of the week. Prairie hay was easier with poor demand and low quality offerings. Very little timothy was put into storage.

FEED—The markets opened irregular but prices continued to advance and averaged slightly higher at the close of the week. The strength in the corn market was helpful in widening the outlet for some feeds and in maintaining prices at higher levels. Bran was about steady but middlings and heavier wheat feeds were scarce and higher. Cottonseed meal was generally lower. Gluten feed was unchanged and linseed meal was practically unchanged in the East. Hominy feed prices were maintained by the strengthening of the corn market.

GRAIN—The grain market for the week was irregular. Wheat prices were about 1c higher in spite of the new crop movement. Oats were about 1c lower. Offerings of new winter wheat was lighter than a year ago and the demand continues active from both mills and elevators. High prot in wheat is selling at a premium.

POTATOES—The potato markets opened weak and this tendency was carried thru the entire week with prices declining. In leading eastern markets Virginia Cobbler potatoes were about 25c to 50c lower per barrel at the close of the week. The movement from Eastern Shore districts continued to drop off and receipts from New Jersey were heavier. At the close of the week nearby truck receipts of Cobbler potatoes sold on the Philadelphia jobbing market at 70c to 80c per five-eighths basket and mostly around $3.00 per 150-pound sack.

TOMATOES—The heavier receipts of New Jersey tomatoes on the Philadelphia market caused the price to take a big drop during the past week. The demand was generally good for fancy stock but very slow for culls and poorly graded tomatoes. Recent rains caused considerable growth cracks, thus lowering the value of the tomatoes.

New Spray Gets Jap Beetle

Entomologists Trick Invader to His Death

AMONG the spray materials being used this year in the control of the Japanese beetle, the lead oleate coated arsenate of lead is gaining in popularity. The development and commercial production of this material has undoubtedly hastened the day when the Japanese beetle will be brought under complete control. The five-year search by the federal entomologists in the Japanese beetle laboratory, River on, New Jersey, for a satisfactory poison has resulted in a material that is palatable to the beetle and one that will stick to the foliage thru numerous rains.

From the very start in the campaign against the beetle, it has been known that ordinary acid arsenate of lead was not attractive to the beetle's taste and that he would leave foliage covered with the poison and seek food that had not been sprayed. In an attempt to find a material that would destroy the beetles instead of driving them away the lead oleate coated arsenate of lead was developed and today it is being used almost exclusively on shade and ornamental trees, young fruit trees, etc., in the control of the beetle.

Field and laboratory tests have shown that this material is deadly to the beetles. It has resulted in actual kills of 80 to 85 per cent of the beetles entering a tree to feed as compared with 40 per cent killed with acid arsenate of lead.

The almost universal use of coated arsenate of lead, however, is confined to shade and ornamental trees, shrubs, bushes and fruit trees not bearing fruit. This exception in the recommendations of the entomologists at the Riverton laboratory is made because there is likely to be objectionable quantities of spray residue on the fruit at harvest time.

This brings the spraying for Japanese beetles into two separate and distinct classes,—one where the object is to kill beetles and protect foliage and the other where the object is to protect the tree and have fruit that will meet the federal and foreign requirements regarding spray residue.

In the manufacture of lead oleate coated arsenate of lead, the chemists and the entomologists covered each minute particle of acid arsenate of lead with the lead oleate soap that gave it the qualities of sticking tight to the foliage and covering up the acid taste of the arsenate of lead. By removing the acid taste of the lead, it has been found that the beetle will eat very heartily of the coated lead, which results in such high mortality in a short time, while with the acid lead the beetle leaves for other kinds of food before it has taken enough poison for a kill.—A. K.

The Market Place

By W. R. WHITACRE

Pennsylvania Bureau of Markets

THIS is my vacation and for two weeks I am a farmer again. It seems good to be back,—a pair of overalls and an old shirt are so much cooler and more comfortable than city garb.

I told a friend of mine who works in Wilkes-Barre that I would like him to write to me about the markets in that section. His letter was a dandy and I am sure it will interest you more than any column I can write.

Dear Bill:—I saw a curious sight the other day while I was walking thru the wholesale produce section of this city, up here in the hard coal region of Pennsylvania. Drawn up along the curb was a truck loaded with watermelons and on each one was a little orange and black label bearing this inscription: 'There is No Substitute for Anthracite—Safe, Clean, Economical.'

"Stepping up to the salesman I said, 'Joe, what's the big idea?'

"'Well,' he said, 'they want labeled melons and you have to give 'em to 'em. Some guys from over across the river came here this morning looking for watermelons. They asked me the price and when I told them $45 they said it was too much, that they could get labeled melons for that. So I told them to come back in a little while and I would have some labeled melons for that price. While they were gone I stuck on these little stickers that the Chamber of Commerce gave me. Those guys came back and took the melons and everybody was happy.'"

Labels Aid in Selling

This shows the value of labeled goods. If hard coal stickers will sell watermelons, wouldn't it pay more farmers to label their produce? Small stickers cost comparatively little and even large labels for basket tops cost but a few cents.

One thing must be kept in mind, however,—a label will work for the man who grades his produce and consistently puts up a high grade pack, but it is a warning sign for all to stay away from the man who puts up a poor grade.

The first step in preparing a design for a label is to choose a name for the brand. Many times the producer can find some distinctive feature of his farm or locality that he can use for a brand name. Other times he will have to invent a name. The more unique it is the more value it will have. Some types of names were so good that they have been widely copied. There are so many kinds of "maids" on brands that they have lost to some extent their individuality.

A name which can be represented by some kind of a symbol is generally better than one that cannot be pictured so well. For example, "Long Pine Brand" could more easily be put on a label effectively than "Valley View Brand."

The simplest design is usually the best. The simple label can be understood at a glance while the more intricate label will fail to make any impression on the mind. Notice the simplicity of some of the well-known brands.

Color plays a large part in the attractiveness of a label. Where more than one color is used there should be contrast, but not glaring combinations.

After the designing the label it is a good plan to protect it in some way. In many states the Department of Agriculture has provisions for registering farm names for a small fee and protecting that name from being used by someone else in that state. If further protection is wanted the brand name can be copyrighted.

The grower who markets uniformly good produce will find that an attractive label of some kind will be of great help in building a reputation for his goods and a worth while aid in selling them.

Keep the Men Out of the Kitchen

(Continued from page 3)

referred to as plaster board. The plaster board is quite rigid, being really a sheet of hard plaster which can be nailed up to the studding. The fiber board is flexible, yet when well applied, makes a solid wall as smooth as any lath and plaster job.

For the joints between the sheets there are various methods. Sometimes these joints have been filled with putty or plaster, but this is no longer recommended. There is a slight expansion and contraction which eventually cracks or bulges these joints. Another method of covering the joints is to paste a special tape over them. The most popular method is to use narrow wood panel strips over the joints, these usually being furnished by any dealer who handles wallboard. The panel effect thus made is very pleasing on inside work.

Any of the various wallboards will give a perfect surface for interior decoration. They will take paint or calcimine, or in some cases the color of the board makes a desirable wall finish with no treatment whatever. Some very nice residences are now built with wallboard.

The place where this material is of outstanding merit is in rebuilding or remodeling, where an extra room is to be made in the attic, or a new partition put in. The wallboard can be handled by anybody, whereas a lath and plaster job requires expert labor and a good deal of bother besides the expense. The cost of wallboard is small as compared with the results it gives.

Some grades of wallboard are very useful in such jobs as making the chicken house tight, lining the garage to keep out winter cold, etc. We would be glad to hear from readers who have used wallboard, telling how they have used it and what satisfaction it has given.

Students Inspect Some of the State's Leading Dairy Farms

Editors' Note:—Early this summer a group of dairy students from the Pennsylvania State College visited several of the widely known dairy establishments in southeastern Pennsylvania and New Jersey. Our Dairy Editor, Professor Borland, was one of the leaders of this group. In the following article, continued from last week, he tells of some of the interesting things seen on these famous farms.

A SHORT stop was made at Delchester Farm, Edgemont, Pa., Dr. T. G. Ashton, owner, to see the new $84,000 barn, 265 feet long by 40 feet wide with stables for 144 cows. These are milked with milking machines. Four men do all the milking, each man handling 36 cows completely with two single unit machines. The milking takes two hours in the evening and two and one-fourth hours in the morning.

M. L. Jones at Westtown, has a fine Holstein herd including 150 milking cows and 150 young heifers. The herd for the last two years in the cow testing association has averaged about 11,000 pounds of milk and over 350 pounds of butterfat per cow with a net return above feed cost of over $200 per cow. This is an unusually high average especially when it is noted that about one-fourth of the herd were young cows in their first lactation period. Mr. Jones has belonged to a cow testing association for four or five years which is doubtless one factor in his developing so productive a herd. The farms include 500 acres of good soil. An adjoining farm of 300 acres has recently been purchased and a herd of heifers that will freshen in the fall will be placed on it. Bill Vandegrift, the county agricultural agent, and Professor Seamens, the vocational agricultural teacher, brought along a group of young men to the farm from vocational schools. The boys were being coached up for a Chester County judging team at the National Dairy Show this fall.

Special Equipment in Model Barn

Brandywine Farm, Pocopson, C. A. Fox, owner and manager, had a good Jersey herd and a new $50,000 dairy barn that was a fine example of modern convenience and sanitary arrangement. The main barn was 144 feet long and 30 feet wide. One side of the barn was fitted with stanchions and the other side with box stalls, the calf stable being at one end of the barn. The barn included an office, special arrangements for handling grain feed and an electric hoist for handling hay. Anyone contemplating the building of a new barn could get many helpful pointers by visiting this farm.

Breidablik Farm, Wilmington, Delaware, H. J. Krebs, owner, J. P. Broadhurst manager, keeps an excellent herd of 200 Guernseys of which 94 are cows in milk. These cows are yielding 1100 quarts of milk daily which is classified into two grades, the extra rich milk testing 6 per cent butterfat brings 30c per quart while the regular milk testing 4.7 per cent butterfat sells for 20c per quart retail.

The dairy barn is a well-built, substantial structure with plenty of light and ventilation. White sand of limestone composition is sprinkled on the stable floor to prevent the cows from slipping, absorb moisture and aid in sanitation. The calves are started on nurse cows for four to six weeks and are then put on grain and skimmilk powder.

Herd Sires Outstanding

Winterthur Farms, Winterthur, Delaware, J. R. Danks, superintendent, with 365 head of Holsteins, 200 of which were cows, was a place well worth visiting. The majority of the cows were housed in the great dairy barn, 325 feet long.

Most of the animals were descendants of the noted Holstein bulls King Segis and King of the Ormsbys. The latter bull's dam is Spring Brook Bess Burke 2d, one of the most noted cows of the breed with four yearly records each above 1000 pounds of butter. At present over 70 per cent of the herd at Winterthur farms traces directly to this great cow. Bess Johanna Ormsby, a daughter of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke 2nd is another great cow. She is the only cow to make three 1000-pound butter records in the 305-day division. Two of her sons are in use as herd sires at Winterthur Farms. The milk goes to Wilmington and is distributed by the Clover Dairy Company. A considerable portion of the milk is bottled and sold as special Holstein nursery milk, at 20c per quart. The farm receives 15c per quart at the farm for it. The milk should be especially suitable for nursery purposes since the health of the herd is excellent, all the animals being negative to the tuberculin test and to the blood test for abortion. The bacterial count is 50 per cent below that required for certified milk.

Longwood Farm, Kennett Square, Mr. Pierre De Pont, owner, and Mr. Farquhar, manager. Keeps a good Guernsey herd, primarily to furnish milk for the employes on the thousand-acre estate. The herd includes 58 head of which 30 are cows in milk.

Yields Yearly Profit

Masonic Homes, Elizabethtown, J. M. Leslie, superintendent, and George Shuchman, herdsman, was the last place visited and it was a great worth while climax to the trip. The herd, including 120 Ayrshires with 61 cows in milk, is kept primarily to furnish milk for the Masonic Home. Since there are 412 guests in the home at present, a substantial milk supply is needed.

The herd has been accredited for 6 years, is practically free from abortion and averaging $4000 pounds of milk and 324 pounds of butterfat yearly. The herd is maintained on a practical basis and returns several thousands of dollars yearly above the cost of maintenance.

The senior herd sire is Penshurst Sir Robert, the sire of Sir Roberts Romona Bell, the world's record junior four-yearold Ayrshire cow with 14,744 pounds of milk and 670.4 pounds of butterfat in the 305-day class. She was presented as a heifer to the Pennsylvania State College a few years ago and has proven a real credit to her illustrious sire, her breeders and her present owners. —A. A. Borland.

Judging Holsteins at the farm of M. L. Jones, Westtown

It Is Time to Sell the "Quitters"

Culling Chart

THE LAYER

Comb—large, red, full, glossy.
Wattles and earlobes—prominent, soft, smooth.
Eye—prominent, keen, bright.
Eyelids—thin, edges folded.
Face—clean-cut, thin.
Vent—large, oblong, moist.
Skin—soft, thin, loose, velvety.
Pelvic bones—flexible, wide apart, thin.
Beak—white.
Keel—slopes downward.
Pelvic bone to breast bone—deep.
Abdomen—soft, pliable, dilated.
Rump—Broad, width carried back.
Shanks—flat, thin, white.
Plumage—worn, molted, lifeless, close-feathered.

THE NON-LAYER

Comb—small, pale, scaly.
Wattles and earlobes—shrunken, rough, dry.
Eye—sunken.
Eyelids—thick, yellow tinted.
Beak—yellow tinted.
Face—full, well fleshed, yellow.
Vent—small, round, dry
Skin—thick, dry, fat.
Pelvic bones—rigid, tips thick, curved in.
Keel—slopes upward.
Pelvic bone to breast bone—shallow.
Abdomen—fatty, hard, contracted.
Rump—narrow, cramped.
Shanks—yellow, round, smooth.
Plumage—signs of molting.

• • •

Some farmers make a practice of selling the whole flock of old hens during the summer when production stops. It is a much better practice to sell only those individuals that have quit laying, as there are always some members of the flock that will continue to lay until late and pay a good profit above their board and keep during the time of rising egg prices. By following the above culling chart anyone can readily detect the quitters in the flock, whether one becomes an expert culler or not.

• • •

For several weeks I have been culling and selling a crate or more of old hens a week, and during this time total production has changed very little. A dealer to whom I sold one lot dressed them off and told me that only one out of twenty showed signs of eggs at all.

• • •

There is very little to do with the growing pullets now. They should have plenty of feed and water, and a clean run with some shade. It is a good idea to move the houses once in a while if it can be done. Plenty of roost room should be provided and the houses cleaned out and littered down frequently.

Babe

(Continued from page 11)

hand's breath, they saved some ghastly impact. Uncountable times, by supreme exertion, they steered their big convoy just clear of the teeth of death. Uncountable times they themselves escaped as by a miracle from being torn to pieces or ground to pulp.

And always before them spread the river of faces—white, wide-eyed faces, panic-possessed, screaming, screaming.

Now on the left, amidst a mass of smaller vehicles, approached a great, slow-moving motor dray, while, nearly abreast of it, filling the other side of the road, a bus full of holiday-makers lumbered along in the opposite direction. Corporal Metcalf, seeing the two, knew that he must find a way between. He set his teeth, threw his ultimate reserve of steady power into his grip, and, by the narrowest nicety, just succeeded in guiding his team along the tortuous lane of safety.

THEN, with the next plunge their forefeet struck out a new sound, ringing hollow on the flood of a high viaduct. But their late maneuver had thrown them to the wrong side of the road—to the extreme left, toward the viaduct parapet. And now, directly before them, not twenty feet ahead, hugging the parapet, came a great, open touring car full of women. Two had fainted, two stood up, preparing in their fright to jump over the wall into the depths beneath. The rest clutched the sides of their car, shrieking.

"Sit down! Sit still!" shouted Corporal Metcalf.

And then—Heaven knows how they did it!—he and Babe together turned that engine of ruin away from those women, altho the curve bent so grimly sharp that the lamps of the car were swept off as they sped, and altho again the Corporal, to save himself alive, was obliged to ride in one stirrup.

But the last ounce of strain unhorsed him, victorious tho he was—dragged him to earth. And still the runaways thundered on, with the Trooper hanging at their bridles.

BABE was out of it now—lost—gone. The man swinging at the heads of the frantic pair was alone in his desperate struggle. The faces in the coach window were terrible to see. On and on swept the team. The Corporal's feet scarcely touched the earth. Yet he knew they were feeling him—knew he was gaining on them. They slackened—slackened—slackened—at last they stopped.

Then a score of men rushed for their heads. Then some one tore open the door of the coach, whose lock had stuck fast. Then Richard Powell, of the Mine Workers' Union, his wife, his daughters, and their grandmother, seven persons in all, came tottering down from the coach to give thanks for their miraculous deliverance—to grasp the Corporal's hand.

The Corporal, too, rejoiced, and from the bottom of his heart, that these people stood alive and whole. But from their thanks he turned aside, a little embarrassed. Seven lives, on seven other occasions, he had saved thus risk as great from death as imminent. But that had been merely his duty as he saw it.

And the rescued had seen it, also, as merely his duty, no more. Corporal Metcalf was not used to being thanked. Besides, that remained which touched him far closer.

"Babe!" he called softly. "Where are you?"

Then Babe, who, after their parting, had traveled each step of the way hand on the flank of the runaways, pushed thru—pushed close, and, with the breath of a whinny, thrust his soft nose over Corporal Metcalf's shoulder.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DOG LOSES HAIR.—About four weeks ago a dog about six weeks old was given to me. It is a part police dog. When I received it it had a slight itch like dandruff which continued to spread. The dog has lost all its fuzz and has no hair at all in spots. Will you please let me know what to do? What shall I feed the dog up to one-half year and after?—C. K., Ottsville, Pa. The question of skin parasites should always be considered. It would be well for you to take this dog to a small animal specialist. In the meantime do not bathe the animal too frequently. Apply carbolized vaseline to the hairless areas, rubbing in thoroly. The diet should be made up of milk and vegetables with a bone to gnaw on. Avoid starchy foods. As the dog gets older the principal foods should be milk and meat, supplemented with vegetables. The police dog is usually recognized by its wolf-like carriage. The color varies from solid black to pure white. One should secure information as to pedigree to determine whether the dog is a full blood or part blood

COWS HAVE SORE FEET.—I have a cow and a calf, their legs swell and they are lame for several days, and then a crack comes under the dewclaw. I have used ointment and liniments. It is something serious for several farmers have lost cattle with it.—C. W. R., Canton, Pa. It is possible that these are serious cases of foul foot. Try applying a bandage around the foot after carefully cleaning it. Soak the foot in a warm antiseptic solution. Repeat often enough to keep the bandage wet. Change the bandage as often as necessary.

Patient (nervously)—And will the operation be dangerous, doctor?

Doctor—Nonsense! You couldn't buy a dangerous operation for forty dollars.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 5 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

The work Your Machinery does

SELDOM do we stop to think of the tremendous amount of work that is accomplished with modern farm machinery, the hours of time and *back-breaking labor* saved, and the many other benefits that come from its use.

Keeping your machinery in first-class condition is of prime importance. You must keep it thoroughly greased and oiled, all parts properly tightened up and free from rust. Just take the simple precaution of taking care of each little loose part or break as soon as it happens and make a practice of regular and thorough oiling and greasing. Most important of all—use the best lubricants in your tractor.

To do this work you only need a few good tools and a supply of good greases and oils. The wise farmer has a complete kit of the most useful tools so he can make repairs and adjustments on a moment's notice.

Go to the nearest "Farm Service" Hardware Store and select the tools you need. You will get the very best ones at a "tag" store and at more reasonable prices than you can get equal quality anywhere else. These hardware men are tool specialists—ask their advice on tools.

Talk to him about the grease and oil you need and arrange to buy them from him in quantities so as to have a good supply on hand all the time. Ask him about machinery paint too.

Your "Farm Service" Hardware Men.

Friendly Talks

By EDGAR L. VINCENT

IF WE are right-minded, we all prize very highly the things which are handed down to us from some friend we love. In every home many such treasures may be found. "This came from a dear old aunt of mine," we say of some article we are showing to a visitor. Or, "My mother left me this. It is very precious to me." And we keep these things laid away carefully to be used or to be worn, if they are articles of jewelry, on important occasions.

There is one inheritance, however, which we do not always value as we should. Often we fail to realize the very existence of this thing which has just as surely been handed on to us as are the bits of lace or the fine tools that once belonged to our friends who have now gone on beyond our sight.

This often forgotten or neglected inheritance is the unfinished task of those who began the work but were not, from the very nature of the case, able to carry it to completion. I do not believe many of us know how very precious such an inheritance may be if we make the most of it.

Here is a farmer, for example, who perhaps in the days of his youth came into possession of a piece of land which was afterward his home as long as he remained in the world. When he took up his work, the place was altogether different from what it was when he went away for the last time.

He Left a Legacy of Work

Perhaps he cleared away the forests, he drained the fields, he picked up the stones, and it may be he laid them up in the walls which separate the fields one from another. The buildings were the work of his hands. He helped to make the roads, he put up the fences. To the making of his farm home he gave the best there was in him, and then he put his tools away and went on his last long journey.

And this man of the farm did not quite finish the work he laid out for himself to do. It was, possibly, in the last year of his life that he said, "I would like to set out a new orchard next year." Or, "We will make the old house over another season. It has been a good home for us, but we have learned how it might be made more beautiful and comfortable."

These are only one or two of the things the father planned but which if they are ever done, his boy must do. Not a son thus steps into his father's footsteps that he does not realize how many things his father wanted to do and could not quite accomplish, but which are left for him to do. And how gladly a good son takes up these tasks, and with what zeal and what happiness he presses on to their performance, partly because father would be glad to know that he was doing them, but in far greater measure because of the love in his own heart for the work he is doing!

The Son Carries On His Father's Plan

Then, too, if the son lifts up his eyes and looks about him, he will find that his father left unfinished tasks as a man of affairs and as a citizen of the community. No man ever can, no man ever does, reach the place in the thought and feeling and action of the little world about him to which he aspires. Even unto the end of his life he will feel the throb of the greater thing he longs to bring to completion. "How I would like to help make this a little better neighborhood!" he surely will think. "If I could live to lift my fellows just one little step up higher, how glad I would be!"

And here is the son's grandest opportunity. He may carry on the work his father has so well begun nearer to the desired end. It is a fine thought that the son can do better things than his father could, for means are at his command that no man of the past could possess. The unfinished task! God give us all the vision of its beauty!

He Will Tell You

CHESTER J. HOKE, York, Pa.

Twenty days after Chester J. Heke, our York County representative, called on Chas. M. Martin, Dillsburg, Pa., and secured his application for a travel-accident insurance policy, Mr. Martin met with a fatal automobile accident. His beneficiary received a check from the Federal Life Insurance Co. for $2000.00.

$2,000.00 for Only $1 Invested

Can anyone who drives an auto afford to be without this protection for the small amount of $1.00 per year?

It is not the careful driver that escapes injury. Many times he is at the mercy of the other fellow who is less careful. This Travel-Accident Insurance Policy issued by the Federal Life Insurance Company to readers of Pennsylvania Farmer and their families at $1.00 per year for each policy pays $2000.00 death benefits for automobile accidents.

Ask any representative of Pennsylvania Farmer about this policy. They will be glad to explain it to you and take your application. Or you can send your application direct to

PENNSYLVANIA FARMER
261 So. 3rd St., Philadelphia, Pa.

Here is what it is worth to you

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

A few of the many claims paid to Pennsylvania Farmer readers

CHAS. M. MARTIN, Dillsburg, Pa.	$2,000	K. B. DEEMER, Reynoldsville, Pa.	$70.00
HENRY D. LAWRENCE, R. 1, Bridgeton, N. J.	$2,000	JOHN F. SHEA, 1182 Westwood Ave., Columbus, Ohio.	$60.00
A. R. MILLER, R. 8, Towanda, Pa.	$150.00	JAMES W. FELTON, 2267 N. 5th St., Phila., Pa.	$60.00
WILBERT POWELL, Pedricktown, N. J.	$82.86	WM. B. GAILEY, Finleyville, Pa.	$45.71
SAMUEL E. WEAVER, New Holland, Pa.	$52.86	JOHN WILSON, R. 1, Sewell, N. J.	$40.00
CHAS. R. KEHRES, Rehrck, Pa.	$38.57	CLARK H. JOHNSON, R. 8, Towanda, Pa.	$40.00
FRANK MOLLO, Smethport, Pa.	$28.57	CLARENCE S. KATES, Glenlock, Pa.	$38.57
WM. H. TURNER, Salem, N. J., R. 4.	$20.00	JOHN A. PERKINS, R. 5, Dubois, Pa.	$30.00
LLOYD C. LEISTER, R. 3, Lewistown, Pa.	$20.00	ANNA R. HARRIS, R. 3, Salem, N. J.	$20.00
CHAS. F. BOSTWICK, Athens, Pa.	$11.43	CLARENCE D. CAREY, R. 2, Coatesville, Pa.	$15.00
HENDRICK VAN CLEEF Cliffwood, N. J.	$10.00	WM. H. JOHNSON, R. 1, Erie, Pa.	$14.28

This policy is offered to readers of Pennsylvania Farmer for only $1.00 a year for each policy. If you already have a policy renew it before it runs out as by so doing you will add 10 per cent value to all parts of your policy except the $10.00 weekly indemnity clause.

☐ NEW POLICY ☐ RENEWAL POLICY

If you are sending for your renewal policy, check above where indicated and fill in below ONLY lines 1, 2 and 3. If you are sending for a new policy, it is necessary for you to fill in every line, otherwise there will be a delay in issuing the policy to you.

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and carefully. Illegible names will delay the delivery of your policy.

don't fool yourself

Loses job and sweetheart

Your common sense tells you that neither employer nor sweetheart can stand a case of halitosis (unpleasant breath) very long.

You, yourself, can never tell when you have halitosis. But you'll *never* have it, if every day you use Listerine, the safe antiseptic.

Listerine immediately destroys odors of all kinds and so leaves the breath normal and sweet. And the antiseptic essential oils combat the action of bacteria in the mouth.

⅓ Had Halitosis

80 streetcar conductors, meeting the public at close range every day of the year, said that about one person out of three offends by halitosis. Who should know better than they?

Face to face evidence

Begin using it now. Common decency demands it. Keep a bottle handy in home and office. It puts you on the popular and polite side.

Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

It Points the Way to Greater Profits

New Jersey's First Marketing Train Shows Growers the Best Marketing Methods

By AMOS KIRBY

NEW JERSEY'S first marketing train is making history. The idea has been sold to several thousand of the progressive farmers in the lower half of the state that the quickest way to get more profit from farming is to pack their crops in conformity with the demands of the consumer. Standardization and U. S. Grades are now only one step ahead of the New Jersey farmer who has been forced to meet severe competition from other producing districts.

Lost Profit in Marketing

This expresses the vision of Secretary of Agriculture William H. Duryee who many months ago conceived the idea of demonstrating to the grower the proper method of packing produce. The railroad train offered the most satisfactory method of carrying the message to the grower, and it did not take the carriers long to realize that additional prosperity to the farmer meant more business for them. So today we find the Philadelphia and Reading and the Central Railroad of New Jersey cooperating with the Department of Agriculture in staging a campaign for improved marketing methods.

New Jersey farmers have known for years how to grow a crop to perfection, but when it came to placing the crop before the consumer many of them fell down, and their profits slipped away.

Starting at Mullica Hill in mid-July the Reading Railroad and the Department of Agriculture turned over to H. B. Bamford, transportation specialist of the agricultural department, a train of

Railroad officials and members of the Department of Agriculture responsible for New Jersey's Marketing train inspect the exhibits.

two cars that is carrying a message to thousands of farmers.

The train is not elaborate. There are exhibits that would not win prizes in the State Fair. Neither would we find on the wholesale markets the same fine specimens that we would expect to see in a close competitive contest. Mr. Bamford and his helpers went into the markets used by Jersey growers and their competitors and bought the goods used in the train exhibits.

W. G. Lynn found some of New Jersey's finest apples on the Philadelphia market. He also found some that should never have left the orchard. Both were brought to the market train and there they stood side by side. One lot returned the growers $3 per bushel while the other sold for less than fifty cents.

Scouting around the market, these experts found some mighty fine potatoes as well as seconds that some grower had shipped in. On the table they went. While both lots were labeled, they needed no marking to tell the story. So on down the line. There are cantaloupes from the Pacific Coast, onions from Spain, tomatoes from Swedesboro, sweet corn from the South, sweet potatoes, and a dozen or more crops, good and bad, side by side.

Show Best Packing Methods

Then comes the package question. A representative from the United States Department of Agriculture is on the train to tell which are the best packages to use. Among the newer ideas were: a new corn crate, the flat for cantaloupes, the bushel basket for apples, the carrier for peaches and many other packages.

The selling end is not forgotten. A newspaper display of the papers carrying market reports is shown, as well as the last minute market reports compiled by the Department of Agriculture for the information of the grower. Not to be behind the times an up-to-date radio outfit is on the train. Thru it the latest market reports are received and posted on a bulletin board.

One of the most interesting exhibits is staged by the poultry department. Here the poultryman is shown how sixty-cent eggs as well as twenty-cent eggs can be secured out of the (to page 21)

Potato Scab or Clover—Which?

The Question of Lime in Short Three-year Rotations Puzzles Potato Growers

By Dr. J. G. LIPMAN, Staff Contributor

ONE of the county agents in New England has raised several questions which are of direct interest to potato growers in the East.

In our potato areas clover failures are becoming altogether too frequent. Lime has been avoided because of the fear of scab increases in the short three-year rotation commonly practiced.

Lime must be applied. The question is raised as to the best type of lime and safe amounts. We are recommending on a basis of 500 pounds of effective oxides; in other words, approximately a thousand pounds of limestone or smaller amounts of agricultural lime, hydrate, marl and stone lime.

Which of these materials would be likely to carry over the three-year period, if any of them? Would it be advisable to apply each or all of these materials on the furrow in the fall after the potatoes have been dug and the ground plowed?

The questions raised in your letter have been before our own potato growers for a number of years and most assuredly deserve our careful study. On the basis of our present-day knowledge, I am inclined to answer your question as follows:

Has Many Functions in Soil

It is widely recognized that lime has different functions to perform in the soil. When properly used, it improves the texture of the land and allows a better circulation of air and water. It stimulates chemical changes and bacterial activities, and makes available thereby a larger supply of plant food. It encourages a better development of the root systems of plants, and helps to conserve soluble plant food. It also helps to increase the accumulation of nitrogen from the air with the aid of legumes and bacteria.

Most commonly, however, lime is used to neutralize soils acids, or at least correct soil acidity so that certain aluminum compounds in the soil cease to be poisonous to plants. It is this particular function of lime that is of interest to potato growers who must struggle more or less with the problem of scab control.

Must Consider Kind of Lime

Since we are dealing primarily with the question of correcting soil acidity, any lime material furnishing a given quantity of lime in the right chemical and physical form would answer the purpose. The preference to be given to any particular form of lime will depend on the cost per unit of lime furnished. At the same time, the purchaser's decision will be influenced by the following facts:

(a). Shell marls usually contain some phosphoric acid. Everything being equal, such marls may be desirable because of their phosphoric acid.

(b). Burned and finely ground quick lime is rapidly slaked in the soil and, if ample moisture is present, is more thoroly distributed than is ground limestone no matter how fine it may be. The same would apply to hydrated lime.

Eliminate Excess of Lime

Because of their more uniform distribution in the soil, ground burned limestone and hydrated lime will disappear more rapidly than ground limestone. If it is your purpose to eliminate any excess of lime before potatoes are planted again, burned lime and hydrated lime should be given preference over ground limestone and lime marl. Even then, we should remember, however, that an application of 1000 pounds per acre of limestone or of marl would not leave large residues at the end of three years, especially when the land is distinctly acid to begin with.

It is sound practice to apply lime where it will do the most good. This means that lime should be applied and mixed with the upper three or four inches of soil. If possible, it would be desirable to distribute the lime to a greater depth.

Of course, it should be remembered that young plants are more easily injured by soil acidity, or the conditions produced by soil acidity, than are older plants. Hence, where it is desirable to obtain a good stand of clover, it might be best to spread the lime on the plowed ground and thoroly work it in by means of suitable tillage implements. This should not hold true where the clover is sown with timothy in the summer, with oats in the spring or is sown in grain and grass in the early spring.

Money for T. B. Indemnity

THE Pennsylvania authorities have received word from the Federal government that $400,000 has been allocated this state for paying indemnity in the work of tuberculosis eradication. This, with the $100,000 unexpended balance from last year, will give Pennsylvania a half million dollars of Federal funds for the coming year. It is estimated that this amount will be sufficient to match the state funds which will be available between now and July 1, 1928. It would seem that the outlook for prompt payment for cattle condemned is good, and this will do much to make the work of the testers easier.

Forcible Opposition

IN ONE section of York County cattle owners use more than verbal arguments in opposing tuberculin testing. The required ninety per cent of cattle owners in the township had signed an agreement to have the test given. Later, thirty reconsidered the proposition and withdrew. This reduced the percentage below ninety, and when the testers arrived a miniature battle resulted which ended in the arrest of several men and women cattle owners who were held for court in a thousand dollars' bail. The charges are, disorderly conduct, obstruction of legal process, resisting arrest and assault and battery. This is merely an editorial news note. Readers may make their own comments.

Community Warfare on the Beetle

THE Pennsylvania Department of Agriculture, in cooperation with the U. S. Department of Agriculture, recently held a demonstration on the Roosevelt Boulevard in North Philadelphia to demonstrate a method by which it is hoped cooperating communities may do a great deal towards reducing the number of Japanese beetles. The process consists of spraying a sweet-smelling, perfumed liquid onto a tree or trees, and after the beetles have been attracted to the baited trees a poisonous spray is thrown upon the trees from powerful spray guns and every beetle touched is quickly killed.

The process is adapted to communities willing to cooperate in providing funds necessary. The individual tree owner cannot use it to advantage because of the cost, and because the area affected would be too small. The contact spray must be applied with great force, a pressure of from 400 to 600 pounds per square inch being necessary. This requires two men to handle each nozzle and trees must be sprayed from two sides simultaneously. Only shade or forest trees may be used, as fruit or vegetables would be ruined by the material. We are sure the Department of Agriculture will be glad to send information to communities considering cooperative effort in fighting this pest.

The Toll of Automobile Deaths

THE weekly letter from the Keystone Automobile Club, in commenting on the increasing number of deaths caused by automobile accidents, contains some statements which we wish to pass on in the hope that they may cause greater care of self and others:

"It is appalling to contemplate the death and accident reports, particularly over weekends. Men, women and children departing for or returning from joyous holidays are overtaken by death in violent form or crushed and crippled because of lack of care in the operation of motor vehicles.

"Nearly 90 per cent of all motor car accidents are due to this cause in one form or another. The speeder, the cut-in demon, the road hog, the wavering, uncertain driver, the one-eyed car—all these contribute their quota to the weekly death and injury roll. And every one of them is guilty of that cardinal offense in motoring, lack of care, or incautious driving.

"There will be no decrease in accidents until every man and woman who undertakes to drive an automobile comes to realization of the tremendous responsibility assumed by motor drivers and learns well the one rule necessary for safe and sane driving."

Pennsylvania's Elections

TIME alone will tell how effective the new election laws will be towards establishing clean elections and honest counts in Pennsylvania. In the meantime, the recent senatorial election muddle remains to be cleared up. It may be thought a smart move on the part of Senator-elect Vare and Senator Reed to propose the recounting of the entire ballot of the state. It is a fine gesture but it will deceive no one acquainted with the men and the methods of unscrupulous politicians. No one believes that a recount of the votes now in the ballot boxes would materially change the face returns. The alleged dirty work was done before that, and the proposition is not worth the cost it would entail. The proposed recount is for no other purpose than the creation of a white-washed front with which to go before the Senate Elections Committee.

Can They Afford It?

NEWS from the Geneva naval conference is not reassuring to those who hoped to see the three naval powers, Great Britain, Japan and the United States, agree to a further reduction in naval equipment. The English have opposed the plan suggested by the representatives from this country and nothing has been accomplished as yet, altho several weeks have been spent in arguing the matter. Charges have been made that the American press misrepresents the situation in this country, while those who follow the British press say that false accusations are made by it against this country.

With the changed world relations which have occurred during the last fifteen years, and with the immense cost of the Great War and her consequent condition of non-employment and high taxes, we would naturally think that Great Britain would be one of the strongest proponents of disarmament. It is possible she believes there is a chance to re-establish herself as the dominant power of the world?

Motor Bus Development

THE growth of the motor bus system of travel has been one of the marvels of the present age. No other means of public conveyance sprang into universal use in so short a time. True, it has hurt railroads to some extent, and has put out of existence a great many trolley lines. But its convenience has appealed to the public and enterprises succeed or fail according to the public's judgment or whim. Forty-five thousand communities in the United States depend entirely upon motor bus for rail connections, and sixty-five towns and cities under 100,000 have supplanted the trolley with the motor bus. So extensively and quickly has traffic of this kind developed in the big cities that it has become a serious traffic problem in the streets. The question to be kept in mind is, how much is bus traffic going to cost in addition to the fare paid?

Farm Incomes Lower in 1926

THE Federal Department of Agriculture, after making a farm survey of over 13,000 farms, reports that the gross returns for 1926 were below those of the previous year. While the report does not state from what part of the United States the figures were received, the average size mentioned,—315 acres,—suggests that the majority of the farms are in the western states. The average investment is given as $16,308, and the average gross receipts were $2448, arising as follows: From crop sales, $926; livestock sales, $894; livestock products, $539, and $89 from miscellaneous sales. The average cash expenses were $1473. Those who may jump at the conclusion that the remaining $975 gives the farmer six per cent on his investment must remember that nothing is credited for upkeep, payment of debts, improvements, living expenses, or wages for himself and family.

Editorial Sidelights

DOCTOR LIPMAN sailed for Europe again on August 1st. After a brief stay in London he will go to Palestine where he expects to spend three or four weeks.

With Dr. Elwood Mead, Chief of the United States Reclamation Service, Doctor Lipman has been commissioned to make an agricultural study of the Holy Land. Three prominent American scientists are now in Palestine gathering field data to be used by Doctors Mead and Lipman in making their recommendations.

It would be difficult to find a busier man than Doctor Lipman has been during the past few months. As president of the First International Institute of Soil Science he deserves much of the credit for the success of the recent meeting of the world's soil scientists in Washington and their nation-wide tour.

In spite of his many responsibilities he has found time to prepare some valuable material for Pennsylvania Farmer readers to be published while he is abroad (Page 3). Inquiries addressed to him in his absence will be answered by another competent soil scientist.

OPERATE AT PROFIT

Consider Insurance for Day-old Chicks—Farmers Seek Financial Improvement—Go On Pilgrimage.

Washington, D. C.

THE United States Lines, operated by the Merchant Fleet Corporation for the United States Shipping Board showed a net operating profit of $371,000 for the fiscal year ended June 30th. This is the first time that this passenger service line has paid a profit, according to President Dalton of the Merchant Fleet Corporation. The five passenger vessels, including the Leviathan, actually had an operating profit of $635,000, but $264,000 was charged off on account of administrative expenses of the corporation. General Dalton says the outlook for the present year is good.

Insure Day-Old Chick Mail

The Post Office Department is considering the question as to whether or not enough day-old chicks would be sent as insured mail covered by an insurance fee to permit the Post Office Department to pay an indemnity on account of loss by death above the normal average death rate without financial loss to the government.

The department wishes to know if its policy were changed to permit payment of indemnity on account of the death of day-old chicks in the mails, to what extent shippers would insure their parcels and the probable number of chicks that would be sent as insured mail. The day-old chick people are somewhat dissatisfied with present mail transportation arrangements, and the Post Office Department is desirous of making changes that will improve the service.

Are Not Very Optimistic

Farmers are not enjoying the optimism with which they are credited by reports in the daily papers, according to Chester Gray, Washington representative of the American Farm Bureau Federation, who has returned from a County Farm Bureau speaking trip thru several eastern and southern states.

While conditions on the farms may be improved somewhat over recent years, nevertheless farmers generally feel the need of still further financial improvement, which can only be brought about by better prices for normal crops.

In New York and New England the farmers are deeply interested in the tariff on hay. Efforts are being made in the New York milk shed to settle the milk distribution question, by uniting the various milk handling agencies under one overhead selling organization. The New Jersey, Delaware and Maryland farmers are much concerned over the alarming increase in imports of raw and processed tomatoes from Mexico and Italy.

Flood control is the main subject of discussion in Louisiana. The farmers down that way want the government to enlarge its flood control program, so that another disaster such as has recently visited them will not be soon repeated.

Want Corn Tariff Increased

The Washington office of the Farm Bureau is doing some research work on the corn tariff. Farmers of the Corn Belt are insisting on a 50 per cent increase in the present rate of 15 cents per bushel.

About a year ago the United States Tariff Commission ordered an investigation of onion production costs. The American Farm Bureau Federation is urging the commission to set a date for a public hearing on onions. The two chief competing countries are Spain and Egypt.

Farmers Visit Europe

A group of farmers headed by President Sam Thompson, of the American Farm Bureau Federation, sailed from New York on July 29, on the Farm Bureau pilgrimage thru the agricultural sections of northern Europe, including France, Germany, Denmark, Holland and the British Isles. They will gather first-hand information regarding methods of production and marketing that have been successfully used by the farmers in those countries.

Hold International Meeting

The Twelfth International Cooperative Congress will be held in Stockholm, Sweden, in August, under the auspices of the International Cooperative Alliance, which is a federation of cooperative educational unions and wholesalers of 36 countries, representing more than 80,000 cooperative societies and 50,000,000 individual cooperators. The Congress is held once in three years.—E. E. R.

WILL PROSECUTE

Tuberculin Testing Will Be Pushed—Want Transfer of Beetle Control Funds—Slow In Buying Forest Land.

Harrisburg, Pa.

PROSECUTIONS arising out of resistance to state agents in charge of tests of cattle for tuberculosis, such as have occurred in some of the southern counties recently, are to be pushed to the limit according to plans of the state administration. This is really regarded on Capitol Hill as one of the most important steps taken in the way of administration of agricultural affairs owing to the fact testing of cattle has progressed to a point where over half of those listed have been placed under supervision.

Another factor entering into this determination is that resistance developed where agreements had been entered into for tests. According to one story coming here owners of less than half a dozen cattle have been the chief objectors. The position taken here is that in a campaign of such magnitude as that for cleaning up herds, resistance can no more be tolerated than in corn borer or Japanese beetle quarantines. Folk on Capitol Hill look for a flare up in the next legislature when the time comes to make appropriations for continuation of the work in cooperation with the federal government. Such explosions occurred in other times.

Asking Demonstrations

More requests for demonstrations of the methods of spraying and other controls for the Japanese beetle have come to Harrisburg than the Department of Agriculture can possibly meet this year and there is serious consideration being given to a proposal that some of the funds now devoted to inspection be assigned to demonstrations on the ground that more can be accomplished by showing how to battle the beetle than by looking into trucks or cars. The success attending the scale campaign fifteen or so years ago is being recalled. That was started by demonstrations. In the vicinity of Philadelphia there is great interest in the demonstrations arranged.

All Want a Start

Announcement of the plans of the State Highway Department for the connecting up of existing improved roads has resulted in demands from all over the state for building of "links." In some instances counties, which had been backward in applying for state money for road building, have come forward with offers. The joining up of concrete sections in some of the rural counties has been advocated by business men's organizations in boroughs and cities.

Bean Beetle's Start

The southern counties already harried by the corn borer and the Jap beetle have been advised by the state's experts to take precautions against the Mexican bean beetle, which turned up some three years ago and was not regarded as a serious pest owing to the menace of the other bugs. Special attention to spraying is to be urged by the Department of Agriculture. The beetle has started over the Allegheny Mountains, which is enough to cause much concern. The farmers are urged to look out for a brown bug with eight small black dots on each wing.

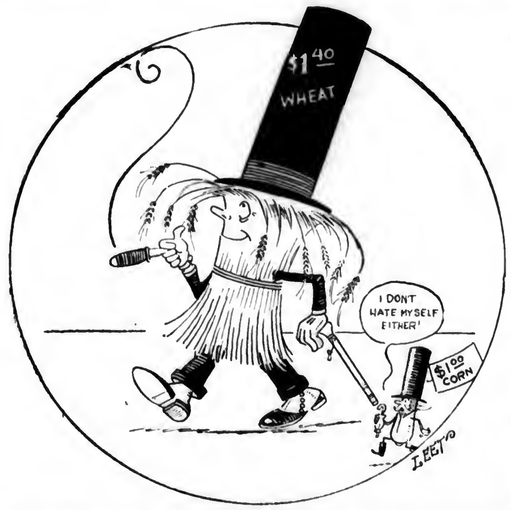
Poor Land Offered

Some of the tracts of land offered to the state as part of the new forestation plan are said to be exceedingly poor and to be of such a character that a considerable outlay for tree planting and fertilization will be necessary. The prices are being closely checked and it may be a long time before any buying is done. Selections are likely where water supply can be aided.

To Watch the Egg Demand

Plans have been made to closely observe the movement of the more than twenty-five million dozens of eggs reported in cold storage in Pennsylvania on July 1st. This is the greatest known and the nearest approach was five years ago. For years the withdrawals have been heavy in November.—T. C.

HIGH HATS!



MANY VISIT TRAIN

Marketing Train Successful—White Potato Market Glutted—Grade Tomatoes—Growers Visit Farms.

Trenton, N. J.

THE attendance on the New Jersey Marketing Train, sponsored by the Department of Agriculture, is exceeding the fondest hopes of Secretary of Agriculture Duryee and the Reading officials by 100 per cent. Indications now point towards 7000 by the time the schedule is complete. About 3000 have already visited the train and it has nearly three weeks to go at this writing.

More Inspection at Shipping Point

A larger number of cars of Jersey potatoes and peaches will move to market this year under shipping point inspection than ever before. E. A. Mercker, chief of the Bureau of Markets, says a 25 to 50 per cent increase can easily be expected this year. Last season over 400 cars moved from the state under inspection and not a car was rejected and not a re-inspection was reversed.

The New Jersey white potato crop is up to previous predictions on yield. Many of the growers have crops that are turning out 60 to 80 barrels to the acre. The glutted market is making the outlook for a big year rather discouraging. Price to farmers is around $1.50 per hundred pounds.

Hammonton Makes a Record

Berry sales on the new wholesale market at Hammonton are far beyond the $200,000 mark and the season not half over. According to Arthur Eldred, county agent in Atlantic County, the total sales for the season are expected to exceed the $400,000 mark. The development of this market has been one of the outstanding developments of the season. In five short weeks, berries have been distributed to a score of markets and the local prices have exceeded Philadelphia quotations by 50 cents and $1 per crate all thru the season.

Dealers Foster Tomato Grading

A U. S. inspector for tomatoes has been stationed at Swedesboro, Gloucester County. The local dealers and some of the leading growers have put up money to pay the cost of the inspection service. While tomatoes will not be inspected according to U. S. Grades at the start, it is the intention of the dealers after a few days to grade the tomatoes so they can move out under shipping point inspection. Nearly every dealer in Swedesboro is back of the move.—A. K.

Peaches Well Sized

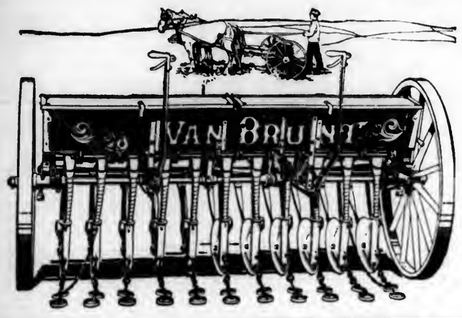
Weather conditions have been favorable for the growth of late varieties of peaches in southern and central New Jersey this year. A recent survey of a number of the larger orchards of Burlington and Camden Counties shows Elbertas progressing rapidly, making up for the late season. The general average of the crop, according to the best information now available, indicates that the fruit will be larger than for several seasons.

Fruit Growers Tour

Mercer County was honored this year with the summer annual meeting and automobile tour of the New Jersey State Horticultural Society, which was scheduled for August 3rd. Those taking part in the automobile tour met at 10:00 A. M. at the roadside market of Earl Dilatush on the main highway between Yardsville and Robbinsville. From there the tour was to cover a number of fruit farms including that of Lemuel Black at Hightstown and places at Princeton, Princeton Junction and Penns Neck.

Guernsey Field Day Announced

The Sixth Annual Field Day of the New Jersey Guernsey Breeders' Association will be held at Wendmore Farms at New Brunswick, on August 6th.—W. H. B.



Store Up Plant Food When You Drill

That's the efficient and economical way. You cut your labor cost in half and your crop has a food supply to draw on right from the start. You may be sure that both jobs will be properly done when you use the

John Deere-Van Brunt Grain Fertilizer Drill

There are two other jobs which the John Deere-Van Brunt Fertilizer Drill does—makes the seed furrows and covers the seed and fertilizer.

It handles these four important jobs in one trip over the field. Every operation is perfectly timed and mechanically correct to insure uniform distribution of seed and fertilizer under varying conditions.

The furrows are of even depth—the seed and fertilizer flow from the feeds in uniform, steady streams and are guided to the bottom of the furrows by disk boots—the cover chains level the bed, putting an even layer of soil over each row of seed.

The Van Brunt Adjustable Gate Force-Feed handles many kinds of seed in any quantity per acre. Any standard fertilizer can be distributed in various quantities from 65 to 1250 pounds per acre.

JOHN DEERE

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

Works a Lifetime at one week's salary

A BOGGS POTATO GRADER will do the manual labor of from three to five men. So it will save enough money in wages to pay for itself in about a week.

Boggs graded potatoes bring from 25¢ to 50¢ *more* per bag than *hand-graded* stock.

With a Boggs you can grade round or long potatoes (or onions) into No. 1 or No. 2 sizes with less than 3% variation from Government grades, and eliminate culls and dirt at the same time. Machines can be furnished with our standard canvas belt picking table, or with a roller picking table which *automatically* turns over the potatoes so all sides can be seen and imperfect spuds easily picked out. It can't bruise or injure even green potatoes. Made in several models, to handle from 75 to 550 bushels per hour. Prices range from $40 up. Operated by hand, motor or engine.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

FOUR and three-tenths inches of rain in one morning! That is what we had on Saturday, July 23rd. It recalled to mind what the old lady said about salting the potatoes: "Enough's enough, and too much is plenty." Well, we had plenty. Altho it washed out a few potatoes which, however, are ready to dig, flattened the sweet corn and made a few small gullies, no serious damage was done at Neshaminy Gardens. Up to that time we had a deficiency of rainfall since January 1, of five and one-half inches.

✦ ✦ ✦

THE very next week after I wrote about the coolness of the season and intimated that it might be the result of adopting the political slogan, "Keep Cool with Coolidge," we had a sizzler. For a whole week the thermometer played around in the nineties. A good, old Republican friend, believing that I was casting indirect aspersions upon the party, asks me to explain and clear myself, if I can, after the hot spell. Well, the most consistent explanation I can give just now is that the hot weather, coming as it did from the west, was a result of the President's visit out there. You remember that he vetoed a bill last spring which western farmers wanted signed. The information gathered from the papers published out there indicates that they made it hot for him when he went out among them for the summer.

✦ ✦ ✦

NEVER have I known such a sudden and widespread finishing of early potatoes by the early blight as has occurred in eastern Pennsylvania this season. Almost over night (in two or three days at most) fields turned from a healthy green to a sickly yellow, and in another day or two were completely dead and brown. Even fields which were well sprayed suffered with the rest. About one-third of our crop will be seconds in size.

✦ ✦ ✦

A READER of this column in Maryland writes as follows:

"Some months ago you wrote in your Neshaminy Garden notes of visiting an orchard you had planted several years ago in which sheep had done in a short time what you had helped try to do for several years by mowing brush with a scythe, but without success.

"I have about twenty acres of orchard which can be cultivated only one way. The centers are hard to cut, so the weeds, poison ivy, honeysuckle, etc., are getting beyond our control. Sheep seem a possible way out.

"Before trying them I would like to get information as to how destructive they are to lower branches and the trunks of trees. Must they have a woven wire fence, or will barbed wire do? Are they practical in an orchard ten to twenty years old? How many sheep will do the work on twenty acres if half is in sod?"

I print this letter hoping that others who have used sheep for the purpose of taming an orchard will tell of their experience. In the orchard to which I referred the brush was locust, sumac, maple, briers, etc. I do not know how sheep would affect poison ivy, nor how the ivy might affect them. They will eat the lower leaves and twigs on low-headed trees, especially if other food runs short. I did not notice any damage to the trunks of trees. The wire used was barbed wire, four-strand. Let's hear from others.

✦ ✦ ✦

WE BEGAN picking the Eldorado black berries on July 20, thus making them overlap the Cuthburt raspberries somewhat. The blackberries are a bountiful crop and of good size. The drought was broken just in time to enable them to swell up to normal size in ripening, and the soaking we got insures sufficient moisture to the end.

✦ ✦ ✦

WHY has the growing of berries in the East largely been taken over by the Italians? Because

You dare not employ children under sixteen years of age.

You can't afford to pay adult's wages to pick berries.

Parents may use their own children in picking.

Italians have large families and the members all work. Ergo:—

The Cheerful Plowman

Opposed to Foot Washing

FARM kids are the same, I am sorry to say, in a very unique and particular way, as they were when I was a troublesome lad annoying my mother, my sisters, and dad; they're the same in the fact that they try to retreat to their beds every night without washing their feet!

For years, I remember, my aim and my hope was saving my feet in the evening from soap, and every device that my mind could contrive—my mind in those days was supremely alive—to sneak off to bed and avoid mother's eye, was tried in a manner surprisingly sly. I never succeeded that I can recall in all of the summer from springtime to fall in putting it over, yet always I tried, night, night, after night, with a skip and a glide!

Now I was at sister's to stay a few days, and she has two boys with the cunningest ways, bright, snappy young fellows, remarkably neat—but say, they object to this washing of feet! Each evening I watched them to see what they'd do. I kept a close watch on the mischievous two, and as I expected when bedtime arrived they both of them planned, and they schemed and contrived to slip off to bed at the close of the day with feet as they were when they came from their play! Farm kids have improved in a thousand of ways since I was a kid in those earlier days, but they've not improved in this foot washing stunt, they haven't improved and I figure they won't!—J. Edw. Tufft.

Ward's New Catalogue is yours FREE!

"We have bought in the great cities—the savings are larger at Ward's."
Bringing to you lower prices than even the big city stores can offer, has been our work for fifty-five years.
No one store in any city offers you the opportunity of saving on such complete assortments of the things you need.
MONTGOMERY WARD
Catalogue Number 107 Fall and Winter

Yours Free

Yours merely for the asking. This complete, new 722-page Fall and Winter Catalogue will be sent you free *if you send us your name and address.*

Yours Free—not merely the Catalogue, but yours the opportunity to see and to have everything new and interesting that the world of business has created.

Yours the opportunity to see and to save by the new Fall prices. Yours the opportunity to profit through buying *at lower-than-market prices.*

This big, new Fall and Winter Catalogue in your home is full of opportunity for you. Each page is a page of interest and saving. Each member of your family will find it a *buying guide,* giving the lowest price, *the right price to pay for goods of Standard Quality.*

At Ward's—Quality is First Then Comes Low Price

Price does not tell quality. One shoe at $3.98 is not always the equal of another shoe at $3.98. It depends upon *where you buy the shoe.* It depends upon the ability and the power to give the utmost value. At Ward's, over Sixty Million Dollars in cash is used to secure low prices. Our eight million customers enable us to buy goods by the carload, by the train load, to contract for the output of factories, and so to secure low prices for you.

Ward's Low Prices Are Made Without Sacrificing Quality

We never sacrifice quality, never use inferior trimmings, or linings, or cheap wood, or cast iron instead of steel, just to make a price seem low. Quality comes first at Ward's—then Low Price.

So write for your big new Catalogue. Study the low prices. See for yourself the saving that may as well be yours.

Choose Carefully!

MEN long experienced in the ways of better farming have placed their stamp of approval on McCormick-Deering grain drills. They know without being told that seed worth planting is worth planting well, and to accomplish this a good drill must be used. McCormick-Deering grain drills represent the tireless efforts of over a half-century of careful observation and drill manufacturing experience. They are the best that can be found in seeding machinery. Proved efficient by years of actual field use, Mccormick-Deering drills are built to serve for a long period of years. These fine drills, made good by quality and kept good by service, can be depended upon to do good work under all conditions. No farmer can afford to risk a reduction in yield by using an uncertain drill. It is simply good judgment to use a drill that will do the most efficient work. See the McCormick-Deering first. Talk to McCormick-Deering owners. A McCormick-Deering drill in the proper style and size on your farm will soon pay for itself in greater crop yields.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

The Chickens Came Home to Roost

THE other morning a peddler came into the packing house and sped three bushels of very old peas, ones which had been missed in the first picking and which had been sorted out of the second picking in order to make sure that those sold at the roadside market were highest quality. I had set them back planning to send them out to the dump at the first opportunity.

"Those peas are not very good. How much for the three bushels?" Against my conscience I sold them for half the price of good peas. Altho the immediate buyer realized exactly what he was getting and was in no wise deceived it seemed too probable that he would deceive some consumer into thinking, "Here is where I get some nice new peas for dinner."

I was sorry afterwards as I thought of how many families expecting better peas than cans usually afford would be treating themselves to something worse. Furthermore, new peas are commonly considered a delicacy, something mighty good, yet I had supplied that dealer the wherewithal to prejudice more than a dozen families against new peas. Now there is a sequel to this story.

A Customer Was Lost

The evening of the same day I was on the roadside market. A lady who did not care to get out of her car asked me to show her some lettuce. I took a beautiful specimen of Black Seeded Simpson from beneath the sprinkler that had kept it crisp and fresh. I knew I was offering something good and right for rich soil and irrigation had made this lettuce tender and succulent in spite of hot weather. Immediately the might-have-been-a-buyer took the defensive. "I bought a bunch of yellow leaf lettuce in market this morning and it was tougher and more bitter than I ever thought lettuce could be." Explanation proved useless. Some one had gained a few cents thru the sale of that over-mature, sun struck lettuce and had done irreparable damage to a consumer's opinion of leaf lettuce.

That was the time the chickens came home to roost. It never does pay to sell stuff that will prove disappointing to the consumer.

I sometimes wonder how much more lively would be the demand for snap beans, sweet corn, new peas, etc., if the folks that do the eating always found these things all their anxious palates could desire.—Gilbert S. Watts.

Set Plants in Spring

I want to make a strawberry patch for family use and as I am entirely unfamiliar with this work, I am writing you for information. Just what time of the year should I do this and how am I to arrange my ground, fertilizer, plants, etc.—O. M. H., Potter County, Pa.

There is no better time to start a strawberry patch than very early spring. If possible the land may be fall plowed to permit an earlier start. If spring-plowed it should be worked down thoroly in order to provide a firm bed in which to set the plants.

One thousand pounds per acre (one pound to 40 square feet) of a high grade potato or truck fertilizer may be broadcasted and harrowed in before planting.

In setting strawberry plants it is important that the roots be extended about straight down, and that the plant be very firmly set, no deeper or higher than it was growing before. A common planting distance is 18 inches apart in rows 3½ feet apart.

Experience will eventually answer the question of which variety is best. You may try at first some Premier, more of this than any other, Big Joe, William Belt, Sample and New York. The last-named is primarily a home garden berry as it is so sweet and soft that it will not stand up for shipment.

You may gain additional information from Extension Circular No. 106, obtainable from the Pennsylvania State College, State College, Pennsylvania, and from Farmers' Bulletin 1028, which may be secured from the United States Department of Agriculture, Washington, D. C.—Gilbert S. Watts.

Rambles of a Pennsylvania Fruit Grower

XIX. Fresno Figs

IT WAS something of a relief to leave southern California, where land values are so high that an eastern man gets the impression that the climate above the soil is being capitalized at $1000 to $2000 an acre beyond its real value for agricultural purposes, and to pass into the Great Valley of California, a real farming country where land is valued for what it will produce. The San Joaquin Valley is 270 miles long and seventy miles wide. Here are great ranches, many square miles in extent, dotted with herds and flocks; orchards and vineyards that stretch away into the distance. Forty years ago the fruit crop of Fresno County was worth $750; now it brings the growers $75,000,000 a year.

The Valley is hot—a dry, insinuating heat that scars the tenderfoot but seems to make no impression whatever on the hardy natives. They tell me that it never gets really hot here; the difficulty is entirely with me. It seems that my blood has not been thinned; six months of life in this delightful country will reduce it to the proper thinness so that 110 degrees in the shade is like an ocean breeze. Snow-capped Sierras look down on the scorching Valley but waft no coolness except at night. They do, however, supply water that transforms the desert into one of the richest agricultural districts in the world. There is no rain whatever, not even a fog, between May and October. There are 265 growing days between frosts and a summer temperature of 100 to 110 degrees is the regular order.

Is Home of Factory Orchards

It certainly is a drying climate. That is why this is one of the great raisin districts of California. The vineyards, chiefly of muscat, are usually trained to self-supporting trunks, a few to stakes or wires. The great bunches of grapes are dried in the sun on trays; in the drying season the ground in some parts of the Valley is hidden with trays. Apricots and peaches are grown in immense orchards, mostly for canning. Near Merced I saw one of the many Del Monte orchards, from which come the canned fruit of that well-known brand. It is said to be the largest peach and apricot orchard in the world. I went thru one block which was four miles long. To an eastern man, accustomed to irregularity in orchard tree growth due to variable soil and topography, these immense orchards of uniform trees are a revelation. This is corporation or factory fruit production; the personal element which is paramount in Pennsylvania fruit growing is lacking. I would not care to be a factory fruit grower.

The feature of San Joaquin fruit growing that interested me most was its fig orchards. Eighty per cent of the figs of California are in the vicinity of Fresno. Figs are grown for home use thruout California and the Gulf States, and there are scattered commercial plantings, especially in Texas, but when we think of American figs we think of Fresno. Figs require cloudless and fogless weather from May till October and a temperature of 100 to 110 degrees during the ripening period.

Smyrna Figs Are Grown for Drying

As is so often the case, the preeminence of Fresno in fig growing is due largely to the untiring efforts of one man, Louis Roeding, whose pioneer work on the pollination of the Smyrna fig is one of the notable chapters in our pomological history. There are now about 26,000 acres of figs near Fresno, and several thousand more in other parts of the Great Valley. Nearly 12,000 acres are in early bearing, over ten years old, and a much smaller percentage in full bearing, over seventeen years old. The individual holdings average around fifteen acres. A considerable proportion of the plantings were promoted by corporations in the familiar way, being sold in five-, ten- and fifteen-acre tracts, the company to plant and care for the orchard until it is five years old, the buyer having nothing to do except to pay $1000 an acre for an orchard that cost less than half that sum to produce. There are over 900 individual holdings in the vicinity of Fresno. Very little new planting is now being made and it is evident that the crest of the boom has passed.

Smyrna figs are planted thirty-five to forty feet apart, other varieties less. The Smyrna, here called the Calimyrna, is more difficult to grow than others, but is higher in quality and brings two or three cents a pound more. It is grown chiefly for drying. It is the only variety that requires caprification, or pollination. The White Adriatic is a heavier producer, is easier to grow, but is discounted somewhat in the market, as is also the Black Mission, which was introduced by the Franciscan Fathers some 150 years ago. The Kadota is valued chiefly for canning and preserving. About seventy per cent of the fig plantings at Fresno is Smyrna.

Require Little Pruning or Spraying

Figs require very little pruning or spraying. The Smyrna is headed back when young but is practically untouched after it comes into bearing; the Adriatic is benefited by moderate pruning. At present the only spraying is one application of lime-sulphur for red spider. No fertilizing is necessary in this rich soil. Figs do not require much water. I saw some orchards that have not been irrigated since they were planted and are in fair condition. The rainfall of the San Joaquin Valley is only about ten inches so it is customary to irrigate figs once a year, preferably in January or February, applying ten to fifteen-acre inches at a single irrigation. The land is clean tilled the remainder of the year; there is no thought of green manuring yet, but it will have to come.

Tiny Wasp Pollinates Smyrna Fig

The most interesting phase of fig growing is the pollination of the Smyrna, which is the common imported variety. These were planted in California in commercial acreage as early as 1885, but failed to set fruit, altho Black Mission trees and other varieties near them were prolific. The zeal of George Roeding in his study of the pollination problem carried him thru fifteen years of discouragement and even of ridicule. It finally developed that the reason for the failure of the Smyrna to set fruit was the absence of the Capri fig, a wild type which is commonly grown in the Mediterranean region for this purpose, together with the tiny wasp, Blastophaga grossorum, which lives in the Capri fig and is the pollination agent. With the cooperation of the United States Department of Agriculture, Roeding imported the Capri fig and wasps, in 1888. The success of the Smyrna fig industry of California dates from that year.

When I was at Fresno (May 14) the Capri figs were about ready for use. Several hundred of the tiny wasps, no bigger than gnats, live in galls inside each fig. When the insects emerge from the galls they crawl out thru the eye of the fig, getting liberally dusted with pollen in so doing. If Smyrna figs are near they enter these, thereby conveying the Capri pollen to the Smyrna blossoms, which are awaiting fertilization. The Smyrna fig is female, the Capri fig male; fertilization cannot take place, except by hand pollination, without the aid of the wasp.

The caprification season is in June and lasts about a month. Twenty-five or thirty Capri figs are placed in a berry basket which is hung in the Smyrna tree. Fresh Capri figs are put into each basket every week so that there may be a continuous supply of pollen. The cost of caprification is about $2.00 an acre.

Cost of Production Is Low

Figs bear paying crops at seven years but are not in full bearing until seventeen years old. A large tree should yield 300 pounds of fresh fruit, or six to nine tons per acre, making two or three tons of dried figs. Last year the wholesale price was seven cents a pound for Smyrnas, four cents for white Adriatic and five cents for Black Mission, fresh, so that even at these prices, which are low, a net of around $250 an acre is secured. The cost of production is low, about $12 an acre for irrigation and cultivation, $2.50 an acre for water and not over $5 an acre for spraying.

Drying figs are allowed to ripen on the tree until practically cured and then drop to the ground. They are picked up once a week, cleansed, dried on trays in the sun, steamed and processed. Figs for preserving, especially the Kadota variety, are picked just before they are ready to drop. Over 300 cars of fresh figs were shipped to eastern markets last year, especially the Black Mission, which is the bootlegger's delight. Fig harvest begins about August 5 and extends into October. There are no crop failures; the grower is certain of a good crop every year if he cares for his trees properly.

I commend fig growing to those who love to bask in a temperature of 110 degrees. But not for me!—S. W. Fletcher.

They Got His Goat

IT MAY have been "meck a a lamb," but the state food agents of the Pennsylvania Department of Agriculture "got the goat" of this butcher.

A butcher in the western part of the state recently was slaughtering goats and delivering them to unsuspecting dealers as lamb. He acknowledged his guilt and paid a $60 fine and costs.

Why I recommend this *quality* fertilizer

WELL, I could give you a lot of reasons why I recommend Swift's Red Steer Fertilizers but they would boil down to two things:

I know who **makes them and I know who uses them. Swift makes them and the Swift name on a product always means the best product of its kind. Successful wheat growers around here use them and I'll take their judgment on results.**

These farmers know that the *right kind* of fertilizer gives them *more* wheat per acre and a better *grade* of wheat—also a good clover catch and more hay. That all means more profit. They make sure of the *right kind* of fertilizer by using Swift's.

They use Swift's *high analysis* fertilizer because it gives them their plantfood for less money—saving on costs of bagging, labor, freight and hauling.

Come in and we'll talk this over—from your standpoint. I know the best farmers here and how they use fertilizer. I co-operate with Swift & Company and keep informed on the work of our Agricultural College. Let me help you select the kind and amount of Swift's Red Steer Fertilizer to make you the most money on your next wheat crop.

P. S.: Come in *soon*—before the rush of planting time.

"Certified Chicks" is New Grade

"PENNSYLVANIA Supervised Chicks" is the term that will be used in the future for birds found to have good egg producing qualities and to conform to breed type to a reasonably high degree. Standardizing baby chicks in Pennsylvania thru the Accredited Hatchery Plan will start its fourth season's work by August 15th.

Flocks which have previously met the requirements of the "Pennsylvania Supervised Grades" and that have not reacted to the test for white diarrhea for two consecutive years will be classified as "Pennsylvania Accredited Flocks."

In order to provide a supply of chicks from flocks of known production, a new grade known as "Pennsylvania Certified Grade" will be established this coming year. In addition to being "Pennsylvania Supervised" these birds will be rigidly selected for egg production and breed type. Birds will be rejected on standard disqualifications. Certified females shall be mated to wing-banded pedigreed males whose dams have a record of 200 or more eggs a year according to trapnest records.

Flock owners should send in their applications for standardization to the Department of Agriculture before August 15th. The Bureau of Markets at Harrisburg on request will give complete information concerning this work.

Pullets Molt During Growing Period

I have 200 February-hatched pullets. Every morning I find a lot of wing feathers. I don't see any blood or any signs of anything killing these. Would chicks be liable that early lose the wing and tail feathers?—J. H., Susquehanna County, Pa.

Young poultry stock shed their feathers at intervals during growth until the final set with which they go thru the winter appears. Probably the feathers you see are due to this development molting. Of course, pullets hatched as early as yours are somewhat unnatural, in that they come into maturity at the normal time of molting, and this may cause an unusual loss of feathers.

Try not to disturb these birds or make sudden changes in their feed. I think it would be a good plan to house them as soon as they are about to lay, feeding them well on grain in addition to the usual laying mash.

If you do think that some animal is after them at night, why don't you make sure that the house is closed so that they are safe from harm?—R. L. S.-H.

Chicks Have Lice

My chicks are one month old today. I could not find any lice at first but after a time I found them on the heads. I tried a mixture of lard and sulphur applied warm. It killed the lice but took the feathers off the necks. Their necks are now very sore. Is their anything I can do for them?—Mrs. D. F., Union County, Pa.

When baby chicks get lice the best thing to do is to rub a little tobacco powder into the down. I hesitate to recommend sodium fluoride, the standard lice powder, for this purpose, and it is pretty strong; however, if you want to take a chance you might try it on a few. The best thing to do for the ones with sore necks is to apply some healing ointment or let them alone.

I presume the chicks got the lice from the hen that hatched them. It is always advisable to dust a hen when she is first set with sodium fluoride, but this should not be done just prior to hatching or when she has small chicks, as the powder is somewhat of a poison. Tobacco dust would be better then. Of course, baby chicks should be kept away from older stock, not only on account of lice, but for several other reasons as well.—R. L. S.-H.

Amount of Grain Varies

I enjoy reading your articles very much and would like to ask you a few questions. How much scratch grain in pounds per hundred birds would you feed to two-year-old White Leghorn pullets which have growing mash before them at all times?—W. W. W., Chester County, Pa.

The general rule in feeding grain to young stock is to feed what they will clean up in fifteen minutes three times a day. It is hard to set the amount in pounds for any given age, because conditions vary greatly, as you readily understand.—R. L. S.-H.

Nest Box Notes

FROM time to time I get letters thru this department asking what can be done for ailing chickens. Sometimes there is a disease or parasite that is causing the trouble, but in many cases the chickens are not doing well simply because they are not properly fed.

• • •

It seems to me that there is no excuse for some of the outlandish feeding methods some people use, in view of the fact that this and other farm papers publish mash and grain formulas from time to time, and similar information can be had from any of the state experiment stations, while almost every feed dealer carries commercial poultry feeds in the form of scratch grains and growing and laying mashes.

• • •

At this season the young stock should have free access to a growing mash, either commercial or home mixed, and be fed grain at least twice a day. A bought scratch grain or a mixture of cracked corn and wheat will do. The laying stock should have all the laying mash they can be induced to eat, and be fed grain as recommended for the young stock.

• • •

There are a great many different mash formulas, most of which contain about 20 per cent by weight of good meat scrap combined with various mill feeds, but they all observe the same principles of feeding. It seems to me that it is the best plan to follow the tested methods of feeding poultry and allow the new methods to be discovered at the experiment stations which exist for that purpose.

• • •

This is the time of year to repair roofs. Last year our roofs were in bad shape so that it was necessary to lay new paper. We planned to put this on right after harvest, but it rained nearly all the time and we didn't get the job all done until the weather got too cool for the best results.

• • •

A bright, hot, still day is the time to lay a new roof, not h an old one, or give it a coat of roofing paint. On cool days the paper cracks and the paint doesn't flow as it should. We all know how much trouble a leaky roof on a henhouse makes. It is mighty good business to put the roofs in shape this month, having a new roof if the old one is in bad shape.

Murphy, a newly-arrived Hibernian, while walking thru a cemetery read the following inscription on a tombstone:

"Here lies Bill Jones, an honest man and a salesman."

"Sure," said Murphy, "this is a quare counthry where they bury two men in the same grave."

Farmer—How did ye come by that black eye, Jarge?

Jarge—Ole cow had a way of lickin' me face wi' her tail, so I tied a brick onto it."

Friendly Talks

By EDGAR L. VINCENT

OLD Jack the farm dog had a great time barking this morning. He sat at the foot of one of the trees in the dooryard looking up into its branches. Once in a while he would move round a little, so that he could get a different angle of sight. And there he sat and barked for an hour.

What for? Up in that tree, comfortably seated on a big limb, was the old cat Tim. He was not worrying. His eyes were half closed and he did not even look down where old Jack was worrying himself. He was all right. Why worry? He knew old Jack couldn't get halfway to the lowest limb. He had had his breakfast. Let the dog bark. It was all the same to him. And there old Jack sat and yelped himself hoarse at something he could not get to save his life.

Barking for the thing out of reach.

Attainment Might Mean Trouble

Is not that what a good many of us do every day of our lives? We wear our lives out, fret our souls away and all for nothing. Old Jack barking up a tree is not a bit more absurd than are many of our efforts to attain the unattainable.

If our dog could have reached the limb where old Tim sat so comfortably taking his morning nap, what good would it have done him? He would have got little except some long digs across his nose and the consciousness that he had been barking up the wrong tree. And that would be just about the fate which would overtake you and me if we could get within arm's length of the thing that looks so alluring to us; sore bodies, aching hearts; a little more of trouble.

Now do not mistake me here. I believe in dreaming and planning and working for everything that is good and right and helpful. No one has spent more hours than I in figuring out ways and means of making myself and these I love more happy and really successful. Few have made greater mistakes in this respect than have I; and now, when I am away over on the sundown side of life I can look back and see that many things I have dreamed of and hoped for and striven to attain were just as futile as barking up a tree at a cat with an eagle eye and a set of sharp claws.

It Does Not Pay to Fret

Therefore, it is my candid opinion, drawn from the experience of a lifetime, that it does not pay to fret our lives away over things that we cannot help.

Again let me say that I am no fatalist. Life does not doom any of us to a hard lot which we must accept and bow to in spite of all our efforts to be free. A good Father does not play fast and loose with us in any such way. He gives us every power of mind and body we possess and He says to us, "Use these to the best possible advantage. Make the most of yourself, and don't fool away your talents. I am here to help you. I will do it, all I ask is that you shall be true to yourself and trust Me."

And I am just as sure as that I sit here at my desk this morning that if we will take God at His word He never will fail us. We may never get the things which so dazzle us sometimes; that might not be best for us, and He knows it, and graciously withholds them from us; but we shall get everything that goes to make life full, rounded out and complete. We do get peace of mind and happiness. We do get a joy and a comfort from life's experiences that fit us for the highest possible service here and now and prepare us for far greater things by and by.

So when we strive, let us try hard to find out whether the thing we long for is really worth having. That tells the story of success or failure with us all.

STOP *these* Losses *at Seeding Time!*

YOU can't afford to take chances with an old worn-out seeding machine. It puts a heavy expense on every acre planted—on every crop it sows. It costs you money in the time of your men and your teams or tractors—in land that brings no returns. *It eats up profits in grain that never grows.*

Make *every* acre produce a full crop — with a *NEW* SUPERIOR Drill!

Be Sure This Year's Crops Are Planted Right!

Replace your old drill with a new Superior. No other drill can give you such a perfect job of seeding. No other drill is so profitable to use. No other is built to last so long—to sow seed so perfectly over such a long period of years.

For the Superior has exclusive features that are found in no other drill. Many of them are new. Many are patented. *And the basic principle of operation has been proved in more than fifty years of service.*

The SUPERIOR DRILL Means *BIGGER CROPS*

Today, farmers everywhere acknowledge the Superior to be the best drill made. Their fathers said the same thing. So did their grandfathers. The Superior has *always* been a *better* drill. Every worthwhile grain drill improvement in the last fifty years has been a Superior improvement. And now the Superior is even better than before. Impossible as it may seem to present Superior owners, the Superior has been *further improved.*

See the New SUPERIOR At Your Dealers—*NOW*

See it equipped with attachments made especially for drilling in your type of soil. See for yourself how it will enable you to do better work, cover more acreage, raise bigger crops, and make more money.

Examine the method of seed rate control. See how the Superior double-run force feed handles all seed from flax to peas without cracking. See how all seed is accurately placed and properly covered—how all chance of skipping and bunching is positively eliminated.

Note the sturdy construction of the Superior throughout. See how wear is prevented by Alemite lubrication. Observe its light running qualities—its ease of operation. It's the greatest Superior ever built!

Arrange to use it in sowing your crops this year. *Let it pay for itself in the extra bushels of grain you'll get at threshing time.*

Write today for complete information and a new free book—a book you ought to have—"Drilling for Dollars." Mail the coupon *now.*

Superior Grain Drills are guaranteed to give you the utmost accuracy in planting. Made in both Plain Grain and Fertilizer Grain models. For team or tractor. Single disc, double disc, or hoe furrow openers. Special design for every type of soil in every section of the country.

Double-Run Force Feed insures precision feeding—perfect timing—even spacing. No seeds cracked or wasted. No skipping or bunching.

Hyatt Roller Bearings, and Alemite lubrication prevent wear on moving parts; contribute to longer life, light draft, and easy, efficient operation.

Dr. Hess Fly Chaser

makes cows milkable

They relax. They let down. You get the last drop. It is long lasting.

Dr. Hess Fly Chaser has the odor of the pines. Because of this odor it serves a threefold purpose:

First—It is the most effective fly and mosquito repellent known to science—quick in action, long lasting.

Second—It is an excellent disinfectant. Therefore, while it is keeping the flies away, it is also destroying the disease germs that attack your cow's body—disinfecting your barns, and injecting into the atmosphere a most healthful odor.

Third—No herd sprayed with Dr. Hess Fly Chaser ever suffers from warbles, which cause a great annual loss to dairymen and farmers.

It does not blister—does not stain the hair—does not taint milk. Applied to the hands and face, it keeps the mosquitoes away.

If Dr. Hess Fly Chaser does not prevent the milk slump, make your cows milkable in fly-time, save your horse-flesh all summer long, it will not cost you one cent.

Please Mention Pennsylvania Farmer When Writing to Advertisers

Buffalo Valley Testing Association Makes Good Showing

Editors' Note—This is one of a series of annual reports of Pennsylvania cow testing associations. As each association completes its fiscal year a summary of its records is published in this department. The owners of herds with a butterfat average above sixty pounds figured at the end of the report will be awarded ribbons by the Pennsylvania Dairymen's Association at the 1928 State Farm Products Show.

THE Buffalo Valley Cow Testing Association, of Union County, finished its year July 1, 1927.

The organization consisted of twenty-five whole-year members and two members for part of the year. Three hundred and ninety-seven cows were tested during part or all of the year.

The result for the whole-year members is as follows:

Average number of cows in the association	297.49
Average per cow: Lbs. milk	8994.00
Pounds of butterfat	307.3
Percentage of butterfat	3.4
Value of product	$238.61
Cost of pasture	9.37
Cost of roughage	34.61
Cost of grain	57.79
Total cost of feed	98.61
Value of product above feed cost	140.00
Returns for $1 expended for feed	2.42

Following is a grouping of all cows producing over 300 pounds of butterfat. These cows are grouped as follows: Group 1, above 500 pounds butterfat, 4 cows; group 2, between 400 and 500 pounds, 34; group 3, between 300 and 400 pounds, 102. Total number of cows producing over 300 pounds of butterfat, 140.

Thirty-eight cows produced over 400 pounds of butterfat during the year.

Cow tester in charge, Floyd L. Cole; County Agent, L. E. Craumer; summary compiled by I. O. Sidelmann.

Sixteen herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge no. cows	Breed	Pounds milk	Pounds butterfat
H. K. Benner, Vicksburg	8.75	R. & G. H.	11,608	386.4
W. S. Erdley, Lewisburg	10.33	R. & G. H.	11,392	380.9
P. C. Shade, Mifflinburg	9.42	R. & G. H.	11,519	367.2
P. C. Moser, Lewisburg	9.00	R.H.	10,995	354.6
J. S. Zeiger, Lewisburg	13.83	R. H.	10,468	354.0
W. J. Erdley, Mifflinburg	12.08	R. H.	10,948	353.2
C. E. Erdley, Lewisburg	15.75	R. H.	11,228	352.5
J. E. Boyer, Lewisburg	7.67	R & G. H.	9912	352.2
H. H. Reigle, Winfield	8.58	R. & G. H.	9897	339.2
Geo. McCormick, Allenwood	13.50	R & G. H.	9662	338.7
John S. Wehr, Mifflinburg	10.25	R & G. H.	9923	335.1
H. H. Moll, Millmont	9.50	R. & G. H., G. J., B. S., G. G.	8176	333.8
A. D. Beaver, Vicksburg	7.00	R. H.	9150	331.3
A. C. Slifer, Lewisburg	9.17	R. H.	9416	326.0
H. H. Dunkleberger, Winfield	5.33	R. H.	9406	308.5
Clark S. Miller, Lewisburg	14.66	R. & G. H.	8259	308.5

Thermometer Removes Guesswork

COOLING, next to cleanliness, is the best safeguard during the summer months against sour milk, high bacteria counts, and inferior butter and cheese. All milk should be cooled promptly to 50 degrees F. or lower, and should be kept at this point until delivered to the receiving plant.

To cool milk to 50 degrees, ice is almost always necessary, but if it cannot be had, only the coldest water available should be used. Water from a deep well or from a cool spring is better than storage tank or running surface water. A surface cooler will save time and ice, but a cooling tank in the milk house is a necessity for final cooling and holding.

In the matter of dairy temperatures, one should never guess. A good thermometer soon will pay for itself. One can of rejected milk would cost more than several thermometers.—C. R. Woodward.

Will Show Cattle

THE Dairy Improvement and Sales Association will hold their Third Annual Crawford County Cattle Show at the Fair Grounds, Conneaut Lake Park, Pa., on August 24-25th. Individuals in five breeds will be shown and will represent the best blood to be found in the county.

A special feature of the show will be the showing of the Boys' and Girls' Calf Clubs from Conneaut Lake, Cambridge Springs and Titusville. The members of these clubs will have a camp on the grounds for three days and two nights under the direction of A. L. Baker and the club leaders. Professors E. B. Fitts, R. H. Olmstead and A. L. Baker, of State College Extension Service, will be the judges and award the ribbons.

The vocational school boys will hold a judging contest during the show. Prof. D. L. Crumb, county vocational supervisor, will have charge of these contests.

To Study Western Cooperatives

HOWARD B. HANCOCK, Bridgeton, president of the New Jersey Farm Bureau, and overseer of the State Grange, is taking a year's leave of absence from New Jersey to make a study of the big cooperative marketing organizations on the Pacific Coast and in Canada.

Early in November, Mr. Hancock, in company with Mrs. Hancock and their son, will motor to the coast. They will make Los Angeles their coast destination.

Mr. Hancock plans to secure a position with the cooperatives in order that he may learn some of the methods employed in marketing their crops. He will study particularly the method of grading, packing, distribution and financing the western farmer-owned organizations to see if these methods can be adapted to New Jersey conditions.

Early next spring a trip up thru northern California, Oregon, Washington, British Columbia and the wheat provinces of northern Canada will be made. It is the intention of the Hancocks to return to New Jersey in the summer of 1928.

This is the first time that a busy New Jersey farmer has taken a year from his active farm operations to make a study of marketing.—A. K.

From the Week's News

ASSESSORS ARE BUSY in Allegheny and Blair Counties, Pennsylvania, taking the second triennial farm census. The census, the figures of which will be used in order to discover trends in agriculture, will be under way in practically all counties by September.

\$ \$ \$

AN INCREASING NUMBER of people are seeking the State Forests for rest and recreation each year. There are now on the State Forest Parks almost 1700 leased camp sites, 38 public camps, 7 State Forest Parks and 9 State Forest Monuments.

\$ \$ \$

FAILURE TO PROVIDE lightning protection costs the farmers of the United States $20,000,000 annually. Lightning rods, both good and defective, have reduced losses by about 85 per cent as compared to unprotected buildings is reported by the National Fire Protection Association. This loss can, in a large measure, be prevented by proper lightning protection on buildings and by the simple expedient of grounding at reasonable intervals all wire fences including pastures or yards for stock.

\$ \$ \$

It is good business to make arrangements with jobbers, wholesalers and retailers in advance of the time your produce is ready to market, says the Pennsylvania State Bureau of Markets. Regular customers should be kept informed concerning your products. An adequate supply of proper containers means quicker and easier methods of marketing.

\$ \$ \$

POULTRY JUDGING schools will be held in Delaware during the months of August and September under the direction of the specialists and the county agricultural agents. These two-day short courses will be held in those communities in the state where special interest in this work is shown by the local people. Pigmentation and molt as a means of judging for egg production, body types, selecting hatching eggs and baby chicks and selecting cockerels and pullets are some of the judging problems that will be studied.

\$ \$ \$

AN ELECTRICALLY charged plow is the latest wrinkle in farm machinery. In England a plowing apparatus has been developed which draws moisture from the soil and causes a condensation of moisture on the plowshare. This film of water, which acts as a lubricant to make the plow run more easily and smoothly, is brought about by producing an electric current by means of a small generator on the plow. The cutting coulter is used as the positive pole while the plowshare is the negative pole which receives the film of moisture.

\$ \$ \$

Apple growers have endorsed a four-year $1,000,000 national apple advertising campaign. This movement to advertise apples on a national scale is being conducted by the national association, Apples for Health, Inc., with headquarters at Chicago. The project was endorsed by the State Horticultural Society of Pennsylvania at its last annual meeting.

\$ \$ \$

SWINE GROWERS of Pennsylvania will make their headquarters at the Arlington Hotel in Washington during the state swine growers' automobile tour, August 4, 5 and 6th. From there they will go to visit the Capitol, the Government Stock Farm at Beltsville, Maryland, and other points of interest.

\$ \$ \$

Mercer County has completed its third retest of all cattle in that area. Only 192 reactors were found among 32,670 head in 1411 herds.

\$ \$ \$

FEDERAL GOVERNMENT men are scouting thruout Pennsylvania to discover possible spread of infestations of the Japanese beetle. These men are working in towns and suburbs as far west as Pittsburgh and as far north as Scranton, Wilkes-Barre, Williamsport and above the Delaware Water Gap. Roads leading from the quarantined area are being patrolled day and night to prohibit the transportation of produce from that area without inspection and certification.

\$ \$ \$

Fifty counties are represented in the Keystone State by the 233 ton litter nominations which have been made up to the present time. The feeder, in order to be awarded the ton litter honors, must produce 2000 pounds of pork by the time the litter is two days of age.

\$ \$ \$

BEEF CATTLE this past spring sold for the highest price for that season since 1920 when prices were on a high level because of war inflation.

\$ \$ \$

Buckwheat honey season will soon be here and before the bees start making this dark honey, beekeepers should remove the supply of white honey from the hives. Purchasers do not care to buy mixed dark and white honey.

Fruit Growers Tour and Learn

MEMBERS of the Pennsylvania State Horticultural Association assembled this year for their annual tour at the packing house of the Fruit Growers' Cooperative Association, West Chester. Starting southward in about 40 automobiles the fruit growers visited the beautiful Du Pont greenhouses near Kennett Square, then went on to the Delaware Experiment Station at Newark where Director McCue and his men explained the results they have secured with fertilizers for apples and peaches. As usual nitrogen seemed to be the first deficiency factor.

Take Boardwalk Stroll

The following day Director McCue and Dr. J. F. Adams guided the party the length of the state of Delaware. The Pennsylvania growers were much surprised at the large acreage of peaches, apples and truck crops and the excellent condition of most of the farms visited. One of the most instructive stops was to visit an orchard which had been nine years in sweet clover without reseeding. The trees were in splendid vigor and bearing a good crop. The only labor put on the sod was to mow around the trees at harvest time and grub around the trunk once each year.

One of the pleasant events of the day was the lunch served by the ladies of Fruitland Grange on the spacious lawn of S. H. Derby.

Tuesday evening found the party on the beach at Ocean City, Maryland. A stroll on the boardwalk or a quiet hour on the veranda watching the full moon over the ocean compensated for the heat of the day.

Explains Experiments

The start Wednesday morning was delayed long enough to give all a chance for a swim. Later, at Berlin, the very large plantations of peaches and apples and the packing sheds and nursery plantings of the Harrison Nurseries were inspected.

At noon in the hotel in Berlin, 145 Pennsylvanians sat down to dinner as the guests of Senator Orlando Harrison. When the last of the chicken, Maryland style, and the soft shelled crabs and all the dixies had been stowed away, and the last story told, it was time to hurry to Salisbury to visit the orchards of W. F. Allen. Mr. Allen and his three sons may be better known as growers of strawberry plants, but their orchards showed them equally proficient in growing peaches and apples.

Dr. A. Lee Zehrader, of the Maryland Department of Horticulture, spent the day with the tour and explained his pruning and fertilization experiments both at Berlin and Salisbury.

Altho the trip officially ended at Salisbury, 21 cars took the trip to Claiborne and ferried across Chesapeake Bay to Annapolis to visit the vegetable area around this interesting old town, under the guidance of Jesse Huffington, vegetable gardening specialist at State College and a former county agent located at Annapolis.—R. D. A.

KELLY
SPRINGFIELD

—a name that means satisfaction to the tire user

EVER since the days of the rubber-tired buggy, the name "Kelly-Springfield" on a tire has been a sure indication to the purchaser that he might buy with confidence.

Kelly always has built good tires. Kelly is building better tires now than ever before. Hundreds of thousands of car-owners can testify to the truth of this statement.

If you are looking for the utmost in comfort and long mileage, try Kellys. Their price is no higher than that of many other tires of less reputation.

For car-owners who want value in a lower-priced tire, Kelly builds the Buckeye line of cords and balloon cords, tough, sturdy and generously sized.

"Kelly dealers everywhere— there must be one in your town."

OUR YOUNG PEOPLE'S FORUM.

Have You Entered the Story Contest?

DEAR FORUM BOYS AND GIRLS:—At last I am able to give you a report of the Treasure Hunt. I'm sorry to have kept you waiting such a long time. After you had completed the hunt, and placed your paper in the care of Uncle Sam you were finished. My Treasure Hunt hadn't yet begun.

On the page this week you will find the names of the winners and the honorable mention lists. On the whole your papers were very neat and carefully written but I'm afraid many of you became confused in the chase back and forth thru the paper. Number nine sentence, "First, she hunted out a convenient-sized tray," found on page 14, sent a lot of you on the wrong track. More than three-fourths hurried by "convenient-sized" and didn't take time to pick up the hyphen. You either ran the two words together—"convenientsized"—which caused trouble, or you left each one forlornly by itself —"convenient sized"—causing more trouble. I'm just mentioning this so that you may be on your guard the next time we have a Treasure Hunt.

You've had practically three weeks' rest now. Are you ready to start the story contest announced last week? You won't have to go dashing and darting thru the paper to enter our present contest. You can simply hie yourself away to a quiet nook and write a letter telling "HOW I WOULD LIKE TO SPEND MY SPARE TIME." In case this is the first you've heard about the story contest, I'll tell you this: We are having an original story contest. The subject is, "HOW I WOULD LIKE TO SPEND MY SPARE TIME." Please arrange your contest paper as follows: In the upper left-hand corner of your paper write the word "contest." In the upper right-hand corner write your name, age and address (including county). All contest contributions should be addressed: The Forum Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa., and should reach me on or before the 20th of August.

THE FORUM EDITOR.

From Forum Members and Friends

Dear Cousin Ruth:—I read all the Forum letters as soon as the paper gets to the house. I live in the smallest county in the state. I live

SHALL WE PLAY FOR YOU?
Ivan L. Hamil, (X), Fulton County, Pa.

on a farm and like to go to school. I am sending you a picture of sister Mary and myself.—Ivan L. Hamil, (X), Fulton County, Pa.

Dear Cousin Ruth:—I am sending you some riddles. I would like to be a Forum cousin.

1.—What flies without wings?
2.—What has blades but doesn't cut?
3.—What has a head and beard and no body?
4.—What gives views but doesn't talk?—Doris Butler, Caroline County, Md.

Dear Cousin Ruth:—I have a horse I can ride. I ride for the cows in the evening. I was helping my brother to harrow. I had a team all by myself. I like to harrow. I ride the horses when I harrow.

I ride my tricycle for the mail almost every day. I have a pretty little kitten, too.—Johnie J. Forrester, six (X), Franklin County, Pa.

Dear Cousin Ruth:—It is very hot these days. During the last week of June it was pretty hot and my sisters, brother and I went swimming in the run. There is a deep place in our run where we swim. I spent the fourth of July at our community picnic which was held at one of our neighbors. I had a very good time.—Martha Thomas, (X), Indiana County, Pa.

Dear Cousin Ruth:—I will tell you about my pet cat. When my sister and I went to school he wanted to go along but I always carried him back in the house. He is gray and has four white paws. He has a bad cold just now, but is getting better every day. He likes to play tricks. Sometimes when I forget to put him out in the evening he comes upstairs and lies down. Then I must carry him down.

I have a pet calf. Its name is Nellie. She is four months old. Sometimes I give her milk in the evening and morning.—Lalla Danner, (X), Lehigh County, Pa.

Dear Cousin Ruth:—I have a little pet dog. I call her Bell. She is a fox terrier. Her color is black and brown spotted. She follows me around everywhere I go. I also have another pet dog, Rover. He is yellow and white spotted. He performs many funny tricks. He will stand up, jump a broom handle, roll over and shake hands with you and many other tricks. He is a Scotch collie. He goes with me for the cows every evening and helps me drive them home.—Phoebe J. Sparks, Bedford County, Pa.

Dear Cousin Ruth:—I am very glad to become a member of the Forum. I always enjoy reading the Forum Page. We have some periwinkles started in water and a little

KITTY AND I
Dorothy Smouse, (X), Bedford Co., Pa.

rose we planted last spring is doing fine.

Enclosed you will find a picture of my kitty and I.—Dorothy Smouse, (X), Bedford County, Pa.

Dear Cousin Ruth and Forum Friends:—Hello! May I come in? Is there room for one more in this large room? It seems good to be home from school and books awhile, but soon all of us will be on our way back to common school, high school and maybe college.

From the look on your faces you are about to ask me a hundred questions. Some of you are wondering where I go to school and what grade I am in and how old I am. I go to Trinity High School. Yes, I am a sophomore and travel between 8 and 9 miles to school every day.

I am a country girl and live on a small farm of 104 acres. We raise potatoes. I help drop them and also dig them.

Everyone is talking about swimming. I live about two miles from Glyde Beach. This is about seven miles east of Washington on the Washington and Brownsville national pike. Come, let's go swimming!—Ruth Weir, (X), Washington County, Pa.

Dear Cousin Ruth:—I had a visit at my aunts. We went on a picnic to Washington's Crossing Park and some of the people went in bathing. While there I played with two boys who used to live in Haiti. We have our hay all in and will cut wheat soon.

We have five little Guernsey calves and I milk a cow at night. We went to Willow Grove twice this summer and expect to go to the seashore next month. Thanks for the membership pin. It is very nice and I was surprised to receive it.—Horace T. Smith, (X), Bucks County, Pa.

Contest Winners

GROUP 1—OVER TWELVE

First—Irene Zimmerman, (X), Burlington County, N. J.
Second—Margaret Andrew, (X), New Castle County, Del.
Third—Raymond Bricker, (X), Franklin County, Pa.

GROUP 2—TWELVE AND UNDER

First—Clarence S. Carper, (X), Lancaster County, Pa.
Second—Myrtle E. Kling, (X), Monmouth County, N. J.
Third—Esther M. Gettel, (X), Franklin County, Pa.

Dear Cousin Ruth:—I stay at my grandmother's during my summer vacation. I feed the calves, pigs and chickens, and also help my uncle do chores. I sometimes lead the calf out to the place where it eats grass.—Charles Grinnell, Crawford County, Pa.

Honorable Mention

OVER TWELVE

Mary Galbreath, (X), Butler County, Pa.
Margaret Zabel, (X), Sullivan County, N. Y.
Joyce Hott, (X), Montgomery County, Pa.

TWELVE AND UNDER

Doreatha Walker, (X), Westmoreland County, Pa.
Bertha Schultz, (X), Bucks County, Pa.
Linda Glossner, (X), Clinton County, Pa.

DEAR LITTLE FOLKS:—A short time ago we had a puzzle about different kinds of food, and I think you all know that the food you eat helps to make your body grow. One of the interesting things we learn in school is that, while each one of us knows exactly who he or she is and our friends recognize us even in new clothes, all the time our bodies are changing. If we get too much sunburn, our skin peels off, but we still have our skin. And some of us grow fat and others thin. Now, these ten words in the list below can each be turned into the name of some part of our bodies if you will change the first and last letters in each. There's the first word "SANE"; change the first letter to an "I" and the last to a "D", and you have the word "HAND." Change the first letter and last letter of all the others (I don't think "XYZ" will give you much trouble, if you try to think of some part of your body—a very useful part, too—whose name is spelled with three letters, and the second letter is "Y"). When you have these ten names, send them to me on a postcard or in a letter so that they reach me by August 12th. BE SURE TO SAY HOW OLD YOU ARE, AND REMEMBER TO TELL

SANE	COST
COOL	SET
XYZ	THIS
MEAT	ORE
BAT	SECT

ME WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. The prizes go to the ten children sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa. The answer to the puzzle in the issue of July 16 (the one about what most of us will be in 1937) is: TEN YEARS OLDER.

The prize winners are: Thelma Bradley, age 12, Federalsburg, Md.; Franklin Dulaney, age 8, Spraggs, Pa.; Orpha M. Frantz, age 11, Rehrersburg, Pa.; Wilmer Geortge, age 13, Quakertown, Pa.; Virginia Held, age 12, Kelly Station, Pa.; Mary Kauffman, age 12, Ronks, Pa.; Betty Matthews, age 9, Pompton Lakes, N. J.; Frances L. Moxley, age 11, Mt. Airy, Md.; Harry E. Reber, age 9, Auburn, Pa.; Jean Rudy, age 7, New Bloomfield, Pa.

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—The ancient Spanish fortress of El Morro at the entrance to San Juan harbor, Porto Rico, has been turned into a schoolhouse for Porto Rican members of the American Army stationed there.

2.—Some of the music of the Alps is furnished by horns larger than the men who play them. The size in the picture is not uncommon in that region.

3.—The marriage of Miss Dorothy Mondell, daughter of former Representative Frank W. Mondell and Mrs. Mondell, of Wyoming, to Mr. Alexander W. Gregg, took place on July 26 at Newcastle, Wyoming. Mrs. Coolidge was one of the guests.

4.—Mr. Gregg, who is general counsel for the Internal Revenue Division, is considered one of the most brilliant young men in the Treasury and because of his capable handling of difficult matters of national importance has been nicknamed, "Andy Mellon's Boy Wonder." Mr. Gregg entered the government service only seven years ago as a clerk.

5.—The racing sloop, "Heather," leading in a preliminary race held off the Pacific Coast near Wilmington, California.

Mrs. GERTRUDE S. STEWART

Let's Get Rid of That Handicap!

Now Is the Time to Guard the Child's Health

VACATION time should be a very definite building up time for the physical child. On the whole, the country child has not measured up physically to the city child, but we hope that condition is being changed. Undoubtedly it can be if country parents will live up to the best they know.

Dr. Emerson, of Boston, points out that a child cannot gain in weight if he is handicapped physically. If the child has diseased tonsils by all means have them out as soon as school is out. After the tonsil operation the child should be kept in bed for a week so that he does not lose in weight. Adenoids should be attended to at once, so the child may have the summer to get back to normal and make definite gains.

Goiters Should Be Treated at Once

If you happen to live in the goiter belt and your child has an enlarged thyroid gland see a competent physician regarding it at once.

Marvelous things are being done with goiters—and it is doing the child a grave injustice to ignore a situation like that. If taken in the first stages there should be no serious results from an enlarged thyroid gland.

It is wise to take the child to a reputable doctor and have him gone over once a year. It is so much easier to keep a child well than to gather up the wreckage after a serious illness.

If the child is kept well and makes the definite gains in weight there should be no serious results from contagious diseases. Contagious diseases are being checked more and more, and a pretty good way to control them is to keep the child well and the power of resistance strong.

Daily Schedule Is Vital

Too much attention cannot be paid to the daily schedule. Diet, rest, open air life, sleep, baths, recreation, chores—all these things are important in keeping the child well. The child must have regular hours of sleep and nothing should interfere with them.

A woman said to me not long ago: "You take the little boy with you when you go out in the evening, do you not?"

She was quite surprised when I told her that either Daddy or Mother stayed with the children and that we did not both go out at night. It is a sacrifice, of course, but we feel that it has paid us in the health of the children.—May H. Mumaw.

Maple Mousse

4 eggs
½ pint hot maple syrup
1 pint thick sweet cream
1 teaspoon almond extract
Salt and ice for freezing

Heat the syrup and pour it slowly over the beaten egg yolks, stirring well. Whip the egg whites and the cream separately to stiff froths, then combine. Fold the syrup mixture into this froth mixture. Pack in ice and let stand four hours.

A friend of mine, famous for her mousse, uses the same proportions, but a little different method. She beats the entire eggs slightly, adds the hot syrup slowly, then cooks that mixture till it thickens. When the cooked mixture has cooled, she adds the stiffly beaten cream and flavoring. Molds, packs and freezes in four hours.—Gertrude S. Stewart.

Sour Milk Recipes Vary Baking Day

SOUR milk, which is always plentiful on the farm, may be utilized in making a number of delicious dainties. Many good cooks prefer to cook with sour milk instead of sweet milk because foods made with it keep moist much longer. Here are some points it is wise to remember in using sour milk or cream.

If you use cream in a recipe which calls for milk, you must reduce the amount of shortening. Otherwise, the food will be too "short," and likely to fall in the baking or to crumble when taken from the pan.

QUICK SOUR CREAM CAKES

1 cup sugar
2 eggs
1 cup sour cream
1¾ cup flour
½ teaspoon soda
2 teaspoons baking powder
1 teaspoon vanilla or lemon extract or ½ teaspoon nutmeg

Mix sugar and beaten eggs and add sour cream. Sift together flour, soda and baking powder and stir into first mixture. Add flavoring and mix well. Drop by teaspoonful onto well greased baking sheets. Bake in moderate oven 15 to 20 minutes.

SOUR CREAM MUFFINS

2¼ cups flour
½ teaspoon salt
½ teaspoon soda
2 tablespoons sugar
1 cup sour cream
1 egg
2 tablespoons melted shortening

Sift together flour, salt, soda and sugar. Stir in cream and lastly well beaten egg. Beat until batter is light and full of bubbles. Add melted shortening. Pour into well greased muffin tins and bake in quick oven until brown.

SOUR CREAM FRUIT CAKE

½ pound seeded raisins
½ pound seedless raisins
¾ pound citron
3 cups flour
¾ teaspoon soda
1 teaspoon cinnamon
1 teaspoon cloves
1 teaspoon allspice
1 cup sugar
1 egg; molasses
1 cup sour cream
4 eggs

Separate seeded raisins and cut citron into fine strips. Mix both with seedless raisins and flour thoroly with one-half cup of the flour. Sift together balance of flour, soda, cinnamon, cloves and allspice. Mix together sugar, molasses and cream and add to flour mixture. Then put in fruit and mix well, add beaten eggs and mix again thoroly. Bake in a slow oven.

SOUR CREAM PIE FILLING

1 cup sour cream
½ cup sugar
1 cup seeded raisins
2 eggs
¼ teaspoon salt

Add sour cream to sugar and mix well. Add well beaten eggs, salt and raisins. When thoroly mixed pour into an unbaked pie shell and bake in a quick oven ten minutes. Reduce temperature to moderate and bake until firm. Take from oven and cover with meringue made by beating two egg whites until stiff, then add two tablespoons confectioner's sugar beating until smooth and glossy, spread on pie and brown in the oven.

SOUR CREAM DOUGHNUTS

1 cup sour milk
1 egg
¾ to 1 cup sugar
2½ cups flour
½ teaspoon soda
1 teaspoon salt
½ teaspoon nutmeg or cinnamon
2 tablespoons melted shortening

Mix milk and sugar and add beaten egg. Sift together flour, soda, salt and nutmeg or cinnamon and stir into first mixture. If necessary add more flour to handle, keeping dough as soft as possible. Turn out onto floured board. Roll out and cut with doughnut cutter. Fry a golden brown in deep fat. Drain on unglazed paper and sprinkle with powdered sugar.

CHOCOLATE NUTS

½ cup shortening
1 cup sugar
1 egg
2 squares melted chocolate
1¾ cup flour
¼ teaspoon salt
1 teaspoon soda
½ cup seeded raisins
½ cup walnuts cut fine
½ cup sour milk
1 teaspoon vanilla extract

Cream shortening and sugar together. Add well beaten egg and melted chocolate. Sift together flour, salt and soda. Add raisins and walnuts and mix in well. Then add sour milk and flour mixture alternately to first mixture blending thoroly. Add flavoring and mix well. Drop by teaspoonful onto well greased baking sheets. Bake in moderate oven.—Mrs. L. H. Funk.

Sunlight Floods This Farm Kitchen

Plenty of light and air, windows over the sink, convenient cupboards and an attractive table and chairs for occasional meals in the kitchen make this room an inviting workshop.

A Hint for the Home Dressmaker

A COOL, attractive dress for August days is made of a green and black novelty plaid gingham with a suggestion of hit or miss red and green effect on a white ground. The trimming of white gingham and the kick pleat contribute a note of smartness. White gingham is combined with the plaid so that the two will shrink alike. However, all gingham should be shrunk before being made up. It is a very satisfactory material for all-year use, being tubfast, sunfast and always fresh and crisp.

Pattern No. 5469, which was used in developing this model, is especially becoming to the woman of mature figure. It may be obtained in sizes 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure from Pattern Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa., for ten cents.

Tomato Rivals Orange

THE tomato is one of Nature's choicest foods, because it can be served in many different ways and because it furnishes three of the vitamins necessary for good health. Tomatoes rank with oranges, grapefruit and lemons as the best sources of vitamin C, which prevents scurvy; they also have a relatively large amount of vitamin B, which stimulates the appetite, and vitamin A, which increases the body's resistance to infections. For these reasons everyone should have a serving of tomatoes or one of the citrus fruits every day.

The juice from fresh or canned tomatoes sweetened with a little sugar, if necessary, may be given to children instead of orange juice. In summer, tomatoes are cheaper than oranges as a source of the vitamins needed to make children grow properly. Altho they supply less energy than oranges, pound for pound, tomatoes and oranges are recommended, because they supply vitamin C which is scarce in many of the energy-giving foods.

The mild flavor of tomatoes makes it possible to use them frequently and to combine them with many other foods.

Unlike many fruits and vegetables tomatoes do not lose their vitamins when they are cooked, so canned or cooked tomatoes may be used.—N. Y. State College of Agriculture.

They Don't Shrivel

MY CUCUMBERS never shrivel, and are so good I must pass my method along. I wash the freshly-gathered cucumbers carefully, and pack them in jars, placing the smallest one on top. For each quart jar I add one teaspoon salt, one teaspoon ground mustard and a few whole cloves. The jars are then set on the back of the stove for several hours till warmed thru. Diluted vinegar is then heated to boiling and poured over the cucumbers. Seal at once.—Mrs. Jacob Whitman.

Go to your local "Farm Service" Hardware Store, the one with the "tag" in the window, for information and prices about water pumping and distributing equipment which you may want to install this fall. You will get accurate information at these progressive hardware stores and the same courteous service that you found so helpful in the selection of tools, paints, builders' hardware and other things.

Take your water problems there, too, whether they are large or small, for it will be the means of getting the best equipment and the greatest value for your money. It is the right place to buy all kinds of barn, milk house and poultry house equipment, too, for "Farm Service" hardware man has made a study of the conditions of your locality and knows what is best suited to meet your climatic and other conditions. Look for the "tag"—it means welcome to you.

Auntie Gives Advice

And Billy's Mother Wonders Whether She's Right

AS I STEPPED in to see a friend the other day, I encountered "Auntie"—one of those characters we have all met, who consider themselves privileged to dispense information and advice by reason of long acquaintance with the family and are "tolerated" by the family for the same reason.

My friend was saying to her: "Auntie, what do you think the Hills are doing?"

"I can't imagine, what now?"

"Well, Teddy has teased them so long for a pony and rig that they are letting the insurance policy that they have been carrying for his education lapse, to get him one next Christmas. They have talked it over and think it is the best way to discipline him. They chose that means because they thought he would see the foolishness of it after they told him he could not have both; they thought surely he would see that college would mean so much more to him in the end. He said he didn't care, he wanted the pony.

Of Course He Preferred the Pony

"Of course he did, any child would. Poor sort of discipline, I call it. It won't help him any when he has outgrown the pony and wants to go to college."

"It is foolish, isn't it? I tell you if we could afford to carry insurance for Billy we'd never let it lapse for a silly whim of his."

Just here Billy came rushing in.

"Mother, you promised me a dime for candy."

"Now, Billy, I think a nickel is plenty."

"Aw, Mother, that's not bein' a sport. You said I could have it."

"Well, then, here it is. Now, run along."

Then to Auntie and me she said, "Children are getting so these days that they are constantly demanding something and each time more than the last!"

"I'm surprised that you give it to him," said Auntie.

"But Auntie, he only buys candy with it, and they say a bit of candy is not harmful."

My friend was saying to her: "Auntie, what do you think the Hills are doing?"

"It won't make him any healthier if he gets it at the corner store of his own choosing and eats it all hours of the day."

"No, perhaps not, but . . . ."

Are You Robbing Your Child?

"My dear, do you know that you are not a bit better than the Hills you've been criticizing? You are using the very money you say you can't afford for a policy for him to satisfy an immediate desire and robbing him of his heritage of good health at the same time. You are failing in discipline, just as they are, and then you wonder why he demands so much. What else can you expect?"

Having given her opinion, Auntie went on her way.

My friend turned to me and said, "You must not mind Auntie, she is always offering suggestions, but we never pay much attention to her."

"Just the same," I said, in a light manner to soften my words, "she dispenses wisdom. It would be well if every family had such an 'Auntie'."

"Perhaps you are right," she answered thoughtfully.

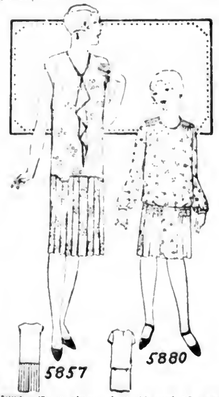
And I left my friend to meditate.

Electric light bulbs that are frosted on the inside give diffused light the same as those that are frosted on the outside but they do not catch so much dust.

Simplicity Combines with Good Lines in Styles for August Days

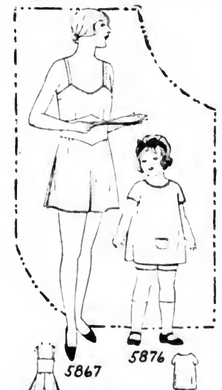
Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5857.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. To make the dress for a 36-inch size will require 4⅛ yards of 32-inch material with ¾ yard of contrasting material for the jabot. To bind the frock edges with bias binding put on as illustrated will require 1½ yards. Pattern, 10 cents.



5880.—Four sizes: 6, 8, 10 and 12 years. To make the dress for a 12-year size with long sleeves will require 1¾ yard of 27-inch lining and 2½ yards of 32-inch material with ⅜ yard of 27-inch contrasting material for the gathered panels and facings on the cuffs. If made with short sleeves the dress will require 2¼ yards of material 32 inches wide with ⅜ yard of contrasting material. Pattern, 10 cents.

5867.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2½ yards of 32-inch material. Shoulder straps of ribbon require 1 yard. Pattern, 10 cents.



5876.—Three sizes: 2, 4 and 6 years. To make the dress for a 4-year size will require 1¾ yard of 36-inch material. For trimming as illustrated 1⅛ yard of bias binding is required. Pattern, 10 cents.

Have Good Light Indoors and Out

YOU'VE solved your lighting problem for all time—indoors and out—the day you get your Coleman Quick-Lite Lamp and Lantern. When you have these modern light-makers you are sure of plenty of *good* light for any purpose anytime, anywhere.

The Quick-Lite Lamp is brighter than 20 old-style oil lamps. Its soft, pure white brilliance is easy on the eyes—ideal for every family use—reading, sewing and for the children to study by. Fuel is motor gasoline. No wicks to trim; no chimneys to clean; no daily filling. U. S. Price $9.

The Quick-Lite Lantern is the handy, all-purpose light for outdoor chores, around barns, sheds, feed lots, granaries, garages, cellars, etc. Built on same principle as the lamp. Has mica chimney—rain-proof, wind-proof and insect-proof. Safe—can't spill fuel even if tipped over. Two popular models: L427, with built-in pump, U. S. Price $8.50; L327, with separate pump, one dollar less.

John G.

By Katherine Mayo

COPYRIGHT BY KATHERINE MAYO

IT WAS nine o'clock of a wild night in December. For forty-eight hours it had been raining, raining, raining, after a heavy fall of snow. Still the torrents descended, lashed by a screaming wind, and the song of rushing water mingled with the cry of the gale. Each steep street of the hill-town of Greensburg lay inches deep under a tearing flood. The cold was as great as cold may be while rain is falling. A night to give thanks for shelter overhead, and to hug the hearth with gratitude.

First Sergeant Price, at his desk in the Barracks office, was honorably grinding law. Most honorably, because, when he had gone to take the book from its shelf in the day-room, "Barrack-Room Ballads" had smiled down upon him with a heart-aching echo of the soft, familiar East; so that of a sudden he had fairly smelt the sweet, strange, heathen smell of the temples in Tien Tsin—had seen the flash of a parrot's wing in the bolo-toothed Philipine jungle. And the sight and the smell, on a night like this ,were enough to make any man lonely.

Therefore it was with honor indeed that, instead of dreaming off into the radiant past thru the well-thumbed book of magic, he was digging between dull sheepskin covers after the key to the bar of the state, on which his will was fixed.

NOW, a man who, being a member of the Pennsylvania State Police, aspires to qualify for admission to the bar, has his work cut out. The calls of his regular duty, endless in number and kind, leave him no certain leisure, and few and broken are the hours that he gets for books.

"Confound the Latin!" grumbled the Sergeant, grabbing his head in his two hands. "Well—anyway, here's my night for it. Even the crooks will lie snug in weather like this." And he took a fresh hold on the poser.

Suddenly "buzz" went the bell beside him. Before its voice ceased he stood at salute in the door of the Captain's office.

"Sergeant," said Captain Adams, with a half-turn of his desk-chair, "how soon can you take the field?"

"Five minutes, sir."

"There's trouble over in the foundry town. The local authorities have jailed some I. W. W. plotters. They state that a jail delivery is threatened, that the Sheriff can't control it, and that they believe the mob will run amuck generally and shoot up the town. Take a few men; go over and attend to it."

"Very well, sir."

In the time that goes to saddling a horse, the detail rode into the storm, First Sergeant Price, on John G., leading.

John G. had belonged to the Force exactly as long as had the First Sergeant himself, which was from the dawn of the Force's existence. And John G. is a gentleman and a soldier, every inch of him. Horse-show Judges have affixed their seal to the self-evident fact by the sign of the blue ribbon, but the best proof lies in the personal knowledge of "A" Troop, soundly built on twelve years' brotherhood. John G., on that diluvian night, was twenty-two years old, and still every whit as clean-limbed, alert and plucky as his salad days had seen him.

MEN and horses dived into the gale as swimmers dive into a breaker. It beat their eyes shut, with wind and driven water, and, as they slid down the sharp-pitched city streets, the flood banked up against each planted hoof till it split in folds above the fetlock.

Down in the country beyond, mud, slush and water clogged with chunks of frost-stricken clay made worse and still worse going. And so they pushed on thru blackest turmoil toward the river road that should be their highway to Logan's Ferry.

They reached that road at last, only to find it as lost as Atlantis, under twenty feet of water! The Allegheny had overflowed her banks and now there remained no way across, short of following the stream up to Pittsburgh and so around, a detour of many miles, long and evil.

"And that," said First Sergeant Price, "means getting to the party about four hours late. Baby-talk and nonsense! By that time they might have burned the place and killed all the people in it. Let's see, now: there's a railroad bridge close along here, somewhere."

THEY scouted till they found the bridge. But behold, its floor was of cross-ties only—of sleepers to carry the rails, laid with wide breaks between, gaping down into deep, dark space whose bed was the roaring river.

"Nevertheless," said First Sergeant Price, whose spirits ever soar at the foolish onslaughts of trouble—"nevertheless, we're not going to ride twenty miles farther for nothing. There's a railroad yard on the other side. This bridge, here, runs straight into it. You two men go over, get a couple of good planks, and find out when the next train is due."

The two Troopers whom the Sergeant indicated gave their horses to a comrade and started away across the trestle.

For a moment those who stayed behind could distinguish the rays of their pocket flash-lights as they picked out their slimy foothold. Then the whirling night engulfed them, lights and all.

The Sergeant led the remainder of the detail down into the lee of an abutment, to avoid the full drive of the storm. Awhile they stood waiting, huddled together. But the wait was not for long. Presently, like a code signal spelled out on the black overhead, came a series of steadily lengthening flashes—the pocket-light glancing between the sleepers, as the returning messengers drew near.

Scrambling up to rail level, the Sergeant saw with content that his emissaries bore on their shoulders between them two new pine "two-by-twelves."

"No train's due till five o'clock in the morning," reported the first across.

"Good! Now lay the planks. In the middle of the track. End to end. So."

The Sergeant, dismounting, stood at John G.'s wise old head, stroking his muzzle, whispering into his ear.

"Come along, John, it's all right, old man!" he finished with a final caress.

Then he led John G. to the first plank.

One of you men walk on each side of him. Now, John!"

Hesitantly, nervously, John G. set his feet step by step, till he had reached the centre of the second plank.

Then the Sergeant talked to him quietly again, while two Troopers picked up the board just quitted to lay it in advance.

And so, length by length, they made the passage, the horse moving with extremist caution, shivering with full appreciation of the unaccustomed danger yet steadied by his master's presence and by the friend on either hand.

As they moved, the gale wreaked all its fury on them. It was growing colder, too, and the rain, changed to sleet, stung their skins with its tiny, sharp-driven blades. The skeleton bridge held them high suspended in the very heart of the storm. Once and again a sudden more violent gust bid fair to sweep them off their feet. Yet slowly, pressing they made their peri unharmed.

Then came the next horse's turn. More than a single mount they dared not lead over at once, lest the contagious fears of one reacting on another produce panic. The horse that should rear or shy, on that wobbling bed footing, would be fairly sure to break a leg, at best. So, one by one, they followed over, each reaching the farther side before his successor began the transit.

AND so, at last, all stood on the opposite bank, ready to follow John G. once more, as he led the way to duty.

"Come along, John, old man. You know how you'd hate to find a lot of dead women and babies because we got there too late to save them! Make a pace, Johnny boy!"

The First Sergeant was talking gently, leaning over his pommel. But John G was listening more from politeness than because he needed a lift. His stride was as steady as a clock.

It was three hours after midnight on that bitter black morning as they entered the streets of the town. And the streets were as quiet, as peaceful, as empty of men, as the heart of the wild woods!

"Where's their mob?" growled the Sergeant.

"Guess its mother's put it to sleep," a cold, wet Trooper growled back.

"Well, we thought there was going to be trouble" protested the local power, roused from his feather-bed. "It really did look like serious trouble I assure you. And we could not have handled serious trouble with the means at our command. Moreover, there may easily be something yet. So, gentlemen, I am greatly relieved you have come. I can sleep in peace now that you are here. Good-night! Good-night!"

All thru the remaining hours of darkness the detail patrolled the town. All thru the lean, pale hours of dawn it carefully watched its wakening, guarded each danger-point. But never a sign of disturbance did the passing time bring forth.

At last, with the coming of the business day, the Sergeant sought out the principal men of the place, and from them ascertained the truth.

Threats of a jail delivery there had been, and a noisy parade as well, but no hitch had occurred or promised beyond the power of an active local officer to handle. Such was the statement of one and all.

"I'll just make sure," said the Sergeant to himself.

TILL two o'clock in the afternoon the detail continued its patrol. The town and its outskirts remained of an exemplary peace. At two o'clock the Sergeant reported by telephone to his captain:

"Place perfectly quiet, sir. Nothing seems to have happened beyond the usual demonstration of a sympathizing crowd over an arrest. Unless something more breaks, the Sheriff should be entirely capable of handling the situation."

"Then report back to Barracks at once," said the voice of the Captain of "A" Troop. "There's real work waiting here."

The First Sergeant, hanging up the receiver, went out and gathered his men.

Still the storm was raging. Icy snow, blinding sheets of sharp-fanged smother, rode on the racing wind. Worse overhead, worse underfoot, would be hard to meet in years of winters.

But once again men and horses, without an interval of rest, struck into the open country. Once again on the skeleton bridge they made the precarious crossing. And so, at a quarter to nine o'clock at night, the detail topped Greensburg's last ice-sealed hill and entered the yard of its high-perched Barracks.

As the First Sergeant slung the saddle off John G.'s smoking back, Corporal Richardson, farrier of the Troop, appeared before him wearing a mien of solemn and grieved displeasure.

"It's all very well," said he,—"all very well, no doubt. But eighty-six miles in twenty-four hours, in weather like this, is a good deal for any horse. And John G. is twenty-two years old, as perhaps you may remember. I've brought the medicine."

Three solid hours from that very moment the two men worked over John G., and when, at twelve o'clock, they put him up for the night, not a wet hair was left on him. As they washed and rubbed and bandaged, they talked together, mingling the Sergeant's trenchantly humorous common sense with the Corporal's mellow philosophy. But mostly it was the Corporal that spoke, for twenty-four hours is a fair working day for a Sergeant as well as for a Troop horse.

"I believe in my soul," said the Sergeant, "that if a man rode into this stable with his two arms shot off at the shoulder, you'd make him groom his horse with his teeth and his toes for a couple of hours before you'd let him hunt for a doctor."

"WELL," rejoined Richardson, in his soft southern tongue, "and what it I did? Even if that man died of it he'd thank me heartily afterward. You know, when you and I and the rest of the world, each in our turn, come to Heaven's gate, there'll be St. Peter before it, with the keys safe in his pocket. And over the shining wall behind—from the inside, mind you—will be poking a lot of heads—innocent heads with innocent eyes—heads of horses and of all other animals that on this earth are the friends of man, put at his mercy and helpless.

"And it's clear to me—over, John! m, boy!—that before St. Peter unlocks the gate for a single one of us, he'll turn around to that long row of heads, and he'll say:

"'Blessed animals in the fields o Paradise, is this a man that should enter in?'

"And if the animals—they that were placed in his hands on earth to prove the heart that was in him—if the immortal animals have aught to say against that man—never will the good Saint let him in, with his dirty, mean stain upon him. Never. You'll see, Sergeant, when your time comes. Will you give those tendons another ten minutes?"

Next morning John G. walked out of his stall as fresh and as fit as if he had come from pasture.

COMING!

"The Road to Carolina"

"MORE scalps for the Shawnees and the Cherokees. The savages' right arms will be worn out before they get across the Susquehanna into our farms." It was a Tory of Philadelphia talking about the immigrants who were swarming across Pennsylvania to the frontier, back in 1770.

"The Road to Carolina" is a thrilling tale of one of those Philadelphia Tories, young Daniel Craig. He was caught in the westward migration and soon found himself fighting beside the frontiersmen in the struggle that led up to the Revolutionary War.

This great story of adventure, based on facts in the early history of Pennsylvania and the other colonies, will appeal to everyone. Don't miss the first chapter next week.

AWK!

Did you ever hear this one?—

Puzzled

Ole Olsen, trackwalker, was testifying after a head-on collision.

"You say," thundered the attorney, "at 10 that night you were walking up toward Seven-Mile crossing and saw No. 8 coming down the track at sixty miles an hour?"

"Yah," said Ole.

"And when you looked behind you saw No. 5 coming up the track at 60 miles an hour?"

"Yah," said Ole.

"Well, what did you do then?"

"Aye got off track."

"Well, then what did you do?"

"Vell, aye said to myself, 'Dis bane h—— of a way to run a railroad.'"

Waitress (taking order)—How do you like your eggs?

Customer—How do I know? I ain't had 'em yet.

Easily Ascertained

Hubby—It's queer how some folks get along without any house equipment at all. Our new neighbors haven't a lawn mower, hose or step-ladder, a saw, hammer or any nails.

Wifey—How do you know they haven't?

Hubby—Why, I wanted to borrow them.

"Hill's nowhere near as big a man as he was."

"Has he reformed?"

"No. He's dieting."

Facing the Music

"Bobby," inquired his pa, "did you wash your face before the music teacher came?"

"Yep."

"And your hands?"

"Yep."

"And your ears?"

"Well," said Bobby, "I washed the one that would be next to her.

Probable Proof

"I think there's company downstairs."

"How d'ya know?"

"I just heard mamma laugh at papa's joke.

Credit, if any, is due the poetry department of the Boston Transcript for this one:

The farmer leads no EZ life,
The CD sows will rot,
And when at EV rests from strife
His bones all AK lot.

Taking His Advice

Hubby—What's good for my wife's fallen arches?

Doc—Rubber heels.

Hubby—What'll I rub 'em with?

All Wrong

"It's all wrong about those Irish being good fighters."

"Yeh?"

"Yeh. Last night me and my brother Gus and two other fellows licked one."

White hominy	42.00
Golden feed, September	35.20
26 per cent cottonseed meal	41.25
41 per cent cottonseed meal	44.25
43 per cent cottonseed meal	46.75
34 per cent linseed meal	51.20@51.70

County News and Comment

Berks County, Pa.—Hay making season is past with an excellent quality of hay stored. It was about two weeks late. Wheat is all cut and about one-half stored in sheds and barns. The price for new wheat is $1.30 at present. Corn is making good progress the last few weeks. Pastures are of a good color and indications point to a fair crop. Spring grass seeding has a good stand and is making fine growth. Pasture is about normal for this time of the year. The oats crop seems to be a fair one. Some of the crop has already lodged. Prices: eggs, 24c; butter, 52c; corn, 80c; oats, 50c; hay, $24; straw, $15.—W. N. M., July 25.

Butler County, Pa.—Wheat harvest in full swing. About half a crop. Oats beginning to color. Prospects fair for an average crop. Hay about one-half made. Exceptionally good. Corn and potatoes growing nicely. Buckwheat making a good start. Not much sown in this neighborhood. Garden stuff short crop and poor quality. Plenty of rain but most of it came in a heavy downpour. Some hail and damage by storms in spots. Quite a few insects of all kinds and plant lice seem exceedingly numerous this year. Chinch bugs doing better than in the early part of the season. Eggs, 30c. Poor demand for late-hatched Leghorn cockerels.—H. E. P., July 26.

Cumberland County, N. J.—Wheat harvest was later than usual. Many farmers have their grain threshed now. Potato digging and shipping is on in earnest. Some plowed their oats under while in the milk for fertilizer, others let them mature and cut for grain. The huckleberry crop was shortened by the late frosts in the low places. Tomatoes are ripening nicely now. Many onions are going to market in Cumberland County. The pumpkins planted for a late crop are up and make quite a showing.—J. J. S., July 25.

Dauphin County, Pa.—Very heavy rains during the past month with some very high temperatures. Corn is growing very fast. Hay making almost finished. Crop heaviest in many years. Nearly all wheat has been cut during the last week which is about two weeks later than usual. Grass in grain fields looks fine. Oats ripening; crop is good. Condition of apples below normal. Crop of early potatoes is good and sell at $1.95 bu; corn, $1.10; new wheat, $1.27; oats, 60c; butter, 50c.—I. F. M., July 23.

Lancaster County, Pa.—Haymaking is about finished and was a good crop. Wheat harvest is well under way and in general is a good crop. Corn is growing but is below expectations. The county has been visited with thunderstorms, doing damage to crops, bridges, roads and telephone lines. There has also been some hail. Local prices are as follows: wheat, $1.35; oats, 50c; corn, $1; eggs, 26c; butter, 45c.—H. C. R., July 27.

Snyder County, Pa.—Farm work well advanced for the late season. Wheat shocks out well. Harvest will be over within a week if fair weather continues. Oats will be cut last week of July or early August. Stand heavy. Potatoes doing well. Good demand for milk cows. Berry crop large. New apples getting in the market at $2 per bbl. Yield promises fair in spots. Labor not so scarce as a year ago; much work being done in the corn, which latterly has developed well. Old corn is being held. Considerable buckwheat set out on hillsides. Pastures continue good.—W., July 19.

Sullivan County, Pa.—The weather during the past month has been fine for hay making if somewhat dry for other crops. Many farmers report an acute shortness of water. For that reason spring wheat is an absolute failure, oats will be very short, while potatoes still have a chance if the delayed rains arrive. Corn throughout the county is the worst failure we have had in years. There are almost no apples but smaller fruits and berries are an average crop.—M. G., July 27, 1927.

Tioga County, Pa.—The past month has been generally dry. Corn improving since the hot weather came on about a week ago. Hay is good and the weather has been ideal for curing it so far. Wool pooled July 13 was the largest ever reported in the county, while the price was the highest yet paid this year in the state. The price for young chickens is poor; this combined with heavy early losses is cutting profits. Prices: eggs, 23c; broilers, 20c; hens, 16c.—F. W. L., July 16.

Tioga County, N. Y.—The cold, wet spring and most of the summer has not been conducive for good crops of any kinds. Hay is a most bountiful yield and of good quality. Oats short and are ripening rapidly. Winter grain just finishing. Corn poor and now needing cultivation. The few exceedingly hot days this month have rushed the corn. Potatoes do not promise well. Gardens all very late and garden truck sells at high figures. No cherries to speak of. Peas small and few. It is thought there will be some more apples than was thought for in the late spring. Few grapes on many vines, peaches and plums few. Berries would have been much larger had there been more rain.—C. A. A. B., July 24.

Warren County, N. J.—We have been well blessed with rain and heat during the past two weeks. Sidehills have been washed considerably. Corn and oats have made a wonderful growth and look very promising. Potato beetles got away to a late start but have been worse than for some years. Potatoes are setting good and promise a good yield. Hay about all gathered but wheat is still in the field with only a small percentage cut. Old wheat is $1.50 and new starting at $1.20. Corn is $40 ton. Butter and milk remain unchanged while eggs are advancing, being 32c. New potatoes, $2; apples, $2, black caps and blackberries both $1.80 per 32-qt. crate with the latter a heavy crop.—A. S. P., July 25.

Westmoreland County, Pa.—Having fine weather with frequent showers, harvest well under way. A few farmers are thru making hay, some wheat to cut yet. Oats beginning to ripen. A fair crop of blackberries is expected. Corn growing fast now due to warm weather and frequent showers. Apples are going to be plentiful. Prices still remain about the same as last month. New potatoes, $1.60.—L. C., July 27.

It Points the Way to Greater Profit

(Continued from page 3)

same basket. Powerful egg-candling machines reveal why good eggs are worth a premium in any market when the inferior ones are left at home.

This same idea is carried out in illustrating the losses sustained on all important farm crops when the poor part of the crop is permitted to cut the returns on both good and poor. Everything is made plain on the train. Nothing is shown that cannot be duplicated on any farm without the expenditure of a dime for extra equipment. Four, five or even six hundred farmers leave their work some days in the height of a busy season to visit the marketing train. That indicates more than passing curiosity, particularly when the same growers return in the evening to hear a speaker of importance discuss some phase of packing and marketing. It is also significant when dealers drive thirty or forty miles to see the exhibit and then stand around to discuss marketing questions.

When we say this train is making history, we only quote from the requests for the train from other railroads. Not only competing lines but railroads serving communities that grow different crops consider the idea of better packing so important that they want to carry the message to their shippers and farmers.

The schedule of the marketing train's stops for the final week follows:

Monday, August 8, Bridgeton; Tuesday, August 9, Greenwich; Wednesday, August 10, Fairton; Thursday, August 11, Cedarville; Friday, August 12, Newport; Saturday, August 13, Port Norris.

The train will be open to inspection at approximately 10:00 A. M. standard time at all stations.

Shoe Salesman—What size do you wear, madam?

Customer—Well, fives are my size, but five and a half are so comfortable that I wear sixes.

Johnny's Ma—Johnny, there were three pieces of cake in the pantry, and now there is only one. How did that happen?

Johnny—Well, it was so dark in there I didn't see the other piece.

Dog Days Does Not Always Mean "Mad Dog"

By Williard H. Wright, D.V.M.

THE popular conception of Dog Days has materially changed during the past few years but there are still some people who look forward with a great deal of foreboding to this period of the summer. Time was when every child was cautioned against playing with strange dogs and warned to be continually on guard against the terrifying spectre of the mad dog. As a matter of fact rabies, or hydrophobia as it is popularly known, still exists as a disease to be feared and guarded against but the hysteria which formerly accompanied the warm lazy days of midsummer has given way to a calmer contemplation of the menace and a saner attitude has arisen which should go far toward controlling this dread disease.

Not Due to Season

The time of year known as Dog Days has no more to do with the prevalence of rabies in dogs than it has with the appearance of any other disease. A dog may go mad at any period of the year and there are no more rabid dogs running at large during mid-summer than at any other time. The reason that Dog Days were formerly thought to be definitely associated with rabies probably arises from the fact that the rabid dog is in most cases incapable of drinking water. In fact the term, hydrophobia, literally means fear of water. The term is, however, a misnomer for the rabid animal does not actually fear water but is unable to drink or eat because of a paralysis of the throat which usually develops soon after the start of the disease. Hence the trouble became associated with the lack of water and it was commonly believed that an animal would go mad simply because of thirst.

Rabies is a specific disease which is transmitted only thru the saliva of the infected animal. It is practically impossible for the infection to enter thru the unbroken skin and it is nearly always transmitted thru a bite or wound of some sort. The causative agent of the disease has never been isolated.

Contrary to popular belief, an animal affected with rabies does not suddenly develop violent symptoms. There is a preliminary period during the onset of the trouble when the symptoms may be so inconspicuous as to be completely overlooked or else fail to arouse suspicion. The animal usually shows a peculiar change in behavior. Most dogs become capricious, obey the call of the master very unwillingly; then jump about, fawn on him and show more affection than usual. There is an increased reflex excitability. The animal is easily disturbed and startled, and apparently frightened by the slightest external cause. A change of appetite is also noticed, the dog frequently failing to touch its favorite food or lets it drop after taking a mouthful. This preliminary period is of varying duration and may last only a few hours before the appearance of more decided and violent symptoms.

Confine the Suspect

An animal which is suspected to be suffering from rabies should not be immediately killed but should be confined and isolated pending the development of more marked symptoms and until death. A positive diagnosis of the disease can usually be made by a microscopic examination of certain portions of the brain and nervous system. This method of diagnosis was made possible thru the work of an Italian scientist by the name of Negri, who in 1903 discovered that animals affected with the disease had certain inclusions in their brain cells which were not found under any other circumstances. These inclusions have since gone by the name of Negri bodies. These cell inclusions, however, are not found in the initial stages of the disease hence it is important that the suspected animal not be destroyed immediately but that the disease be allowed to run its course if a positive diagnosis is to be made.

Is Partly Bugaboo

The great French scientist, Pasteur, together with his co-workers, developed in the eighties of the past century the protective method of vaccination against rabies known as the Pasteur treatment, and thus saved the lives of thousands of persons who have become inoculated with the virus of this malady. Of late years, other scientists have developed a cheaper and just as effective means of vaccination which has been adapted for use in animals. It is therefore possible to protect your pet against the disease by the use of this preventive vaccination. In fact many cities and towns have recently enacted ordinances making the vaccination of all dogs compulsory as a means of stamping out the disease within their borders. If this compulsory vaccination is extended generally it will mean in time that the menace of rabies or hydrophobia will be largely eliminated. However, this does not prevent the individual dog owner from protecting himself and his family by voluntarily having his pet vaccinated.

The old bugaboo of Dog Days has gone and in its place has come a saner conception of a disease which is to be guarded against but not to be dreaded with an uncontrollable fear. A little more common knowledge of the true facts of the disease and the means of preventing it will take much of the terror and hysteria out of the old cry, "Mad Dog, Mad Dog."

Prices Continue Irregular

Review of the Week Ending July 30

EGGS—At the close of the week the general conditions of the market were unchanged in New York City. Qualities continued irregular and for the bulk of the supply trading was quiet in competition with the use of storage eggs, chiefly from dealers' own stocks.

POULTRY—The New York market opened weak and unsettled on both fowls and broilers and this condition was carried thru most of the week. Leghorn fowls were firmer at the close of the week while large colored broilers sold slowly at lower prices. Leghorn broilers were steady and the market was stronger for old roosters the latter part of the week.

BUTTER—From the standpoint of prices the butter markets were steady and free from sensational changes thruout most of the week. Chicago showed more fluctuation in price than the eastern markets. Eastern markets were unchanged during the week except for a 1½c advance at Philadelphia and New York on Thursday which was followed by a decline on Friday.

LIVESTOCK—On the Chicago market hogs were steady to 10c higher for the week. Pigs were in better demand and were 50@75c higher. Packing sows were lower. Cattle prices were steady to slightly stronger on most grades. The decreased receipts of sheep stimulated the demand and prices were higher at the close of the week. Slaughter lambs were 25c to 35c higher.

HAY—The hay markets were irregular. The consuming markets were firmer with improved demand for both old and new crops. Surplus markets were quiet with a couple supplies and moderate demand.

FEED—The feed markets were generally stronger in sympathy with higher corn markets and limited output of most feeds. Bran was practically unchanged. Heavier wheatfeeds were higher while linseed meal was higher in the East and steady in the Northwest. Gluten feed and hominy continued in good demand at higher prices.

GRAIN—With the spring wheat crop in a critical stage the wheat market continued unsettled. Movement of new winter wheat was lighter than generally expected by the trade but there was no material change in prices. Corn tended upward on light receipts and unfavorable crop reports in some areas. Oats remained steady.

POTATOES—Virginia Cobbler potatoes were 25@75c lower per barrel on most eastern markets at the close of the week and the f. o. b. market was 65c per barrel lower. Supplies were liberal in most markets and demand continued slow all week. Shipments from New Jersey continued to increase and the f. o. b. market was quoted at $2@2.10 per 150-pound sack the latter part of the week.

TOMATOES—The liberal supplies and slow demand early in the week caused prices to decline on the Philadelphia market. With lighter supplies and better demand the market improved on Thursday and prices were very irregular. The supplies were again heavy at the close of the week and prices showed a sharp decline. The Marglobe variety which New Jersey is giving a trynout this year continues to meet favor with the trade and has brought top prices since.

Use the sprinkling can FREELY

Destroys disease germs —keeps down foul odors

DR. HESS Dip and Disinfectant quickly establishes healthconditions and helps to prevent contagious diseases.

Dip, spray or sprinkle and give every animal a chance to be at its best and to do its best.

This standardized preparation has five times the strength of carbolic acid. Always uniform in strength. It makes the finest, milk-white emulsion of any dip you can buy at any price.

Dr. Hess Dip and Disinfectant kills hog lice, sheep ticks, scab.

Kills poultry lice and mites. Destroys disease germs and makes dairy barns sanitary and clean smelling.

Dr. Hess Dip and Disinfectant costs less than ordinary dips because it goes farther.

Excellent household disinfectant.

Guaranteed

Ashland, Ohio

DR. HESS DIP AND DISINFECTANT

WHEAT NEEDS fertile, well-prepared, and well drained soil to carry it through winter.

Liberal applications of high analysis, well-balanced fertilizer, will help prevent winter injury, increase yields, improve quality and grade.

Potash produces plump, sound grain, and stiff straw that does not lodge. When potash is lacking, the grains ripen too early and lack quality; the stems and leaves die while the grain is still immature. Potash is cheap. Use it liberally.

Feeders Try Ear Corn Silage for Beef

DURING the past few years many farmers in the East as well as other sections of the country have been confronted with the problem of handling a corn crop that did not reach maturity. The 1927 crop got a late start and up to July 15 was considered from two days to two weeks late, which under normal conditions would mean another crop of corn that could not be matured. Recent favorable weather has, however, improved conditions all over the country and with favorable weather during August and a late growing season the crop may be matured.

Silos Saved the Crop

Farmers who were fortunate enough to own one or more silos in recent years were able to utilize the corn crop and secure a good price for the corn by feeding it to livestock. While silage made from immature corn does not have the feeding value equal to the silage from mature corn it can usually be fed to good advantage.

Eastern cattle feeders will be interested in the results of a recent feeding experiment at the Illinois Experiment Station. Last fall when the corn did not mature and contained too much moisture for cribbing a considerable amount of corn was snapped and put into a silo. This ear corn silage was used in this feeding trial to determine its feeding value.

Moisture determinations were made when the corn was put in the silo and it was found to contain up to 55 per cent moisture. A valuation of $12 per ton was placed upon this ear corn silage, compared with $5 per ton for the silage from the entire plant. Shelled corn in this case was valued at 70 cents per bushel.

Gained on Concentrated Silage

The ear corn silage was made from corn that was badly frosted. The ears were snapped from the stalks and put in the silo in the same manner as normal corn would be put in the silo. No water was added. This naturally made very rich silage because the stalks were not used and it was possible to put a greater number of acres of corn into the silo because of the concentrated form in which the corn was handled.

This silage was fed with cottonseed meal and alfalfa hay for a period of 200 days to calves that weighed about 375 pounds per head at the beginning of the feeding trial. The calves made an average daily gain of 2.18 pounds during the feeding period and returned $1.39 per bushel for the corn that was unmarketable and could probably not have been sold for 50 cents per bushel.

The results of this test seem to point a way for handling the corn crop in years when it does not mature sufficiently so that it can be cribbed and stored.—W. H. Tomhave.

Teamsters Compete

AN attempt to break the state and national horse-pulling record will be made at the first contest scheduled in Pennsylvania this season at Towanda, Bradford County, August 31 and September 1st. Erie County teamsters will try to establish new records at Wattsburg on the same day. Other events are scheduled at Smethport, McKean County, September 2 and 3; at Dawson, Fayette County, September 7 and 8, at Ebensa, Cambria County, September 9 and 10; and at Bedford, Bedford County, September 29 and 30th.

In the contests thruout the state two dynamometers from the Pennsylvania State College will again be used this year. The state record for teams under 3000 pounds is held by C. H. Elder, of Smethport. His 2800 pounds made a tractive pull of 2725 pounds the official distance of 27½ feet last fall. With a tractive pull of 2925 pounds for the distance of 27½ feet a 3495-pound team owned by the Cook-Anderson Lumber Company, of Beaver Falls, won the 1926 state record for teams over 3000 pounds.

Discovers New Weed Growing on Farm

PAINT BRUSH, wild carrot, Canada thistle and the many other weeds now scattered thruout the countryside may have a new companion. A new weed, which resembles the wild carrot, has been discovered growing on the farm of Samuel Myers, near Welsh Run, in Franklin County, Pa.

It is believed by Doctor E. M. Gress, state botanist, that the weed, which is a native of Central Europe, was imported about ten years ago in either clover or grass seed.

The Feedlot Mud Hole Ended Here

Are you raising a ton-litter this year? A concrete feeding floor in a sheltered, well-drained location will help to grow real pork. The concrete may be laid directly on the surface of the leveled soil. A slight slope should be given the floor in order that the sunshine and rain may help keep the surface clean. The curb or apron which is shown on this feeding floor prevents hogs from pushing grain off the floor and extends twelve inches below ground level to keep the hogs from rooting underneath.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HOG IS PARALYZED—I have a hog that is paralyzed on all his feet. The hog eats good but cannot get up. His joints are swollen and there is pus coming out from around the joints.—S. K., Cresson, Pa.

If the paralysis was the first condition noticed, it would be desirable to feed a greater variety in the ration. Corn, oil meal, tankage or fish meal and skimmilk form a good combination. Add a tablespoonful of cod liver oil to the feed daily for a couple of weeks. The sores may have been secondary but in any case it is well to provide plenty of clean straw and to bathe the parts daily with a two per cent solution of one of the standard coal tar disinfectants.

COW SCOURS.—I have a cow that seems to have natural scours all thru the winter. She is fed a dairy ration when she milks but is dry now and receives no feed but scours just the same. She is a good milker and I would hate to dispose of her.—L. P., New Brunswick, N. J. Scouring or diarrhea may be caused by an intestinal irritation, secondary to other diseases, or intestinal infection. It would be desirable to have an examination made by your veterinarian in order to determine the cause. Johne's disease, involving the intestine may be evident on examination. If such examination is not possible, you might try administering one quart of raw linseed oil in pint doses 10 to 12 hours apart. Avoid feeding laxative feeds for a few days.

THRUSH.—I have a horse that has running thrush in all feet. I had a veterinarian cut them out and burn with a hot iron. He prescribed formaldehyde. We have used the formaldehyde each day for four weeks but the feet do not get any better. Can you recommend any treatment?—D. P. G., Salem, N. J. It will probably be necessary to bandage the feet and keep them soaked with an antiseptic solution. Change the bandages as often as necessary. This should be done only after the feet have been cleaned and parts of the hoof that are decayed have been cut away. The animal should be in a clean, well bedded stall.

"Queek, queek, bringa de piek, bringa da shov, Antonia stuck in da mud!"

The boss, making a megaphone of his hands shouted back:

"How far in?"

"Up to hees knees."

"Well, then, let him walk out," the boss replied, disgustedly.

"But he wrong end up!"

Check Chevrolet Delivered Prices

They include the lowest handling and financing charges available.

Offering the most amazing quality in Chevrolet history, today's Chevrolet is the most popular gear-shift automobile the world has ever known.

Quality in design! Quality in construction! Quality in appearance and performance! Never before has a low-priced automobile possessed them to such an amazing degree—

—because no other low-priced car combines the progressiveness of Chevrolet and the experience, resources and matchless facilities of General Motors.

Go with the crowds and study today's Chevrolet. Mark well the aristocratic beauty of its lines—the superbly executed details of its bodies by Fisher.

Then go for a ride over city streets or country roads! Revel in the thrilling spurt that results when you "step on the gas". Delight in the smooth operation, the secure comfort, the swift sweep of the passing miles. Marvel at the way the car hugs the road, the ease with which it obeys the steering wheel, the promptness with which it responds to the brakes!

Here is quality expressed in terms that everyone can understand—and millions are now enjoying!

Here is quality obtainable at prices which reflect the savings of tremendous production and which emphasize the willingness to share these savings with the buying public.

Here is that most desired object of American life today: a beautiful car of amazing quality—*for everybody, everywhere!*

What's the Big Secret of Fall Milk Production?

Read this Free Booklet and FIND OUT!

Every year swells the ranks of successful dairymen who feed a summer grain ration — almost always including Linseed Meal. And each year they make more money than neighbors who trust pasture alone.

Why? Because a cow isn't just a machine to turn today's feed into tomorrow's milk. She's a living, breathing animal—capable of storing up health and energy cheaply in summer, and giving it back to you in profits weeks afterwards.

Look beyond summer milk checks. Build up your herd by grain feeding. Swing into fall with everything set for continued production. Write today for new booklet including practical summer rations.

Get this new, live story on Summer Feeding. Mail the coupon NOW!

Black Locust Poisons Cattle

Prevention is Better Practice Than a Cure

By Dr. E. M. GRESS, Penna. State Botanist

A FEW years ago, thirty-two boys, inmates of the Brooklyn Orphan Asylum, ate of the bark that was being stripped from black locust trees which were to be used for fence posts. All became very ill but none of them died. The prominent symptoms of the poisoning were vomiting, flushing of the face, dilated pupil, feeble pulse and deathly pallor.

Cattle and other livestock have been killed by eating the tender leaves and shoots of vigorous growing young trees and sprouts, and horses have been poisoned by eating the bark from locust trees to which they have been hitched.

The symptoms in horses and cattle are colicky pains, irregular pulse, purging followed by inaction of the bowels, nervous depression and collapse.

Abounds in Limestone Regions

Black locust (Robinia pseudo-acacia L.) is a tree which attains a height of about 80 feet. It is a very valuable tree, the wood being used for posts, which do not easily rot when placed in the soil. It is very common in Pennsylvania, particularly in limestone regions. An abandoned field or a vacant lot in a town is often completely covered by a black locust growth. The leaves are not palatable and are not often eaten by livestock except when on young tender shoots, therefore the poisoning occurring from black locust is not frequent considering the amount that is found in the state.

The leaves are compound, that is each leaf is made up of a number of small leaflets arranged along both sides of a main axis. The flowers which are borne in rather large white clusters are very fragrant and furnish a great deal of nectar. The fruit is a bean similar to the pod of our common lima and other garden beans. Indeed the locust belongs to the same family of plants as the clover, alfalfa, beans and peas.

Prevention again should be the practice of the farmer. Young tender shoots and sprouts should not be allowed to grow in the pasture field.

Locust flowers are very fragrant

If locust trees are growing in the pasture the lower limbs should be removed so that cattle cannot reach them. Horses do not often eat sufficient bark from a tree to be poisoned but still there are cases where such poisoning has happened when horses were hitched to a tree. This practice should be discontinued.

4-H Members Learn The "Why"

By ALLEN L. BAKER, State Club Leader

AMERICA is not only the "land of the free," but also the land "of the brief." Slangy phrases, catch slogans and trick trade names feature both our social and our commercial life. Junior Agricultural Extension Work, alias Club Work, has acquired a trade name—"4-H Club Work."

The trade name is derived from the national club work insignia, the four-leaf clover—each leaf having a white letter H. Good fortune, success and prosperity are indicated by the four-leaf clover. The four H's represent the training for Head—Hands—Heart and Health, as provided by the junior extension clubs.

Club Work Trains the Mind

Club work teaches farm boys to think, to plan, to reason and emphasizes the fact that present-day farming calls for brains as well as brawn. Members learn the "why" of balanced rations, of frequent cultivation for crops, of spraying to control insect pests and plant diseases, of vitamins, calories and saving kitchen steps.

Hands are taught to be skilful in all manner of farm and home practices. Youthful stockmen learn to weigh their feed accurately, to "get the feel" of proper flesh coverings on animals they may be fattening. Poultry culling, too, is dependent largely upon the skill of hands. Future farmers' wives acquire a knowledge of cold pack canning, become skilful at cutting patterns and sewing seams.

Loyalty to the club group, to the home community, to the state and nation are instilled thru programs in connection with regular meetings of the local club. Young Farmers' Week programs and Inter-State Club events such as those held at Camp Vail, Springfield, Mass., at the National Dairy Show and International Livestock Exposition help to strengthen the morale of these young people. "To win without boasting, to lose without squealing," is the ideal of a good club boy or girl.

A knowledge of what to do—the ambition and skill to do it, are of little avail if one does not have good health to enable him to carry his tasks thru to completion. Health instruction for club members is carried on in many ways and varies in the different states. Hot school lunch work probably occupies the major place in this division. Many states have definite health club projects for club members, each member being required to score himself or herself at stated intervals on certain health factors. These may involve sleeping a certain number of hours each night with windows open, regular bathing and brushing of teeth, drinking milk with each meal, partaking frequently of leafy vegetables, etc.

Many clubs open their meetings by having the members repeat the standard club pledge:

"I pledge—
My Head to clean thinking,
My Heart to greater loyalty,
My Hands to larger service, and
My Health to better living—for my club, my community and my country."

Three Thousand Members Picnic

ON THE shores of Lake Marcia, in High Point Park, the highest mountain in New Jersey, three thousand of the state's leading Grangers and Farm Bureau members met for their second annual picnic. Representatives from nearly every county in the state left their home duties to spend the day in this park which was recently donated to the state by one of its former residents.

In addition to watching the state horseshoe pitching contest, the day was spent in climbing the mountains, bathing, boating, visiting and listening to an array of some of the state's notable agricultural speakers. Senator David Agans, Three Bridges, Master of the State Grange, was chairman of the day's program.

The Warlike Locusts Pay Dividends

This Kind Doesn't Frighten Us with Its Chatter, But It Has Unusual Traits

By F. T. MURPHEY

LOCUSTS — seventeen-year excursionists, extraordinary — chew over favorite shrubs and entertain us for a short, interesting time with their chattering. They are scheduled for certain parts of our country this year. Those of us who saw and heard the last myriad are now just 17 years older, if not wiser.

A certain mystery surrounds a creature with such unusual habits. We cannot readily conceive of a span of almost two decades to mature an adult insect which lives and flutters about for only a few months. It is because we are accustomed to busy ourselves with shorter lived species. This week we set eggs. In three weeks we have chicks, and in less than a year we have a laying hen. We think in days and weeks, instead of years.

An acre of seventeen-year-old locusts furnishes posts for a three-mile fence

Accomplishes Wonders

There is another locust growing and living among us which is just as unusual in many respects as our long-sleeping friend. It is called a black or yellow locust and belongs to our woody plants. It believes in living and growing and being useful to us humans instead of spending most of its life in bed asleep.

Black locusts accomplish wonders in the seventeen years set for hatching a brood of its namesake, the insect. About the time we were pestered with flying millions of the last brood of seventeen-year locusts, (in 1908) one and a half acres of seedling locusts were planted on an unused corner of the property of the Pennsylvania State College. In the fall of 1925, just 17 years later, this plot of locust, then grown to good-sized trees, was cut for fence posts. As a result, over 1600 seven-foot posts went into the college pasture fences. Over 1000 tough, hard, durable posts were grown on a measured acre. Every one of these posts built up by black locust in 17 years will last another 17 years in the ground. This plant locust serves us while another brood is growing.

Is Interesting and Odd

Like the much heralded insect, the locust plant possesses many interesting and odd life processes. It is really a second cousin to our table beans and peas and a relative to clover and alfalfa. On its roots grow tiny plants called bacteria. By developing a close partnership, the locust tree and its bacteria friends derive from each other mutual benefits. The tree gives a home and life to its minute neighbors in exchange for nitrogen

Hoover Reviews Farm Situation

THE man whose colossal creative genius and organizing skill kept thousands of men, women and children in a dozen European countries from starving, during and after the war, came to Kansas the other day from the scene of another tremendous emergency—the escape of the 700,000 Mississippi flood refugees which have been kept free from sickness and epidemic. And he brought back with him a well defined plan for their rehabilitation and for flood control. When the new Congress meets in December it will have the facts at hand.

Arthur Capper

William Allen White, dean of Kansas writing men and editors, had asked Secretary Hoover to come to Kansas to meet with the state's representative newspaper men, to talk to them and answer their questions, as a few months ago he had invited another member of the Coolidge cabinet for a similar conference. Kansans like to get their facts at first hand.

The meeting was at Mr. White's home in Emporia. A distinguished body of editors was present and heard an epic story of America's greatest disaster, simply but graphically told. Then the Secretary came smilingly thru a searching cross-examination on flood control, waterway development, super power, installment buying, aviation, chain stores, agriculture and other economic problems.

Is One of Country's Best Informed Men

Hoover himself is a westerner, but he has lived and labored in many lands where his work as a mining engineer took him. He was born of Quaker parents 53 years ago on an Iowa farm where his boyhood was spent. His wife was a western girl. He worked his way thru Leland Stanford, a western university, by running a laundry and waiting on tables. An English mining company in Australia gave him his first job. Since March 5, 1921, he has been Secretary of Commerce and we have made great strides toward becoming the world's leading commercial nation. He has made his department our most useful department of government, and President Coolidge sets great store by him.

The great engineer is a big man physically and mentally, a broad six-footer. I believe he has one of the world's best reasoning minds, as I believe that by the nature of his abilities and training he is the best informed man that the country has today.

Hoover is not a politician. In selecting a man for his department his first concern is about his fitness for the job, rather than his politics. However, Hoover would classify politically as a Progressive, not a radical but a constructive Progressive. He recognizes the importance of the part big business must play in a more and more densely populated modern world, but in his attitude toward big business he is pretty much on the people's side. It is his view that big business is here to serve the people. He has no sympathy with the hard-boiled Wall Street view that the people must take care of big business, or serve it.

He's going to be a big help as he grows larger

Prices More Important to Farmer Today

Naturally I was interested in what Mr. Hoover might say about agriculture. Referring to the time when he was a boy on an Iowa farm, he remarked that about 80 per cent of what was grown on a farm at that period was consumed by the growers, a market had to be found for only 20 per cent. Recently when he had revisited the farm home of his boyhood, he had found the figures reversed. About 20 per cent of what the farm produced now, was consumed on the place and an outside market had to be found for the 80 per cent. Farmers had had to adjust themselves to a complete change in marketing their products. He added, "Prices are much more important to the farmer today than to the farmer of the last or any preceding generation, for the reason that he must find a market for so much more of what he produces."

There are now "too many sellers of farm products compared with the number of buyers." These comparatively few buyers distribute the farmer's products to the consumers. The farmers must reduce the number of farmer sellers to reach a bargaining equality with the buyers. The way out was thru cooperative marketing.

Tact is the ability to remove the sting from a dangerous stinger without getting stung.—James Bryce.

Agriculture in Politics

THE economics of agriculture remains in such condition that some form of so-called farm relief is sure to loom big when Congress meets. Not only that, but it promises to be one of the major questions in the coming political campaign. All the efforts of the politicians, aided by eastern papers, have failed to quiet those who believe that an honest effort should be made to adopt a national policy for agriculture which will do for it what has been done for industry by the protective tariff. That's the idea that has gotten into the heads of the farmers of the big farming sections and no amount of palavering and pouring of oil on the political waters is going to change it until something is tried. In other words, agriculture, like prohibition, promises to stay in polities even if many people would like to eject it.

Are You One of the Fanatics?

ONE day last winter as were were walking along Chestnut Street, we were accosted with the question, "Don't you want the blue law repealed?" We looked up and there stood a pimply, sallow-faced young man in baggy trousers and a slouch hat with a cigarette hanging to his under lip. He had a soiled sheet of paper and a lead pencil in his hands. He was accosting the passers-by to get signers to a petition to the legislature to have the Pennsylvania Sunday law repealed. As you know, the bill failed of passage, but the horde who want all restrictions regarding the Sabbath thrown aside, and liberty given to conduct and promote amusements freely on that day, have not given up hope. The forces who want a chance to gather in the change of the people on Sunday because the people are not working are keeping up the fight for the repeal of what they call the blue laws. They stop at nothing in their efforts. They resort to misrepresentation, ridicule, cupidity and appeals to ignorance to get adherents. The following quotation appeared in an editorial from a tabloid paper published in Philadelphia. We print it merely to show you the spirit of those who want us to adopt the Continental Sunday:

". . . . . for these reasons, however, the Blue Law fanatics should be challenged and even goaded into committing folly. They are an everlasting nuisance and only the disclosure of their incredible narrow-mindedness and what it means can rid society of them."

That's the kind of talk against the founders of our government which a more or less alien-minded class indulge in. We ask in all seriousness why, if this country has laws which they dislike so much, they do not stay in or go back to the lands allowing greater personal liberty.

Where The Milk Goes

A LITTLE more than sixty million tons of milk were produced in the United States in 1926. This would load 30,000 trains of 50 cars each, each car holding 40 tons of milk. The amount is almost beyond comprehension. The average person will ask, "What is done with it all?" A little less than one-half of it is used for household purposes, and a little more than one-half is made into butter, cheese, condensed and evaporated milk, chocolates, ice cream, etc. It takes twenty-one pounds of milk to make a pound of butter, ten pounds to make a pound of cheese, eight pounds to make a pound of powdered milk and thirteen and three-fourths pounds to produce a gallon of ice cream. Nearly four per cent of all the milk is fed to calves, and it is estimated that three per cent is wasted.

For Voters' Self Protection

THE sentiment in favor of honest elections in Pennsylvania has at last begun to crystallize in the shape of an organization called the Pennsylvania Elections Association. It is hoped to develop a large and powerful, non-partisan organization with the sole purpose of insuring a free ballot and an honest count. Such an organization, led by the right people and supported by the upright citizenry, will show election crooks that the people are really in earnest and will make the manipulation of elections unsafe because it is unpopular. Machine polities is organized. That's what makes a machine. Honest voters are not organized. That's what makes it easy and safe to steal elections. There should be a braneh of the associntion in every county, and every real citizen of the county should belong to it.

Prepare for Soft Corn

THE chanees are there will be a great deal of soft corn when the normal harvest time comes 'round. The season up to the last week in July has been distinctly unfavorable to the production of a normal crop, and even if the latter part should be ideal many localities cannot hope to escape frost late enough to ripen the crop. What is to be done about it? Farmers who keep any considerable number of cattle have the alternative of putting it in a silo. There are still thousands of farms yet without a silo, altho it has been proven beyond question that converting corn into ensilage is one of the most economical ways to store corn even in an ordinary season. The erection of a silo now by those who are not provided with one and who have cattle to feed is a good way to insure against the possible total loss of their corn crop.

Vegetable Growers to Meet

THE Vegetable Growers' Association of America will meet this year at Syracuse, New York, August 22-26th. The abridged program received indicates that preparations for an entertaining and profitable time have been made. In addition to the educational sessions an extensive exhibit of machinery, implements and equipment will be held. So fast has ingenuity and skill developed labor-saving equipment that a study of these things by the farmer is now quite as necessary as the study of methods in these days of high-priced labor.

Besides the sessions and the exhibitions, the management has arranged for several tours. In this way, visitors may see what others are actually doing in the field. Every market gardener who can possibly go should plan to attend this gathering. Program and details may be obtained by writing the secretary, Frank Held, 609 N. Fourth St., Columbus, Ohio.

The Farm Loan Board

AS WE predicted at the time, the new men appointed to the Farm Loan Board by President Coolidge will be strenuously opposed when they come up for confirmation by the Senate next winter. The National Association of Federal Farm Loan Borrowers, an organization composed of several thousand farmers, have set themselves to have the farmers regain control of the Board and keep the control where the law intended it should be. Carl Vrooman, the president of the association, says: "The movement can hardly fail to bring another upheaval in the Farm Loan Board and discredit upon those who forced the recent changes in personnel." Farmer borrowers cannot understand why Eugene Meyer, for example, an international banker, and a man who has been more or less antagonistic to the farm loan idea, should have so prominent a place on the board.

Editorial Sidelights

THE perpetrator of the Sidelights has been traveling. This morning we drove out of Philadelphia, at no unreasonably early hour, and now, at 10:00 P. M., we are in a Clearfield hotel, wondering whether the jazz orchestra playing somewhere nearby is loud enough to drown the sound of our typewriter. Early retiring guests in adjoining rooms might tolerate jazz, but we couldn't expect them to put up with the less rhythmical rattle of our trusty portable.

While the hour hand made one trip around the clock today we covered two less than 300 miles, besides taking time out for several stops, and one bad detour.

We are not citing this as an unusual one-day automobile drive. We mention our day's run simply to emphasize the vacation possibilities that are opened up to farmers by good automobiles and smooth roads.

The idea that a farm family cannot take a vacation trip has lost ground rapidly since the time when it was a day's work to navigate the mud roads from the farm to the nearest railroad. Now there is not a place of scenic or historic interest in all of Pennsylvania that cannot be visited in a two- or three-day trip.

We are not vacationing on this trip of ours, but we must confess we are enjoying it. We started this morning at tidewater and crossed the ridge of the Alleghenies in Centre County at an elevation of 2082 feet this afternoon. We passed thru congested cities, smoky industrial towns, the varied countryside of Chester County, beautiful, rolling Lancaster County.

Just after leaving the State Capitol behind we began to skirt the Alleghenies, dodge thru narrow gaps, roll down long, narrow valleys and climb ridges that the road-makers couldn't avoid. We traveled several highways well known to those who study the road maps,—the Lincoln Highway, the Susquehanna Trail, the William Penn Highway, and finally the Lakes-to-Sea Highway.

Tomorrow we shall continue toward western Pennsylvania on the Lakes-to-Sea route. And now we shall mail this and then devote our energies to observing how long is required for a jazz dance orchestra to wear itself out.

SLOW TO ACCEPT LOAN

Oleo Manufactures Unsatisfied —There Are Commercial Possibilies of Potash in Southwest.

Washington, D. C.

THE Intermediate Credit Banks were established to provide loans to farmers' cooperatives on liberal terms. Provision was also made in the Intermediate Credits Act, whereby individual farmers could obtain loans thru the rural credit corporations.

The report of the twelve Intermediate Credit Banks to the Federal Farm Loan Board up to June 30, 1927, shows direct loans of $15,520,452.76 and rediscounts amounting to $49,530,829.95. These figures are taken to indicate that so far farmers and cooperative marketing associations have been slow to take advantage of the facilities for borrowing money now available to them.

Oleo Interests File Petition

The oleo manufacturers will never rest satisfied until they secure the repeal of all federal and state legislation which prevents them from selling their product as creamery butter. Their propagandists and agents are continually on the job of trying to convince the people that oleomargarine control legislation is against the public interest.

At the recent annual convention of the National Association of Retail Grocers a resolution was adopted, apparently at the request of the oleo interests, to the effect that the "retail grocers' organization is opposed to the oleomargarine taxes that are imposed upon retail dealers for the privilege of selling that article of food, and that we do hereby petition Congress to repeal such tax law as soon as possible."

Potash Wells Are Drilled

Two potash wells have been drilled in New Mexico under the $100,000 appropriation made available by Congress last winter for potash exploration purposes. Drilling on another well in New Mexico is now in progress and a potash well is being sunk across the line in Texas.

The Bureau of Mines reports that the coring of the potash bearing salt in the two wells completed was very successful. It is expected that the specialists in charge of the explorations will be able before many months to give out information as to the commercial possibilities of the potash deposits in the Southwest.

Chain Stores Affect Growers

The chain stores are steadily encroaching upon the field of the individual retailer of food products. The Federal Reserve Board reports that chain stores showed a most important increase during the first six months of 1927 over the same period last year.

Small farmers and market gardeners who grow vegetable crops for the local market say that the growth of the chain store system is seriously affecting their business.

The chain store management buys fruits and vegetables in car lots shipped in from the large trucking regions, in many instances hundreds of miles away. These car-lot shipments are distributed out among the stores of the system operating in a city. In consequence the local store manager does not care to handle the products of the nearby grower who has only a few crates of berries or baskets of beans or tomatoes at one picking.

Child Labor Laws Enacted

The states are making much progress in enacting laws governing the employment of child labor. The Children's Bureau of the Department of Labor reports that three states, Michigan, Illinois and Maryland, have recently passed amendments to their compensation laws which provide for additional compensation in the case of minors injured while illegally employed. North Carolina has prohibited night work for children under 16, and limited the working hours for children 14 to 16 years of age to 48 hours a week.

Connecticut requires the issuing of a part-time permit for the employment of children outside school hours. In Maine the educational requirement for children under 16 years of age leaving school for work has been raised to completion of the eighth grade.

In Pennsylvania and New Jersey attempts were made to solve the problem of the schooling of migratory child workers, by getting legislation making it unlawful for non-resident children to be employed during the time when the laws of the state of the child's residence require his attendance in school, but the bills carrying this provision failed in both states.—E. B. R.

SCHOOLS DISCUSSED

Study Rural School Problems —Many Roads Being Built —Reluctant in Beetle Control Work.

Harrisburg, Pa.

IF DISCUSSIONS getting under way indicate anything they mean the subject of appropriations to school districts, particularly the fourth or rural class, will figure largely in the next legislature. Two unofficial studies have been started as to needs and resources of such divisions and attention will also be given to the taxation problems. The state will launch its own inquiry into the whole subject of educational subsidies this fall and it is probable the matter of valuations will be brought under survey. The prompt payment of appropriations, which was begun a year and a half ago, led to the distribution of between $5,000,000 and $6,000,000 to the fourth class districts the week just closed so that they will have cash on hand when school doors open, a situation not always the case in the last ten years. Just what will come out of the studies will be a subject of observation at the State Capitol, but chances are the next legislature will not want for information on rural schools and their needs. The Governor may refer to it also.

Urge Grading of Apples

Agricultural department officials have come out with calls for people to buy graded apples, it being the idea to take advantage of the conditions in many counties to drive home the importance of grading.

More Reward Work

Records of the State Highway Department show probably more projects for improvement of roads and bridges being launched this summer than in years. Almost daily announcements are being made of authorization both of roads and bridges to be built under the reward plan. This work is to be supervised by the state.

Demonstrations and Talks Given

Demonstrations by federal and state authorities as to the means of spraying to halt the Japanese beetle appear to have caused much discussion and in some of the city as well as urban communities the cost problem has arisen. The state authorities have issued statements calling notice to the value of the demonstrations and pointing out that it is a serious business, but some of the cities and boroughs having men at the demonstrations are not inclined to take up the method immediately. One result may be holding of demonstrations at a number of places, which would quicken public interest.

Inquire into Claims

State officials have asked information on any disputed claims for killing dogs. Officers are not allowed to turn in personal claims on what other folks do.—T. C.

WANT GRADING LAW

Farmers Will Visit Farms—Land Offered for Egg-laying Contest—Recommend Picking Scale.

Trenton, N. J.

APPLE growers and several of the farmer organizations are discussing the advisability of introducing an apple grading law into the New Jersey legislature this coming season. With the three nearby states of New York, Delaware and Virginia operating under quite drastic measures to improve grading and packing, the better class of New Jersey growers seem to feel that New Jersey would profit by similar legislation. Central and southern New Jersey apples come into such close competition with the Delaware product and to a considerable extent at some seasons of the year with the New York fruit, that many growers are of the opinion that the proposed apple law situation in the state should come to a head this season.

Hunterdon Farmers Tour

The annual Hunterdon County Board of Agriculture tour will be held this season on August 19 when the membership will gather at Flemington at 8:30 A. M. for a one-day trip. The first stop will be at the fruit farm of R. Stanley Terhune, of Hopewell; next the poultry farm of Donald Pettit where more than 7000 baby chicks were brooded this season. The Walker-Gordon farms at Plainsboro will be visited during the course of the day, where the tourists will be met by speakers from the State Department of Agriculture and College. The alfalfa dryer on the Walker-Gordon farms will be inspected.

New Egg Contest Proposed

Land has just been offered near Flemington, N. J., for the establishment of another egg-laying contest in New Jersey. The poultry department of the Experiment Station is interested in the idea and is drawing up tentative plans for establishing a new contest plant. The acreage offered is 10 acres of good, high ground located between Flemington and Sergeantsville. The Vineland contest for next year is already completely booked and the Bergen-Passaic contest has nearly all of its entries for 1928.

Tomato Picking Scale

The Gloucester Board of Agriculture has taken firm decision on a tomato picking scale this year, not so much to influence the amount of wages to be paid but rather to arrive at a pre-arranged schedule which will be followed uniformly by tomato growers thruout the county. Growers in other nearby counties are actively interested. The effort is to overcome one of the most troublesome problems that confronts growers every year when the harvest draws near. The labor committee of the Gloucester Board of Agriculture has recommended a price ranging from 5 to 8 cents per basket for picking, such sliding scale to depend upon not only the conditions of the labor market but the size of the crop to be picked.—W. H. B.

ECONOMIST SPEAKS

Gives New Views On Farm Conditions—Automobile Valuable Machine On Farm —Cycles Run Together.

Ithaca, N. Y.

DR. GEORGE F. WARREN, farm economist of national note, last week gave some new views on the agricultural situation to a group of special students of farming conditions. "Inflation and deflation are the biggest causes of the present depression," he said. "It is one of the commonest errors of human beings not to distinguish between evidence and coincidence, and to call two things that happen together 'cause and effect.' Inflation and deflation bring in their wake a great set of corollaries, such as high taxes, high cost of distribution and general price disparities. Before 1920 wages lagged, distributing charges were small and farmers profited. Now, with deflation, the retail price is down, but wages are high, causing price disparity."

Bad Marketing Is Factor

"Bad marketing has often been named as a factor," he continued, "but did marketing suddenly go from good to bad in 1920? No, there was more cooperation than ever, probably because of the depression. Rampant speculation in land is not only not an explanation but it is not a fact. Extravagant living is given by city people to explain the depression. Worst of all, they assume that country people ought to do without things, like automobiles, telephones, water systems, because they weren't made for them anyway. The automobile is one of the most valuable machines on the farm, so great is the saving of human time.

Need Modern Things

"The tariff is too low, say some, or too high, others claim. But there was no sudden change, in fact no change at all. Taxes, over-production, under-consumption are other reasons advanced. But the agricultural depression was not caused by these things.

"There was a coincidenec in 1920 in the hog, cattle and horse cycles. This was, however, wholly independent. Figure out for yourself how often waves of 3, 9 and 15 years will all hit bottom together."—M.F.

County News and Comment

Blair County, Pa.—We are having fine harvest weather now, nearly all wheat is cut. Oats are looking good, will soon be ready to cut. Hay is very plentiful this year. Some farmers have already begun to plow for wheat. In some parts of the county there has been quite a little damage done to corn fields by severe rains. The grain and hay markets are very dull at present, help is scarce in spite of the fact that there are many idle men around. Wheat is quoted at $1.15; corn, 80c; old oats, 50c; hay, old, $25; new, $16; straw, $15; eggs, 30c.—H. E. H., August 1.

Elk County, Pa.—In casting back over previous notes I find it has been necessary to put rather a pessimistic note forward in a good many cases and therefore it is a pleasure to be able to speak in a brighter mood for this one time at least. After the cold, wet and late spring the planting season has been brought to a close and farmers are in the midst, or perhaps more of them are finishing, one of the largest hay crops grown in years. As very little hay is sold in this locality most men consider it from a feeding standpoint and are pleased with a large crop. Hear very few complaints about the probable price due to surplus crop. Potato plantings were slightly less than normal but in general are starting in very good shape, that being one crop which the late season did not hold up materially. The acreage in oats has been cut rather involuntarily as it grew so late that much of the land alloted to oats has been put into buckwheat and in a few cases to soy beans or some such crop. The planted crop tho has made wonderful growth and in general looks well. Corn, of course, is the sore spot in this high altitude this year. A gamble here at best, the element of chance has been removed and we know that except in a very few cases there will be no corn matured here and a light cutting of silage. This year marks a decided increase in interest in small fruits in this county. It is one of the crops our soil and season is adapted to and the market is ready at all times. The poultry industry here is growing slowly and soundly. Dairying is also experiencing growing pains and will likely within another year or so break away from its long-time position as a strictly local business and will be shipping milk to the cities. The hesitancy with which our more up-to-date brothers in eastern counties have accepted the tuberculin test for their herds has brought the demand here and we expect to hold part of the business obtained. Prices for eggs, 35c; butter, 45@50c; hay around $20 altho price unsettled at this time. Strawberries just off the market, most of them brought 25c. Old potatoes, of course, off the market and it will be better than a month before new ones arrive in any quantity.—H. D. M., July 22.

Frederick County, Md.—Weather thru July for the most part was dry and hot but not too dry for the corn as we had an occasional small shower. The corn has made up some for the poor start of the spring but is still about two weeks behind. Wheat, oats and rye are good crops. Hay was a bumper crop. Farmers plowing. Fruit and spring stubble grass looking good. Potatoes are lower, around $1.25 per bushel, and crop is good. Early threshed wheat is selling from $1.20 upward. Chickens and eggs are low. —R. J. W., August 1.

Fulton County, Pa.—One of the largest hay crops in many years has just been harvested. Wheat was a fair crop and oats is excellent. Corn, however, is below average and at least two weeks late. The spring-sown clover came up well and is making fine growth. Pasture is about

"See before you buy"

THEY say that personal observation is the greatest teacher in the world and the best way to judge the merits of any article. This is why we ask you to go to a "Farm Service" Hardware Store and "see before you buy." There is no other way to judge the value and usefulness of any hardware article except to look it over, handle it, and have its special features personally explained by a "Farm Service" hardware man.

The beauty of trading in the "Farm Service" Store is that you are always welcome to look at everything in the store, to give the goods the most careful examination, and compare them in all their different qualities so that you can get a complete idea of what service they will render after you have purchased them. It is the sure way and the best way to invest your hardware money. The "tag" in the window is your invitation to walk in and make yourself at home.

Now is the time to start figuring on getting everything ready for the coming winter. Go into your favorite "Farm Service" Hardware Store and get information about roofings, paints, builders' hardware, winter poultry and milk house equipment that you may need. Find out about them now so that when the time comes to buy you will know right where to get the best in value and utility.

Your "Farm Service" Hardware Men

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

THE Dog Days are upon us,—murky, sticky and oppressive. Well do I remember the old-time fear that people had of Dog Days. It was believed that the dog-star (Sirius) exerted a malign influence on earthly affairs, inducing sickness and death, and causing everything to mold and plants to wilt and die. The Dog-Day's season lasts forty days, or from July 3 to August 11; that is, twenty days before and twenty days after the heliacal rising of Sirius. Now that's as clear as mud.

✦ ✦ ✦

CHOLERA Infantum, diarrhea and dysentery were attributed to the evil effects which the dog-star produced. Typhoid fever, also, was thought to be the result of this star's destructive reign. Another of his activities was making dogs go mad. Many people had a mortal fear of all dogs during dog-days, because it was believed that any dog might be influenced any time so that he would go stark, raving mad, bite someone and produce hydrophobia. Fifty years ago, people could do little but trust to luck and hope for the best, until the dog-days were over.

✦ ✦ ✦

HERE is one of the fields in which science has replaced superstition. In the olden days people were not mistaken about certain diseases and troubles being prevalent during dog-days. Summer complaint and other diseases of children carried off the little folks by the tens of thousands. In a few hours they would develop a condition with which medical skill could not cope, and in a short time it was all over. Epidemics of typhoid fever would break out in a neighborhood and entail a long list of suffering and death.

✦ ✦ ✦

BUT since we have learned the true cause of these and other maladies, we are able to guard against them, and in the great majority of instances they have almost disappeared. Science taught us that these affliction are due to microscopic organisms called germs, and that they multiply rapidly when the days and nights are hot and the atmosphere moist and murky. The worst season of the year happens to be when the dog-star is over us, altho we are assured that the dog-star has no influence in producing this kind of weather.

✦ ✦ ✦

SCIENCE, besides teaching us the real cause of disease, has also found out how to make conditions so that disease germs may be avoided and how to prevent their multiplying. Before this age, baby's food was not properly cared for. Mother did not know that she deliberately, tho ignorantly, fed to her baby the poison which killed it. Now she keeps the milk cool and the bottle clean. People look to their food and water supplies to make sure that no lurking germs of typhoid are taken into the system, there to multiply and produce the disease. Hot water, ice and disinfectants, properly used, have drawn the teeth of the dog-star, and we no longer fear him. His malign influence has been dissipated, tho he still continues his heliacal rising at the appointed time. So much for the triumph of science over superstition.

✦ ✦ ✦

THE same advancement has been made in the treatment and prevention of diseases and troubles in other things than the human family. Germs of all kinds which thrive in hot, sultry weather and cause things to mildew and mold; bacterial diseases of plants, the quick rotting of fruits and vegetables, are all due to the rapid development of some kind of germ life, promoted by dog-day weather, but not to the dog-star itself. "Surely, the world do move."

An old favorite: "They Called the Baby Woolly Because He Shrank from Washing."

The Cheerful Plowman

Snappy in Presence of Kids

JOSEPHUS JOHNSON and his wife indulge in endless, petty strife, they chew the rag, I'm sad to say, three hours, I reckon, every day! Now they could chew, and scold, and rave until they tottered to the grave, yes, they could jaw, and snarl, and snap, and talk at random thru the cap until the dawn of Judgment Day, and I'd have not a word to say, if 'twere not for the wretched truth they jangle right in front of youth!

Yes, with their children grouped about they start to sputter and to spout, they start to quarrel about the price of next year's hat or last year's rice, they fuss away like sordid sin and children have to drink it in! That isn't right, it is a shame, it is a cruel, dishonest game for grown up people, rated sane, to paw the ground and shake the mane right in the presence of a child whose feelings are alert and mild! Say what you like that line of stuff, sour-grained, and sharp, and cross, and rough, will make a deep and lasting hurt in children's lives, as sure as dirt! They drink it in day after day, and tho they turn again to play and try to drive it from the mind a portion must be left behind.

The children hear that "wow-wow-wow," that constant, rumbling, whining row, and tho they may forget a part, a scar is left upon the heart. The little folks need wholesome air, need cheerful homes, I must declare, if they shall grow up sweet and sane with cheerful minds of proper grain. Josephus Johnson is a chump, his wife's a suit-card, not a trump, they should be spanked and put to bed with muzzles on the mouth and head, they should be gagged as scolds of yore were gagged in sixteen twenty-four!—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

GRANDPA had been having quite a time with his eyes. Somehow he could not see very well. The lines on his paper blurred and once he got the sheet upside down. He was afraid he was going to lose his sight, and that was a thing he dreaded almost above everything else, for he had taken a great deal of comfort reading and doing such odd jobs as lay within the range of his strength.

But the Little Chick one day asked Grandpa, "Grampa, let me take your spectacles a minute."

"Take my spectacles, Little Chick? You couldn't see a thing thru them. They're too old for you. You don't need specs anyway."

But Little Chick kept teasing him until he got Grandpa to take his spectacles off and hand them to him. Away he went with them, and when he came back he called out with a big smile, "Now look them 'em, Grampa. Bet you can see now!"

Is Your Vision Dimmed?

Sure enough, everything looked so much clearer. Now the old man could read all right. He could look way off, and the fear of losing his sight had all vanished. And all the little boy had done was to wash the glasses and rid them of the dust which had accumulated on them, nobody knew how long.

Dust on the glasses!

I have had it that way, and so I suppose have you. Until a few days ago somehow things looked pretty gloomy to me. I could not see how I was ever going to come out with my business affairs. It worried me. I did not sleep very well at night. I was tired when I got up in the morning. I do not know when I have had a spell like that. But after all, it was only dust on my glasses. But it was something nobody else could do for me that time. You know there are different kinds of trouble. Some of them our friends can help us to get rid of. And is it not a blessed thing that we have so many good friends to help us clear up our glasses when they get all blurred up and we can scarcely see thru them!

And there are other difficulties which it seems no friend can do anything about. We have just got to take ourselves in hand and sometimes we have to deal with ourselves pretty severely. It was so with me that day. Other folk had noticed that I was feeling glum and they did all they could to help me get back to my old-time state of mind. It was good and kind of them.

We Must Trust Him Implicitly

But I went away down in a back lot on the farm, all by myself and there I fought my battle out all alone. If I tried I could not tell you all about it, but these are some of the things I asked myself:

"When you have been in dire straits before and did not know which way to turn, did not everything turn out all right when you took the Great Friend on trust, as you have learned that it is always best to do? Have you forgotten the old, old words in the Big Book, 'I have not seen the righteous forsaken nor his seed begging bread'? And is not that other beautiful word still in your Bible just as it used to be, about casting 'all your care upon Him for He cares for you'?"

Away down in that back lot I leaned on my hoe and looked up into the sky; and as I looked and looked, all the dust of trouble disappeared from my glasses and it was broad daylight again, with sunshine and singing birds all round me once more.

Dust on our glasses! How it does darken our sight and weaken our better life! Can we do anything better than to ask God to wipe our fears and cares and doubts all away and to give us a clearer vision of His goodness and mercy to every one of His children?

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Oats Conserve Excess Nitrogen

THE June issue of "Crops and Markets," published by the U. S. Department of Agriculture, gives production costs for corn, wheat and oats over a period of several years. It is very significant that yield per acre influences cost per bushel more than any other factor. In vegetable production, where expensive hand labor is a much larger item than in the growing of general farm crops, I am sure yield per acre influences cost in even larger degree. Every possible effort must be made to secure high yields if satisfactory profits are to be realized.

• • •

Intelligent selection of a green manurial crop demands careful consideration of several factors. Length of growing season which remains before average date for first killing frost and also before hard freezing is likely to take place, time when crop is to be plowed down, fall, winter, early spring, or late spring, adaptability of the green crop to be grown to the soil, moisture conditions, whether or not the crop is a legume, seed cost, reliability, all enter into the problem.

• • •

Other things being equal there is no questioning the desirability of legumes. On the other hand there is a large territory where climate rarely permits satisfactory development of these crops during the part of the growing season remaining after cash crops have been harvested. Under such conditions oats or barley for seeding up to the middle or last of August and rye for later use look mighty good. They are absolutely reliable and will come thru under conditions of drought and low temperatures which virtually stop legumes in their younger stages.

• • •

The small grains as green manurial crops enjoy another advantage which has not been widely advertised. That is the great nitrogen conserving ability which a quick start and rapidly spreading root system gives. When truck crops have been liberally fertilized with large amounts of easily lost nitrogen it may be of far greater importance to conserve nitrogen thru the use of a rank, quick crop than to make an effort to add nitrogen thru legumes, especially when the land must be used early the following year.

• • •

We think of labor as costing so much per hour, of land as costing so much per acre. Yet every acre we own costs us something in taxes and interest on our investment for every hour we own it. Idle labor very obviously represents a loss. Similarly it gives one a sense of well grounded satisfaction to see land working for its own improvement within a few days after it has ceased to produce cash returns. One week ago the last peas were picked from a late patch. Today the same area is "green as grass" with three-inch-high oats, sown four bushels to the acre and now coming "thick as the hair on a dog's back." Looks lots better than a mess of withered pea vines and oncoming weeds and is better. Pea vines turned down, plus oats to lick up and conserve all left over nitrates, as well as to add organic matter will not make a bad foundation for next year's early cabbage.

Windstorm Destroyed Apple Crop Was Visitors' Impression

THE New Jersey State Horticultural Society held their Summer Meeting and Auto Tour in Mercer County this year on August 3rd. The attendance was about 500, traveling in nearly 100 automobiles. The arrangements were so well made and carried out, and the day was so well suited to the occasion, that it was one of the most satisfactory summer meetings ever held.

The entourage met at the farm of Earl Dilatush north of Yardville and inspected his fruit farm and roadside market. Mr. Dilatush is credited with having one of the most complete markets of the kind in the state. Practically all the fruit and vegetables sold are produced on his own place. They are well graded, and prices are reasonable and plainly displayed.

Discuss Spray Residues

The next stop was at the fruit farm of Lemuel Black near Hightstown. There are fifty acres in apples, six in pears, five in grapes, besides several acres in small fruits. Mr. Black sells his fruit thru retail stores in Trenton to a high-class retail trade.

Lunch was eaten on the fine old home estate of Edward Howe near Princeton. The beauty of these grounds makes the place well worth a visit. Mr. Howe planted all but one of the many large, beautiful trees forty years ago and while there is artistry in the selection and location, he never permitted any of them to be pruned in the least, and no one can say that they could have been improved.

A short program was carried out after lunch. Charles D. Barton, the president of the association, opened the question of spray residue on fruit, a subject which state and federal regulations are making an important one for fruit growers. Mr. Barton said that the requirements next year would necessitate lessening the amount of residue to less than one-half what it is now, or in other words, from a tolerance of two and one-half hundredth grains per pound of fruit, the rule reduces it to one one-hundredth grain per pound of fruit. A. E. Mercker, chief of the Market Bureau, in talking on the outlook for prices said the prospects were decidedly better than last year, due to the much smaller crop in the United States. Peach prices are good and will remain good, unless the price-dispute between canners and growers in California continues and causes heavy shipments eastward. Prof. Schermerhorn, Dr. Headlee and Dr. Martin gave short talks on the prevalent pests this year.

The tourists were next interested in the intensive methods practiced in the orchards of R. S. Terhune, near Rosedale. Besides intensive cultivation, Mr. Terhune thins his fruit heavily. As the visitors drove into the orchards and saw the ground strewn with green apples the first impression was that a wind storm must have destroyed his apple crop; but it was only the result of the severe thinning recently done.

Orchard Is in Sod

Everyone who attends the New Jersey horticultural and agricultural meetings is acquainted with John H. Hankinson, one of the first county agents of the state. Mr. Hankinson quit this work and took up fruit growing several years ago and is making a success of it. His peach orchard is unique in that it has been grown from its planting in 1919 in alfalfa sod. The alfalfa is cut two and three times a season and left lie on the ground. The trees are vigorous and promise a crop of 20,000 baskets this year, the same as last year. Mr. Hankinson says that, while the trees grow a little slower the first few years, he has little trouble with the Oriental moth because of this. The size of the trees now compares favorably with other cultivated orchards.—R. P. K.

Blaze of Color Greets Poultrymen

THE World's Poultry Congress opened July 27 at Ottawa, the capital of the Dominion of Canada, amid a blaze of color and music. Delegates from 42 countries and from 42 states of the United States were in their seats when Viscount Willingdon, Governor General of Canada, and Viscountess Willingdon entered, accompanied by Premier W. McKenzie King and Minister of Agriculture W. R. Motherwell.

Following the speeches of welcome and the presenting of the keys of the city to Edward Brown, of London, England, president of the congress, William Phillips, newly appointed minister from the United States to Canada, was introduced for his first public appearance in Canada. In very well chosen words and with an exceptionally pleasing manner he assured the congress that the delegates from the United States, present in such large numbers, were there to contribute the best they had for the good of all. Mr. Phillips showed a surprising grasp of the poultry industry.

Two Languages Spoken

The whole tenor of the opening program was that of international good will and tribute to the humble hen, which had made the congress possible. The opening of the meeting was of great interest to folks from the states as the Governor General made his opening remarks both in English and French while the delegate from Spain that responded to the thanks from Canada for the inspiration received from the 1924 congress held in Barcelona, Spain, spoke only in French. English and French are the official languages of the congress.

Following the opening program the great exhibition held in connection with the congress was officially opened by the Governor General. Here are found birds from every civilized country of all sorts and descriptions. The various nations taking part in the congress have educational exhibits, outstanding among which is the one shown by the U. S. Department of Agriculture and made possible by an especial appropriation of Congress.

Building after building at Lansdowne Park contains things related to the poultry industry. The display rivals some of the largest state fairs in the United States and it all relates to the poultry congress.

Following the opening, the poultry congress settled down to work for the long week's program ahead of it. This will wind up with an official visit by the Prince of Wales on August 3 and a business session on August 4th.—W. H. Lloyd.

Is It Limberneck?

I am having trouble with my chickens which are about three months old. They go on the roost in the evening well and the next morning are sick. Some stagger when they walk and try to eat. They pick for the feed but can't reach it. I gave one sick one a half teaspoon of Epsom salts and it is all right now. The next one I tried it on died. Some people tell me it is limber neck. Would you please let me know what you think it is, what causes it and what to give to cure them?—M. M., York County, Pa.

The symptoms you describe resemble those of limberneck, as you suggest, very much. This ailment comes from eating decayed flesh, such as the carcass of a fowl that has died in some hidden corner, and is more or less common in the summertime when birds are on range. Picking around the barnyard might also be a cause. The remedy is to give the flock a dose of Epsom salts at the rate of one pound per 100 birds, dissolved in the morning drinking water. Of course, you must search for and remove the cause, which is something dead.

How do you find that the pullets are growing? If I understand your letter, you say that they are getting cracked corn only in addition to what they pick up on range. In case you are not satisfied with their growth and condition, I think that feeding a growing or even a laying mash such as you can buy at any feed dealers will be a great help.

If you carry out these suggestions and still have trouble, kindly write me again.—R. L. Scharring-Hansen.

Losses Are Due to Carelessness

CARELESSNESS causes the heaviest losses to farmers who ship eggs, says the Pennsylvania Bureau of Markets after a recent examination of a large number of shipments. Lack of grading and improper packing resulted in an average damage of 7.5 eggs per case when the eggs were delivered by farmers for shipment.

The extreme lack of care exercised in preparing eggs for shipment is shown by the following figures taken at four shipping points in the northern section of the state:

	Per cent
Cases nailed in the center	43
Cases with old packing material	99
Cases with new packing material	1
Cases improperly padded	12
Cases properly padded	88
Cases with dirty stained packing material	24
Cases with damp packing material	3
Cases with dirty eggs	27
Cases with long eggs sticking above fillers	16
Cases providing space for long eggs	1
Cases packed large end down	8
Cases with spray odor	1
Cases with some duck eggs	3
Cases with scattered tinted eggs	41

Nest Box Notes

CARE OF THE FLOCK—Continue to cull each week in order to maintain a 50 per cent production and to make the pens available for early-hatched pullets that are coming into production on the range. Cull birds can be recognized by their dry scaly combs, dry puckered vents and yellow eye rims. Dispose of them and save the quarter a month that it would cost to feed them.

House the remainder of the flock in cool comfortable houses; feed green stuff regularly; supply plenty of fresh water and adequate mash hopper space.

• • •

Care of the Young Stock.—It is foolish to follow the practice of early hatching if the pullets are not housed a little before they come into production. The eggs they lay during the summer and fall are valuable and will offset the cost of carrying the birds if they do go into a molt in the late fall. Any pullets that are laying on the range should be removed to the laying pens.

• • •

Watch the development of the pullets on the range closely. One should aim to have birds with good frames before production starts. Many New Jersey poultrymen are following the practice of mixing the grain and growing mash in equal parts and when the birds are 12-14 weeks of age, placing enough of this mixture in the hoppers to last the pullets until 2 or 3 o'clock in the afternoon. From then on, nothing is fed until 7 o'clock when an additional amount of scratch grain is given. In this way a greater proportion of grain in relation to the mash is consumed and the sexual development of the bird retarded thus benefiting the ultimate size of the pullets. Remember that good-sized pullets cut down the number of small eggs gathered.

• • •

By the time these notes are published it will be too late to plant cabbage to mature this year; but anyone who has plants will do well to set out a small patch with the idea of having soft cabbage to feed until freezing weather. Hens seem particularly fond of cabbage.

MAKE SURE of Fall and Winter PROFITS

FEED Larro EGG MASH NOW

Your hens need Larro Egg Mash now! The long season of production has lowered their vitality and robbed their bodies of the elements that go into the formation of eggs. These must be restored if you are to get plenty of fall and winter eggs when prices are at their peak.

Larro Egg Mash prepares your hens for a quick, easy molt. It keeps early hatched pullets in top notch condition for steady, profitable laying. It nets you the biggest profit from every bird in your flock from one year's end to the next.

Here is what William Ellery Bright of Waltham, Mass., nationally famous Brown Leghorn breeder wrote on February 2nd, 1927: "Just as an example of Larro production I am giving you some figures for last week from eight pens of pullets raised on Larro and still fed on Larro. This is a 64% production which is pleasing, and the condition of the flock is the best I ever had."

Pen 1, 20 pullets, 86 eggs	Pen 5, 22 pullets, 118 eggs
Pen 2, 25 pullets, 88 eggs	Pen 6, 21 pullets, 127 eggs
Pen 3, 23 pullets, 106 eggs	Pen 7, 25 pullets, 107 eggs
Pen 4, 18 pullets, 60 eggs	Pen 8, 24 pullets, 105 eggs

Make sure of *your* fall and winter profits by starting your flock today on the Larro feeding program.

Picnics Appeal to Young and Old

Are You Prepared to Conduct One?

ONE summer day a few years ago I was one of four playing picnic hostess to fifty little kindergartners and their mothers. We had chosen a lovely park, and swings, slides, sand piles and wading made the youngsters happy for an hour. Then we surprised them with games and contests galore; but I am sure that I was asked at least once every five minutes, "Miss Smith, when is our picnic?" In other words, "When do we eat?"

Not long ago one of our readers wrote me asking for games and contests for young and old to play at a picnic. She has had folks ask her that other picnic query, "Now what shall we play?" Both are most important, and I believe we are prone to prepare eats with more thought than games and contests. Here are a few good suggestions that interest all ages.

SINGING GAMES

Who does not love "The farmer in the dell," "Happy is the miller boy," "Here we dance Looby-Lou," "Here we go 'round the mulberry bush," "London Bridge is falling down," "Oats, peas, beans and barley grow," and a score of others. If you do not recall the old songs and words, write me for help.

BALL GAMES

Aside from staging a real baseball game which may not interest everyone, there are so many interesting games with balls. The games that follow may be played with any large ball; a football, volley ball, or just a big shore ball will answer.

ARCH BALL—Arrange any number of players in two or more sides with equal numbers in each row. Have the shortest folks in the front of each line. Let each row choose its captain. All players stand at arms distance from each other, rows about four feet apart. Each row needs a ball. Players get ready by raising arms high above heads prepared to catch the ball and toss it to the players back of them, who in turn catch and toss to their nearest neighbor. No player dare be missed. Each in the row must catch the ball and toss it over his head to the next in line. The contestants should be allowed to have a period of free play before the actual contest begins.

Excitement Reigns

When all understand the game, it is exciting sport. The balls are then given to captains who are first in the lines. At a given signal the captains toss the balls and the race is on. When the last player in each line gets the ball, he runs quickly along the right side of his own team to the front and the tossing begins anew. The contest is ended when one of the captains is back again to first place, each rear player having run in turn to the front of his row and started the ball on its course down the line. The team wins whose captain is first in front with the ball.

HOT POTATO—By this time players will appreciate a quieter game. Let them be arranged in a large circle at arms length apart, and then sit down, Indian fashion. The balls are placed "in the oven" in the circle center to bake. Stories are told while the baking continues. Then a chosen leader starts each ball rolling. The balls are hot potatoes and every one touched anywhere except hands is burned, and must turn his back toward the circle center. The idea is to keep the ball going so swiftly by rolling it quickly away from you that no burns are possible.

CHASING GAMES

THREE DEEP—I am sure there is no more popular running game for picnics where all ages assemble than Three Deep. Players form a great circle, then count 1—2—3, 1—2—3, and so on all around the circle. Odd or incomplete numbers step out for the starters. Number 1 and 2 then step in front of number 3, and the fun begins. There must be a chaser and a person to chase. The chased one quickly frees himself by running to the front of one of the groups of three. At the same moment the rear person in that group must turn to the fellow being chased and hunt refuge in front of a group before he is caught. And so the game continues indefinitely. If it grows too tame or the circle is very large, enliven it by having two or more chasers and folks chased.

PUSSY WANTS A CORNER—In a woods or park where trees abound children love this old game of chase. Each one selects a tree, bush or corner, except the leader. He is Puss. He then announces that pussy wants a corner, and everyone must move to a new position. Puss then gains a place and someone else becomes "it."

INTERESTING CONTESTS

Potato Race, Peanut Race, Three-Legged Race, Sack Race, are fun for racers and watchers. The line-up is about the same for each game. Arrange as many potato groups, 5 or 6 potatoes in each, as there are entries in the contest. Let each player stand to the right of his potatoes, which are to be carried one at a time on a knife in the left hand to the goal. No running is allowed.

The Peanut Race is similar except that the peanuts must be jabbed onto a hatpin one at a time and carried to the appointed place.

The Three-Legged Race demands pairs of folks, usually boys or men. Each pair is made into a three-legged racer by tying two legs together in each pair. John's left with Tommy's right. Use stout cord or rope. Any number of pairs may enter the race which is walking or "trying to walk" a specified distance.

The Sack Race, as its name implies, means that all players are standing in a sack and the sack is securely tied about the player's belt. In this he runs or walks as the race demands.

ALL DAY SPORT

It is a wise forethought to provide swings and see-saws for the tiny tots, and bats and balls for the youths, and both men and women will pitch horseshoes all day in real vacation fashion, if given the chance.

Suppose all who attend a very successful picnic during August will write us an account of the fun you had and the games you played. That will be a help for next year if too late for this summer's sport.—Gertrude S. Stewart.

Baby's Health Must Be Safeguarded

Especial Care Should Be Taken in Hot Weather

ABOUT one-sixth of the deaths occurring among children under one year are from gastric and intestinal disorders. The greatest mortality from these causes is apt to be during the hot weather. Parents usually can bring their children

Plenty of pure milk, cool clothing and fresh air chase the dread of baby's second summer

safely thru the summer if they will follow a few simple rules of hygiene particularly in regard to feeding.

The cardinal rules for mothers during the period are:

Nurse your baby. The breast-fed baby has at least four times as good a chance to live and thrive as the artificially fed baby.

If the baby must be weaned before autumn, wean him before the hot months. Babies should be weaned by the time they are nine or ten months old.

If it becomes necessary to give a complementary bottle, feeding after the nursing, or to wean entirely, give the baby clean cow's milk from a tuberculin-tested herd, modified according to the directions of a competent physician. Certified milk is best, and well worth the extra cost because of the extra safety for the baby. To insure the most perfect digestibility any milk fed the baby, certified or otherwise, should be boiled for three minutes.

Doctor's Care Should Be Constant

The physician should see the baby at least once a month so that the formula may be changed to meet the needs of his rapid growth.

Offer the baby plenty of boiled water to drink. Sometimes the breast-fed baby refuses to drink much water, but in the hot weather, he should frequently be given a chance to drink in case he wants to. Water that has been boiled five minutes is safe to drink.

Never consider any disturbance of the baby's bowels as unimportant. Any unusual constituency of the stool, or more than four stools a day is a disturbance. Consult your physician at the first sign of trouble. Never forget that any bowel complaint occurring in babies in the summer time may be the beginning of serious illness.

Clothing is an important item in the summer hygiene of the baby. The amount of clothes or coverings should never be such as to cause the baby to perspire. Cotton garments are best.

Rubber or waterproof napkins, if they must be used, should never be worn for long periods. Better to carry along some sort of a washable protective pad for him to sit or lie on. Diapers, no matter how slightly soiled, should be boiled at least 20 minutes and well rinsed before being used again, and dried in the outdoor sun and air.

When and wherever possible the baby should be kept out-of-doors several hours a day. His movable abiding place can be put out on the veranda if it is impossible for the mother to take him out-of-doors.

Especial care should be taken during summer to guard children against contagious diseases. Hot weather lowers resistance to disease.

Please Tell Me

PLEASE print on our Home Page several ways of serving endive salad.—X. Y. Z.

The tender white endive hearts are delicious in cold salad. Have the leaves clean and very cold. An hour before serving, marinate the salad in French dressing. This dressing is made by combining ½ teaspoon salt, ¼ teaspoon pepper, 1 teaspoon sugar, 2 tablespoons vinegar and 4 tablespoons olive oil. Shake until the mixture thickens. Keep very cold.

Any preferred salad dressing can be served on tender crisp endive, and a garnish of eggs is attractive.

Endive may also be served in hot salad and touches the spot in the cool of autumn. Simply pour the boiling hot dressing over the prepared greens, and stir well. Serve at once.

ONE reader asks how to finish floors by painting and oiling; also with paraffin. Secure the very best floor paint you can find on the market and follow directions explicitly. When painted to suit your taste, then make it enduring and nicely finished by the hot oil finish. Heat boiled linseed oil to boiling hot and apply at that temperature with a brush, trying not to put it on too thick. After ten minutes remove all excess oil, being sure not to leave any. By that time the floor will have absorbed what it can and any not removed will cause a sticky mess.

I think our inquirer refers to the wax treatment in her second query. It has some paraffin in its make-up. To make a good floor wax, shave into a pint jar one-eighth pound of beeswax and one-eighth pound of paraffin. Heat this mixture by setting it in a pan of water. When the waxes are very soft, remove from the fire, and stir into it as much turpentine as the jar will hold. Stir till a nice thick batter, and keep in a cool place. Apply sparingly with soft clean cheesecloth, and follow by a weighted rubbing. Excellent for painted floors and linoleum.—G.S.S.

Heats Home for 25c a Week!

"I can run my Bulldog furnace steady for fourteen days in normal weather conditions on the actual cost of fifty cents." So writes F. R. Redetzke, of Cleveland, North Dakota, and he adds: "Hard to believe is it? That's what some of my neighbors thought until I showed them! We have an unlimited amount of grain screenings in this country. That's the fuel I am using."

That's what the Bulldog does with about the lowest grade fuel you can think of! Here's what it does with coal:

"There is no heater to compare with the Bulldog. I burned 2½ tons of coal last winter and heated 5 rooms and bath"—Walter Geary, Gloucester, Mass.

Comes Completely Erected!
Fits Any Height of Basement
Goes Through Any Door
You Install It Yourself!

If you are even thinking of a pipeless furnace, or any furnace, write for our free catalog. The Bulldog is one furnace you MUST investigate. Comes completely erected, fits any height of basement, goes through any door, and you install it yourself!

No Money Down!

Small Monthly Payments

The Bulldog is sent you for free inspection. Then, if satisfied, you make only small monthly payments, at our amazingly low price! Factory connections in both East and West. We ship from nearest point. Don't consider buying any furnace until you find out about the Bulldog. Write at once for our special offer and our free catalog together with the wonderful record of Bulldog success. Get ready for winter NOW! Mail this coupon TODAY!

Will Buy GUINEA PIGS CHECKERED GIANT RABBITS WHITE FLEMISH GIANT and WHITE NEW ZEALAND RABBITS ANY QUANTITY. STATE SEX AND PRICE
TAYLOR'S FARM, Doylestown, Pa.

These Patterns Will Shorten Sewing Day for Busy Mothers

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5835.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size if made as illustrated will require 2⅞ yards of 36-inch material with one yard of contrasting material for panel, trimming and collar, belt and cuff facings. Pattern, 10 cents.

5851.—Five sizes: 1, 2, 3, 4 and 5 years. A 3-year size will require ¾ yard of plain and ⅝ yard of figured material 40 inches wide if made as illustrated. If made of one material 1¾ yard is required. Pattern, 10 cents.

5845.—Five sizes: 1, 2, 3, 4 and 5 years. A 3-year size will require 1⅝ yard of 27-inch material with ¼ yard of contrasting material for facing on pockets, tabs and leg bands, and 5 yards of bias binding put on as illustrated. Pattern, 10 cents.

5836.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2 yards of 36-inch material if shoulder straps are made of ribbon one yard is required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Maybe He Doesn't Like Oatmeal

Did You Ever Try Dressing It With Raisins?

IF YOU were to go to a milliner for a hat and she were to offer you a plain bare straw or felt, then make no effort to demonstrate how the hat could be trimmed, you would very likely walk out of the store, righteously indignant because of the poor salesmanship of the shopkeeper. Hats, without trimmings, are just as good a protection for the head, but somehow it is never too much trouble to trim a hat.

But what about "garnishing," the term we apply to the trimmings for food. The busy housewife is too prone to feel that garnishes for food entail a tremendous amount of extra work, and can be used only on festive occasions. But if the housewife thinks how she may trim the food which she wishes her family to eat, she may consider herself a better saleswoman than the milliner who offers the untrimmed hat.

An Extra Touch Sells the Meal

Maybe Johnny doesn't like oatmeal. Did you ever try dressing it with raisins? Surely that is no trouble and it may increase its sale greatly. Maybe the reason why the patrons at your dining table do not eat lettuce is that you never think to pick it a little early and put it on the ice so that it will crisp up nicely. There is as much difference between a flat piece of lettuce and a nice, cold, crisp, curling one as there is between a drooping, rain-soaked hat and a perky French model.

Even the much abused spinach becomes very desirable when stacked in the center of a platter, topped with a few slices of hard cooked egg and surrounded by bright colored carrots or beets. When you are serving two such foods why not make one enhance the other by serving them together?

You really save yourself work because you save dishes. Meat and vegetables may often be arranged on one large platter with less trouble than it would take to serve them in separate dishes. Pure ice cream has such a generous appeal that it really needs no trimmings, but during the summer luscious fresh fruits and berries will lend a refreshing charm to the ice cream such as a flower may add when placed artistically on a hat.

And so it is not extra work, but a little ingenuity that is needed by the housewife to put the trimmings on food so that those who see it, eat it because they really want to!

Oil Stoves Lighten Hot Weather Burdens

OIL STOVES radiate much less heat than either coal or wood stoves and, therefore, keep the kitchen cool during hot summer days.

Three main types of oil stoves are on the market. The wickless type has to be kindled with gasoline or alcohol but it gives a hot flame similar to the flame from a gas stove. The kindler type is wickless also but has a kindler of asbestos. The third type is equipped with wicks which are lighted directly and need no kindling. All three types may be had with short chimneys which bring the flame up directly under the pot or pan. Many stoves are equipped with one extra-sized burner which gives more heat than the ordinary size.

To get the best results with any oil stove, the stove should be set level to insure an even flow of oil to the burners and the oil tank should be kept well filled with good oil. All stoves should be cleaned according to directions that come with them, and, in those that need wicks, only the wicks intended for the stove should be used.

Use CHAMPIONS *for* Dependability

CHOOSE the spark plugs you use in engine-driven farm equipment as carefully as you select the equipment itself.

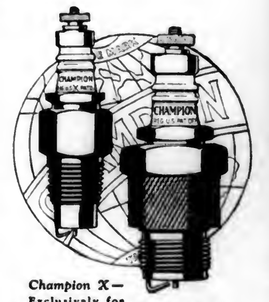
For the operation of the finest piece of equipment—the best truck, tractor or stationary engine—can be seriously impaired by faulty ignition.

Champions are known the world over as the *better* spark plugs—better because of their two-piece, gas-tight construction which makes cleaning easy; their exclusive sillimanite insulators which are proof against heat fractures and breakage; and their special analysis electrodes which will not corrode.

For assured dependability and better engine performance use Champions in your farm equipment and in your own car as well—they are noted the world over for their stamina and long life—outselling all others two to one because they are the *better* spark plugs.

Car manufacturers recommend, and hundreds of thousands of motorists are changing spark plugs every 10,000 miles to insure better and more economical car operation. This is true, even of Champions, in spite of their world-wide reputation for remarkably long life.

CHAMPION
Spark Plugs
TOLEDO, OHIO



Champion X—Exclusively for Ford cars, trucks and tractors—packed in the Red Box 60¢

Champion—for trucks, tractors and cars other than Fords—and for all stationary engines—packed in the Blue Box 75¢

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Cousin Ruth:—I received my pin and thank you very much. I think it is very pretty.

There are two birds' nests near our house. One is on the porch and the other is on a lilac bush. The nest on the porch has four baby birdies in it. They must like us, don't you think?

We have a little calf and I feed it out of a bucket every day. I call it Queen Marie. We have three white bunnies.—Ruth Sheasley, (X), Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm. Here is a cake recipe:

NEW VELVET CAKE

2 eggs
½ cup milk
One-third cup butter
One and one-third level teaspoon baking powder
One-third cup flour
Two-thirds cup sugar
2 tablespoons water
3 drops lemon extract
3 drops vanilla extract

Sift flour once before measuring. Measure into the sifter, add baking powder and sift three times. Cream the butter and sugar until frothy. Beat the egg yolks until thick and lemon color. Then beat them well into the creamed butter and sugar. Whip the whites of the eggs until stiff, then whip into the mixture. Pour in the milk and water, sift in flour, add the extract and beat all until smooth.

Bake in small loaf pan 45 minutes, allowing the mixture to rise as high as it will before browning over the top. If baked in shallow pan or in layer pans one-third of a cup of flour should be added with a corresponding proportion of baking powder.—Josephine Baker, 13, Bedford County, Pa.

Dear Cousin Ruth and Forum Members:—I sure do like to make candy. Will someone please send me a recipe for butterscotch candy? —Marie Rush, 13, Greene County, Pa.

Grace A. Wilson, Fulton Co., Pa. Agnes Zabroski, Greene Co., Pa.

Dear Cousin Ruth:—I have been ill for eight months and because my illness keeps me from going out I have lots of time to read. I have been reading the letters of the little friends. I like them very much. have four little kittens. They are very cute. I named one of them Sugar Lump. I thought it was a nice name for a cat. I also have 36 ducks. I always mix their food.

I have a dog named Rex. He is a very wise dog. He fetches the cows and tells us by barking when someone comes. He is very kind to me.—Christine Edris Darcas, Lebanon County, Pa.

I hope, Christine, that by now you are entirely well.

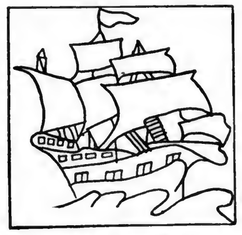
Dear Cousin Ruth:—I live on a farm. We have horses, cows, pigs and chickens. I was trapping this winter and caught a raccoon but it got away from me.

In the summer I must watch our cows. I like to plow and harrow.—Ralph Bower, Snyder County, Pa.

Dear Cousin Ruth and Forum Friends:—I live in the country and have a pony. We call him Dan. He is black. When we take Dan out to water he will lay down and roll. If you throw your hands up he will get up on his hind feet, and if you clap your hands together he will clap his front feet together.

He will eat candy and will drink out of a tea cup. My pony shakes hands with you.—Margaret Blossom, Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading the Forum letters for a long time and enjoy them very much. I would like to be one of your members.



THE MAYFLOWER
Catherine V. Merritt, (X), Wayne Co., Pa.

I am sending a picture of the "Mayflower" that I drew.—Catherine V. Merritt, (X), Wayne County, Pa.

Dear Cousin Ruth and Forum Friends.—I received my pin and thank you very, very much for it.

We have a dog. Her name is Buster. She does many things but the one I think is the most polite is this. When she wants to come in the house she comes to the door and scratches, which we call knocking. When we open the door she will not come in unless we ask her to. Sometimes she barks so we open the door. Then she runs in. We caught on to her trick, so we do not open the door any more.—Ruth Sandt, thirteen, (X), Northampton County, Pa.

Dear Cousin Ruth and Forum Friends:—I will write you a few lines or maybe you will drop me for not writing. Here are some riddles.

1. Why is a horse like the letter O?
2. How does a bird eat apples?
3. Why does a cock shut his eyes when he crows?
4. Why is a bridge used on fiddles?
6. Why is a bad man like a broken pen? — Mildred Hartman, eleven (X), Columbia County, Pa.

To You

DEAR FORUM BOYS AND GIRLS:—Last week you'll remember I reminded you of our Story Contest. I hope all of you will have enough spare time to enter the contest. Once you decide what you're going to say it won't take very long to put your thoughts on paper will it?

Today I received a letter from a Forum cousin in York County inquiring about the contest. In part she says, "Do you mean this summer on our vacation from school or just the time we have off in the day? Must it be written with pencil or ink?" That's entirely up to you. You can tell me what you'd like to do between times during the day or what you'd like to do during vacation when you have lots and lots of spare time. You probably haven't a lot of spare time during the day for I suppose it keeps you busy helping outdoors—watching the cows, tending the chicks, etc. But you possibly will have a great deal of spare time during vacation. Some of you, no doubt, would like to go camping this summer, others would like to visit the seashore and still others would like, perhaps, to take a trip to the city. The camping trip sounds good to me.

Try to make your story as interesting as possible for I'd like to publish several of your contest papers. You may write either in pencil or ink. I shall not judge your materials but I shall consider the neatness of your paper. I think we're going to have lots of fun with this contest for you probably all will be wanting to do something entirely different.

Chestley Bellamy, Kathryn Carll, Bessie Snyder, Inez Bower, Millie Kelso and Jonas Yingst have written saying, "I would like to become a Forum member. What shall I do?" The Forum is for all the boys and girls who read Pennsylvania Farmer. Membership pins are sent to those who send in particularly good contributions of letters, pictures and drawings. Forum friends who have been made members because of especially good contributions to the page have the "X" appearing after their names.

THE FORUM EDITOR.

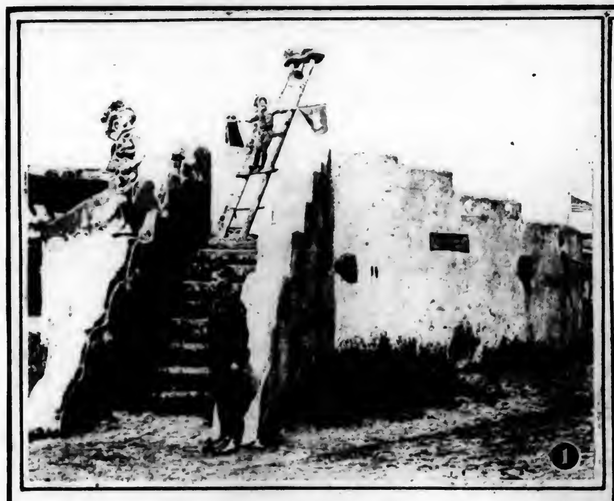
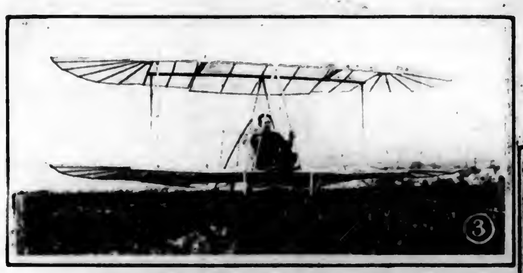
PASSING EVENTS IN PICTURES





1.—The Boy Scouts of San Diego, California, hold their meetings, practise signalling, prepare for summer encampments and enjoy other activities in a real Indian village. It was constructed for the use of Cliff Dwellers and Pueblo Indians of Arizona during the San Diego Exposition in 1915 and 1916 and covers five acres of ground in Balboa Park. The village was given to the 1200 Boy Scouts of the city ten years ago.

2.—King George, wearing the uniform of an officer in the Black Watch Regiment, inspected his bodyguard during his recent visit to Scotland.

3.—Hans Richter, celebrated German glider, has designed and built a motorless plane with movable wings which enables the glider to imitate the flight of a bird.

4.—The four setters shown here are waiting for orders from their trainer, Helen Kersten, said to be the youngest animal trainer in the world.

5.—A recent portrait of young King Mihail, the new ruler of Roumania. He succeeds his grandfather, King Ferdinand, who died last month.

(Copyright by Underwood & Underwood)

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—This puzzle is something like weeding a path—only when you get the ground all nice and clear you will have a picture of something that does not look like a path at all. As a matter of fact the animal you will draw would probably feel more at home on a road than on a little garden path, altho he is often seen in fields, too. I mustn't tell you more about him but you can find him for yourself by filling in with a pencil all the queer little white spaces in the puzzle that have just one dot in them. Be careful to fill in only those spaces which have only one dot—or your animal will be scared and not look like himself at all. It may be that you will find he wants to be turned around a little bit after standing in one place for such a long time. Just humor him a little and I think you will find he is your very good friend. When you have drawn this animal, let me have your answer either on a postcard or in a letter by August 20th.

BE SURE TO SAY HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Evidently we all have lots of friends with lots of different names. The puzzle in the July 23 issue was to make up names of girls and boys from the letters given you. The names I had in mind were: RUTH, ROBERT, MABEL, CHARLES, ALICE, JOHN, MARY, GEORGE, MARTHA and JAMES. Some of you found the names of other Little Folks.

The prize winners are: Josephine DePalmo, age 10, Millville, N. J.; Joe Ferkan, age 9, New Bethlehem, Pa.; Alice Garton, age 11, Uniondale, Pa.; Tronto Gavazzi, age 11, Kersey, Pa.; Arline Harper, age 11, Connellsville, Pa.; Alma Kephart, age 11, Osceola Mills, Pa.; Mary Osborne, age 12, Forest Hill, Md.; Josephine M. A. A. Toth, age 11, Jermyn, Pa.; Mary E. Wiles, age 10, Chambersburg, Pa.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

MY UNCLE FROM CAROLINA

IT WAS the night of my first assembly that I first saw my uncle. With poor Aunt Eliza dead, and nobody to keep me in hand except my tutor—and he was far too drunk most of the time to pay much attention to me—my hours of coming in and going out were not quite what they should have been. Looking back, I would say that my freedom had gone to my head. Yet at the moment and according to the customs of the time, it did not seem out of the way that a boy of seventeen should consider himself a gentleman of leisure and fashion and try to act the part.

The dancing assemblies were all the rage in Philadelphia in that winter of 1770-71. Every one but the Quakers attended, and even a few Friends weakened at times. To this assembly I had gone without a partner, after the fashion of the other young bucks, danced a bit, gossiped and drank punch until nearly twelve. Now I was coming home, very fine, with velvet surcoat, lace on wrists and shirt bosom, and as a crowning touch of elegance, a long, ornamental staff in my right hand. I felt very grown up and very fashionable, and minced along as if the whole town were there admiring me.

INDEED, I was so taken with myself and my clothes that when a man stepped out of the shadows of my doorway, I jumped back, cried out, and swung the staff up in an absurd posture of defense.

The man, however, did nothing but stand stock still and eye me. He was a tall, lean fellow of a type that was getting a bit uncommon in Philadelphia. His leather hunting shirt, deerskin leggings and coonskin cap marked him as from the frontier. He carried a rifle and there was a scalping knife at his belt.

"Are you young Daniel?" he asked.

"I am Daniel Craig," said I somewhat haughtily, now that my scare was over. "What do you want?"

He made a sort of grimace.

"Suppose we go inside," he suggested.

My sitting-room was somewhat in disorder. I had tried on three suits before I decided on the one I wore. The others lay about on chairs and table. The sight did not seem to please my visitor. He cleared a chair by dumping on the floor a red coat, a pair of plush breeches and a cocked hat with gold lace on it, and sat down without invitation, after wrinkling a long nose at the display of finery.

"Let's get this over," he urged brusquely. "I'm in a rare hurry. Boy, I'm your Uncle Daniel."

I stared. Could this forest runner be my father's brother? I had thought of him as a rich planter in North Carolina.

"Your aunt raised you like a lady, I see," declared my uncle briskly. "You have the air of one; no doubt you are expensive to keep. Your mother had some sense, but none of it went to her sister."

"Sir," I cried hotly, "I will not have this—"

"No dramatics," said my uncle shortly. "We are not dealing in compliments just now. Well, the good lady is dead, and the evil she did lives after her, as is customary. But this is beside the point. What are we to do with you?"

"Why, my aunt, I take it, left ample provision for me," I replied.

"Your lawyer must be more of a fool than I thought," snapped my uncle. "Your aunt did not leave a cent. She had an annuity that died with her. This property was hers for her life only. It was arranged to go, I think, at her death, to her cousins in England."

"But how—" I started to ask and could not go on. The safe position which I had occupied as a young gentleman of family and some fortune seemed to be breaking into bits.

My uncle showed the first indication of embarrassment.

"You have been looked after," he explained, not very clearly. "That's all past now. What we need to find out is what you are to do in the future."

"I insist on knowing, sir," I broke in. "Where has the money that I have been spending come from?"

"Hang me, where should it come from?" roared my uncle in some thing of a mock fury. "To be flat about it, your lawyer Lowe has been paying your allowance from my remittances to him."

I was very red, very angry, very much mortified. "I give you thanks, sir," said I; "and assure you that had I known—"

"It doesn't matter," interrupted my uncle. "I came here hoping to plan out your future with you, maybe take you back to Carolina, put you to a trade, or do something with you. It strikes me now"—he looked me over—"that the job may be harder than I thought.

"AS BAD luck would have it, there was a runner on my trail, sent out after I left. He found me almost as soon as I made the town. The Regulators are starting for Newburn to rescue Husband, and they want me back. That means I must return at once. I told Lowe to keep things as they are. It had come to me that I might take you—no, we'll settle that later."

He got up, stretched himself and yawned. "That Catawba ought to have the horses around by now," he remarked, and picked up his rifle.

"But I thought you were a planter," I cried, still bemused by the difference between my imaginings of this uncle and the man himself.

"A bit of one," he answered. "I trade a little with the Cherokees, buy pelts from anybody—and spend a good deal of my time in keeping out of the hands of His Gracious Majesty's representatives. You know I'm something of a Regulator. And you, I suppose, are a good Tory?"

"We don't take sides much in Philadelphia," I answered in some confusion. Indeed, I had been greatly influenced in my political ideas by the song of some of our great merchants. They, it seemed, thought the Sons of Liberty and the non-importation agreements a good deal worse plague than anything King George might send. I had sense enough to see that my uncle would hold different views.

HE LAUGHED a little harshly at my reply, and made for the door. I followed and put my hand on his arm as we stood together on the doorstep outside.

"Am I to understand, sir," I asked, "that my livelihood is altogether dependent on your bounty?"

"Ah," he commented, with a quick glance; "it sticks in your craw, does it? Come, perhaps your clothes have given me the wrong notion of you."

I hardly realized what he was saying. Upon me there was a stifling sense of personal disgrace that I, a gentlemen of Philadelphia, should be dependent on this backwoodsman.

"I can not—" I began, and choked; "I can not—"

He patted me on the shoulder. A man on horseback with a led horse behind him came up the street. He pulled up before us, and my uncle swung into the spare saddle.

"Come, come, my lad," said he, in a much more pleasant tone than he had before used; "you're my own nephew. It's no disgrace for a man to take help from his own kinfolk. Perhaps I was too short with you. You are a good boy in spite of your raising. You'll do for Carolina yet."

He rode off. The light from the window at the corner flashed on him once, and then he went into the darkness, with nothing to mark his going save the clang of shod hoofs on the cobblestones.

I went back to my room. It was as if such a person as my uncle had never existed. The familiar surroundings all told me that the last half-hour had been a nightmare. Yet I knew it was only too true.

In truth I spent the few hours till morning in such a fret of indignation and dismay as I had never before experienced. I had pictured some disasters, but never this. To be penniless had seemed an absurdity too wild for dreams, even. My aunt had reared me, her sister's boy, as she thought a young gentleman should be reared. I knew my scraps of Latin and Greek; I could dance well, fence a bit, ride a horse, shoot not badly; but could not add a column of figures, mend a plow, nor shoe a horse to save my soul.

I had never dreamed that my aunt's income stopped with her death, especially since my customary allowance kept on. I did remember an odd sounding remark from the lawyer, after the funeral, but paid no attention. I knew my aunt would have left all she had to me. My mistake was that I had not guessed how little that would be.

Now I faced a black future. This was my life—theater parties at the Southwark Theater, card games, horse races, dancing, riding to hounds. It was, altho I did not think of it this way at the time, the imitation by the colonies of the life of the aristocracy of England. Now that life was ended. Young and simple tho I was, I was quite aware that to be a gentleman of this type demanded a certain and adequate income.

My uncle I hated sincerely, partly because I disliked being indebted to him, and partly because he represented all I had grown to scorn—the barbaric manners, the certainty of the frontier. I [illegible] how Douglas Manning, [illegible] Mastrom of the town, established at the London Coffee House, [illegible] of the hordes of German, Scotch and Irish immigrants who were pouring off the ships and thru the town.

"They stink," said he, and wrinkled up his nose to show how much.

"So would you, Manning," retorted another, "if you had been crowded on an immigrant ship for a month or so. Let them be. They go straight thru to the frontier. More scalps for the Shawnees and the Cherokees. The savages' right arms will be worn out before they get across the Susquehanna into our farms."

THIS was my view, too. It was with difficulty that I recalled that my father and his brother had been of that immigrant crew only a generation before. They had come from Ulster early in the century. My father gained some land, married, and died soon after my birth. My mother, I gathered, had lived long enough to use up the small estate, and my aunt, after thriftily converting her scant fortune into an annuity, had reared me. No doubt, poor woman, she had got exaggerated reports of my uncle's fortune in North Carolina, and was sure I was due to share it. She was always an optimist of a particularly fervent type. She disbelieved in the seriousness of her last illness and died happy, firmly convinced that she would live to cheat the annuity company out of another ten years' income.

Daylight began to filter thru the windows at last. When folks began to stir in the streets, I flung my coat and hat on and started out. My ball costume was none the better for a night's tossing on couch and chair, and I had none of that gay assurance that had been my lot the evening before.

Yet as I walked out even my distress, coupled with the time of midwinter and the hour of early morning, could not make Philadelphia other than a fair town to my eyes. The solid, red brick houses, the cobbled streets, had a businesslike, calm, a civilized air. I shivered a bit as I thought of my uncle riding toward the wilderness, populated, as I had a vague idea, by howling Indians and mobs of rioters.

Lowe, my aunt's lawyer, and, as I had learned, my uncle's, was up and eating breakfast. I was shown in, to find him in slippers, a banyan (a flowing robe that gave him something the air of a Turk) and a black turban.

"You grow industrious," he remarked, with a sidelong glance at my disarranged finery. "Well, Father Abraham says, 'How deep while luggards sleep. There is worse advice and very little better."

"I have seen my uncle," I said, and with that found to my surprise, that I hardly knew how to go on.

"Doubtless you have, since he saw me yesterday," said my barrister coolly. "Are you going back to Carolina with him?"

"He had to start back last night," I responded. "He did not ask that I go with him."

Mr. Lowe eyed his cup of chocolate quite thoughtfully.

"I suggested something of the sort," he commented. "You are, my friend, if I may say it, rather singularly fortunate. Your aunt dies and you gain freedom and her your income. Your uncle comes, your income continues and your freedom goes on."

"But why was all this kept from me?" I asked.

"Because you were too busy to listen," said the lawyer sharply. "How many times have I tried to pound some sense into that head of yours. But no, you were engaged; there was a horse race, or a bull bait, or a cock fight, or something else, and no time for business—"

He broke off suddenly and began to laugh.

"Here I am, quarrelling with an heir," said he, getting up briskly and holding out his hand. "That is poor business for such a businesslike fellow as I talk of being. You may know, Mr. Craig, that your uncle left me his will, making you his sole heir, has ordered your allowance continued until further notice, and to crown the list of good deeds has gone back to the wilderness and has laid down no rules for your behavior."

"And you sir?" I asked.

HE MADE me a satirical bow. "I stand not in loco parentis," he declared. "I pay you your allowance and see that the house is kept for you. That is all. You can go back to your cock fights."

With this dismissal I was forced to be content. I went back to my desultory lessons with my tutor, to my riding and dancing, more because I knew not what else to do than with any real purpose of enjoyment. My memory of my uncle was too clear for me to think this life could go on. Some day he would come back, and then this life of ease and amusement would vanish like a bubble. So I idled and waited, with a growing consternation in my heart.

It was a month later, in fact, that the blow fell. It was a February evening and I was again at the assembly, not taking part this time, but sitting back in a corner and looking somewhat gloomily at the dancers. I was finding that night, as on many other nights, that the savor had gone out of existence. Behind every gay scene, I saw the dark outlines of the hills of the frontier country, a trading path swarming with Cherokees, the rough cabins of the settlers, the smoke of an Indian signal fire.

It was hardly fear that I felt. Distaste was a better name for it. There was in me—and is yet, for that matter—a liking for old, tinished things, for steady ways and certain customs, for security and comfort.

Old Jonathan Graham came over to sit down by me. He was well toward ninety, but still brisk. It was his custom to drop in at these assemblies, chat with a friend or two for a little, and drift out again, to be shepherded home by the colored body servant who waited for him outside.

"Have you ever been out in the back country, the frontier, sir?" I asked presently.

"You might say that Philadelphia was a frontier when I came," he replied. "I was a young sprout just fresh from Oxford and ready to make my name as a wit or a dramatist or a poet—how I looked up to Addison and his set! Well, fortune went rather ill with my father. We came here. I built houses, traded for land, farmed—and left literature behind in England."

"It is common word that you have done well here, sir," I suggested.

"There are good farms this side the Susquehanna that seem to say that," he responded. "May my grandsons enjoy them. No, it has not been a bad life—but I would have liked Oxford and London better. Well, no man chooses his own lot. I didn't; neither will you."

I nodded. "I fear not." I murmured.

The old man put his hand on my shoulder as he rose.

"Your choice will not be as hard as mine," he declared. "Philadelphia has nothing; Boston and New York, nothing. They have grown beyond being frontier villages, but they have not as yet discovered any way of being anything else. The real life of Pennsylvania, or Virginia, or all the rest, is out on the frontier itself. Look at these thousands of Irish and Scotch and Germans who go thru here in streams. Those men are the only ones here worth imitating. Go with them, or go back to England."

I WENT out with him and helped him into his carriage. Then instead of returning to the hall, I started to wander aimlessly along the street.

I must have walked for half an hour or so in a brown study, when I was recalled sharply to myself by the rattle of a coach and the shouting of postillions. I was close by the George Inn, where the stages from New York and Baltimore came in, and this was a coach newly arrived.

The passengers crawled out, shook themselves, and went hurriedly into the inn parlor. As I watched them, I felt inclined to follow their example. It was a raw night out, and a little hot food and drink would not go badly. More than that, however, I wanted company. Within George Inn, if the shouts and laughter that sounded thru its walls were any sign, there were jovial folk and friendly.

The tap room was crowded. The new folks just in on the coach were ensconced in a little parlor that opened to my left. Over to my right there was a big table crowded with men, half in uniform, and half in ordinary citizen's dress. I recognized one or two of the latter and got a nod from each.

(To be continued next week)

Did you ever hear this one?—

"Pa, will you buy me a pair of boots if I prove to you that a dog has ten tails?"

"Yes, my son."

"Well, to begin with, one dog has one more tail than no dog, hasn't he?"

"Yes."

"Well, no dog has nine tails; and if one dog has one more tail than no dog, then one dog must have ten tails."

He got the boots.

Have just read that 99 per cent of the people contribute nothing to the permanent welfare of mankind. Just a bit harsh, perhaps, but isn't there a wonderful feeling of satisfaction in belonging to the other one per cent?

Rowell Builds Them Right!

We have been making high-quality farm equipment since 1870 and were among the first to make an ensilage cutter.

All this specialized experience goes into the building of Rowell Trojan Ensilage Cutters. It is because of this experience that we developed a guaranteed-for-life flywheel for the Trojan—a flywheel *that will never break.*

Rowell Trojan cutters are built right, in every detail from the twist-proof main frame to the end-thrust bearings that take up wear; from the automatic feeder to the non-clog blower. Big capacity and light running. A 10 H. P. engine, or equal power, runs it.

Important To Employers!

The Workmen's Compensation Act became effective Jan 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

Saves Tractor Fuel

Tractors equipped with Pickering Governors use considerably less fuel. That's because Pickering Governors respond **instantly** to the slightest change in load.

Pickering Governors are built for McCormick-Deering, Fordson, Twin City and all other Tractors.

Equip your tractor with a Pickering Governor. It will save enough fuel in 60 days to pay for itself.

Mail Coupon for free pamphlet 8G which tells about the Pickering for your tractor—also letters from farmers who installed Pickering Governors.

Wheat, No. 2 red winter (Philadelphia)	1.43	1.43	....	1.45
Oats, Number 2 white (Philadelphia)	.61¾	.58½	.59	.52

Potato Shipments Light

Review of the Week Ending August 6

POTATOES — Potato prices advanced at both consuming and shipping point markets during the week. Rains during the early part of the week retarded digging both in New Jersey and on the Eastern Shore and resulted in lighter shipments. New Jersey is now the heaviest shipping state and while over 200 carloads a day have been shipped by rail there are considerable quantities being hauled by motor truck to Philadelphia and other points.

POULTRY—Cooler weather stimulated the demand for live poultry in New York and fowls held firm. Broilers were about steady with White Leghorn broilers from nearby states meeting a good demand. Fresh killed poultry of good quality was firmer toward the close of the week. Small fowls were draggy but large stock was in better demand.

EGGS—The quality of most of the egg receipts in New York was irregular and prices showed a wide range. Fancy stock was scarce and prices advanced while average stock was meeting the competition of storage eggs. Fancy nearby white eggs sold readily with prices advancing at the close. Medium grades were in slightly better demand but cheaper stock was still dull.

BUTTER—Butter markets were unsettled and prices fluctuated considerably during the week. On Monday price declines of one-half cent a pound occurred at practically all markets and conditions continued dull during the balance of the week. Buyers limited purchases to immediate needs.

LIVESTOCK—The Chicago hog market was generally steady but prices closed slightly lower than last week. Beef steers were irregular while she stock closer 25c higher. Vealers advanced slightly while heavy calves, stockers and feeders were steady. Feeding lambs and yearling wethers showed some decline while fat ewes were steady.

HAY—Considerable of the new hay arriving on the market was heated and sold at sharp discounts. The markets were generally steady on the best grades with old crop timothy bringing a premium of $2.00 a ton over new. There was a good demand for timothy and clover mixtures while alfalfa was rather dull.

GRAIN—The grain markets were generally firm with slight advances. Toward the close of the week wheat was about one cent higher. Receipts of soft red winter wheat in Philadelphia increased and considerable smut and garlick were present. In some markets there has been so much smutty wheat that discounts have been made larger. Excessive moisture was responsible for most cars grading below No. 2 Red Winter. Corn and oats also advanced due chiefly to unfavorable weather conditions.

FEED—The feed markets were generally firm. Bran was slightly higher than a week ago while middlings were irregular in price. Linseed meal was barely steady while cottonseed meal and gluten feed were more freely offered. Hominy feed held about steady.

County News and Comment

(Continued from page 5)

average for this time of year. Not over seventy-five per cent of the usual acreage of buckwheat was sown. Young chicks are not doing well. There are fewer turkeys than for many years. Hens are scarce but are still selling for 25c. best young chicks are bringing 29c lb.—T. H. T., July 27.

Lawrence County, Pa.—Hay harvesting has been set back somewhat by rainy weather the past week. In most sections of the county the hay crop is very heavy. Much damage has been done by wind and several buildings burned by lightning. Wheat is mostly in shock. Oats promise an average crop. Some few fields of corn have good growth and color. The hot, damp atmosphere of the past few weeks has caused considerable trouble with dairymen from soured milk. Pasture is abundant and flow of milk the same. Bugs and worms are playing havoc with potatoes, cabbage and the vines. Transparent and Astrican apples in the market at big prices. Veal calves sell for 12@15c live weight; butter, 50@55c; strictly fresh eggs, 35@36c and scarce, but few spring chickens in the market yet.—M. L. V., July 30.

McKean County, Pa.—The hay crop is good, much to be cut yet as we have had several rainy days the past couple of weeks. Corn is growing good and promises to be an average crop. Not as much buckwheat sown as usual. Wheat will be a small crop. Fruit is very scarce, very few apples. Potato spraying has been improved this spring and summer, also several new ones have been built. On June 30 a Mckean county dairy loaf was held. Four farms were visited which represented some of the best dairy cattle in the county. On one of the farms was a herd of registered 1153 pounds of milk with a test of 3.2 per cent making 36.6 pounds of butter-fat per cow, this was during the month of May.—T. Cree.—OATS, 35c potatoes, $1.50; butter, 48c.—F. J. H., July 28.

Salem County, N. J.—The county is digging one of the best white potato crops it has grown in recent years. The yields are high, the potatoes bright and the prices low. The whole situation, however, despite the price is much better than in former years. There is a steady increase in the number of herds of cattle being tested for T. B. in the county. Plenty of rain has resulted in fair pasturage. Corn has not looked better for several years. Farmers have delayed potato digging until the wheat harvest is out of the way and fair yields have been secured. While not up to last seasons level they have ranged from 28 to 40 bushels to the acre. The demand for wheat direct from the thresher has been excellent. Local dealers have been paying $1.20 per bushel to ship, while there has been a big demand for many thousands of bushels from the poultrymen in the Vineland section for feeding the laying hens. Hay harvest was finished three weeks ago and most of the dairymen have full barns with sufficient hay to carry them over the coming winter without any difficulty. There will also be plenty of corn for the silos and unless there is an unusually early frost the corn crop should mature in good time this fall. Seed potato planting is now in full swing. There will be a slight increase in acreage with a big increase in the number of tuber unit plots on farms where seed potato culture is an important factor. Over twenty farmers are following this scheme to increase the productivity of their strains of potatoes.—E. M. B., July 31.

Susquehanna County, Pa.—Crops are late but growing fine. Hay is a bumper crop. The apple crop is away below normal. The oats crop is showing up fine. Dairy cows are in great demand and are bringing good prices, $100 to $125. Late potatoes are coming fine but bugs are plentiful. Pastures are looking good. Little pigs scarce and high in price. The cherry and plum trees seem to be dying out. Very few chestnut trees. New potatoes, 40c pk; eggs, 25c; chickens, 35c.—J. A. G., July 28.

Union County, Pa.—Hay is still being made and the yield is very good. Wheat is nearly all stored, but much is being threshed from the fields. On account of fly being in wheat the yield varies from 10 to 30 bushels per acre. Oats are turning rapidly for cutting next week tho some early oats have been cut already. Many bushels of timothy seed will be made in the county. Corn is being cultivated for the last time and it is growing rapidly. Potato spraying and cultivating are jobs being done between times as work and weather suits. Many young chickens have been raised this summer to be sold and for winter layers. The members of the different clubs have meetings to discuss feeding and care of those registered Holsteins which came in from Michigan in the carload in May. H. K. Hehner, of Vicksburg, had the best producing Holstein cow in the cow testing association this year, over 13,000 pounds of milk were given by her. Pastures are not very good. The stand of clover in wheat fields is very good. The apple crop will be only a half crop but peaches will yield fairly well.—J. N. G., July 27.

Warlike Locust Pays Dividends

(Continued from page 3)

which the latter take from the air and build up into a palatable dish for their host.

Black locust has a warlike nature. Instead of frightening us with chatter and stinging us with beak, it grows an array of piercing thorns. If it is not approached in a respectful manner, its thorns will sting and worry us as much as the bites of its namesake.

Many casual observers are led to believe that the plant locust is a pest. The tree produces abundant pods and seed. It spreads and spreads and spreads, if given an opportunity. It will sprout from the stump, stool out from the roots, and multiply with surprising rapidity.

Even with the opinion of many against it, a closer observance of its possibilities will bring out its merits. An acre of seventeen-year-old locusts will furnish posts for three miles of fence.

Unusual is the wood which this leguminous locust produces. It is hard, strong, heavy and very durable in contact with the soil and weathering elements. A few posts exhibited at Farmer's Week at the Pennsylvania State College last year had stood in the ground for 55 years. From all appearances those posts would have endured and given service for at least two more decades.

Investment Is Small

The seventeen-year locust relieves us from its scourge by its long sleep. Both living and dead, our friend the black locust serves us; building up and retaining our soil while living, and holding up our fences when dead.

Black locust is a widely distributed tree, thriving thruout our eastern and mid-western states, and planted and grown extensively for its fence post and timber-producing possibilities. The Pennsylvania Railroad Company planted millions of seedlings of this tree twenty years ago for future ties. These plantations dot the holdings of the company thruout the East.

In planting a grove of this species of tree, one must take the chance of damage from its insect enemy, the borer. Altho it has not yet been proved, it is believed that where lime is in the soil in sufficient quantities to permit the bacteria to thrive on its roots, that the tree will successfully overcome insect attacks.

Seedlings of this tree may be obtained from various State Departments of Forestry at a very small cost per thousand. The cost of planting will not exceed $5 or $6 per acre, when all labor is hired. These first costs are the only investments necessary in the growing of this tree.

This was waste land

Where seedlings are used, about a thousand to the acre should be planted. Six or seven feet apart each way is about the correct distance. They may be put in with a mattock, digging a hole sufficiently large to accommodate the roots of the seedling. Shallow furrowing every 6 or 7 feet, in which the trees can be planted, is another method which will cheapen the establishment of a plantation.

A waste piece of ground on the farm will serve for a plantation of this sort. Ordinarily, a single acre will supply enough posts to keep the average farm supplied with its quota needed for replacements. This means, of course, after the trees are large enough to begin cutting.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

DEAR SIR:—I saw your article in Pennsylvania Farmer regarding labels as an aid in selling. We have 1200 Concord grape vines and have been thinking of putting some up in two-quart Climax baskets for roadside sale. Do you know of any place that might have Concord grape labels in stock that would just need the name and address filled in? Did you ever see half-bushel peach baskets of grapes with a label or some other advertising matter on them? If so, can you give me a description of it?—C. J. C., Yardley, Pa.

There are a number of firms specializing on labels for agricultural products and I understand that you can get the labels that you desire from them. I am also mailing you the names of several firms making rubber stamps in case you should want to use that method of filling in your name and address.

Pack in Half-Bushels

I have seen grapes packed in half-bushel baskets both of the Climax type and also the round kind as is used for peaches. As I recall they were fairly popular. Some growers find that it pays to select the best stock for the two-quart baskets, as they are used chiefly for table grapes, and to put irregular bunches in the half bushels. The half-bushel is bought largely for preserving and juice purposes.

In packing grapes in the two-quart baskets you will find it will make a more attractive package if the stems are tucked down so that the basket when opened looks like a mass of grapes. This also applies to grapes packed in half-bushel containers. Personally, I believe it is better to use the half-bushel than the five-eighths-bushel, which is so common on the Philadelphia market. It takes fewer grapes and the price is generally higher in proportion. Some growers line the round half bushels with newspaper but in general this is worse than none at all for the appearance is poor. The most attractive pack that I have seen of this kind was a basket lined with either white or colored paper with another sheet with the farm grower's name folded over the top.

Let Grapes Mature

We used this method of packing peaches at one place I worked. The paper was in sheets about two feet by one and one-half feet. The first sheet was placed around the basket on the inside so that the edge of the paper covered the rim on one side. The sheet with the label was inserted on the other side so that when the basket was filled it would fold over the top and display the name and address.

Several dealers in Philadelphia told me that they find a label on a two-quart basket of grapes will generally make a difference of 3c to 5c a basket over the same quality of grapes in unlabeled packages. When the market is overupplied, labeled grapes will sell more readily. Many times buyers will learn that a certain man is putting up a good pack of grapes and will look for his mark or label and are willing to pay a premium for it.

There is one thing that I often hear complaints about, and that is on the maturity of the grapes. Too many are picked before they are really ripe and they do not seem to mature after picking as many other fruits do. Grapes that are immature will sell well at times if people want them for jelly but they are not desirable for dessert purposes.

The United States Department of Agriculture has published a bulletin called "Marketing the Eastern Grape Crop" that can be secured from the Division of Publications at Washington. It contains a large amount of information that might prove helpful.

3000 Members Picnic

(Continued from page 2)

Charles Eaton, Somerville, also Congressman from the fourth district, was the speaker of the day.

The congressman firmly declared his position on farm relief by legislation. "The government should not undertake anything that the farmer or business could do for themselves." In supporting this statement and offering his suggestions on what should be done to benefit the farmer, Mr. Eaton said, "I would that the same thought be given marketing farm crops that is given marketing of all merchandise. I would like to see a national body study the farm problem and develop a structure that will bring relief to the farmer." Ending his remarks, he said, "The farmer has always had hard times, but he has managed to pay his taxes, educate his children, buy new machinery, an automobile, improve his farm and save something for a rainy day."

Make Bid for Picnic

Mrs. Howard Hancock, Bridgeton, the only lady speaker on the program, discussed "Husbands and Homes." The success of the farm and the home are inseparable and depend on the aid given by the woman of the home.

Other speakers were ex-Senator Joseph Frelinghuysen, president of the State Board of Agriculture; Howard B. Hancock, president of the Farm Bureau, representatives of the Park Commission, and others. A reception committee from the Sussex County Board of Agriculture and Granges acted as hosts and made possible the success of this big event.

Cape May County has made a bid for the next picnic in 1928.—Amos Kirby.

What Feature of the De Laval Milker Do You Like Best?

THIS question was asked of a large group of De Laval users and 1844 replied. Their answers show that the De Laval Milker is liked for many reasons; that it is not a one-feature milker but combines all the elements necessary for better milking, saving time, producing clean milk, simplicity and reliability of operation, to the best advantage. The answers can be grouped as follows:

Better, faster and cleaner milking.

Pleasing to the cows and operates without injury.

Saving in time and labor.

Elimination of drudgery and greater pleasure in dairying.

Simplicity and ease of operation.

Ease of washing and production of clean milk.

Fool-proof construction.

Uniformity of pulsations.

Simple pulsator with only one moving part.

Alternate action milks fast and clean.

Simple and efficient teat-cup design and construction.

Reliability and durability of construction.

Ability to keep individual records.

Vacuum control prevents injury to the cows.

Pulso-Pump efficient in design, reliable and durable.

Service from Agents and Company.

You, too, will like a De Laval Milker, and for the same reasons. Sold on such easy terms that you can use them while they pay for themselves. See your De Laval Agent or write nearest office below.

SAVE YOUR CORN WITH A UNADILLA

SPRING was late. Early summer cold and rainy. But corn is coming fine now. Make the most out of it. Put it in a Unadilla.

We're prepared to ship on short notice, any size in Oregon Fir or Spruce.

The Unadilla is the favorite silo on leading dairy farms. It is a tower of strength. The easiest and safest silo to use.

Act now! Get all you can out of this season's crop. Order your Unadilla and have plenty of time in which to erect it before the need for it is on you.

Liberal discount for cash on delivery, or you can buy a Unadilla on easy time payments. Write for catalog.

UNADILLA SILO CO.
Box No. P — Unadilla, N.Y.

PAPEC

The Cutter That Does Not Clog

"I Like the Low Speed"

writes J. C. Willard, Philadelphia, N.Y. "High-speed cutters are dangerous and take more power. No matter how crooked the stalks, the Third Roll takes them through." "We ran six days without a stop of any kind at all," reports S. M. Richardson, Smith Grove, Ky.

Here's a Book You Need—FREE

The 1927 Papec Catalog tells how to put up better silage — and MORE silage — at lower cost. Tells why the Papec pays for itself in one or two seasons. Write for your copy of this Catalog, also for "Papec News".

Papec Machine Co.
178 Main St.
Shortsville, N.Y.

Hoosier FARM NECESSITIES

INDIANA Wood and HOOSIER Tile Silos are the recognized leaders. They save their cost many times over in providing better feed, stronger cattle, greater milk or beef production. Hoosier Wood Brooders provide ideal housing for chicks. Scientifically designed. Built of staves 2 inches thick. Warm, sanitary. Buy now for low price and fall delivery. Hip copper hoops for ornate HOOSIER Silos. Write Dept. FN-10 Hoosier Silo & Silo Co. Albany, Indiana.

Make This 10 Day Test

Try Dr. Clark's PURITY Milk Strainer for 10 days. Pour your milk through an ordinary strainer and note the amount of dirt and sediment removed. Then pour the same milk through a PURITY Strainer and see all the dirt it gets that the first strainer did not get. It's the only strainer made that gets ALL the dirt, dust and sediment. Made in 10 quart and 14 quart sizes. Write today for the 10 Day Trial Offer and prices.

Produce or "Get Out" Is Choice of New Jersey Dairy Cow

DUE to economic conditions the dairy cows in New Jersey and adjacent territory must produce well or "get out." Within a radius of 60 miles of Trenton live more than ten million people in one of the most thickly populated sections of the globe. This area includes most of the state of New Jersey and a big part of Delaware and eastern Pennsylvania. The land and taxes are high and labor is scarce.

The business of producing milk would soon disappear from most sections of the state were it not for the available markets which call for milk of a high standard at prices which continue to be attractive. New Jersey is now about entirely a market milk state since 94 per cent of its milk is sold in the form of whole milk, the remainder being disposed of as butter and cream. That it costs more to produce milk in the Middle Atlantic States than in most sections of the country is only in keeping with economic laws. A few comparisons are presented in Tables I and II.

That New Jersey can still find the dairy business profitable despite the decrease in number of cows is still further explained in Table III.

Much feed and labor was saved in 1924 over 1919 as we come to a much greater production per cow by securing several million more quarts of milk from 15 per cent fewer cows.

Table I

	Cows	Value per cow	Value per 100 lbs. milk	Value per cow plus calf
New Jersey average	65	$2.65	11	$84.00
United States average	145	1.76	64	63.00

Table II

	Pounds of grain fed per cow	Cost of grain per cow	Pounds of milk per cow	Percentage of grain to milk produced
New Jersey average	15c	$85.00	5600 lbs.	8%
United States average	12c	57.00	4200 "	25.4

Table III

	Number of cows	Average production per cow	Total production
For 1919	147,000	4800 lbs.	70,490,729 gal.
For 1924	124,000	5600 "	76,245,204 "

Table IV

	Cow index	Pounds fat	Profit per 1 cow milk
Yearly average for association cows	$500	308	$1.44
Yearly average for all cows of state	5600	210	1.91

Table V

Herd number	Feed cost per 100 lbs milk March 1926	Feed cost per 100 lbs milk March 1927	Herd number	Feed cost per 100 lbs milk March 1926	Feed cost per 100 lbs milk March 1927
1	$1.28	$1.05	7	3.44	2.01
2	2.38	2.39	8	2.83	1.69
3	2.19	1.44	9	2.60	1.65
4	1.58	1.38	10	3.07	1.49
5	2.04	1.70			
6	1.88	1.68	Aver. per cow.	$2.32	$1.64

Table VI

Relation of Season of Freshening to Profits

	Number of cows	Yearly fat average	Fat index	Value of product per cow	Value of product less feed cost
Winter	123	$292	291	$129	$158
Spring	75	7903	287	123	162
Summer	129	7525	282	121	161
Fall	213	8437	289	119	147

The increase in yearly milk yield per cow can be attributed to two main factors:

1. The elimination of low producers.
2. Better feeding methods, especially the wider use of alfalfa.

Intelligent Weeding Practiced

Getting rid of low producers automatically meant the better management of the remainder of the herd. More and more, intelligent weeding is being practiced by the use of records, altho as yet a much too small percentage of the dairymen have become habituated to the regular keeping of individual cow records. In this connection the cow testing association is offering the best solution to the busy dairyman. While the number of cows in the testing associations of the state has increased from 3000 in 1923 to 8500 in 1927, yet this is only a beginning in what should be done toward systematic record work where production costs are high. To cite instances of increased profits thru the cow testing associations would be to repeat what is occurring from Maine to California wherever the associations are operating. It is observed that the most progressive dairymen are not content until they know what their herd average is and how it compares with the testing association average for the county, state and country, as well as with the average of all cows of the state and country. Today automobile manufacturing companies not only know how their annual total volume of sale compare with those of other companies in the United States, but also how much business each of their sales agencies is doing every 12 months. It would seem highly important in like manner for the dairymen to know week certainly how the output and efficiency of their individual cows compare with those belonging to many who are engaged in the same business.

C.T.A. Cows Compared with Average

A comparison of the New Jersey cow testing association cows with the average herd in the state is shown by Table IV.

If all the cows in the state were as good as the association cows, there would be an additional gross income of $50,000,000 annually, or an increase of $2.50 per 100 pounds of milk. It is all the more important to keep such cows in the herd because of the present scarcity of good producing cows with 11 per cent less cows.

An illustration of the extent to which it is possible for an association, when supervised by a competent tester, to reduce feed costs, is afforded by these figures in Table V from 10 herds in the Burlington County No. 1 Testing Association.

This table is a startling revelation of what can be done in a testing association where the members use their records as a guide in feeding. The cost of a ton of grain was only $2.00 a ton less in March, 1927, than in March, 1926.

Alfalfa is playing a major role in the economical production of milk in New Jersey. The total acreage has increased from 15,000 in 1919 to 23,000 in 1925. At a recent annual cow testing association meeting, it turned out that of the two men with the highest herd averages neither had a silo, but both fed liberally of alfalfa. This was not an indictment against silage, but eloquent testimony of the value of good breeding and management and alfalfa hay. Due to the liberal feeding of grain thruout most of the summer, and the wider use of summer silage and green feeds, the season of freshening seems to cause little or no difference in production and returns, as indicated by the results tabulated in Table VI from four associations.—E. J. Perry.

DAIRY

BUCK & DOE RUN VALLEY FARMS—Hereford Cattle and Poland China Hogs. Sold out on highest taking orders only for future delivery. THE SAINT AMOUN COMPANY, Mortonville, Pa.

TWO LOADS OF YOUNG CATTLE, beef grades, low price for immediate purchase. W. HUNDLEY, BOYDTON, VA.

COLLIE AND WIRE-HAIRED FOX TERRIER PUPPIES WANTED—Will buy litters. GEORGIE GORDON, Rt. No. 1, Chatham, N. J.

LEWELLYN AND ENGLISH SETTERS, also rabbit hounds on trial. Pamphlet free. O. K. KENNELS, MARYDEL, MD.

GOATS

FOR good health, drink goat's milk. World's Best Type. $25 Nubians. $45. Registered Purebreds $75. Kids $15. Guldsboro's Goatery, Mohnton, Pa.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DOGS ARE DYING.—I had nine hogs and seven have died. They won't eat and lie around panting for their breath. They also get weak in their hind quarters and go staggering around. All that have died bled at the nose.—H. S. H., Osceola Mills, Pa. This may be hog cholera. Better call your veterinarian and have him look over the situation. If all of these hogs die, it would be best to put your new ones in a different pen.

CALF SCOURS.—I have a calf four weeks old. He is out on grass in day time and in the barn at night. He is fed on scalded middlings mixed with sweet skimmilk. When his bowels move they seem full of slime and foam.—Mrs. S. M. A., Lakesville, Pa. When the calf has become accustomed to grass, this condition will probably clear up. In the meantime omit two feedings of middlings and give two ounces of castor oil. Repeat in twenty-four hours.

HYSTERIA OR FRIGHT DISEASE.—We have a dog about six months old. It acts as if it has fits. He'll be quiet and all of a sudden he will jump up and run around a ring frothing at the mouth and hold his left front leg up.—J. W. T., Keyport, N. J. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet and an excessive allowance of carbohydrates such as potatoes, white bread or macaroni, over-loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation. Dogs need meat, as that forms an essential part of the diet if dog is allowed choice of feed. Your veterinarian should be consulted and an attempt made to determine the cause of the trouble. If it is due to faulty diet, this can be changed. If due to parasites, these can be controlled by the use of proper worm medicines.

A mountaineer school teacher corrected a boy who had said, "I ain't gwine thar."

"That's no way to talk. Listen: I am not going there, thou are not going there, he is not going there, we are not going there, you are not going there. Do you get the idea?"

"Yes, sir. They ain't nobody gwine thar."

MAMMOTH TOULOUSE GEESE and Bronze Turkeys. Breeders and eggs. Twelve leading varieties poultry. Stock—eggs—chicks. List free. Satisfaction guaranteed. Highland Farm, Sellersville, Pa.

CHICKS C.O.D.—100 B. Rocks or S. Reds, $10; S. Leghorns or H. Mixed, $8; Mixed, $7. Delivery guaranteed. Feeding system raising 95% to maturity, free. C. M. Lauver, Box 42, McAlisterville, Pa.

PULLETS—6-12 and 16 weeks old. Write for prices and state what variety. No culls. All guaranteed. Frank X. Burkhart, Tiffin, Ohio.

LEGHORNS

WHITE LEGHORN hens and males now half price. Thousands of eight-weeks-old pullets. Also baby chicks and eggs. Tancred, pedigreed foundation stock, egg bred 27 years. Winners at 20 egg contests. Catalog and special price bulletin free. 1 mile S. of U. S. and guarantee satisfaction. George B. Ferris, 960 Union, Grand Rapids, Michigan.

PULLETS 5000—Ace eight weeks and up. Produced from our large Barron's English White Leghorns that we import direct. We breed English Leghorns only, there is no better egg-bred stock to be had. Get our prices before you buy. Catalog Free. Willacker Poultry Farm, Box P, New Washington, Ohio.

MARCH HATCHED White Leghorn pullets, produced from Ohio Accredited Chicks. Better Poultry Company, Sugarcreek, Tuscarawas Co., Ohio.

WHITE LEGHORN PULLETS, all ages, low prices. Live delivery guaranteed. Willow Egg Farm, Holland, Mich.

PULLETS—White Leghorns from pedigreed males and ohio accredited hens; excellent layers; prices attractive. Lay More Poultry Co., Woodsfield, Ohio.

MARCH HATCHED White Leghorn Pullets, $1.25 each. C. E. Kennedy, East Berlin, Pa., Route 4.

WHITE LEGHORN PULLETS—8 weeks, 65c; 10 weeks, 75c. Ed Kroodsma, Zeeland, Michigan.

TOBACCO

GUARANTEED HOMESPUN TOBACCO—Chewing 5 lbs. $1.60; 10—$2.75. Smoking, 10—$1.50. Pipe free. Pay when received. United Farmers, Bardwell, Kentucky.

BETTER TOBACCO! Fragrant, mellow! Fine Pounds smoking, 75c. Four pounds chewing, $1.00. Farmers' Club, 193, Hazel, Kentucky.

FARM LANDS

BIG GRISTMILL, sawmill, waterpower and farm in Chester Co.; large 2-story stone and frame gristmill bldg., adjoining is 2½x44 ft. saw mill, all best construction; attractive 10 room residence and 50 acres good farm land; 3 generations have prospered here; property fully equipped and operating. Age reason for sale; price $10,000; which is only part of value bidg.; part cash. Independence awaits someone here. H. R. Jones, Street Agency, 324 N. Union St., Kennett Square, Pa.

RIVER BOTTOM FARM—210 acres, fireclay and coal underlying. In sight of railroad station. On concrete road. 75 acres cleared. Fine spring, good buildings. Price $6000. Write or phone. Cora Mitchell, Corry Run, Pa.

GROW with Southern Georgia. Good lands. Low prices still available. Write Chamber of Commerce, Quitman, Ga.

WANTED TO HEAR from owner of land for sale for fall delivery. O. Hawley, Baldwin, Wis.

PLANTS

AUGUST PRICES—Cabbage, Celery and Brussels Sprout Plants (12 varieties of Cabbage, 8 of Celery). $2.00 per 1,000; 500—$1.40. Postpaid for flat. Snowball Cauliflower, $4.00 per 1,000; 500—$2.50. Safe delivery Guaranteed. No business done on Sunday. Ford W. Rochelle & Sons, Chester, N. J.

15 LARGE IRIS, $1.00. List of 40 varieties on request. Demers, Marlboro, Mass.

MISCELLANEOUS

RICH MAN'S Corn Harvester, poor man's price—only $25.00 with bundle tying attachment. Free catalog showing pictures of harvester. Process Co., Salina, Kans.

POST YOUR LAND! Keep trespassers off. 6 cloth, weatherproof "No Trespassing" Signs, printed with your name, $1.00; large type; prepaid. Brinkerhoff Press, New Canaan, Conn.

FISTULA REMEDY—Physicians prescription, not a patent medicine. Used successfully 45 years. $2 per box postpaid. Satisfaction guaranteed or money refunded. Fillmore Co., Westminster, Md.

CHICKEN MITES. Henhouses Cleaned out. No sprays or chemicals. Send stamps brings you sample, descriptive literature free. Write today. American Mite Eliminator Co., Dept. B, Crawfordsville, Indiana.

MAIL YOUR KODAK FILMS to us; we develop roll, make 6 good prints, allow prints and return for 25c with or stamps. Cowie Studio, 10½ Fountain Ave., Ft. Springfield, O.

MOTORCYCLE BARGAINS—Used, rebuilt. Guaranteed. Shipped on approval. Catalog free. Floyd Clymer, 813 Broadway, Denver, Colo.

HELP WANTED

AGENTS WANTED—A splendid opportunity to earn extra money by selling 25 household articles needed by every housewife. Send for list and full particulars. J. F. Notman, 820 Drexel Bldg., Phila., Pa. Also Room 662, 100 Hudson Street, New York, N. Y.

WANTED—Single man of good habits, experienced in farm work, until Fall work is done or longer. Raymond Orner, Mill Hall, Pa.

Boys' Watch

Size 16, open face, stem wind. Full nickel octagon case. We will send one of these watches to every boy who will send us four yearly subscriptions to Pennsylvania Farmer at 50 cents each.

Subscriptions may be new or renewal.

*Hay, Silage, and Grain

Set your mark at *$100* profit per cow, *yearly*

THERE can be no real profit in milking cows unless each cow returns one hundred dollars yearly over her feed costs. This requires a yearly production of between 8000 and 9000 lbs. of milk or 300 lbs. of butterfat. This means 30 lbs. a day for a Holstein, and 20 to 25 lbs. for an Ayrshire, Guernsey, or Jersey.

Look at the accompanying table! In which group does your herd stand? The money you get above the cost of feed (*shown in the last column*) must pay interest, taxes, insurance, depreciation, and your other costs. It takes a dollar for these for every dollar spent for feed. Therefore, the *return over feed* must be greater *than the feed cost* or there is no profit in dairying.

Check the last two columns of the table. Note that the value of the milk above the feed cost does not become greater than the feed cost until the cows are producing at least 7000 to 8000 lbs. per year. Even in this group the profit is slight. With cows producing 8000 lbs. or better, the profit becomes increasingly greater.

You will note from the last three columns of this table that the cows fed liberally were the ones that made a profit; that as the feeding cost increased, the return over feed cost *was much greater in proportion.* You are not only losing immediate returns but future income unless you feed your cows liberally on grain in August and September. The price of milk is going up every month. Every year August milk brings more than July. The September price is better than August. There is a substantial increase in price each month until January. To keep in condition so they will produce milk in the coming months when the price of milk is at the highest point for the year, your cows need the variety, minerals, protein, and energy that come from a good grain ration in August.

It is the purpose of Amco Feed Mixing Service to furnish you the proper feed for your cows under the special conditions of each season. AMCO 20% DAIRY is that feed for August and September. It will make milk and keep the flesh on the cows. The right protein is there in the gluten feed, cottonseed meal, and oil meal; the proper bulk is in the wheat bran and malt grains; hominy, corn meal, and molasses furnish energy and palatability. Minerals are needed on pasture. AMCO 20% DAIRY has them in bone meal, ground limestone, and salt in the proper proportions.

The formula is open and on every tag; you can see for yourself that these ingredients are combined in the proportions recommended by the best feeders. Feed at least one pound of AMCO 20% DAIRY to every four pounds of milk produced.

The price of AMCO 20% DAIRY is right. It will surprise you when you know how reasonable it is. Get acquainted with the Amco Feed Mixing Service Agent in your town or if you haven't one write to the nearest branch office.

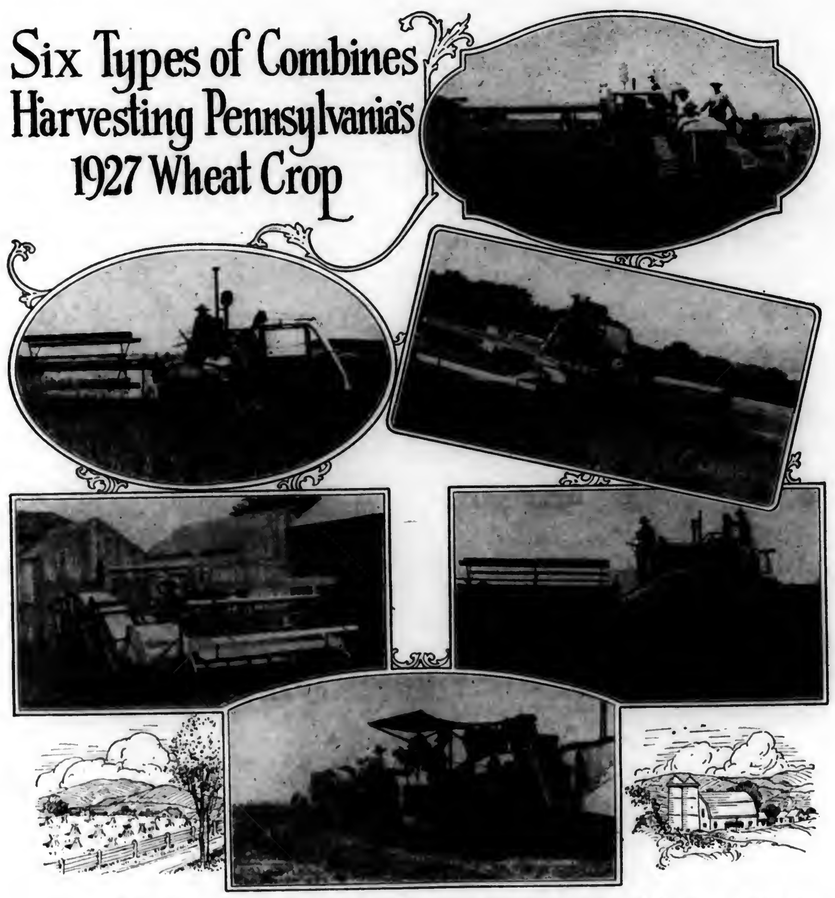
Six Types of Combines Harvesting Pennsylvania's 1927 Wheat Crop



Upper left—Nine-foot Case combine on farm of George S. Gotwalt and D. C. Fahs, York County.

Lower left—Eight-foot Gleaner harvester owned by Levi L. Brubaker, Lancaster County.

Upper right—Ten-foot Massey-Harris combine at work for the Schlenker brothers, Berks County.

Right center—George E. Ziegler, of Northumberland County, and his ten-foot McCormick-Deering combine. It operates with a power take-off.

Lower right—Three sons of Jonas Meyers, York County, operating his twelve-foot Case combine.

Bottom center—The oldest combine in Pennsylvania, a nine-foot machine of International make that has been used since 1920 by Ralph Brinser on his island farm in the Susquehanna below Middletown.

ALLEN'S *Parlor Furnace*

HEAT RADIATING FINS

The new ALLEN fin construction increases radiating surfaces 100%, thereby giving large, added heating capacity. This greater efficiency does away with the necessity of a bulky, clumsy heater. The heat radiating fins strengthen the castings and make possible big savings in fuel. Only in the ALLEN do you get the great advantages of this improvement.

Oldtime Fireside Cheer

A patented ALLEN feature

With its outer doors closed, ALLEN'S resembles a piece of beautiful, period furniture. When the doors swing open, you have the cheerfulness of dancing flames.

BURNS WOOD

Large, double doors and oval firepot permit the use of wood. Also burns all other fuels with real economy.

ALLEN'S heats the whole house with circulating, moist warm-air. Replaces a number of stoves and reduces labor. The porcelain, Allenamel finish can be quickly dusted and polished.

If there is no ALLEN Dealer near you, write direct for complete information.

Rambles of a Pennsylvania Fruit Grower

XX. Pajaro Valley Apples

CALIFORNIA is a state of amazing contrasts in climate and in horticulture, even within a few hours' travel. In the morning we left our camp in the Yosemite, amid snow-capped peaks, gurgling trout streams, giant pines and redwoods that looked down upon the earth when Solomon was in his glory. At noon we had crossed the San Joaquin Valley, almost Saharan in its heat and dryness. In the early afternoon we were across the Pacheco pass and entering "Watsonville, the Apple City," as the Chamber of Commerce proudly calls it.

The Pajaro Valley is one of the oldest apple districts on the Coast. It had large plantings fifty years ago, long before the Yakima or Wenatchee Valleys were on the horticultural map. It is only fifteen miles long and seven miles wide but it has over 15,000 acres of as well cared for apple orchards as may be found anywhere; it is one vast orchard. It lies only a few miles from the ocean and has a coastal climate, cool and equable. High fogs prevail during the summer months and moderate the heat. They also make it impracticable to grow red varieties of apples to advantage. Over eighty per cent of the planting is Yellow Newtown and most of the remainder are Yellow Bellflower. The rainfall of the Valley is around twenty inches a year, none of which comes between May and October. There is practically no irrigation of apple orchards but this is necessary with strawberries and vegetables. The Pajaro Valley was under water many thousands of years ago; the black, rich alluvial loam, over a hundred feet deep in places, is retentive of moisture and requires little, if any, fertilizing thus far.

Fifty-year-old apple tree in the Pajaro Valley, showing how low and open the top is kept by severe annual pruning

Crop Never Fails Completely

Most of the orchards are on the floor of the valley, flat land that would be considered very frosty in the East. I saw quite a number of orchards with heaters still standing under the trees, which shows that there is a frost problem, but I was assured that there has not been a complete crop failure in the history of the industry and very rarely is the crop cut below fifty per cent from any cause. This is a light year, with an average for the Valley estimated at forty-five to fifty per cent.

The Pajaro Valley is one of the most attractive apple districts I have seen. Practically all of the orchards are well cared for and look thrifty. All except the few that are on hillsides are given clean cultivation—not a weed in sight. The individual holdings average about twenty-five acres but there are a number of over 100 acres. One of the best is that of Rodgers Brothers, pioneer apple growers in the Valley. The dust mulch in their orchard is at least six inches deep. Because of the absence of summer rains it is easily maintained with three or four discings. No fertilizer is used. Some years ago they tried nitrate of soda, applied as a spray, fifty pounds to 200 gallons, using about fifteen gallons to a tree. It made rank, glossy foliage but no more and no better fruit.

Thruout the Valley a cover crop is grown, seeded after the crop is off, in October. Winter vetch or sweet clover is preferred. The cover is plowed under in February or March, by which time it has made a dense mat two feet high. Rodgers Brothers are experimenting with a permanent alfalfa sod, which is cut but once a year, before harvest, to facilitate the pickers. This requires irrigation; it remains to be seen whether what is gained in soil improvement and labor saving outweighs this disadvantage.

Put All Their Eggs in One Basket

Like most California fruit growers, Rodgers Brothers are fruit specialists. They grow apples and nothing else. There does not seem to be any sentiment whatever here for diversified farming as we know it in the East. These men put all their eggs in one basket and then watch the basket. The trees are twenty-six to thirty feet apart, low headed, with open center training, and are kept low and open by severe annual pruning. The forty-five-year-old trees of Rodgers Brothers are scarcely sixteen feet high. The tops are thin, there are no crowding limbs. Only a stepladder is needed for picking. I believe the East will have to come to smaller trees planted more closely, as a matter of economy and effectiveness in all orchard operations. They have a peculiar method of preventing rot from developing where large limbs have been removed. Ten or fifteen copper nails are driven into the stub, which is then painted with Bordeaux, frequently renewed. Explain it as you will, it seems to accomplish the purpose.

The spraying problem is not as serious as in most parts of Pennsylvania. Three sprays a year usually suffice—the dormant, petal-fall and a cover spray two weeks later. The first is in February, with oil, for scale and aphis; the latter two are with sulphur (not lime-sulphur) and lead arsenate. Wetable sulphur is used or dry sulphur is mixed with a spreader. There is but one brood of codling moth, no scab, and rosy aphis rarely is serious enough to justify the use of nicotine. There is a cull pile, but it is more likely to be caused by leaf-roller, case bearer and tussock moth than by codling moth. No dusting is done in the Valley; the spray pump still rules.

Floating Labor Harvests the Fruit

Labor is scarce and high, usually about fifty cents an hour. The pickers' wage is six to seven and a half cents a bushel. The harvest help is mostly of floating labor, or tramps, and is very unsatisfactory. Newtown trees forty-five years old pick fifteen to thirty boxes a tree. Rodgers Brothers have a well equipped packing house but most of the smaller growers sell to buyers who pick their fruit and haul it to a private central packing house in Watsonville. It cost Rodgers Brothers forty-five cents a box last year to pack their apples. This includes the cost of the box, which is seventeen cents, also the paper wraps. At other packing

The Combine Proves Itself in the East

Users Are Enthusiastic about This Greatest of Harvest Time Labor Savers

By C. L. WHITE

DURING the wheat harvesting season just passed we spent considerable time hurrying from one part of Pennsylvania to another to watch different types of combines in operation. This is the first year these importations from the western prairies, sometimes called harvester-threshers, have been used to any considerable extent in Pennsylvania. We wanted to see them in the field and get pictures to pass on to Pennsylvania Farmer readers who are interested in what promises to be the greatest labor-saving development in grain growing since the adoption of the reaper and binder.

Make Quick Work of Harvesting

We were able to reach several of the machines while they were at work. That wasn't as easy as it sounds for the combine makes short work of the average eastern wheat field.

Harvesting may begin and end on the same day. Two men, or perhaps three, take a combine into the field. In a few hours the grain is in the barn, the straw is in windrows ready to be loaded with the hay loader,—or spread evenly over the ground ready to be plowed down, and the year's harvesting is finished.

No bundles to be shocked, rained on and spread out to dry. No moth infested mows of grain in the barn. No threshing crew to worry about. No small army to be fed at dinner time. When the combine comes out of the field, harvesting on that farm is finished and the year's threshing is done.

We don't know who was the first man in Pennsylvania to realize the possibilities of the combine, but the first Pennsylvanian to back up his belief in the machine with hard cash was Ralph Brinser. He farms an island in the Susquehanna River a few miles below Harrisburg and has been using a combine since 1920.

It Is the Oldest Combine in Pennsylvania

That date may lead someone to inquire, "Why did we never hear of combines in the East until two or three years ago if there has been one in use on a Pennsylvania farm for the last eight seasons?"

We asked that question, too, and we found the answer when we went to visit Mr. Brinser. An island in the middle of the broad Susquehanna isn't the most accessible place imaginable, particularly if you don't happen to carry a rowboat as part of your traveling equipment.

This International combine, the first in Pennsylvania, has given Ralph Brinser eight years of trouble-free service on his island farm near Elizabethtown

You don't ring a doorbell when you call on the Brinsers. Instead, you find a certain isolated landing on the bank of the river and shout until someone rows over from the island after you, or brings one of the motor-driven flat-boats which will carry your automobile, too. The pleasant

The Gotwalt and Fuhs Case combine cutting a square corner. The tractor doesn't slow up on the turns.

hospitality of Mr. and Mrs. Brinser is in strange contrast with the difficulty of paying them a visit. But that explains why comparatively few people have heard of this combine that has been giving perfect satisfaction under eastern conditions for eight years.

Mr. Brinser believes in machinery. He farms practically all of his land, —410 acres above low-water mark, —and there isn't a horse or mule on the island. He worked on large wheat farms in the West before settling down in Pennsylvania. It was there he conceived the idea of using western production methods in the Keystone State.

Eight Years Old and Going Strong

But when he came back East and tried to put his ideas into practice he struck a snag. He tried to buy a combine, but couldn't. The makers of the machine he wanted didn't believe it would give satisfaction in Pennsylvania and told him so. However, Mr. Brinser persuaded them that he was willing to take the risk so he obtained his machine. That was only eight years ago. Now combines are coming into Pennsylvania by the score!

Mr. Brinser's nine-foot harvester-thresher is one of the earlier types made by the International Harvester Company. Thru eight years of hard usage nothing has been spent on repairs or replacements except for new conveyor canvas. The beginning of the combine's eighth season was celebrated by giving the auxiliary engine its first overhauling. The outfit has been drawn by the same tractor, a 15-30 International, since 1921.

They Harvest and Thresh Twenty Acres per Day

The Brinser place is primarily a grain farm, a few swine being the only livestock. The acreage of wheat and oats harvested with the combine averages about 225 per year, altho it was nearer 300 acres this year. The machine cuts, threshes and bags about 20 acres per day.

Corn is the other cash crop. It is picked and husked by a tractor-driven machine. The International Harvester Company. Thru eight years of hard usage nothing has been spent on re-attachment cultivates the corn.

Mr. Brinser has one helper the year around and one extra man in harvest time. The three men handle the combine, altho only two would be needed if the fields were perfectly smooth.

The second combine owner we visited was also a pioneer. Levi L. Brubaker, whose farm is near New Danville, Lancaster County, bought the first Gleaner harvester to be brought into Pennsylvania.

The Gleaner is a small combine built around and over a Fordson tractor.

(to page 8)

A ten-foot Massey-Harris harvester-thresher on the Fuller estate, Lehigh County. Some 500 acres of small grains make the use of modern methods imperative here.

One man runs this ten-foot McCormick-Deering combine owned by George E. Ziegler, of Northumberland County. A power take-off operates the combine mechanism.

Comments on the Week's News

Coolidge Will Not Run—

Like a bomb from above was the cryptic statement of President Coolidge the other day saying that he did not "choose" to run for President in 1928. The world "choose" is what made the announcement cryptic. The public was at first inclined to think that it contained a hidden meaning, and that he might be prevailed upon to be a candidate. While he has not so far amplified his meaning it is now generally conceded that he meant he would not consent to a nomination next year. His withdrawal clears the field for a free-for-all entrance, and next year's campaign and the scramble for the nomination will be such a one as the Republican party has not had for several years. Whether his decision is due to the factions within the party, the failure of the Geneva conference, or to his views on the third term question, the public does not know and what is more it is not likely to find out.

Governor General Wood Dies—

When the world opened its morning paper the other day it was startled to read that Leonard Wood, Governor-General of the Philippines died in Boston, his death following an operation performed for the removal of a tumor. He was sixty-seven years of age. General Wood's life has been more or less hectic and spectacular ever since he entered public service. His actions as Governor-General of the Philippines brought both commendation and severe criticism. General Wood was a candidate in the nomination for President in 1920. He had a tremendous following, but the charge that someone had contributed an immense sum towards his nomination convinced the leaders that it would be impracticable to make him the nominee. He was buried at Arlington Cemetery with military honors on August 9th.

Nothing to Show for It—

News of the sale of buildings and equipment erected to accommodate the Sesqui-Centennial last year emphasizes the fact that the affair is over and there is nothing to show for it except debts. The immense auditorium erected at a cost of $500,000 was sold at auction for less than one cent on the dollar of its cost. Other things have been sold at almost equally low prices. The people of Philadelphia now realize that the millions spent in trying to hold a big exposition might better have been devoted to the erection of a memorial building, or the making of needed improvements. The Sesqui did not even do what it was hoped by many people it would do,—advance the value of real estate or the fame of its promotors.

Gasoline Differs Little—

The experts of the Bureau of Standards after making a series of tests and experiments say that little difference exists between "cracked" and "straight-run" gasoline, aside from volatility. Gas from the cracked process reduces the knocking when compared with gas from straight distillation.

A New Farm Bill Prepared—

A new farm bill, which is said to have the approval of President Coolidge, has been prepared for introduction when Congress meets. Some of the features most objected to have been eliminated, but its proponents claim that it will do practically what was proposed in the McNary-Haugen Bill. Eastern papers are already fighting it.

Are We Teaching Loyalty?

OUR customs and educational institutions have established in the public mind a fairly good respect for the flag of our country, but have evidently failed to inculcate the same degree of respect for that which the flag represents. To make a fetish of the flag and disregard what it stands for will not make loyal, helpful citizens in a democracy.

These comments are suggested by observing some of the tendencies and activities of today. A proper observance of what the flag stands for would prevent mob action, lynchings, bomb-throwing, and otherwise taking the law into individual hands. It would eliminate that tendency to disregard law whenever it can be done safely. True Americanism means more than merely saluting the flag. It means the performance of duty and the observance of the country's laws.

Cotton Prices Soar

THE government's cotton crop estimate, showing a decrease of 25 per cent under last year's yield, caused a wild swing upward in the price of that product last week. The estimated yield of 13,492,000 bales is 4,500,000 below the crop of last year. Floods, unfavorable weather and insects are given as the cause of low yield. Added to these causes is that of a greatly reduced acreage.

The "shorts" on the market were caught in a real jam when the government's figures appeared. The price of cotton for July, 1928, hit almost $100 per bale,—a record price.

Grading Standards Are Necessary

ONE of the hindrances to getting satisfactory prices for farm produce is the lack of standard grades, or, at least, the knowledge and application of them. Samuel Bowser sends a load of produce to market and he cannot understand why the prices returned were lower than those his neighbor received. He put up his packages according to his own idea of what is "Standard," "A-1" "Extra First," etc., but his ideas were not the same as the market standards, hence the disappointing prices.

The federal government, cooperating with the state governments, has been trying to establish uniform grading practices for several years, but there has been a lack of efficient means in educating the producers. Samuel Bowser has heard of the uniform grading standards, but he never had a chance to learn them. It is for the purpose of extending this education that the Reading Railroad has been conducting a moving exhibition thru New Jersey. But the spreading of the information should not be left to the magnanimity of private enterprise. There should be provided a thoro and effective method of carrying to farmers the information needed, and nothing short of actual demonstration will be sufficient. Spasmodic and inadequate attempts will never establish uniform grading. Uniform grading when practiced by only a few injures agriculture as a whole.

The Conference Fails

AFTER weeks of bickering in which it was impossible to come to a mutual agreement, the tri-power disarmament conference at Geneva adjourned without tangible results. This was a distinct disappointment to the whole civilized world. The common people as well as the leaders of all nations, except the tory element in the British government, were expecting action which would relieve the tax-paying public from further burdensome levies to build and maintain big navies. But the British representatives were big-navy men who would not consent to the propositions laid down by America and agreed to by Japan.

However, it is doubtful whether the British people will proceed along the lines made possible by the failure of the conference. The addresses made and the spirit which prevailed at the dedication of the bridge between Canada and the United States the other day are a better exponent of the public temper of both nations than was indicated by the bickerings at the Geneva conference.

Business Holding Up

DESPITE the harmful effects of the big floods, the soft coal strike, and the reduced activity in the automobile industry, the general business condition of the nation on August first was pronounced "satisfactory." In many directions, notably in the electric power, and the volume of checks passing thru the banks, the amounts are above those of last year. But volume and profits are by no means satisfactory in all lines. Factory employment rolls and the railroad loadings are below last year's figures. Employment conditions in the industries are fairly good, altho jobs are a little harder to get than in the past. Compared with 1923 the payrolls show a reduction of three and one-third per cent. The steel business is duller than at this time last year.

Editorial Sidelights

MR. LLOYD, who covered the World's Poultry Congress for Pennsylvania Farmer readers (Page 9), is editor of the Ohio Farmer. In a letter accompanying the second of his articles, which will appear next week, Mr. Lloyd says: "These were among the hardest stories I ever had to write as there was so much to see and write about and could tell so little. . . . I did not mention shaking hands with the Prince of Wales as I thought that too personal."

The rest of us who listened to the International Peace Bridge dedication can only sigh and say, "We didn't shake hands with him, but we heard him over the radio."

SPEAKING OF COMBINES, as we do this week (Page 3) a farmer stood watching three men cut and thresh grain in a single operation in a combine test on the Cornell University Experiment Farm last week. He exclaimed, "And it was only a few years ago when I used 24 men to operate a threshing rig."

NEED RESEARCH FUNDS

Blight Remains Uncontrolled—Alien Law-Violators May Lose Certificate—Poultrymen Cooperate.

Washington, D. C.

THE new so-called administration farm relief proposal does not appear to have met the approval of either the McNary-Haugen bill advocates or the more conservative farm organization leaders. It would create a Federal Farm Board to supervise the use of a $200,000,000 federal revolving fund in financing agricultural cooperatives, and to attempt to control production by the distribution of statistical information relative to world production of farm products. It is the opinion of farmer representatives that no plan of farm relief will be effective which does not give agriculture as effective protection as the tariff gives to industry.

The farm organization representatives are agreed that whatever form of farm relief is finally adopted by the government, it should be supplemented by more funds for research, which has contributed immeasurably toward making the American farmer produce more per worker than is produced in any other country. Only 10 cents per man, woman and child in the United States is spent annually for the entire research and extension work of the Department of Agriculture, whereas the promotion of marine transportation gets 54 cents.

Lack of Funds Causes Loss

As an example of how failure to provide adequate funds for research has caused untold economic losses, both to farmers and to the nation, the farm organization representatives who are asking for larger federal appropriations for research point out that in the past 25 years millions of acres of chestnut trees, native in 22 states of the East and South, have been killed by blight.

If more money had been made available many years ago for a thoro study of the blight, probably some means of effectively combating it would have been found. But today the blight still remains practically uncontrolled and most of the chestnut forest growth north of Virginia and east of the Allegheny River has been killed by the blight, and chestnut trees in the southern Appalachians and Ohio Valley will be destroyed in the near future. In addition to the loss suffered by farmers, the present domestic scarcity of chestnut trees makes it necessary to import large quantities of tannin at great expense.

May Lose Citizenship

Aliens who violate the prohibition law are liable to lose their American citizenship. Several cases are noted by Commissioner of Naturalization Raymond F. Crist where the naturalized citizen has been compelled to return his naturalization certificate because after receiving it he pleaded guilty to unlawful possession and sale of intoxicating liquor. It is held that a man cannot be a worthy citizen who wilfully violates the laws of the land. As one judge has well said: "It is not enough to be attached to some of the principles of the Constitution. There must be proof of attachment to all of them, including that of prohibition."

Renewing Effort in Beetle Control

The government is renewing its efforts to keep the Japanese beetle within its present bounds. Department investigators say that the greatest danger of disseminating the Japanese beetle is in shipments of green corn and beans. An amendment to the Japanese beetle quarantine affecting the interstate movement by boat from New York City of farm products grown in the infested area, requires inspection and certification of such products. The object of the amendment is to remove the slight chance of the Japanese beetle being carried some distance to other states by boat in the coastwise trade.

Co-ops Market Poultry Products

More than $40,000,000 worth of poultry products were marketed by 67 farmer-owned cooperative marketing associations during 1926, according to the Bureau of Agricultural Economics. Egg sales amounted to $30,000,000, live poultry sales to $4,850,000 and dressed poultry sales to $6,200,000. These associations served 55,000 farmers. About 68 per cent of all the eggs marketed cooperatively were handled by 14 associations located on the Pacific Coast. Nearly 63 per cent of the 20,400,000 pounds of dressed poultry marketed cooperatively was handled by an association of large-scale duck farmers located on Long Island. Two sales agencies handling poultry products during 1926 for local cooperatives sold nearly one million cases of eggs and several million pounds of poultry. Most of the associations engaged in the cooperative marketing of eggs and poultry were organized since 1920.—E. E. R.

BUILD NEW PLANT

Will Increase N.J. Market—Sell Quality Pack—Recover Jap Beetle Parasites—Grangers Meet.

Trenton, N. J.

THE biggest news of the week for the South Jersey farmer is the announcement made by the Campbell Soup Company of their plans for increasing the size of their plant.

Beginning next spring just as soon as the frost is out of the ground, work will be started on this new plant that is expected to double the present output. At the new plant boats of tomatoes from Delaware, Maryland and New Jersey points will be unloaded direct into the washing tanks. It is also planned to have ships load direct from the wharf for foreign points where this firm now has a big business.

The new steamship landing will also be used for the California trade. It will be recalled that last year the Campbell Soup Company had one shipment of over a half million cases of tomato pulp unloaded in Camden from California. This may mean that California will enter more keenly into the competition of the East than ever before.

Improve Market Methods

The placing of the inspector at Swedesboro for tomatoes, peppers and sweet potatoes has already resulted in a 50 per cent improvement in the quality of the pack. Growers have taken kindly to the suggestions of the U. S. inspector, E. L. Fleming, and are leaving at home a large part of the crop that is not adapted to market needs. The improvement in pack is reflected in the prices being paid by the local dealers. Both tomatoes and peppers are selling at prices higher than for many years. In many instances the prices are double those paid one and two years ago.

Storm Does Damage

New Jersey, from the Delaware to the Hudson, was swept by a heavy wind and rain storm early in the week that did considerable damage. At Trenton over three inches of water fell in less than twenty-four hours. Considerable damage was done by the washing of fields and the blowing over of crops. In other respects the rain is proving of great benefit to all crops. Corn in the northern part of the state is out in tassel while in the lower end the corn is well set with indications of a bumper crop this fall. The crop in this part will mature unless there is an unusually early frost.

Parasites Are Established

During the last few days two more families of the Japanese beetle parasites have been recovered in the field. This brings the total up to five that are now firmly established in the most heavily infested section. They apparently are well adapted to New Jersey and Pennsylvania conditions and are probably largely responsible for the reduced number of beetles in certain sections of the area this year.—A. K.

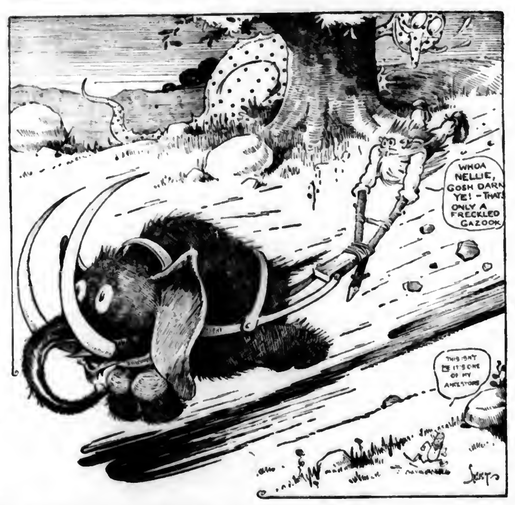
Atlantic Grangers Confer

Plans are now well shaped up for a busy program at the first Annual Grange Lecturers' Conference to be held in New Brunswick, N. J., August 23 to 25. Patrons of all of the nearby eastern states will gather to discuss various features of the lecturers' work and to enjoy a fraternal entertainment and social program. Altho the conference is designed primarily for the lecturers it is not to be limited to persons holding that office. Past lecturers and patrons generally with their families are expected to be present in large numbers from nearby states as well as from the New Jersey membership. Each state office has charge of assembling the membership from its state, and the visiting Grangers will tour as a unit by automobile from their own centrally located headquarters. The Agricultural College will provide a special reception to the conference.

Apple Export Rates Reduced

New Jersey farmers, thru the activity of their Farm Bureau and leading growers, have been instrumental in bringing about a reduced freight rate on export summer apples packed in straight-side bushels. The rate has been reduced from 60 cents to 45 cents per bushel when carried in common storage and from 90 cents to 70 cents per bushel when carried under refrigeration. Heretofore the rate for this package was double that for apples packed in the northwestern box package or the barrel. Inasmuch as the straight-side basket is considered the standard package for summer apples and is so recognzed by the Federal Department of Agriculture, this condition has been working a hardship on the eastern summer apple industry. The new rates follow effort started over a year ago by a New Jersey grower-exporter and the State Farm Bureau. —W. H. B.

A PRE-HISTORIC FARM TRAGEDY



RECEIVE DIVIDEND

New Egg Grades Established—Would Increase Number of Vocational Schools—Season Shows Record Crop.

Ithaca, N. Y.

STOCKHOLDERS in the leading farmers' cooperative buying agency of this state, the Grange-League-Federation Exchange, Inc., received a six per cent dividend recently. The dividend was paid on 154,656 shares of stock listed at $5 a share. The total amount paid in dividends was $46,396, the average holding per farmer being five shares. Several local subsidiary corporations owned by farmers also paid a similar dividend. The patrons of the organization bought approximately 50 per cent more supplies thru the G. L. F. this year than in any preceding year.

Announce New Egg Grading Rules

Commissioner B. A. Pyrke, head of the State Department of Agriculture and Markets announces five new grades into which all eggs shipped by state poultrymen will be divided. The first grade will be "nearby fancy," with Grade A designated as second in quality. The third classification will be "U. S. Standard" which will differ from Grade A only in that low visibility of the germ will be tolerated. In Grade C the germ may be clearly visible and the fifth grade, called "unclassified," includes everything not included in the others, such as dirty eggs and any that are "free from objectionable odor."

Agriculture in High Schools Needed

A. K. Getman, supervisor of vocational agriculture in New York State, reports an increase of 347 per cent in the enrollment in high schools in the past 21 years. He scores the state's educational system for clinging too tenaciously to the 1820 conception of academic education as "preparing to go to college." He finds that 70 per cent of those enrolled never get beyond the second year and 89 per cent never beyond the third. Hence, these pupils have a right to expect their brief school experience to do something for them by way of vocational training. If the high schools did this it seems likely that the boys and girls would find a way to remain in them longer. Professor Getman's figures prove that as the schools do challenge the interest and effort of the young more of them choose to become farmers. In progressive areas boys come to school eager for a type of curriculum that will prepare them for farming. He would reorganize and perhaps relocate the six original state schools of agriculture and advises agricultural department in high schools with the itinerant curriculum system of agricultural training— which he pronounces one of the soundest types of secondary school education anywhere in the country.

Record Crop of Peas Packed

The Albion canning factories in three weeks' time packed the heaviest crop ever experienced in the region. One factory packed a total of 160,000 cases. The string bean season will soon begin and this will also require a full force of operators on farms and in factories.—M. G. F.

Buy 6-ply tires--it pays

THE Kelly-Springfield 4-ply balloon is as good a 4-ply tire as it is possible to buiid today, and for city use, where road conditions are ideal, it is giving very satisfactory service on light cars.

For the kind of work, however, that a car usually gets in the country, tires of a sturdier, heavier construction are needed.

Kelly 6-ply tires are built for just this kind of service. Barring punctures, a set of Kelly 29 x 4.40 six-ply balloons on a Ford will run indefinitely.

There is real economy in paying the slight difference in cost between a 4-ply and a 6-ply tire.

"Kelly dealers everywhere— there must be one in your town."

KELLY-SPRINGFIELD TIRE CO.
GENERAL MOTORS BLDG., NEW YORK, N. Y.

KELLY SPRINGFIELD BALLOON TIRES

PAPEC "The Cutter That Does Not Clog"

"Quality and Quantity of Cutting"

are the Papec features that most appeal to J. Smith Brundage, Superintendent of the Steuben County (N.Y.) Farms. The Papec cuts ensilage fine and even, so that it will pack firmly. It "eats up corn" as fast as a man can throw it from the wagon. Needs no man at the feeding table, thanks to the Third Roll. Fills the highest silo without stress or strain. Operates at low cost.

Four sizes—ask your dealer to show them.

Will Buy GUINEA PIGS, CHECKERED GIANT RABBITS, WHITE FLEMISH GIANT and WHITE NEW ZEALAND RABBITS ANY AGE. ANY QUANTITY. STATE SEX AND PRICE.
TAYLOR'S FARM, Doylestown, Pa.

THERE was a much-used quip in vogue a few years ago which ran thus: "Cheer up; the worst is yet to come." I thought of this the other day after reading an article on sun spots, in which it was stated that we are passing thru a three-year period which will reach its worst in 1928, then they will pass away. This period of the eleven-year cycle began in 1926, is a little worse in 1927 and, as stated, will continue next year. Just how they affect the weather is not fully explained, but the spots are blamed for the freakish storms, the big floods, the frosts, and the cool nights. Well, we have had these things now for two years and they might as well be blamed upon sun spots as anything else.

✦ ✦ ✦

THIS seems to be a bad year for pod beans. We have made three plantings and none of them has done any good. I do not know whether others have had the same trouble, but ours have been ruined by a disease called mosaic. The outer edges of the leaves turn a light yellowish color and stop growing. The green part of the leaf continues to grow and soon the leaf is curled downward. Very few pods are set and soon the plant is useless, altho it does not die but continues to blossom. A few varieties are said to be partially immune, among them the Red Valentine of which we are, August 8, making a late planting.

✦ ✦ ✦

IT IS claimed that the spores of this disease, as well as some others, are carried over on the seed, hence the safest thing to do as a preventive is to get disease-free seed, if possible. At the time I bought the Red Valentine I also purchased a small can of a new material which the manufacturers claim will destroy disease germs when seed is treated with it. It may either be added to water and used to soak the seed, or added as powder to the seed and thoroly mixed with them by shaking the container.

READERS may remember that I have, during the past three or four years, said some harsh things about the persistency and vigor of smart weed on Neshaminy Gardens. Well, I publicly and unashamedly take most of it back. I retract the statement that it is an unmitigated pest without a redeeming feature. It has one use that makes it almost a blessing: It furnishes the first choice food of the Japanese beetles. As long as they can find smart weed they eat nothing else. I do not know how long the present ratio of beetles to smart weed will last, but if the beeties increase proportionately next year it may be that we will have to let most of the farm go to smart weed.

✦ ✦ ✦

THE only method of fighting the beetle so far found that seems practical on farms is to keep some foliage they prefer covered with coated arsenate of lead. But this material should not be applied to fruit and vegetables near gathering time. They will not eat ordinary arsenate of lead, but the coated arsenate is relished by them. Next year we shall try spraying it on smart weed before they appear, hoping to kill them as they begin feasting. I called up a manufacturer of the material the other day and asked about the propriety of spraying the smart weed on which they have been and are now feeding and he advised against it, saying it would probably drive them away to something else.

✦ ✦ ✦

THE May 1 pullets are developing rapidly. They were three months old on August first, but they are nearly full grown, are developing combs, and have begun to sing. The cockerels have been disposed of and the pullets have the run of the place. We do not know the exact number, but they seemed to be about half-and-half while the cockerels were there, and there were 250 cockerels. Out of the original 500, seven died and eight met untimely deaths by accident. If there is a better record, let us hear of it.

The Cheerful Plowman — A Good Teacher

THE teacher in our district school is not scholastic, stiff and cool, she's no high-brow and distant girl with head up where the cloudlets whirl. She's not a formal, mental snob with set-rule interest in her job. That girl's a girl with spacious heart and human from the very start. She wishes to instruct the youth in facts and figures, that's the truth. She follows rules of discipline, has no confusion, fuss or din. She makes the kidlets do their tasks and every item that she asks.

She's pedagogical enough and will not stand for fuss and bluff. She's all of that, that's plain to see, she's all of that she ought to be, but as I tried to say before, she's all of that and many more! She is a girl who takes a pride in every kidlet by her side; she is a girl who loves to teach with long, and broad, and lofty reach; she is a girl who surely feels that knowledge makes its best appeals when facts and figures in the head are not just formal, cold and dead, but traveling from the very start with fine impulses from the heart! That teacher sees that every child no matter how uncouth and wild is worth her very, level best,—no child is rated as a pest.

That teacher loves each little tad no matter how supremely bad the little jigger aims to be,—at least that's how it seems to me! That teacher's not just drawing pay and teaching a high-handed way; she's taking little boys and girls, tow-headed kids and kids in curls, and doing just the best she can by orderly and loving plan to make them grow, as I have said, in HEART as rapidly as HEAD!—J. Edw. Tufft.

SCHOOL-TIME SAVINGS *Through This Nation-Wide Personal Shopping Service-*

SCHOOL TIME! New clothes time! Money-spending time! Every mother knows how this can use up the family budget if she doesn't shop with care and discretion.

This year why not follow the example of the millions of mothers who have found how to effect large savings on their family requirements? Go to your nearest J. C. PENNEY COMPANY DEPARTMENT STORE and *shop* before you buy!

You will find greater values than ever before at our nearest Store, for the J. C. PENNEY COMPANY now has more Stores and larger cash buying resources than in all our past twenty-five years. The result is greater savings on all of our purchases—*and, as always, these important savings are passed on to our customers.*

A few dollars saved on Shoes and a few dollars saved on needed Stockings, Underwear and Clothing soon mount up to a tidy sum. You will make those savings at our stores. In addition, you will have the advantages of seeing exactly *what* you buy BEFORE you buy it! Here you can examine quality, color and fit and know that you are getting the fullest VALUE for every dollar you spend.

HELPING THE BOYS AND GIRLS RETURNING TO SCHOOL

Boys' Four-Piece Suits in medium grey and tan fancy weave cassimere; single-breasted model with 1 longie, 1 knicker and vest. Sizes 6 to 16 years. $7.90

Boys' 805 Ecru Ribbed Union Suits Fleeced; good weight; long sleeves and ankle length or short sleeves and knee length. Sizes 2 to 12 years 49c

Boys' 812 Wool-mixed Grey Ribbed Union Suits—Long sleeves and ankle length. Sizes 2 to 16 years $1.49

Boys' 202 Heavy-weight Ribbed Hose In black and cordovan; made of combed yarn. Pair 25c

Girls' Dresses Of gingham, chambray and small all-over printed effects; plain colors; embroidery; pleats. Generous pockets. Sizes 7 to 14. 98c

Girls' 300 Fine Gauge Full Mercerized Hose in both regular and popular English rib; black and colors. . . Pair 25c

School Shoes For boys and girls, excelling in leathers and workmanship—the kind giving sturdy wear and style pleasure at price-savings.

Supplies for the schoolroom—pencils, pads, etc.

Once the binder was considered a great labor saver, but how the combine has changed things! to get ready to thresh. In the next field the Schlenker brothers were harvesting and threshing

Here are four men working hard, just beginning in one operation with three men and a combine.

The Combine Proves Itself in the East

The harvester can be lifted off at the end of the season and the tractor used for other purposes. A power take-off operates the cutterbar and separator.

The eight-foot cutterbar is directly in front of the tractor. A large spiral sweeps the straw into the separator. The threshed grain is carried to the bagging platform on the left side by another conveyor.

The machine is intended to operate with the tractor in second gear. A water tank connected with the radiator provides additional cooling capacity. Two men run the Gleaner harvester. One drives the tractor and controls the cutterbar. The other bags the grain.

Mr. Brubaker and his son were giving their new harvester the final tuning up the day we visited them. Unfortunately we had to leave before they had a good start in the field. However, we saw the outfit thresh its first half bushel of grain and it did the job perfectly, on a sloping field.

(Continued from page 3)

der ordinary Pennsylvania conditions. The best threshing is done when the separator runs at a constant speed. Our uneven fields and heavy straw make it difficult to maintain an even separator speed with a power take-off when the tractor is as light as the one used with this harvester-thresher outfit.

In York County we saw two Case combines, George S. Gotwalt and D. C. Fahs have a nine-foot Case machine on their farm near York. It is a two-man outfit. One drives the tractor and the other controls the cutting mechanism. An auxiliary engine drives the separator. A Fordson tractor pulls the outfit with ease, even on a slope.

Mr. Gotwalt bagging grain at the corner of the field. The tank on the combine holds 30 bushels.

A Tank Receives Grain

This combine carries a 30-bushel tank to receive the grain. When the tank is full the machine is stopped and the two men bag the grain.

The second York County harvester-thresher we saw was on the farm of Jonas Meyers, along the Lincoln Highway west of York. This was a 12-foot Case combine with auxiliary engine. It was easily handled by an 18-36 Hart-Parr tractor. Mr. Meyers' three sons were running this big outfit and altho they had only a few hours' experience they worked like veterans.

The Meyers combine has a bagging platform in place of the grain tank on the Gotwalt and Fahs machine. One man rides on this platform, ties the filled bags and lets them slide down a long chute almost to the ground. At the corner of the field nearest the barn he pulls a lever and the accumulated bags slide easily to the ground, to be loaded into a truck and hauled away.

A straw spreader on this machine puts the straw and chaff back onto the ground evenly. Without this attachment the combine would leave the straw in windrows ready for the hayloader.

About 45 acres was Mr. Meyers' wheat acreage this year. The 10-acre field where we saw the combine at work was harvested in about five hours, including the time lost in turning and making adjustments.

We saw still another type of combine on the farm owned by the Schlenker brothers of Kutztown, Berks County. It was a ten-foot Massey-Harris harvester. Another of the same kind was working on the Fuller estate in Northampton County. The latter was drawn by a 15-30 Frick tractor. A Fordson tractor with crawler traction instead of wheels pulled the Schlenker machine. As they wanted to save the straw no spreader attachment was used. The combine went down the field leaving behind a fresh windrow of straw. A little pile of bags was dropped at one corner of the field on each round. A hay loader stood nearby. When the combine finished and the bags were hauled away the loader would be put to work gathering up the straw.

We took another boat ride when we went to see our sixth combine. This one, too, was at work on an island in the Susquehanna River. The owner was George E. Ziegler. His island farm lies opposite Herndon, Northumberland County, several miles down the river from Sunbury.

Mr. Ziegler's ten-foot McCormick-Deering combine is a real one-man machine. It is operated by a power take-off from the 15-30 International tractor which pulls it. From the seat of the tractor the driver controls the height of the cutterbar. No one is needed on the combine, unless the ground is very rough. The grain is delivered into a 30-bushel tank. When the tank is full a motor truck is driven up beside the combine and a lever is moved, opening four gates thru which the grain quickly flows into the truck. Where the yield is good one man can harvest and thresh fast enough to keep another busy hauling the wheat to the barn. The combine will cover

Trade Asks Fewer "Barnyard" Eggs

THE other day one of my retail customers told me that he liked my eggs because they didn't taste of the barnyard. He buys eggs from other farmers than myself, who let their hens run in the old fashioned manner, and it was his contention that altho he knew the other eggs to be fresh, that they nevertheless had a strong flavor from the miscellaneous and sometimes unwholesome food that hens running at liberty are bound to pick up. Consequently, the soft-boiled eggs that graced his breakfast table came from my flock, while the other eggs were used for baking purposes. The experience of this customer goes to show that there is a difference to the discriminating palate between eggs produced under modern poultry farm conditions and those produced by the free-ranging farm flock; and where the eggs are sold in a discriminating market this difference can be translated into dollars and cents. On up-to-date poultry farms eggs are gathered least once a day, and brought into a cool cellar where the temperature is right. Broody hens are "broken up" instead of being allowed to occupy the nests and start incubation on eggs that other hens lay there. The eggs themselves are carefully cleaned and packed and shipped twice a week if the weather is warm. For the best trade, eggs must also be graded and candled, because no customer wants to discover a blood spot in the egg he is opening at the breakfast table.

Some classes of trade, especially in New York, demand a pale yolk, and this is obtained by feeding sprouted oats as green feed, and avoiding such stuff as rape, which produces a very dark yolk On the other hand some customers demand a well colored yolk, complaining that a pale yolk fails to give the desirable golden color to cake. Of course, plenty of green feed and yellow corn will produce as dark a yolk as anyone could wish.

Must Cater to Demand

Such market peculiarities, while they must be catered to, have nothing to do with the real quality of an egg, which is dependent upon the feed from which it was produced and the way in which it was handled after being laid. The very opposite of quality is sometimes seen in customers' kitchens at times when eggs are high. Such eggs come from the chain stores as a rule; they have been produced in the Middle West and gathered from nests discovered around strawstacks, in haymows and under barns; they have been kept in hot kitchens and musty cellars and passed thru many hands before reaching cold storage. When they finally reach the consumer in the winter, their only merit is their cheapness; but after a couple of bad one have been discarded from every dozen, even their cheapness is doubtful. I never could see why anyone who knows the flavor and quality of a good fresh-laid egg would permit such an object in the house.

We poultrymen in the East, with the world's best markets at our door, have the very best opportunity to secure all the premium that the market will pay for quality in eggs, and it is the successful man who takes advantage of it by producing eggs of high quality and getting this premium.—R. L.-S. H.

Disinfect House

My chickens have been dying for some time. I cut one open and the liver and heart were full of yellow lumps the size of a pea.—J. H. W., Bedford County, Pa.

It is probable that the yellow lumps you discover in the ailing fowls are the result of tuberculosis. This is especially so if you find that the birds become light in weight prior to death. First of all I would advise you to go thru the flock and remove all birds that are light or listless and dispose of them in some way, as they cannot be cured and if allowed to remain will be a constant menace to the rest of the flock. The next thing to do would be to give the house a thoro cleaning, removing all the dirt and dust and spraying thoroly with some good disinfectant according to the manufacturer's directions. After that it is a good plan to keep the poultry buildings in as sanitary condition as possible.

Older fowls are more susceptible to this disease than the younger ones. One very good method of prevention is to sell off all the hens in the fall, replacing them with pullets, and saving only enough old stock to use as breeders.—R. L. Scharring-Hausen.

Nest Box Notes

WE FOUND the first pullet eggs in a range house on July 30th. By the middle of August we had a flock up in their winter quarters. They won't get out again until April. Pullets do much better in the houses than with range once they start to lay. They eat more and are better contented than if they are running out part of the time.

• • •

One of the neighbors complained that the pullets forsook the range house and now roost in one of the tall apple trees in his orchard. He was wondering if he had to climb after them when the time comes to house them. We once had just such night-blooming apple trees ourselves, and had to scramble all over them after the pullets with a flashlight, until we learned to scatter a little grain in the houses during the day. The pullets, of course, would go into the houses and we would shut the door and catch them. There is much less chance of someone collecting your life insurance if the pullets are caught this way instead of climbing the apple trees at night.

• • •

Last year about this time one of my neighbors seeded his orchard, in which the hens run, down to alfalfa, and got a good stand. He plowed the ground, disced it well, worked in some rotted manure and some lime and sowed the seed during favorable weather. Alfalfa makes a good soiling crop as well as pasture, if the hens are kept in houses or yards and it is necessary to provide green feed for them.

• • •

We have disced up our hen lots several times this season for successive crops of oats which the birds have picked off for "Chicken Salad." They like such green feed best when it is young and tender. We expect to get another crop or two in the lots before seeding them down to rye or wheat for the winter.

• • •

When the time comes to house the pullets it is advisable to cull them. Not every pullet will make a good layer. Weak small birds, individuals with pale beaks and legs, crow-headed birds and crooked birds had better be culled out and sold for meat. They will never pay a profit, and many of them will die during the winter. It is much better to get broiler money out of them now than to continue to support them, only to lose them later.

Exhibit is Like a Visit to a Strange and Foreign Country

RECORDING the events at the World's Poultry Congress held at Ottawa, Canada, July 27 to August 4, is like reporting a great Farmers' Week at one of our state agricultural colleges, an immense state fair and a visit to a strange and foreign country. The World's Poultry Congress is all these things rolled into one.

Delegates from 42 countries, practically every state in the Union and all nine provinces of Canada make this first a picturesque human assemblage. There is Mohammed Askar Bey, the affable and genial delegate from Egypt with his red fez, representing the world's oldest civilization. The Governor-General of Canada, Lord Willingdon, and his wife have been frequent congress visitors. His Royal Highness, the Prince of Wales, and his party who are now touring Canada, visited the poultry exhibition August 3rd.

Are Many Prominent Visitors

We could go on and on in the listing of prominent people at the poultry congress. For instance, it seems as if the entire staff of the Bureau of Animal Industry of the U. S. Department of Agriculture is here. Nearly every agriculture college is represented. All the officials of the American Poultry Association are here. Poultry breeders galore "from the States"—as the folks in Canada say—are here. We have seen cars from Washington to Massachusetts and from Michigan to Florida on the exhibition grounds.

Live Bird Exhibit Large

Coming from the human angle of the congress to the exhibition, the main building or coliseum houses the 5016 birds from all over the world. Every known variety of poultry and pigeons is represented, from the Asil, or fighting fowl of India, to the common varieties found in the farmyards of Canada and the United States. The live-bird exhibit, said to be the largest exhibition of fowls ever gathered together in one place, is just like having the American Standard of Perfection pass in review, with many foreign varieties not known in the United States added.

The American Poultry Association has one whole room full of birds in addition to the birds in the regular United States exhibit. These birds are the embodiment of the fine points in the American Standard. Another entire room is devoted to an exhibition of the Canadian record of per-

Eastern States Farmers' Exchange

Sharpen Your Pencil

All signs point to a very close adjustment between supply and demand for fluid milk this fall and winter. There are fewer cows and more are being slaughtered. There are more people using milk and they are using more milk. Prices for milk are going to be firm. Remember that the man who is making the most milk at a profit over feed cost and not the man who is making the most milk per dollar spent for feed reaps the highest reward.

For instance, one farmer may be feeding no grain this summer and getting from pasture and fresh cows 20 lbs. of milk per cow. He may think that he is better off than his neighbor who is feeding 1 lb. of $50 a ton grain to 5 lbs. of milk. He is probably wrong. Even if the market for milk is only $2.50 per hundred lbs., the farmer who feeds grain need make but 5 lbs. more per cow to break even on the milk check with his neighbor, and any increase over that is profit his neighbor can not have. As the market for milk improves, the cows which get no grain drop off and the cows which are receiving it hold out. "'Tain't what you spend; it's what you git that counts." This is a good year to take out the old jack knife and figure close on how you will secure maximum returns for your labor from your cows.

Eastern States Rations have been built to produce the greatest net return for the farmers using them. By planning their own feeds and sticking absolutely to a high quality standard through cooperative control of plant, they set out to reach this goal. That is why they purchased their own storing and mixing facilities at Buffalo. The feeds are bringing results to the feeders and that is why more than 19,000 farmers are using more than 130,000 tons of Eastern States feeds a year.

Recently shipments were inaugurated at Stockbridge, Mass., and one of the farmers who has a milk route has reported that the **gain in milk production** due to switching from his former ration to Fulpail **paid his entire Fulpail bill.** This is a concrete example of what the Exchange has actually accomplished for one of its members.

Where records are kept, Eastern States Open Formula Feeds prove their worth.

For information on the Eastern States Feed Service, a service which should not be confused with car door service offered by private manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange
A non-stock, non-profit organization, owned and controlled by the farmers it serves.

Paint Suggestions for Farmers

Paint—good paint—has a greater earning value in proportion to its cost than any other thing that you can buy for the upkeep of your farm property. It protects, preserves and saves enormous costs for renewal and reconstruction.

Your Barns

How long since you have painted your barns, silos, chicken houses and other buildings? If it has been several years, you should paint this fall before winter's dampness can get into the wood and cause rot and decay. See that the doors and frames are well painted. It will prevent their swelling and sticking in cold weather when you need them most. If you have made additions or put in new boards, give them a good oil priming coat and then paint with a good grade of barn paint. Barn paint is not expensive, spreads easily, covers a large surface per gallon, varying according to what is underneath. Tell your "Farm Service" Hardware Man the size of your barn and he can estimate the amount of paint you will need.

Your House

A trim little house, well painted in pleasing colors, is far more attractive than a big and elaborate place that has become shabby looking.

A good paint job will save many dollars of repair cost. The cost of paint is comparatively small. Windows, casings, doorways, doors and porches should be carefully painted in the fall to make sure of weather tightness and protection against rot and other damage. Ask for color cards on fine quality, long wearing house paints.

You will get good value in paints and brushes at a "tag" store.

Fall-Sown Spinach Is a Gamble

HAVE you eaten raw carrots when they are young and tender? They are increasing in favor. Quite a number of folks come to our market and select small carrots for use raw like radishes as well as to slice, dice or grate in salads.

Fall-sown spinach for spring cutting is rather a gamble throughout most of Pennsylvania. The Yellows Resistant Strain of Virginia Savoy developed by the Virginia Truck Experiment Station, Norfolk, Va., has usually given better results than any other. The land should be well drained and if acid must be limed. Seeding date will depend upon whether or not irrigation is available, richness of soil and on climate. Here in central Pennsylvania the middle of September seems about right. I suppose the accepted wheat seeding time would be a fair guide. Seed should not be sown too thickly in order that the individual plants may attain some size and develop robustly. After the ground freezes fairly hard a coarse mulch is applied. Oats or buckwheat straw lies too closely, especially during thaws and will almost surely smother the plants. Coarse horse manure may be used but I have seen burning injury if it is applied very fresh. Last winter we spread some fresh manure on top of the snow thinking it safe. When the snow melted the spinach covered with fresh manure was severely injured, that protected with partially decayed material came thru in good shape.

During the fall months it is worth while to keep the strawberry patch clean, especially to get out the perennial weeds, those which will live over winter. Then when it comes to selecting a straw for mulching, whether purchased or from one's own barn, freedom from weeds is a primary consideration. Straw loaded with seeds of winter cress, mustard, wild radish, etc., can prove a tremendous nuisance.

In most cases growing vegetable seeds is a specialist's job. However, it is a simple proposition to save one's own sweet corn, tomato, squash, cucumber and pepper seeds. Mark desirable plants with a stake or piece of rag before the picking season has advanced and then save seed only from those individual plants which have produced well. We must always remember that it is the mother plant which counts rather than particularly large or handsome fruits. It is well to keep in mind that corn varieties cross or mix readily, also varieties of squashes and cucumbers. Seed may be safely saved only from isolated patches.
—Gilbert S. Watts.

Here Are Answers to Japanese Beetle Control Questions

THE Pennsylvania Department of Agriculture has prepared the following series of questions and answers about Japanese beetle control basing them on the questions the authorities received from the public most frequently. Extra copies of the publication containing the information set forth below may be obtained from the Department at Harrisburg.

FOR SHADE TREES AND ORNAMENTAL PLANTS

Q. What spray is recommended for shade trees, shrubs and ornamental plants?

A. Coated arsenate of lead.

Q. Where can it be purchased?

A. At reliable seed, drug and hardware stores in the infested area.

Q. When should this spray be applied?

A. About June 25th. This spray must be in place before the beetles begin to feed and all portions of the foliage must be completely covered.

Q. How long will this spray stick to the foliage and remain effective?

A. When applied thoroly about June 25, it will remain effective thruout the beetle season.

Q. At what rate should the coated arsenate of lead be used?

A. In small lots it is used at the rate of 8 ounces to 5 gallons of water. In large lots, 10 pounds to 100 gallons of water.

Q. What spraying equipment is required for applying the coated arsenate of lead?

A. This spray can be applied with any spraying device from a hand sprayer to the large power sprayer.

Q. What is the approximate cost of this spray material?

A. About 40 cents a pound.

FOR GRAPE VINES, FRUIT TREES (EXCEPT PEACHES) AND VEGETABLE PLANTS

Q. What plants must not be sprayed with coated arsenate of lead?

A. Fruit trees, grape vines and vegetables.

Q. What spray should be used on fruit trees, (except peaches) grape vines and vegetables?

A. Arsenate of lead and wheat flour.

Q. What are the proportions to be used?

A. For small amounts:

Arsenate of lead	5 ounces
Wheat flour	3 ounces
Water	5 gallons

In large amounts use 6 pounds arsenate of lead, 4 pounds flour and 100 gallons water.

Q. When should this spray be applied?

A. During the last week in June.

Q. How is this spray mixed?

A. Mix the flour and arsenate of lead while dry. Then add just enough water to make a thin paste. Add this paste to the required amount of water.

Q. What spraying equipment is required?

A. Any spraying device from a hand sprayer to the power sprayer which will enable the grower to completely cover the plants.

SPRAYS FOR PEACHES

Q. What spray is recommended for peaches?

A. A spray consisted of arsenate of lead, wheat flour and hydrated lime.

Q. Why must this be used on peaches?

A. Other sprays damage the foliage by burning.

Q. How is the spray prepared?

A. Use the following formulae:

In small lots:

Arsenate of lead powder	2½ ozs.
Wheat flour	2 ozs.
Hydrated lime	8 ozs.
Water	5 gals.

In larger amounts:

Arsenate of lead powder	3 lbs.
Wheat flour	2½ lbs.
Hydrated lime	10 lbs.
Water	100 gals.

Q. When should this spray be applied?

A. About July 1st. Caution: This spray should not be applied later than from 4 to 6 weeks before fruit is marketed.

CONTACT SPRAY

Q. When are contact sprays recommended for killing Japanese beetles?

A. When a large number of beetles occur on very valuable plants. However, the coated arsenate of lead and arsenate of lead and flour sprays when applied in time will give the necessary protection to plants at a much lower cost than the contact sprays. Contact sprays kill the beetle today but give no protection to the foliage tomorrow.

Q. What contact spray is used?

A. Pyrethrum soap emulsion, a material sold in reliable seed, drug and hardware stores in the infested areas under various trade names.

GENERAL

Q. How many different plants does the Japanese beetle attack?

A. Over 120. If forced to it, this beetle will eat almost any green plant.

Q. Have the apple growers of New Jersey been successful in combating the Japanese beetle?

A. Yes. By the addition of 4 pounds of wheat flour and increasing the arsenate of lead to 6 pounds to 100 gallons of spray. Some use this in lime sulphur 1 to 40 while others are more successful without this fungicide. The time is about that of the so-called chuck-a-pple spray for codling moth and the increased cost for beetle control is but little.

Q. What precautions must be taken before marketing or consuming fruit and vegetables sprayed with arsenate of lead?

A. Should any traces of the spray remain on the food product, remove such traces by washing with clear water.

Q. What precautions must be taken with all arsenate of lead sprays?

A. Keep arsenate of lead away from irresponsible persons and label it "Poison."

Q. Where may additional information be secured?

A. From the Pennsylvania Department of Agriculture, Harrisburg, Pa.

Buy Plants Locally

Will you please give me information as to the best time to set out blackberries and raspberries and how they should be tended? When is the best time to set strawberries?—Mrs. A. P., Fulton County, Pa.

In reply to your recent inquiry addressed to Pennsylvania Farmer there is no better time to set out blackberries, raspberries and strawberries than as early in the spring as the soil may be worked. I am afraid that it will be impossible for you to set strawberries this summer and secure a satisfactory crop next summer. This practice is feasible only where especially fine or pot-grown plants are available as well as very fertile soil and irrigation.

The Eldorado blackberry, Cumberland black raspberry, Cuthbert red raspberry and Premier strawberry are standard varieties. It may be possible to secure good plants of these sorts in your county and I would suggest that you get in touch with your county agricultural agent as to source of supply.

Strawberries are commonly set 18 inches apart in rows 3½ feet apart. Raspberries and blackberries may be spaced about 3 feet apart in rows six or eight feet apart. When the canes on the latter reach a height of about 2½ feet it is advisable to pinch out the tips in order to encourage the development of numerous fruit-bearing laterals.—Gilbert S. Watts.

Growers Meet

THE National Vegetable Growers' Association of America will hold their twentieth annual convention on August 22 to 26, 1927, at Hotel Syracuse, Syracuse, New York. The New York State vegetable growers promise one of the best conventions that has ever been held.

The program this coming meeting is made up of some of the ablest speakers and authorities in vegetable growing in the country. In the exhibition room will be displayed various equipment, insecticides, seeds and other necessary equipment used by the vegetable grower.

On Wednesday, the 24th day of August, the visitors will be entertained by the Vegetable Growers of Onondaga County. They will leave in the morning for an all-day tour to see the interesting places around Syracuse. In the evening the annual banquet at Hotel Syracuse will be held.

Exhibit is Like a Visit to a Strange and Foreign Country

(Continued from page 9)

formance work and here enthroned in the center of this exhibit is Maizie, the charming White Leghorn owned by the University of British Columbia that at present holds the World's record of 352 eggs laid in 365 days.

The only thorn in Maizie's record is that her eggs only averaged 21 ounces to the dozen, while alongside of her stands a Plymouth Rock hen, not quite so showy, that laid 326 eggs in 365 days that averaged over 28 ounces to the dozen. On a basis of weight Hen No. 400, the Barred Rock owned by the Dominion Experimental Farm at Agassiz, B. C., has beaten Maizie, with 47 pounds of eggs compared with Maizie's 38½ pounds. If over eggs are sold on weight this Barred Rock will come into her glory. Either performance is highly creditable and both are world's records.

The International Baby Chick Association has an extensive exhibit showing the growth of the chick industry in the United States. At the present time Ohio leads in the total output of baby chicks. New Jersey is the center of another large production section.

United States Stresses Marketing

Each of the provinces of Canada has large and beautiful exhibits, telling of the advantages of their particular territory.

Coming to the International building one finds exhibits by the United States showing the essentials of good poultry culture, the development of the poultry industry in the United States and an exposition of how poultry products and eggs are marketed. Great Britain, Spain, Holland and many other countries have exhibits but those which attract the most attention are those of India and Egypt.

The Egypt exhibit consists of an incubator such as is used today in Egypt and was used 4000 years before Christ. It is a large structure built of clay. A fire is built in one end to supply the heat. The eggs are carefully turned during the process of incubation and tested at the end of the first week for fertility. The fire is maintained for the first two weeks and the heat in the building walls is sufficient for the third week. This exhibit is quite a contrast with the mammoth coal- and electrically-heated incubators and brooders shown by American and Canadian manufacturers and from which come the majority of the baby chicks used in the United States.

India Shows Fighting Fowl

In the Indian exhibits are two types of fowl—the Jungle Fowl or Gallus Bankiva, from which are said to have descended all our modern breeds of chickens, and the Asil or fighting fowl. These latter birds are a large, extremely vigorous fowl that live to the ripe old age of 30 to 40 years of age. The hens of this breed have been known to lay at the age of 18 years. This vigor is at least partially accounted for by the conditions under which the fowl are kept. Sanitary conditions are none too good and a bird has to have stamina to withstand the environment. The Asil are not champions when it comes to laying, their average output per year being 18 to 29 eggs, altho where kept under more favorable conditions they have been known to lay 70 or 80 eggs a year. The folks in charge of this exhibit suggest that American breeders use the blood of the Asil to cross with our high producing hens in an effort to graft some of the vigor and longevity on our comparatively short-lived and high-producing strains.

In the commercial exhibits are nearly every known brand of commercial feeds, poultry house equipment, incubators and brooders, etc., a veritable paradise for the visiting poultryman, and they are here in throngs. Not one day since the exhibition opened has the attendance run less than 10,000 and on Saturday it went to nearly 20,000.

Hoffman's Seed Wheat

Cleaned Right—Priced Right—Sure to Yield Better

ONE way to reduce production cost is to use better seed. It costs only 50c to 75c an acre to change to Hoffman's Selected Seed Wheat. The results—5, 8, maybe 10 more bushels to the acre; the cost for plowing, tilling and fertilizing, just the same; the cost per bushel produced, much less.

Eight proven varieties of Winter Wheat. Smooth Chaff and Bearded types. Grown for seed on the famous wheat soils of Lancaster, Pa. Cleaned by special modern machinery—free from cockle, garlic, rye, weeds.

New Catalog FREE

Gives full details—describes our "Leap's Prolific", "Forward", "Trumbull" and other heavy-yielding varieties. Written especially for wheat farmers by folks who know wheat. Tells you how to raise more bushels at less cost per bushel, also how to have wheat that tillers like and lay well for. Write for your copy.

Please Mention Pennsylvania Farmer When Writing to Advertisers

The man who thought a buggy was good enough

In the old days, a solid, conservative citizen might sniff and tell you he didn't read advertising.

He didn't think so much of the horseless carriage, either. The telephone was newfangled, and an insult to the United States mails.

As for radio, aeroplanes, wireless photography—if they had been born then, he probably would have thought them a bit immoral.

But he's changed. He's been educated. His point of view has been made broader and more modern. He has been civilized—by the automobile, the telephone, radio, advertising.

Every single one has opened up new paths for him, taught him new things. Advertising, especially. Advertising tells him the newest things to wear, the best things to eat. Advertising tells his wife how to make a home up to date and attractive. Advertising tells him the prices to pay for things he buys, saves him from the old-fashioned ways of doing business — helps him live well, keeps him modern.

Advertising can help you. The advertisements in this magazine are here to tell you many things that make life more comfortable, more interesting, happier. Read them faithfully. They'll keep you abreast of the times. They'll prevent you from becoming the type of old fogy who—sniff!—doesn't read advertising.

Advertising is the key to modernity

How about YOUR COWS' HEALTH?

If your diet lacks an essential something and your system gets out of tune, you can't do your best work, can you? Of course not. So with your cows. If something is lacking in their feed, how can you expect them to fill the milk-pail night and morning so you can get a fat check on the first of each month? Of course you can't.

You know that the modern high-producing dairy cow, the kind that pays the bills, is a sensitive machine. Unless you feed her so that she keeps on edge, she will go off on her appetite; her digestive tract will get clogged up. She may get garget—you know what that means—milk yield cut in half, a lot of extra work bathing and rubbing, and likely a lost quarter, perhaps two lost quarters, and a ruined cow.

Very often, too, the cow will not settle until she has been bred three or four times. You also know what that means. It means that she will be a stripper when she should be fresh, or a practical loss for a month or two, which never can be made up.

You can prevent these unnecessary losses by feeding Union Grains and keep your cows up to a high degree of health and in milking trim all the time. Each month brings a big milk check when you feed Union Grains.

Try a ton of Union Grains and you will see the difference in the condition of your cows. Each cow will give an extra pound or more of milk per day, on the average.

If you are getting $2 to $3 per hundredweight for your milk, this will bring an increased annual income of 12 to 18 clean dollars per cow. A worth-while increase, isn't it? This is just what Union Grains is doing for hundreds of dairymen. It will do it for you. Feed Union Grains because—

1. Its base is dried distillers' grains, the greatest single milk-producing concentrate known. The proteins in distillers' grains are especially adapted for sustained heavy milk production.

2. Dried distillers' grains are so blended with other carefully selected grains that a perfect balance is obtained. Every exact requirement of a ration especially adapted for heavy milk yields is met—no overloading with proteins that happen to be cheap.

3. It carries the health-giving elements to an unusually high degree and keeps the cows in perfect milking trim. This insures good appetites, reduces losses from garget, and helps to keep the cows on a regular breeding schedule.

Get Union Grains from your dealer and try it on your milkers.

Exhibit Prize Cattle

FOLLOWING the custom of recent years a dairy cattle show was made one of the attractions at the annual farmers' picnic of Montgomery County which was held at Memorial Park, Schwenksville, on Tuesday and Wednesday, August 2 and 3rd. There were about 40 cattle on exhibition. The exhibit, while not large, was of extra good quality. Holsteins were shown by H. D. Allebach, Wm. H. Landis and J. L. Wood. The exhibitors of Jerseys were Hansel French, Percy Hittle and Richard Hittle.

The prizes in the Holstein breed were fairly well divided between the exhibitors with W. H. Landis and H. D. Allebach capturing all the blue ribbons. Mr. Landis won the grand champion ribbon.

Judging Contest Featured

Mr. Landis also showed the Holstein cow that won first place for production in cow testing associations in Pennsylvania in 1926. This cow produced 22,474 pounds of milk and 924 pounds of butterfat during the year. This is the highest record ever made in association work in the state. In recent years more than 15,000 cows have been tested each year.

In the Jersey breed the blue ribbons were won by Hansel French and Richard Hittle. Hansel French won the breed championship on a yearling heifer.

A feature of the show was a dairy cow judging contest which was staged before prize ribbons were awarded. This event attracted a great deal of interest and more than 40 persons participated. The following persons scored 100 per cent in the contest: Richard Hittle, Henry M. Kuhns, Lloyd S. Shultz, F. E. Martin, Wm. H. Landis, B. D. Cassel.

Richard Hittle is a member of a boys' calf club in connection with which some training in judging is given. A cash prize was divided among the winners.—E. B. F.

Plays a Versatile Role

MADAM Dairy Cow has a place in the social world other than that gained thru her products on the table. Milk, butter, ice cream and cheese play an important part in the life of the human race, but we often forget about the many milk by-products.

These by-products are being used in the manufacture of glue, paints, plastic masses, combs, brushes, cigar holders, knife and fork handles, ferrules for umbrellas, bells, rings, dominoes, chess figures, in printing calico, in weatherproofing and "loading" silk, in the manufacture of foodstuffs, medicinal preparations, photographic plates, toilet soaps, poultry feeds, shoe polish, in priming canvas and treating pulp board covering.

One-half Penna. Cattle Tested

THE tuberculin test had been given to one-half the 1,280,000 dairy cattle of Pennsylvania up to July 1st. Butler, Cameron, Clearfield, Crawford, Indiana, Jefferson, Lawrence, Mercer and McKean Counties are declared "modified accredited counties" by Dr. T. E. Munce, director of the Bureau of Animal Industry, State Department of Agriculture. Columbia also is understood to have qualified as a modified accredited area, being the first county in eastern Pennsylvania to complete the area test.

Milk Prices Higher

THE Philadelphia milk price for August for a three per cent test is $3.29 per 100 pounds or 7.1 cents per quart as compared with $2.16 per 100 pounds or 4.65 cents per quart which was paid to producers during the month of July. These quotations are based on three per cent butterfat milk and a differential of 4 cents for each tenth point and 2 cents for each half point up or down.

Plans to Build a Small Creamery

Will you please tell me where I can obtain plans for building a small creamery or milk depot including an ice plant and bottling machine?—C. B., Erie County, Pa.

A free circular of the farm dairy house may be had by writing to Pennsylvania State College and requesting a copy of Extension Circular No. 107. Farmers' Bulletin 1214 which may be had upon request to the U. S. Department of Agriculture, Division of Publications, Washington, D. C., also gives plans for dairy houses. Complete blueprints for the construction of the dairy house shown in Farmers' Bulletin 1214 may be obtained from the Division of Agricultural Engineering, Bureau of Public Roads, U. S. Department of Agriculture, Washington, D. C.—A. A. B.

This Mother Boasts of Twins

This cow, owned by Judd H. Stevens, of Tioga County, Pa., has a distinguished record as a mother. She is shown here with her fifth pair of twins, born within the past five years.

They don't *come* any better

I DIDN'T know it, but Prince Albert was just the tobacco I had been looking for all the time. I hate to think of the time we lost getting together. But let that go. We're all set now—me and the pipe and P. A. We've been pals from the very first puff.

I had a hunch I was going to like P. A. the minute I got that breath of Nature's noblest gift to pipe-smokers. What a treat! It made me think of a hike through the woods, when the trees and the vines are in full leaf. I found the taste "as advertised" by the aroma.

Cool as a customs-inspector. Sweet as the thought you have nothing to hide. Mild as a milk-shake, yet with that full-bodied flavor that satisfies your smoke-taste right down to the ground. That's Prince Albert, Fellows. They don't *come* any better.

No matter how set you appear to be on a smoke-program, try P. A. I give you my word, no other tobacco that ever came down the pike ever brought so much downright satisfaction out of a pipe. "That fellow knew his groceries," you'll say, or words to that effect.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and patch removed by the Prince Albert process.

PRINCE ALBERT

—the national joy smoke!

© 1927, R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

How about YOUR COWS' HEALTH?

If your diet lacks an essential something and your system gets out of tune, you can't do your best work, can you? Of course not. So with your cows. If something is lacking in their feed, how can you expect them to fill the milk-pail night and morning so you can get a fat check on the first of each month? Of course you can't.

You know that the modern high-producing dairy cow, the kind that pays the bills, is a sensitive machine. Unless you feed her so that she keeps on edge, she will go off on her appetite; her digestive tract will get clogged up. She may get garget—you know what that means—milk yield cut in half, a lot of extra work bathing and rubbing, and likely a lost quarter, perhaps two lost quarters, and a ruined cow.

Very often, too, the cow will not settle until she has been bred three or four times. You also know what that means. It means that she will be a stripper when she should be fresh, or a practical loss for a month or two, which never can be made up.

You can prevent these unnecessary losses by feeding Union Grains and keep your cows up to a high degree of health and in milking trim all the time. Each month brings a big milk check when you feed Union Grains.

Try a ton of Union Grains and you will see the difference in the condition of your cows. Each cow will give an extra pound or more of milk per day, on the average.

If you are getting $2 to $3 per hundredweight for your milk, this will bring an increased annual income of 12 to 18 clean dollars per cow. A worth-while increase, isn't it? This is just what Union Grains is doing for hundreds of dairymen. It will do it for you. Feed Union Grains because—

1. Its base is dried distillers' grains, the greatest single milk-producing concentrate known. The proteins in distillers' grains are especially adapted for sustained heavy milk production.

2. Dried distillers' grains are so blended with other carefully selected grains that a perfect balance is obtained. Every exact requirement of a ration especially adapted for heavy milk yields is met—no overloading with proteins that happen to be cheap.

3. It carries the health-giving elements to an unusually high degree and keeps the cows in perfect milking trim. This insures good appetites, reduces losses from garget, and helps to keep the cows on a regular breeding schedule.

Get Union Grains from your dealer and try it on your milkers.

INTENTIONAL SECOND EXPOSURE

Genuine Cork Linoleum Rugs in NEW–DIFFERENT–PRETTIER Patterns

Why not brighten the kitchen with a touch of color?

NOTHING would be more suitable for the kitchen (that most lived-in-room in the house) than this lovely rug of Armstrong's Linoleum in the green-and-white tile pattern. Colorful, simple in design, clean looking, it is far prettier than that old wood floor, and much easier to keep clean! Just a light mopping keeps it bright, shiny, and new-looking.

Resilient, quiet to the tread and *tough*, it will give years of wear. It is so flexible and pliant, too, that it can easily be rolled up and moved from room to room. Yet an Armstrong's Linoleum Rug costs little—the price is now amazingly low, lower than it ever has been.

Besides the tile pattern illustrated for the kitchen, there are 19 new patterns of Armstrong's Linoleum Rugs now being shown in the stores. These new rugs are more than merely new designs. They are really new creations in beauty and coloring. Rugs of genuine Jaspé linoleum with an overlaid border, rugs with a single all-over design without repetition, patterns you must see to realize fully their unusual attractiveness.

In the main illustration:
Pattern No. 867
Above: *Armstrong's Jaspé Linoleum Rug, Pattern No. 727*
Right: *Pattern No. 960*

Now, with these new Armstrong Rug patterns, you can have the beauty of design and charm of color together with the practical advantages of a smooth-surface rug. . . . Not only in the kitchen, but the best rooms in the house—living-room, dining-room, bedroom. Many of these new patterns are made in the extra-large sizes, 12 ft. by 12 ft., and 12 ft. by 15 ft., as well as the usual smaller room sizes.

SEND FOR THIS FREE BOOKLET

"Rugs of Practical Beauty" shows a charming array of these new Armstrong Linoleum Rugs in full color. You will enjoy making your selection before you go to the store. Look for the CIRCLE A *trade-mark on the burlap back*

Friendly Talks

By EDGAR L. VINCENT

ONE of the queer things about us all is that we are more than half inclined to think that nobody is as near right as we are. This frailty of human nature is not a peculiarity of folks that live in the city; farmer folks are just as subject to the same weakness. If we think a certain way of sharpening our scythe is best, we like to think that other people think so, too.

Over in Scotland a young farmer found a girl just to his taste. Being quite like-minded as to the lover when he came to propose, there soon was a fine wedding in the country home. And when they stood up to pledge their troth, the minister told them that if they lived a good, harmonious life, being loyal and devoted to each other, their joy would increase as the years went by.

"I Hope You'll Grow Like Me"

"And he told me a strange thing," the young wife went on as she told about it. "He said that if we lived in love with one another we would grow more and more like each other as we grew older." Then she suddenly interrupted herself and looked into the homely, honest face of her husband and burst out impulsively, "Eh, Jock, but I hope you'll grow like me!"

Now, I suspect more folks than this young Scotch couple would like everybody to grow to be just like us. If we are husbands, how we long to have our wives think and act just as we do! And where is the wife who is not glad from the bottom of her heart when she can see that Jock is coming more and more to look at things just as she does?

Likeness Extends to Features

And it is one of the certainties of life that after a man and a woman have lived together a long time they do come to take similar views of the matters which interest them from day to day. Some folks tell us that this likeness extends even to the personal appearance; that our very features change to take on more and more of a similarity to those of the ones we live with and who share our hopes and our plans, our successes and our disappointments. This is a pleasant thing to think about—provided that our helpmates are coming more and more to resemble us!

Clear up thru all human thinking and reasoning this tendency to want others to think as we do makes itself felt. Nations love to have their own way; and if they cannot, often there is trouble. Men in high places dissolve partnership if they find that they cannot carry every point in the way which seems to them best and wisest. A great many of the divorces that figure in our courts have their beginning in differences of opinion, often about the most unimportant things.

See the Other Fellow's Side

There is no more beautiful characteristic than that of being able to see the other fellow's side. It can be done only after long self discipline; but it can be done. A young farmer I know has this happy faculty to a marked extent. Always when somebody else is in trouble because of some act he has committed this man says, "Now, we don't know all about it. Let's wait till we hear his side of the story." And this enables him to live peaceably with all men, as the Good Book enjoins us to do.

If we wish others to grow like us, it stands us in hand to be sure that our lives are right. Who would want to know that because his life was warped and out of shape, the life of someone else was crooked and ugly, too? It takes never-ending care, constant thought and earnest prayer to bring a life to beauty. But we have a Pattern, that of the one Perfect Man. Following Him we may be sure that some day "we shall be like Him, for we shall see Him as He is."

FARMALL *Evidence*

"I just finished plowing 80 acres in 7 days with my Farmall, plowing 11 hours each day. I have had two other makes of tractors, but I can see that this is the only all-purpose outfit."
PAUL SCHRODER, Colfax, Wis.

"The Farmall surprised me by doing all that you claimed it to and more, too."
DAN W. TAYLOR, Corpus Christi, Texas

"Our Farmalls are very satisfactory at plowing. The soil here is hard to work and the moldboard will not scour, so you know they pull hard. I think the Farmall is the greatest machine since the binder."
THOMPSON LAKE FARM, Lewistown, Illinois.

"The Farmall is thoroughly competent to plow, harrow, culti-pack, drill grain, list for corn or peas, plant, mow hay, operate the binder, and besides that we have used it on any number of belt jobs. I feel you should know these things and know your company deserves a pat on the back for the Farmall. Please do not thank me for this as it is too well deserved."
D. M. HASTINGS, Atlanta, Ga.

Rear view of the Farmall plowing. This also shows the high clearance over the rows of corn and cotton and other row crops. With this tractor you will be ready for next season's *planting* and *cultivating*.

PLOWING—
At Its Best and Easiest by FARMALL Power!

THERE is enthusiasm for the work of the Farmall wherever the Farmall appears. On all crops, on all jobs in field and barnyard, it shows the power farmer *something new in handling and efficiency.*

Plowing is one of its strongest suits. The Farmall owner goes out to tackle that once-dreaded job with interest and good humor. He has learned that Farmall and its plow will move handily and rapidly over the fields and leave well-turned furrows behind, in ideal shape for the operations and the crops to follow.

Remember that the Harvester engineers devoted several years to working out this all-purpose, all-crop, all-year design. They tried out thoroughly *every* type of design. When Farmall was *right for all drawbar, belt and take-off work* they offered it to the farmer. The Farmall is *the one all-purpose tractor that plows and cultivates row crops, too.* It is the feature of power farming today.

Plow your fields the Farmall way. Begin by asking the McCormick-Deering dealer where you can see a Farmall plowing.

See the Other Fellow's Side

There is no more beautiful characteristic than that of being able to see the other fellow's side. It can be done only after long self discipline; but it can be done. A young farmer I know has this happy faculty to a marked extent. Always when somebody else is in trouble because of some act he has committed this man says, "Now, we don't know all about it. Let's wait till we hear his side of the story." And this enables him to live peaceably with all men, as the Good Book enjoins us to do.

If we wish others to grow like us, it stands us in hand to be sure that our lives are right. Who would want to know that because his life was warped and out of shape, the life of someone else was crooked and ugly, too? It takes never-ending care, constant thought and earnest prayer to bring a life to beauty. But we have a Pattern, that of the one Perfect Man. Following Him we may be sure that some day "we shall be like Him, for we shall see Him as He is."

FARMALL *Evidence*

"I just finished plowing 80 acres in 7 days with my Farmall, plowing 11 hours each day. I have had two other makes of tractors, but I can see that this is the only all-purpose outfit."
PAUL SCHRODER, Colfax, Wis.

"The Farmall surprised me by doing all that you claimed it to and more, too."
DAN W. TAYLOR, Corpus Christi, Texas

"Our Farmalls are very satisfactory at plowing. The soil here is hard to work and the moldboard will not scour, so you know they pull hard. I think the Farmall is the greatest machine since the binder."
THOMPSON LAKE FARM, Lewistown, Illinois.

"The Farmall is thoroughly competent to plow, harrow, culti-pack, drill grain, list for corn or peas, plant, mow hay, operate the binder, and besides that we have used it on any number of belt jobs. I feel you should know these things and know your company deserves a pat on the back for the Farmall. Please do not thank me for this as it is too well deserved."
D. M. HASTINGS, Atlanta, Ga.

Rear view of the Farmall, plowing. This also shows the high clearance over the rows of corn and cotton and other row crops. With this tractor you will be ready for next season's *planting* and *cultivating*.

PLOWING—
At Its Best and Easiest by FARMALL Power!

THERE is enthusiasm for the work of the Farmall wherever the Farmall appears. On all crops, on all jobs in field and barnyard, it shows the power farmer *something new in handling and efficiency.*

Plowing is one of its strongest suits. The Farmall owner goes out to tackle that once-dreaded job with interest and good humor. He has learned that Farmall and its plow will move handily and rapidly over the fields and leave well-turned furrows behind, in ideal shape for the operations and the crops to follow.

Remember that the Harvester engineers devoted several years to working out this all-purpose, all-crop, all-year design. They tried out thoroughly *every* type of design. When Farmall was *right for all drawbar, belt and take-off work* they offered it to the farmer. The Farmall is *the one all-purpose tractor that plows and cultivates row crops, too.* It is the feature of power farming today.

Plow your fields the Farmall way. Begin by asking the McCormick-Deering dealer where you can see a Farmall plowing.

A Money-Maker on the Farm

With this low-priced HANDY FARM MIXER you can save half the cost of having your concrete work done for you.

You can make your own walks, steps, feeding and well platforms, stable, chicken and hog house floors, foundations for new buildings, cement blocks, fence posts, etc.

It thoroughly mixes a wheelbarrow load per minute—no job too small—no farm job too large. All metal construction lasts for years. Operated by hand or with small engine.

Don't put off buying a HANDY MIXER any longer. It will pay for itself on a job or two.

If your John Deere Dealer can't supply you, write us.

FREE BOOKLET tells how to mix, and use concrete, covers mixtures required, describes the Handy Mixer. Write today to John Deere, Moline, Ill. Ask for booklet MT-936

INTENTIONAL SECOND EXPOSURE

OUR YOUNG PEOPLE'S FORUM

Is This a Bargain?

DEAR FORUM BOYS AND GIRLS: Your contest papers continue to come in but I'm afraid that many of you are waiting until the last minute to send them along. I know that you want your story to be just as interesting as possible and that probably is why some of you are holding back. The contest closes on Saturday, the 20th, so this is the last reminder I shall be able to give you. I wonder who will capture the prizes this time. You know there will be three prizes for Forum friends over twelve and three more prizes for those twelve and under.

After reading a few of your stories I've discovered some are great readers. One Forum member has read the "Life of Abraham Lincoln," "Life of Washington," "Uncle Tom's Cabin," etc. Some others like to spend their time doing athletic stunts and are happiest when swimming, racing, playing ball or engaged in sports generally. Some like to occupy their spare time with needle and thread helping mother with the home sewing. They tell me they like to embroider, crochet and knit during their spare time so that they may have gifts of their very own to give their friends. What do you like to do in your spare time?

If this contest interests you, I'll tell you what I'll do. After I've corrected your papers, distributed the prizes and all that, I'll write and tell you what I'd like to do with my spare time. Is that a bargain?

THE FORUM EDITOR.

From Forum Members and Friends

Dear Cousin Ruth:—We have two rose bushes in our yard. In the one a robin built her nest and in the other a sparrow. One morning when I looked in the nests there were three eggs in the robin's nest and four in the sparrow's nest. A while afterwards little birds were in both nests. Two of the sparrows died. All of the robins lived. The sparrows soon learned to fly and a few days afterwards the robins learned to fly. Now both nests are empty.—L. Bausman, 12, York County, Pa.

Dear Forum Friends:—I want to tell you about our Sunday school picnic. We went in a truck but we had to walk up many big hills because the old truck couldn't haul us up. At last we came to the picnic grounds. It was a nice place with grass and trees. We played many games and I had a very good time. I was so tired when I got home that I could hardly stand.—Mary Lukeik, (X), Indiana County, Pa.

I'm glad you had such a good time. At times trucks can be very stubborn, can't they?

Dear Cousin Ruth:—I have five little pets, one goose named Elizabeth and four little ducks which we call Lilly. I enjoy reading the letters very much that are in Pennsylvania Farmer. I'm sending you a picture of me and my little brother Anthony.—Johanna Rehak, (X), Bucks County, Pa.

BROTHER AND I
Johanna Rehak, (X), Bucks County, Pa.

Dear Cousin Ruth:—I was cultivating last summer and liked it very much. My father is going to buy me a plow. We have three engines. We have a little fodder shredder. We run this with the biggest engine and we run the corn sheller with the little engine. I thank you very much for the membership pin you sent me. My sister's pigeon died and my brother's pigeon flew away.—John Blank, (X), Lancaster County, Pa.

Dear Cousin Ruth:—Here is a picture of dad and my uncle cutting oats. That was when we lived on the farm. Mother couldn't stand the farm so we had to move. We have three acres now and a four-room house.

CUTTING OATS
Emma Whigam, (X), Westmoreland County, Pa.

We keep a Jersey cow, White Wyandotte chickens and two geese. We also have a calf.—Emma Whigam, (X), Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—I have for my pet an Airedale dog named Sandy. He was a little dog when we got him. On the last day of school eight girls and myself went on a hike. One of the girl's father went along with us. We took our lunches. We were on a sliding board nearly all afternoon.

Dear Ruth Throckmorton, I am sending you a recipe of candy.

FUDGE

2 squares of chocolate
½ cup cold milk
2 cups of sugar
One-third cup of corn syrup
2 tablespoons of butter
1 tablespoon of vanilla

Grate the chocolate and add all the ingredients except the vanilla. Cook slowly, stirring once in a while. Requires about forty-five minutes actual boiling. Remove from fire and add vanilla and beat until it begins to granulate. Put in buttered plate and let cool and cut in squares.—Kathryn Engle, (X), Somerset County, Pa.

Dear Cousin Ruth:—I am going to tell you about my trip on June 12th. I took a trip to East Liverpool, Ohio. I had a very good time there. I was near Rocks Spring Park. We spent the Fourth of July there. We took our dinner and came home for supper. Then after supper we went back to see the fireworks. They did not start until nearly eleven o'clock. I came home on July 5th.—Geneva Duke, Washington County, Pa.

Dear Cousin Ruth:—I have a registered Jersey calf and I belong to the calf club. We deliver our milk to customers twice a day during hot weather. I help sometimes. We have nine cows. I have one pair of Buff Cochin Bantams. My brother, Sutton, belongs to the calf club, too.—Pearl Marion Smith, Indiana County, Pa.

I'm glad that both you and your brother belong to the calf club. Is this your first year of club work?

THE FORUM EDITOR.

Dear Cousin Ruth:—I want you all to try my favorite drink. Beat an egg, add one teaspoon sugar and one-half teaspoon of vanilla. Fill the glass with milk and it is ready.—Ethel Reynolds, eight, Wayne County, Pa.

Gladys and Anna Wetherill,
Columbia County, Pa.

Dear Cousin Ruth:—My brother built a bird house in a tree and there are brown birds building in it. Last year a robin built its nest in our shed. Bluebirds build nests in our orchard every year. I do like birds and music. We have an organ and I can play a good bit. I wish to take music lessons this summer.—Genevieve Bennett, (X), Elk County, Pa.

Answers to riddles printed on our page last week from Mildred Hartman, Columbia County, Pa.

1. Because Gee (G) makes it "go."
2. By the peck, of course.
3. Because he knows his speech by heart.
4. To get the music across.
5. Because neither of them do right (write).

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—Nobody has to do anything to "belong" to the Puzzle Corner, as some of you ask at times, because the Puzzle Corner just naturally belongs to Our Little Folks. But, of course, I get to know only those Little Folks who write to me. I surely am glad to hear from so many of you each week and this is a very special message to you all since I cannot write a letter to each one.

When some of you grow up and are big folks, maybe you'll learn how some of the words we use every day have grown from other words and how some words have changed when they have been transplanted from another language into our own. But even now, while you are still Little Folks, you can watch how written—or printed—words will grow up from adding one letter at a time to a letter given to you as a seedling. In the little story below the first word is "A," and to the letter "A" you add a letter for the second word (where I have put two little blanks); then where there are three blanks, you add a letter to the word you have just made, and so on. When you send me your answer (either in a letter or on a postcard) you may either write the whole of the story or you may send me the list of words you made in the order in which you added them. Let me have your answer by August 27th. BE SURE TO TELL ME YOUR AGE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. The prizes go to the ten children, sending in the correct answer, whose letters or cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

WHAT HAPPENED?

— man sat — — a table and began to — — — his supper. He had been in town and talked — — long that his coffee was cold, so he asked his wife to — — — — it for him. He was very indignant because a man had tried to — — — — — him when he was selling his produce.

The answer to the puzzle published in the July 30 issue (the mixed up verse) is:

Little Jack Horner sat in a corner,
Eating a Christmas pie.
He put in his thumb and pulled out a plum,
And said, "What a good boy am I!"

The prize winners are: Franklin H. Bartgen, age 8, Millheim, Pa.; Dempsey S. Kinnamon, age 12, Goldsboro, Md.; Harold Kulp, age 8, Lancaster, Pa.; H. Harold Miller, age 9, Safe Harbor, Pa.; Effa May Mong, age 10, Scenery Hill, Pa.; Margaret Montgomery, age 10, Oxford, Pa.; Ethel Pinnock, age 9, Le Raysville, Pa.; Julia Zeman, age 12, Jermyn, Pa.; Myrtle Rodgers, age 11, West Chester, Pa.; Bertha W. Leaman, age 12, Lancaster, Pa.

Mrs. GERTRUDE S. STEWART

Mrs. Williams Knows the Secret

Her Dried Corn and Apples Retain Their Flavor

NOT far from our home, in a little Quaker village, lives Mrs. Williams, famed for her dried corn and apples. Each year she sells several hundred pounds. I have never tasted better corn. After soaking overnight it is tender and succulent as if fresh from the garden. Her dried apples make the best pie imaginable. She tells me you must use a good flavored apple for no matter how careful the drying the process does not improve the quality of the apple.

Out in the orchard I was shown the drying apparatus, which consisted of a drying "tunnel," about eight feet long and eight feet from the ground at one end, while it rested over a low brick oven at the other end. A packing box would do, if you could get one the right size. Mr. Williams constructed this himself from lumber he had about the place, modeling it after a prune tunnel he had seen in California.

The box-shaped tunnel was about two feet square, arranged so that shallow trays could be slipped in the top and taken out at the bottom when sufficiently dried. These trays slipped into grooves in the tunnel, so that the warm air could circulate below and above them.

Apparatus Made at Home

The brick stove was made by Mr. Williams and the fire built right on the ground. Later he replaced it with a small heating stove, with tin pipe connecting with the wooden part, to carry the heat up over the trays. This drier was so simple that it could easily be copied.

Mrs. Williams dries some of her food over the kitchen stove when the weather is rainy and they do not work in the orchard. This drier is home made also, tho there are similar ones on the market.

It consists of a box 12 inches wide by 21 inches broad by 27 inches high, open at the top and bottom to allow circulation of the hot air from the kitchen range. This rests upon a base of 27-gauge galvanized sheeting, nailed to the box by five-eighths-inch flanges turned in at right angles on the upper edges of the metal base. The base is wider than the box, slanting back to cover a larger part of the kitchen range, gathering more heat. The base is made with an opening at the bottom, for more circulation of air.

The galvanized sheeting holds the box high enough from the stove that the food will not scorch. However, an extra piece of sheeting may be needed, not quite as large as the bottom shelf in the box, protecting food from scorching, yet allowing the warm air to enter on all sides.

Temperature Varies as Food Dries

Cleats are nailed to the sides to allow eight trays to slip in. These are interchangable and reversible, and are made of small mesh galvanized wire cloth, inserted between double wooden frames.

Lower temperature is used at the beginning of the drying, and higher at the finish, tho it must not be hot enough to scorch. As the food in top trays dries, they are slipped down, nearer the fire where it is hotter. Temperatures for drying vary from 100 degrees F. to 190 degrees. It is safer to use a thermometer.

Drying corn is more difficult than drying fruits, since it must be prepared quickly. The freshly gathered corn, still in the milk stage, is husked, put into boiling water five minutes or longer to set the milk, then cut from the cob. All of the silks need not be removed, since these are easily separated after drying. The whole kernels may be cut off, or only the tips, and the milk scraped out. This is spread one inch deep on the drying racks, and started at 180 degrees, finished at 190 degrees F. The drying is continued until the corn rattles on the trays, stirring several times during the process to separate it and let the warm air reach each grain. When finished, it is hard and semi-transparent, a kernel breaking with a clean glass-like fracture if crushed.

Speed Is Essential

Fall or winter apples are best for drying, tho summer apples will be good if fine flavored. Peel, remove decayed spots, core and slice, spreading one to one and one-half inches deep. You can use a guarded knife and an apple corer, slicing crosswise into apple rings. Mrs. Williams has a mechanical peeler and slicer she bought at the hardware store. Putting apples into weak salt water or lemonade will prevent discoloration, but it is better to fill each tray quickly and put at once into the drier, at 125 degrees, finishing at 150 degrees F. The fruit is finished when a handful gripped firmly has an elastic, springy feel, separating promptly and leaving no visible moisture on the hand when dropped. The apples should not be dried so long that they become crisp and hard.

The dried food is spread out in a warm place a few days and stirred occasionally before being put into airtight containers. Paper or muslin sacks are most convenient, and are more often used than airtight fruit jars. If dried in the sun, or if there is danger that insects may have bothered the food, even after drying, spread thinly on baking tins and heat in the oven to 180 degrees F. This may be done if your dried food is not keeping well. If part of it has spoiled, but the rest appears good, it is safer heated in the oven, to destroy any possible insect life.

Home made drier used over the kitchen stove

Mrs. Williams stores her dried food, by hanging up in the attic. The kitchen cupboard is not suitable since there is moisture in the air from cooking. She looks in the bags occasionally, but with proper drying, she never has spoilage.

"Farm and Home Drying of Fruits and Vegetables," Farmer's Bulletin 984, free from U. S. Department of Agriculture, Washington, D. C., gives directions for drying. Mrs. Williams finds she can speed the process with no danger of scorching by using the temperatures I have told you. This bulletin tells how to make a different stove drier, also how to make a sun drier similar to a hot bed, with slanted frame covered with glass, and how to dry all products from orchard and garden.—Doris W. McCray, Iowa.

A guarded knife simplifies apple peeling and protects the hands

Out-of-Season Buying Cuts Clothing Budget

LARGE savings in the clothing budget can be made thru buying out-of-season. Tailored suits which were rather costly in March and April can now be bought for less than half price. Altho there is never so wide a choice of garments in the clearance sale, good bargains can be found if the buyer knows values.

Merchants must clear their stock periodically, and if the home-maker keeps track of when they plan to do this, she will be able to manage her clothing budget for much less money than if she buys in season.—N. J. State College of Agriculture.

Have Your Children Gained?

HOW would your children score today as compared with the day school closed? Have they gained in weight? Are they easier to manage and less irritable? Now is the time to check up as there are several more weeks in which to make good any shortcomings that may be found.

Vacation is the ideal time for growing children to make their greatest gains in physical development. Most of the day is spent in play out of doors where there is plenty of sunshine and fresh air. During the summer months there is an abundance of fruit and vegetables with which to tempt the appetite. In spite of all these good things many children are not in as good physical condition when vacation ends as they were at the close of school.

Many children use up too much energy each day to gain any weight, and some even lose weight. Regular meals, rest periods, and sleep are absolutely essential for good growth. An hour of quiet play or reading after the noon meal aids digestion and allows the body to rest. Perhaps the most difficult task for mother is to have the children sleep the required nine or ten hours, but this is most necessary if children are to gain in weight.—Marie C. Doermann, N. J. Food Specialist.

Relishes Which Add Zest to Any Meal

DEAR EDITOR:—Please print on your ever welcome page a good recipe for chow-chow, and one for piccalilli.—Mrs. P. G., N. J.

CHOW-CHOW

2 quarts green tomatoes
1 small head cabbage
1 cup salt
12 small cucumbers
4 green peppers
1 gallon vinegar
6 small onions
1 quart string beans
1 tablespoon each of mustard, pepper, celery seed, allspice and cloves

Chop the six vegetables together in an enamel pan that can be tightly covered. Alternate the mixture in layers with salt, being sure to have salt on top. Let stand all night or for twelve hours. Then drain well. Heat the vinegar and spices to boiling point, then add the vegetables and cook slowly until tender. Pack into hot sterilized jars while boiling hot, and seal at once.

PICCALILLI

Slice thinly ½ peck small green tomatoes and 12 white onions. Sprinkle lightly with salt and a little water and let stand all night. Next morning pack into jars and cover with the following pickling liquid. Boil together ½ gallon pure cider vinegar, ½ cup brown sugar, ½ ounce each of celery seed, black mustard seed and white mustard seed. Seal at once.

FEAST DAY PICCALILLI

Chop finely ½ peck green tomatoes, ½ head cabbage, 1 head cauliflower, 6 onions and 1 red pepper (but not the seeds). Sprinkle lightly with salt and let stand all night. Drain. Then add 1 teaspoon each ground cinnamon, mustard seed and paprika, 2 teaspoons celery seed and two and one-fourth cups sugar. Let good vinegar cover the mass. Boil for one-half hour and seal while hot.

Sheep Fill Comforts

WHILE walking across the fields the other day to visit an old neighbor, the thought came to me that I would get materials and cotton batts the next time I went to town so that I could work on comforters the next rainy day. I always make two or three new comforters every fall, so as to keep my supply of bedclothes from diminishing. However, I saw something which changed my mind.

I found my old friend busy using wool cards. As I admired the pile of soft fluffy white wool I asked her what she was planning.

"I am carding enough wool for a comforter," she told me. Picking up a piece of wool in my hands, I remarked, "I would like to have some new comforters filled with that pretty wool myself."

"There is no reason why you shouldn't have wool-filled comforters," my friend explained. These cards can be bought in almost any mail order house and cost very little. Just a little over a dollar, and they will last a lifetime. You can easily get the wool as you have a nice flock of sheep.

"You may get my cards any time that you wish. I will soon be done with them. It's no trouble to card wool and I'll show you how and in no time you will have enough for a comforter.

Washed, Carded, Then Covered

"The first thing you do is to get out your tub and fill it partly full of warm rain water. Wash the wool thru this water without any soap, soap it in the next two waters, then rinse it in water of the same temperature, and your wool will be as soft and fluffy as mine. Spread it out on newspapers to dry. Sunshine makes it fluffier. The wool from one sheep, if it is at all heavy, will make two comforters.

"After the wool is carded, cover it with cheese cloth, then with sateen or challis. When the cover is soiled, it is easily removed washed and replaced. This eliminates the necessity of washing the wool."

With the aid of my friend I have carded enough wool for three comforters, one of which I have already tied. It is certainly a delight, so soft and such light weight and yet it gives more warmth than two cotton comforters.

I know that as long as we have sheep all my comforters will be wool filled. They are not only nicer but are inexpensive when one uses picked wool.—Mrs. L. H. Funk, Mo.

Timely Tips

VARNISHED wall paper such as is used for bath rooms makes an ideal covering for pantry or cupboard shelves. It is white, strong and durable and can be cleaned many times without showing signs of wear.

* * *

If the front edge is doubled it will wear even longer. This paper is eighteen inches wide and comes in rolls like wall paper. It costs from 25 to 30 cents an eight-yard roll.

* * *

Do you know the value of rubber corks? They never wear out. For use in bottles which contain acids or very strong drugs they are invaluable for unlike cork, the drugs do not affect them.

* * *

Use rubber corks to seal your catsup, and instead of pushing in the cork, as is customary, screw it into place just as tightly as possible. They serve as air tight tops for grape juice also. Be sure to screw them in, never pushing, and they will shut out every bit of air.

* * *

When the cream pitcher drips leaving oily spots on table linen, rub a bit of butter on the lip of the pitcher, and save the soiled linen.

* * *

When the coffee pot is nearly full and there is danger of its boiling over, a small piece of butter put in when the water is added will be oil on troubled waters, and the coffee will stay inside the pot.—Helen Manning.

Apples and Tomatoes Combined

TOMATOES and apples with their attractive color, good flavor and valuable vitamins can be combined in a number of ways.

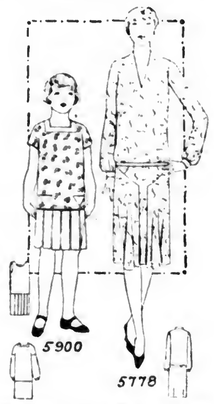
Waldorf salad, made of diced apples and celery and chopped nut meats may be served in shells made of firm ripe tomatoes hollowed out and salted slightly. Small balls of apple cut with a potato-ball cutter, and treated with French dressing or lemon juice to keep them from turning brown, may be served on slices of tomato in beds of crisp lettuce.

A good conserve to serve with meat is made from a pint of tomato, either fresh or canned, a pint of diced apples, one lemon cut in small pieces, and three cupfuls of sugar. The ingredients are combined and cooked until the mixture is thick and clear. It is then poured into clean hot glasses and when cold it is covered with hot paraffin.

For fruit butter, using apples and tomatoes, combine one pint of tomato pulp, one pint of apple pulp, three cups of sugar, one small stick of cinnamon, and the juice and grated rind of one orange. Cook the mixture until it is thick and clear, pour it into clean, hot jars, seal the jars, and keep them sealed until used.

Slender Lines for Afternoon

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



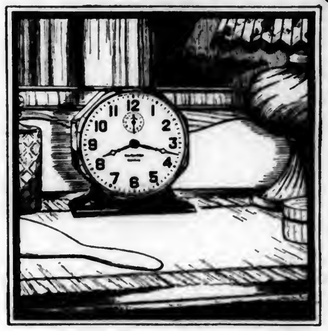
5900.—Four sizes: 4, 6, 8 and 10 years. To make the dress as pictured for an eight-year size will require 1¾ yard of 40-inch material for the blouse with ¾ yard of contrasting material for yoke and pocket facings, and 2⅛ yard for the skirt. If blouse is made with long sleeves 1⅜ yard will be required. The underbody requires 1 yard of 27-inch linings. Pattern, 10 cents.

5778—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 1⅝ yard of 36-inch lining and 4⅞ yards of material 40 inches wide with ¼ yard of contrasting material for facing on collar, cuffs and belt. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Charming New Designs in Alarm Clocks

NEW HAVEN CLOCKS BEAUTIFY THE HOME



TOM-TOM—*Large clock, 6 in. high. White dial, $3.25. Radium dial $4.25.*

TICK-TOCK—*with Havenite base. Attractive in any room. 4½ in. high. White dial, $2.50. Radium dial, $3.50 (As the picture, left.)*

TIDY-TOT—*A small clock 3¾ in. high. Silver dial, $3.25. Radium dial, $4.25*

These new alarm clocks are so distinctive in appearance that they beautify your home. They are good timekeepers that do their duty dependably in kitchen, bedroom or wherever alarm clocks are used. New Haven Clocks are made in a wide variety—not only alarms—but also chime clocks, tambours, and colonial models as well.

The superior features of the latest New Haven Alarm Clocks:

1 Distinctive beauty of design; artistic hands; ornate numerals.
2 Non-breakable *Krack-Proof Kryflal.*
3 Mellow-toned alarm with shut-off.
4 Aluminum non-rust bell on back.
5 Thin-model case, dust-proof; patented octagon design.
6 Full-vision dial.
7 Forty-hour movement.
8 Dependable timekeepers, all.

All True Time Tellers—See them at your dealer's!

NEW HAVEN CLOCKS

Made by the makers of Good Clocks *for more than five generations*

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

The Story Thus Far

"BOY, I'm your uncle," he said. How I stared at the roughly dressed backswoodsman who had forced his way into the house. I reckoned myself a young gentleman of Philadelphia. Could kin of mine be nothing but a trader of the frontier?

It was true enough. Worse yet, it was he who had supplied my income since my aunt died. And he planned to take me back with him some time to Carolina. That was horror added to horror to a delicately bred lad like myself.

Some matter connected with the Regulators, rebels against the authority of His Excellency, Governor Tryon, called him back before he could carry out his threat to take me south with him. Yet I knew he would return and that my gay life in that Philadelphia of 1771 would vanish like a bubble. I dreaded the day.

One evening, at the George Inn, I heard my uncle's name, Daniel Craig, the same as my own. A big Major of Carolina militia was cursing him out for a coward. For a moment I remembered only that Daniel Craig was my uncle and forgot he was a rebel and a backwoodsman.

---

taste." And he went on to sing by himself what I recognized as a parody of the parody, better known as the Massachusetts Liberty Song:

"Come swallow your bumpers, ye Tories, and roar,
That the friends of fair Freedom are hamper'd once more;
But know that no cut-throats our spirits can tame,
Nor a host of oppressors shall smother the flame.
In freedom we're born, and, like sons of the brave,
We'll never surrender,
But swear to defend her,
And scorn to survive her, if unable to save."

THIS was not at all to the liking of my friends at the big table. As I went over to join them and touched Harrington on the arm, the red-faced man in uniform whom I had noticed before had got to his feet and was trying to force his way to the singer.

"I'll teach that impudent fellow a lesson," he was growling to himself between clenched teeth. "If I had him in Carolina now—"

Harrington, obviously somewhat befuddled, stumbled in front of him. He put his hand on the officer's chest and tried to push him back.

"Don't fight that little fellow from Boston now, Major," he begged. "Want you to meet somebody else—Here's Daniel Craig to see you."

You would have thought the Major had seen a ghost. He jumped back and grabbed for his sword hilt. Meanwhile his startled eyes went over my shoulder to search the room for the figure he seemed to seek.

I bowed. Harrington's jaw dropped.

Major Bunston," he cried. "What ails you, man? Craig is no bogey."

The Major's eyes came back to me with a look of surprise and relief. He got hold of himself and returned.

"Mr. Craig is entitled to my apologies for my seeming discourtesy," he declared grandly. "Truth is, sir, your name is the same as a noted rebel of our colony, whom I have been trying to put my hands on for some time. I thought for the moment Mr. Harrington meant that this fellow was here in this tavern, and could hardly believe my good fortune."

Harrington gave a silly laugh. "Good fortune? Faith, Major, you looked ready to run. This rebel of yours must be a good man of his hands."

"He still, man, you're drunk," said the Major, contemptuously, but his heightened color showed that the jibe had hit home. To recover, he had me sit down by him, and began to talk rapidly of affairs in his own colony. He had spoken of Daniel Craig twice before I realized whom he meant—he was talking about my uncle!

"The fellow is sly, devilish sly," the Major was saying. "He is a power with those Regulators. If we could once put our hands on him, many of our troubles would be over."

"Do you mean prison or execution?" I asked.

"Both," the Major declared. "Under this new mob act of ours, we can hang him out of hand as soon as we catch him. But his disposal can be managed. Of course, if he had been a gentleman, we would have fixed him long since. Called him out, and—" he closed one eye and sighted along an imaginary pistol.

"BUT the cur won't fight," he went on; "so we probably shall have to have him knocked on the head one of these days."

I had listened to all this with a mounting indignation. Now I got up. My voice, when I spoke, was shrill and harsh enough so that the room quieted suddenly and I said the last words in a complete hush.

"Tho I differ with the gentleman you mention, in politics," I declared, "I cannot forget that he is my uncle. Neither can I forget or permit others to forget that he is a gentleman of courage. Anyone who assumes the contrary lies, as you have lied tonight."

The Major looked at me in silence. Then he beckoned to one of his friends and whispered to him. This fellow, a young officer in the uniform of the Philadelphia Light Horse, started toward me.

I felt a hand on my arm. The little Bostonian stood beside me.

"Carnes is my name," he said quickly. "Let me handle this for you. I know your uncle."

I nodded and moved over toward the fire. In truth, I knew nothing else to do. Someone had to act as my friend. Harrington was too drunk to be trusted.

A dull wonder came upon me that I had dared to be so warlike. No doubt this Major was an experienced duelist. The businesslike air with which he had received my challenge indicated as much. Certainly he hated my uncle, and would be inclined to take out that hate on me.

CARNES was back before I had much time for meditation. He gave me a doubtful look.

"Pistols it is," he informed me, "and lucky enough for us. By the looks of you, your wrist is not strong enough for him with the foils. But pistols— What sort of a shot are you?"

"Fair," said I, "at a target. I've never—that is, this will be my first affair."

"May you sink a bullet in his black heart," muttered Carnes. "Hark you, this Major thinks he can aggravate your uncle by killing you. His friends are urging him to let it pass, and, frankly, your death will bring him no honor. But not he."

"Where is it?" I asked with dry lips. "And when?"

"Down at the wharves. As soon as the dueling pistols get here and the watch is bribed to stay clear. There's moonlight enough for it. Of course, you know one of you will have to ride for it after the affair is over. Pennsylvania is not fond of duelists."

I managed to smile a little.

"Time enough for that," I suggested. "I shan't worry about getting away till I see if I'm able to."

Carnes looked keenly at me. "You have all the advantage, youngster," he asserted. That ox of a Major will show up like the side of a mountain. You will make a poor target. But come over and sit down and get something hot into you.

"I well remember my first affair," he went on, as we took our seats. "I was scared down to my boots. You put a bold face on it—" that was to hearten me, I think—"but I was gray and shivery.. But after all it was no great matter. One gets used to these things. And while dueling is a cursed folly of the aristocrats who ape England, and while every sensible colony should abolish it, still it is a great relief to the feelings at times."

He broke off. Two men had just come in. One had a long case under his arm. Carnes joined him and they bent over the case together.

My second came back.

"Ready," he said, and I got up. My legs seemed weak. The anger I had felt against Major Bunston had all gone out of me, and there was nothing left but physical weakness and a foolish sort of pride that forbade me to show it.

Outside it was clear and crisp. The shadows of the houses were like ink on the lighter pavement. We followed the two men ahead of us, down one street and up another. Presently we could see the masts of vessels showing above the sheds we walked among.

We came out on the water front. The two men ahead parted and one came back. It was the officer of the Light Horse.

"This pier will do," he offered. "The footing is better than here and the light more equal."

My second agreed. He went on. The pier stretched out interminably into the darkness. You could hardly see its end. I took post with my back to the shore. The officer and Carnes began to pace off the distance. Some yards from me, Major Dunston stood with his arms folded and looked out across the water.

I became suddenly conscious of the lapping of the water against the pier. It occurred to me that that lapping would go on indefinitely, while that infinitely more important mechanism that was I might stop in a few seconds.

Carnes came back and held out a pistol.

"Fire when I count three," he said. "Aim for his body and take your time."

I TOOK the pistol and waited. Some moments of danger that have come to me have come and gone like a dash, so that I acted my part too quickly to be able to think whether I was frightened. But not this time. I had a queer feeling that the pulse of the world had slowed; my own motions seemed no more rapid than the movement of the minute hand of a clock; the other men with me appeared to walk like men in a dream, bound by invisible chains.

The major took his pistol, and, as I thought, moved with exasperating slowness to take post opposite me. As a matter of fact, Carnes afterward told me that Dunston was unusually brisk and that he wore an air of business that seemed to say, "Come, let's get this business over with." I suppose my wits, keened by the peril, were twice as much alive as usual, and that movements and gestures that ordinarily would have escaped me now held the attention of my racing mind.

Carnes took his place half way between us and well to one side.

"Are you ready, gentlemen?" he asked.

"Ready, sir," echoed Dunston. His voice was full and confident.

I did not trust myself to speak, and nodded. I remember Carnes leaning toward me to catch that motion of my head.

"Muzzles up, head high," warned Carnes. "I shall count three. At the third count, fire."

He paused for a long second, and then his voice came crisp and sharp.

"One."

I studied the bulk of the Major, dimly outlined against the darkness behind. What side was his heart on, I wondered, and in a sort of mental panic, could not think for an instant whether I should fire at his right or his left side.

"Two."

I decided to fire at his middle, a little above the waist line.

"Three."

AS THO it were someone else's arm and hand, I felt my right swing down with the pistol. It came with exasperating slowness. Still with that sense of slow movement, the barrel straightened itself before my eye. I caught the sights, centered the front sight on something that was like a dull blur straight ahead, and touched the trigger.

Set on a hair, it spat fire in the blackness almost before I knew I had touched it. At the same instant, it seemed to me, that gray blur ahead vanished for a second behind a point of flame.

I stood there with the smoking pistol in my hand. The next instant, Carnes was pawing over me. He swore delightedly as he felt my coat.

"A clean miss, my lad," he cried, "I thought you were too fast for him. This will be good news for your uncle."

"Did he miss, too?" I faltered, not comprehending what he said.

"Lad, you spotted him in the gizzard, and not a scratch to show for it. He'll leave the Craigs alone for a while now, and maybe forever."

A man with a bag in his hand came running up the pier. Two more followed, their steps sounding hollow on the planks as they ran.

"The doctor and a couple of lads to help the Major to the coach," said Carnes in answer to the question I had not voiced. "Come, we must be going. There's work to be done before daylight."

HE LED off. As I followed, I looked back. A group of men were in a knot about something out on the planks. I heard a groan and someone say sharply:

"Fetch a light. I'll not move him till I can see how bad he's hurt."

A hundred yards farther on, Carnes found me lagging and turned back. In truth, I felt weak and sick and longed for nothing so much as to lie down and cry like a girl. The excitement, the suspense, the stiffening that danger gives to nerves, had passed and now I could only think how tired I was and how the man on the pier had groaned.

"Make haste, boy," he urged. "This is no time—"

"I'm afraid I'm going to be sick," said I in a very small voice, and was.

After the vomiting spell was over, I felt shaky but better. Carnes bade me take his arm and we went on together, more slowly.

"Nothing to be ashamed of," he answered my attempted excuses. "No it was nothing you had to eat or drink; It was scare. Lots of men are that way. Better after the ruction than before to my notion, too."

We must have walked for a long half hour when Carnes stopped at a door. No light showed, but the door opened almost instantly at my companion's rap. He pushed me in and we stumbled along a dark hall at the end of which stood a half open door and a lighted room beyond.

Three men were in the room. They arose as we came in. All were soberly dressed men of tradesman type.

One of the three—a dark, lean fellow with a big nose and keen eyes, addressed himself to Carnes.

"Hannay brought word. You have done ill to mix yourself in this scrape."

Carnes laughed. "I think differently, Mr. Thomson," he declared "I have had a little excitement, a Carolina militiaman has been put out of the way, and we have found a lad to take our message to Hunter."

"Let us hear your story," said Mr. Thomson judically.

When Carnes was thru, there was a moment's silence. I was recovering enough from my experience to begin to wonder what these men had to do with me. Mr. Thomson spoke first.

"Will you go?" he asked, and looked at me.

Much of what Carnes had just said had failed to make sense to me. I said as much, pleaded my exhaustion as excuse, and to his inquiry, professed to be feeling better and ready to hear his proposal.

"To a nephew of Daniel Craig," he began, "we can be frank. Especially since that same nephew"—he added with a slight smile—"has just this evening made it certain that no Tory will have a welcome for him. You have heard of the Sons of Liberty, of course. I am the secretary for Philadelphia. Carnes here belongs to the Boston Society. We try to work for the rights of the people against oppressors everywhere in all the colonies. Just now—"

"THE Tories have the upper hand," Carnes broke in. "Even with us, men are saying the Boston massacre was the fault of the citizens, and that we have no cause for complaint against England now that the Townshend acts are repealed. Your Quakers are worse. The agreement to refuse to import goods from England broke down here long before our merchants weakened."

"True enough," Thomson agreed, "but our time will come again. Now down in North Carolina, some of the good people who inhabit the back country are being grievously oppressed by a set of scoundrels in office, like the fellow you pistoled tonight. It will come to war yet between those patriots and these thieves in office. Wherefore—"

"Wherefore," broke in Carnes impatiently, "a good shipment of arms and powder goes down to the Cape Fear for the use of these brave lads. And I go with it."

(To be continued next wek)

"I simply can't stand the toot of an automobile horn."

"How's that?"

"A fellow eloped with my wife in an automobile and every time I hear an auto toot I think he's bringing her back."

THE RIGHT KIND OF BAIT GETS THEM

Did you ever hear this one?—

Such Is Fame

"There's no livin' with my "usband now, ma'am; fame's ruined 'im! 'E won't work since 'e got cured by them pills and 'ad 'is photograph in the paper."

She—It was really a toss-up this morning whether I played golf or went to church.

He—Really?

She—Yes, and I had to toss up fifteen times before I got golf.

"Joan's going to have another operation."

"Really? What's she got?"

"Money."

"Are you a professional swimmer?"

"No; I just swim on the side."

"Was your barn hurt during the cyclone?"

"I dunno; I ain't found it yet."

"I walk two miles every day for my complexion."

"That's some walk to find a drug store."

"What do they call those big machines they used during the war?

"Tanks."

"You're welcome."

Teacher—Take this sentence: Let the cow be taken out of the pasture. What mood?

Pupil—The cow.

Roosters are used for weather vanes because hens couldn't lay eggs on roofs, anyway.

The Wrong Idea

He—They've lovely musbrooms in this hotel. What d'you say we get some?

She—Don't bother; we can use the parlor when we get home.

Ruth—Who is that fellow with the long hair?

Eddie—He's a fellow from Yale.

Ruth—Oh, I've often heard of these Yale locks.

She—The Lord made us beautiful and dumb.

He—How's that?

She—Beautiful so the men would love us—and dumb so we could love them.

An Old One

He—Say, there's to be a big dance at Union Station tonight.

Him (excitedly)—Oh, let's go. Who's giving it?

He—Two trains are going to Charleston.

Visitor (in newspaper room, watching cartoonist)—Do you always draw everything larger than it ought to be?

Old Newspaper Man—Everything but my salary.

No Hopes

Mistress—I saw the milkman kiss you this morning. I'll take the milk in myself after this.

The Maid—It won't do any good, mum. He promises to kiss nobody except me.

Popular Song—She was only a woodsman's daughter, and she married a perfect sap.

LIVESTOCK

Review of local market for week ending August 13, 1927: Market fairly active on killing classes, yards well cleared. Beef steers fully steady with early week's advance of 25c higher than week ago; early top, $12.15; average weight, 1350 lbs; top for week, $12.75; numerous loads selling around 1400 lbs; bulk of sales, $10@$0 11.50. Bulls steady; bulk medium bulls $7@7.75. Heifers steady with week's 25c decline. Cows and all cutter steady; bulk butcher cows, $6@7; cutters, $4@5.50. Stockers and feeders slow, about steady; bulk, $7.25@8.25. Calves steady; top vealers, $15.50. Hogs, no fresh receipts; last sales steady with last week's close.

Receipts for Saturday's market: Cattle, 24 cars; 10 Chicago, 6 St Paul, 2 Virginia, 2 St Louis, 2 Kansas City, 1 West Virginia, 1 New York, containing 693 head, 61 head trucked in from nearby farms. Total cattle, 754 head, 10 calves. Receipts for week ending August 13, 1927: Cattle, 181 cars; 38 Virginia, 37 Chicago, 32 St Paul, 21 West Virginia, 16 St Louis, 15 Kansas City, 10 Canada, 5 Penna, 2 Maryland, 2 New York, 1 Tennessee, 1 Kentucky, 1 Texas, containing 4958 head, 276 trucked in. Total cattle, 5231 head, 132 calves, 441 hogs, 214 sheep. Compared with previous week: Cattle, 139 cars, containing 4129 head, 175 trucked in. Total cattle, 4304 head, 122 calves, 458 hogs, 778 sheep.

Steers:—
Good, 1200@1500 lbs ..... $11.75@13.00
Good, 1100@1300 lbs ..... 11.25@12.75
Good, 950@1100 lbs. ..... 10.25@12.25
Medium, 950 lbs up ..... 9.50@11.25
Common, 950 lbs up ..... 8.00@ 9.50

Cows:—
Choice ..... 7.50@9.00
Good ..... 6.50@7.50
Common and medium ..... 4.50@ 6.25
Low cutter and cutter ..... 3.50@4.50

Vealers:—
Good and choice ..... 13.50@15.50
Medium ..... 10.50@13.50
Cull and common ..... 6.00@10.50

Hogs—
Heavyweights, 250@350 lbs.. 9.50 - 11.00
Mediumweights, 200@250 lbs.. 11.00 - 12.00
Lightweights, 160@200 lbs.. 11.25@12.25
Rough stock ..... 8.50@ 9.50

HAY AND GRAIN

Wheat, Hay and Straw (prices paid to farmers)—Wheat, $1.22; hay, baled, timothy, $12@15; straw, $8@9.

Feeds (selling prices)—Bran, $39@40; shorts, $42.50@43.50; hominy, $46@47; middlings, $52@53; linseed, $56@57; gluten, $43.50@44.50; ground oats, $45@46; alfalfa, regular, $40@41.

YORK PRODUCE

Butter and Eggs—Country butter, 50@55c; separator, 45c; eggs, 33@35c.

Poultry—Hens, 16@20c; springers, 18@25c; dressed, 75c@$2 ea.

Vegetables—Potatoes, 15@20c ½ pk, $1.25 bu; cabbage, 3@10c hd; celery, 10@15c stalk; lettuce, 8@25c hd; horseradish, 5@10c glass; onions, 5c bch, 10c box; beets, 5c bch, bulled, 2@5c ea; turnips, 10@15c ¾ pk; soup beans, 15@20c qt; lima beans, 20@40c qt; radishes, 5c bch; peas, 20@30c ¾ pk; beans, 15c ¾ pk; tomatoes, 3@5c ea, 10@15c box; squash, 3@10c ea; corn, 30@50c doz.

Fruits—Apples, old, 15@20c ¾ pk; new, 10@20c ¾ pk, $1.25@2 bu; plums, 10@15c box; blackberries, 15@15c qt; peaches, 10@20c box, 20@35c ½ pk.

Wholesale Grain Market—Wheat, $1.17; corn, $1.15; rye, 90c; oats, new, 40c; bran, $34 ton; middlings, $45 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 43 @ 43½c; choice, 42@42½c; do, good, 41@42c, do prints, 44@46c; do, blocks, 43@45c; do, ladles, 31@32c; Md and Penna, rolls, 30 @32c; Ohio and W Va, rolls, 30@31c; store-packed, 31c; dairy prints, 30@32c; process butter, 28@29c.

Live Poultry—Hens and chickens, hens, 4½ lbs and over, mostly 25c; hens, 4@4½ lbs, 23@24c; hens, 3½@4 lbs, 18@20c. Legs, roosters and other light stock, 16@17c; old roosters, mixed colors, 15@16c; old roosters, Leghorns, 13@15c; young chickens, colored, 27c lbs and over, 25c; smaller, 20 @28c; Leghorns, 2 lbs and over, 24@25c; smaller, 22@23c. Young ducks, White Pekins, 4 lbs and over, 25c; small, ducklings, 14 lbs and over, 18c; all kinds, smaller, 15 @18c. Pigeons, young and old, pair, 20 @30c.

NEW YORK MARKETS

PRODUCE

Butter—Firm; creamery, higher than extras, 42@42½c; creamery, extras, 92 score, 41½c; creamery, firsts, 88@91 score, 38½@41c; packing stock, current make, No 1, 41½@42c; do, No 2, 39 @40½c.

Eggs—Steady; fresh gathered, extra firsts, 31@32c; fresh gathered, firsts, 28 @30c; fresh gathered, seconds and poorer, 23½@27c; nearby hennery whites closely selected extras, 60@ hourly and nearby hennery selected hennery whites, firsts to average extras, 32@44c, nearby pullets, 25@ 28c; nearby hennery browns, extras, 37@ 46c.

Cheese—Steady; state, whole milk flats, fresh, fancy to fancy special, 25@26½c; state, whole milk, flats, held, fancy, 27@ 27½c; do, average run, 25½@26½c.

Live Poultry—Steady; broilers, by freight, 22½@28c; do, by express, 23@30c; fowls, by freight, 20@27c; do, by express, 26@35c; roosters, by freight, 15c.

Dressed Poultry—Steady; chickens, fresh, 23@37c; do, frozen, 20@35c; fowls, fresh, 18@31c; do, frozen, 17@30c; old roosters, 14@19c; turkeys, fresh springs, 50@60c; do, frozen, 30@46c.

LIVESTOCK

Cattle—Steady; steers, $9@15; state bulls, $4@7.25; cows, $3@6.25.

Calves—Steady; veals, common to prime, $8@17.50; lightweight culls, 10@ 10; buttermilk and ted calves, $8@9.

Sheep and Lambs—Steady; sheep, $2@ 6.50; culls, $2.50@3.50; lambs, choice to prime springs, $14@15; medium springs, $11@13; culls, $9@11.

Hogs—Steady; light to medium weights $11@11.60; pigs, $10.25@10.75; heavy hogs, $11.50@11.75; roughs, $7.75@8.25.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt or 30-day shipment: City bran $36; middlings, $44, in 100-lb sacks; red dog, $50, nominal, western feed bran, $35 in 100-lb sacks, standard middlings, $40; flour middlings, $48; red dog, $54, all in 100-lb sacks, mixed or like-grade millfeed; white hominy feed, $44.50, nominal, in 100-lb sacks; cotton-seed meal, 36 per cent protein, $49 per ton, prompt shipment; linseed oil meal, 34 per cent protein, $52.50, in 100-lb sacks.

Hay and Straw—Hay, old or new, large bales, timothy and light mixed: No 1, $25@26, No 2, $22@24, No 3 and poorer, $20@21; No 1, large bales, rye, $24@25.

Grain—WHEAT, No 2 red, 1.52¾; No 1 dark spring, c i f, domestic, $1.66¾; No 2 hard winter, f o b, export, $1.54¼; No 2 Northern Manitoba, in load, f o b, export, $1.80¾. CORN, No 1 yellow, $1.28¾; No 3 yellow, $1.26¾. OATS, No 2 white, 57c; No 3 white, 54@ 56¾c; No 4 white, 55¼c; ordinary white, clipped, 56¾@61¾c; fancy white, clipped, 62½@63½c. RYE, No 2 nearby, $1.47¾. BARLEY, malting, c i f, Buffalo, 90¾c.

CHICAGO LIVESTOCK MARKET

Hogs—Generally steady to 10c higher; quality considered; top, $10.90; most sales 150@200 lbs, $10.50@10.90, few butchers 220@240 lbs, $9.65@10.35, 250@300 lbs, $8.50@9.40; big weights downward, $8.25; most packing sows, $7.25@7.65; light weights, $7.75@7.85; heavy weight hogs, $8.25@9.40; medium, $9@10.90; light, $9.50@10.50; light lights, $9.15@10.90; packing sows, $6@7.85, slaughter pigs, $8.25@10.25.

Cattle—Now high top on strictly choice steers at $14.65; 1170-lb averages up to $14.50; nine 953-lb yearlings, $14.15; yearling heifers, $12, most feed steers, $12@ 14, in-between grade heavies selling very unevenly at $12.50@13.50, mostly; most grass cattle, $10.50 downward to $8 by killers, cake-fed southwesterns, $11.75 downward to $9.50, several loads of oats grain fed steers, $12.25@12.75; northwestern range supply mostly culls and heifers at $6@8 and $8.25@9, respectively; yearling steers and mixed sausage bulls, $6.75@6.75 mostly; vealers at year's high time, $15@15.50, few $16.

Sheep and Lambs—Steady; natives, fifty down; culls around $9.50; feeding lambs around $13.50. Fat lambs closing strong to 25c higher than week; steady; feeding lambs strong. Week's top: Fat native and western lambs, $14.25; yearlings, $13; fat ewes, $7.25; feeding lambs, $13.75 @14; shearers, $14@14.25; native feeding lambs, $13.50@14; yearlings, $9.50@11; fat ewes, $6@7.25; feeding lambs, $12.75@13.25.

WOOL MARKET

Boston, August 13, 1927.

Domestic: Ohio and Penna fleeces—Delaine unwashed, 45@46c; ½-blood combing, 44@45c; ⅜-blood combing, 43@44c; ¼-blood combing, 42@43c. Michigan and New York fleeces—Delaine unwashed, 42@44c; ½-blood combing, 43c; ⅜-blood combing, 42@44c; ¼-blood combing, 40@41c. Wisconsin, Missouri and average New England—½-blood, 37@38c; ⅜-blood 41@42c; ¼-blood, 41@42c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, August 13, 1927.

Cloverseed, cash, imported, $14; October, $18 bid; December, imported, $15; December, domestic, $17.65. Alsike, August, $16.15; December, $16.10; January, $16.25. Timothyseed, cash, new, $2.10 asked; December, $2.10 asked; March, $2.15.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on August 15, 1927. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.50@36.50
Spring bran	34.50@35.00
Soft winter wheat bran	36.70@37.00
Hard winter wheat bran	35.75
Standard middlings	43.00@43.50
Soft winter wheat middlings	45.20@46.00
Flour middlings	47.50@53.00
Red dog flour	53.50@54.00
White hominy	43.50@46.00
Yellow hominy	43.50@45.00
Gluten feed	38.20
36 per cent cottonseed meal	41.00@42.00
41 per cent cottonseed meal	42.50@44.00
43 per cent cottonseed meal	45.00@45.50
34 per cent linseed meal	51.75@52.50

For Baltimore, Cumberland and Hagerstown rate points, subtract 30c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .41½	$ 40¾	$ .42	$ .41½
Eggs, fresh gathered extra firsts (N. Y.)	.32	.29	.28½	.33½
Steers, good to choice (Lancaster)	11.62½	11.62½	12.12½	8.87½
Hay, Number 2 timothy, baled (Phila.)	18.00	18.00	18.00	25.50
Wheat, No. 2 red winter (Philadelphia)	1.45½	1.43	...	1.42½
Oats, Number 2 white (Philadelphia)	.61½	.61¾	.58	.51¼

Wheat and Corn Advance in Price

Review of the Week Ending August 13

BUTTER — The butter markets were firm during the week and prices advanced. Trading was more satisfactory than it had been for several weeks, and most arrivals sold readily. A feeling of uncertainty still prevailed which discouraged speculative buying. Receipts were comparatively light with fancy butter scarce and in good demand. Production is beginning to decline altho conditions in production centers are good.

EGGS—The New York egg market was firm with a good demand for the better grades. Prices advanced and the higher prices and cooler weather resulted in more storage eggs coming into the market. Nearby white eggs were firm with the better grades selling readily. There were some lots of fancy Pennsylvania and New Jersey white eggs that brought a premium of 1@2c per dozen above top quotations.

POULTRY—The live poultry market in New York held firm with cooler weather stimulating the demand. Fowl met a moderate demand but broilers were not very active. Some of the poorer grades of broilers sold at lower prices, but the best stock was about steady. Offerings of fresh-killed broilers were heavy and the market weak.

LIVESTOCK—The Chicago hog market was irregular while beef steers were steady to 25c higher. Heifers were generally steady and cows slightly higher. Vealers and heavy calves advanced while stockers and feeders were about steady. Fat lambs were firm, while yearling wethers, fat ewes and feeding lambs were steady.

GRAIN—The grain markets were irregular with prices generally higher. Wheat futures were 4c higher and cash prices made gains of 5@6c. Unfavorable weather reports caused corn prices to advance 5@6c while oats were higher in practically all markets. Rye prices advanced with wheat.

HAY—The hay markets were firm on top grades and receipts were rather light. Rains held back country shipments at many points, but good pastures were partly responsible for the light demand. Timothy hay was firm in eastern markets on top grades but lower grades were draggy. Alfalfa markets were quiet with considerable lower grades among the offerings.

POTATOES—The potato markets were generally weaker and prices declined at both consuming and shipping point markets. Heavy rains early in the week brought slight advances but prices soon dropped when arrivals continued heavy. The bulk of the offerings in Philadelphia arrived by motor truck and were sold on the jobbing market. On Saturday there was a firmer tendency and prices on home-grown stock advanced 5c to 10c.

County News and Comment

Armstrong County, Pa.—Hay, wheat and rye harvest about two weeks late. The former was a large crop, the two grains not a standard yield. Oats almost all in shock, generally short in straw but seem well filled. No peaches, a few pears and grapes and a prairie crop of not over 25 per cent of a full crop of apples. Corn still two weeks behind in development. Potatoes have developed fine tops while many complain of a scarcity of tubers on the stalks. Early cut meadows making a fine second crop. Pastures reasonable and spring seeded clover fine, all garden and truck crops making a good growth. Dairy cows slowing up in milk flow. Yearling and older hens heavily "laid out." Eggs have advanced sharply in price. Plowing for fall seeding has begun. Inquiry brings the information that wheat and rye acreage will be less than last year. Good beef cattle scarce and commanding a good price. Poultry demands slow and prices not quoted. Fertilizer prices for fall delivery higher than spring. Prices: wheat, $1.40; rye, $1; corn, 96c; oats, 50@70c; potatoes, $1.50; butter of good quality, 45c; eggs, 35@40c.—W. M. F., August 6.

Centre County, Pa.—In the latter part of July and this far in August we have had cool nights and frost in some places. One of the largest hay crops that we have had for many years has been put up. We have just cut our first wheat crop. Corn is a poor crop for this time of year. Market quotations: wheat, $1.25; rye, $1; corn, $1; barley, 75c; buckwheat, 90c; oats, 45c; butter, 40@50c; eggs, 28@ 30c; lard, 14c.—A. I. A., August 6.

Clarion County, Pa.—Hay about all made and a heavy crop. Wheat all cut and hauled in and will be a fair crop. Oats turning yellow and will be a good crop. Buckwheat looking fine. Dairy cows looking good as pasture has been good all summer. Egg production falling off some and eggs going up in price. Live poultry down in price to what it was a year ago. Late potatoes looking fine. Corn about two weeks behind but growing fast. The hard roads being built will connect the south and west end of the county to the lake-to-sea highway.—C. R., July 29.

Clearfield County, Pa.—We are now about in the midst of wheat harvest. There is some old meadow grass cut yet. Most of the hay stored was put in in very good condition. Just now rain persists and wheat standing in shock is pretty well saturated. The hay and wheat crops are average and the oat crop bids fair to make a normal yield. New potatoes are selling at $1.25, local apples are not yet on the market. Cabbage, 5c; dressed lambs, 25c; eggs, 40c; butter, 50@60c. Cucumbers and tomatoes are late and will not be on the market for a week or two.—D. H. W., August 1.

Cumberland County, N. J.—Plenty of late potatoes being planted. The early crop has been dug. Friday, July 29, the price was 90c cwt, and Monday, August 1, they were $1.40. The first of August started very warm but by the 3rd the temperature was down to 60. Plenty of farm labor available this season. The Bridgeton Beebe Run road was oiled after the people of that section petitioned against it. The Del-Hay Farms are beginning operations under a new controlling company. This fruit and vegetable farm contains 3200 acres. They expect to market 100,000 bushels of peaches and 40,000 bushels of apples this season. Good rains are coming in an easy manner after the long dry spell.—C. J. S., August 1.

Gloucester County, N. J.—Indications now point to one of the best seasons that Gloucester County has had in many years. Ample rains, moderate temperatures and fair crops have resulted in good prices for everything that the farmer has had to sell. Tomatoes are still up around $1 per crate while usually they are around fifty cents for the first week in August. Peppers are likewise high and apples are bringing good prices. The peach crop has never looked better. While the set is not as heavy as in other years, the fruit is making a fine growth and it now looks like some of the biggest fruit that the district has ever grown. The only disappointment for this county may be on the sweet potato crop. Not in recent years have the fields looked so ragged as they do just now. The stand is irregular and the vines have not made their usual growth. Favorable weather, however, is hoped to overcome this situation. There are many fields that do look fine despite the poor showing for the district as a whole. White potatoes and poultry are somewhat depressed. There seems to be more poultry and potatoes than the market can absorb at full prices. Dealers report the stock harder to move than for several years. Labor is quite plentiful and lower than usual at this time of the season. The late tomato crop looks promising. The vines are filling the rows and the fruit is setting in a fair volume. The rains may cut the set to some extent, but there is practically no disease to be found in any of the fields.—A. K., August 1.

Juniata County, Pa.—The farmers are just finishing one of the largest and best wheat and hay harvests they have had for several years. The hay crop was unusually heavy and of the finest quality. The corn is growing nicely but is small, some is still under cultivation. Potatoes promise to be a good crop. Some threshing has been done, wheat is turning out good. Oats is good and is ripening fast. Chickens are going to market at 20c for young and 15@20c for old ones. Wheat, $1.40; corn, $1.50; buckwheat, $1; milk, $2.55 cwt. for four per cent; butter, 40c; eggs, 22c.—C. B. L., August 1.

Lebanon County, Pa.—Much rainy weather latter part of July. Much plowing is done on some farms. The ground is in excellent condition for this work. Many farmers are engaged in threshing their wheat, not much oats threshed thus far. Corn is growing nicely, some fields are real good, while some are backward and poor stand. Potato fields generally appear to be good. Second crop of alfalfa ready to be cut, crop not very good. New grass fields have a good stand. Fruit not so plentiful but garden vegetables fine and of good quality. Prices: wheat, $1.32; corn, $1; oats, 50c; sweet corn, 25c doz.; blackberries, 25c; potatoes, $1 bu.; eggs, 32c, butter, 50c.—P. L. M., August 4.

Montgomery County, Pa.—Up to the present time harvesting has progressed nicely with crops coming in in excellent shape. Heavy showers of the past week have delayed the oats cutting altho there is much in shock and some threshed. Most farmers that are able to do it thresh their grain out of the field. The corn crop is still doubtful altho it has grown wonderfully in the past few weeks. Not many potatoes have been raised but indications point to a good crop. Local truck crops are now on the market, including some sweet corn. The annual Montgomery County Farmers' Picnic, held at Schwenksville, August 2 and 3, was an outstanding success. The cattle exhibits were very good and the merchandise displays were larger than ever before. Price: old wheat, $1.30; oats, 70c; eggs, 35c; poultry, 25@30c.—C. N. D., August 3.

Rambles of a Pennsylvania Fruit Grower

(Continued from page 2)

houses in this district the cost frequently runs up to over fifty cents a box. This is too much and too large a percentage of the selling price. They are looking for a cheaper package. No bushel baskets are made in the West but they may get there yet. Bulk sales, for peddler trade, are increasing rapidly and usually are to the advantage of the grower. Last year bulk Newtowns brought $47.50 a ton f. o. b. Watsonville; in 1918, $120 a ton. Fully eighty per cent of Pajaro apples are sold on the Pacific Coast; California uses more apples than it produces and buys heavily from Washington and Oregon, especially Red varieties. Only when the eastern crop is short is any considerable quantity shipped East. Several hundred cars of the smaller sizes are exported, since the English market pays a premium for small yellow apples. Culls are not used to as much advantage here as in the East. Rodgers Brothers have a dryer but it has not paid to work up the culls for three years. Usually the cull pile is a dead loss.

Human Element Kills Cooperation

It would seem that the Pajaro Valley ought to be an ideal place for successful cooperation of growers; practically all the orchards are of one variety, they are close together, with good roads. The human element, however, is not favorable. Fully eighty per cent of the apples are packed by Slavonians, who came here from Austria, Dalmatia and other parts of southern Europe. They came into the Valley some years ago as orchard workmen, being familiar with fruit growing in their native land, and have gradually taken possession of the industry. These people are good cultivators and thrifty but intensely competitive, with an instinct for and love of barter that amounts to a positive passion. They will gamble on anything and are willing to buy a crop of apples while the trees are still in bloom, or even earlier, at a very low figure, of course. Naturally they do not take kindly to cooperation.

Several cooperative packing and marketing projects have failed; another is now on trial. Most of the growers wait for a buyer, who picks and packs the crop. The disadvantage of this method is that the buyer is often in a position to force a sale at a very low figure, especially in a full crop year like 1926.

Outlook Poor for Pajaro Growers

The Pajaro Valley apple growers have made no money for several years. Some have broken even but most of them are simply broke. There is general discouragement over the outlook. More than 1500 acres have been pulled out but these were mostly poor orchards. There is no new planting. Rodgers Brothers figure that it cost them $1.10 to produce a box of Newtowns and put it on the car. This is more than the average selling price the last three years. The orchards are still held at a high figure, however, and few are changing hands. A Pajaro Valley apple grower will quote you his orchard at $1500 an acre even tho he may admit that it is not paying interest on half that sum. The difference, I suppose, is California climate and California optimism as to the future.

There is a tendency to plant more pears. Last year one grower netted over $1000 an acre, mostly on Bosc which were shipped East. Pear blight is practically unknown. Head lettuce of the Iceberg type is grown for eastern markets at a profit and the industry is expanding. The Valley long has been noted for its strawberries.

The Pajaro Valley is evidently a delightful place to live in and its apple industry has many advantages, especially that of certainty of crop, but I am not at all sure that the Pennsylvania fruit growers of my acquaintance would be willing to swap orchards, acre for acre.—S. W. Fletcher.

The Market Place

By W. R. WHITACRE

Pennsylvania Bureau of Markets

PENNSYLVANIA, with its population of nine million people, has more than twice as many cities of 5000 to 25,000 population than any other state. The farmer in Pennsylvania is exceptionally well situated for local markets for his produce since all these people must eat.

Marketing produce in one of these smaller cities presents altogether different problems from marketing in one of the large cities such as Philadelphia or New York. I have farmed under both conditions and while each has its advantages and disadvantages it seems to me that the farmer who can haul a load of produce to a commission man to sell has the simpler proposition.

If you are supplying a small market you must grow the produce and then take the time to sell it. Generally there are two outlets; the retailer and the consumer. To build up a trade that will enable you to sell enough produce to take care of your overhead expense is a big job.

Can Market Thru Two Main Outlets

The farmers' market plays an important part in the marketing of produce in most of these cities. I have sold produce at a farmers' market and I have talked with scores of others and most of them agree that as a rule you can get fairly satisfactory prices but the trouble is to sell enough to make a living. I know men who have lowered prices with the idea that they could sell a much larger amount and in that way increase their income but most have come to the conclusion that they must have another outlet besides the farmers' market.

The retailer is the other main outlet and it has advantages over selling to the consumer in that the unit of sale is larger and less time is usually consumed in selling a load. In the long run I have often found that there is more profit in selling at wholesale prices to the retailer than spending a long day at the market stall.

Competition is continually growing for these small cities are receiving more and more produce from distant states. Large cooperative selling agencies are realizing that they must get more produce into the small cities to move their crops. In most cases it costs less to produce this shipped-in produce than the home-grown product. Even with freight and other handling expenses added the farmer will find it difficult to undersell the produce from the distant section. He rightly believes that his produce is fresher, better flavored and should bring the most money but unless it is more attractive he will have a hard time to sell this idea to retailer and consumer. The storekeeper is always going to buy that on which he can realize the greatest profit.

One Man Supplies a City

I know one farmer who practically supplies a small city with fruits and vegetables. There are some cars of produce shipped into that city but mostly they are products which he does not grow. I do not believe he is rich but I am sure he is making money. He has built up a trade that depends upon him and knows he produces the best, but it has taken years of effort to accomplish this.

I once asked him how he had built up such a business. He said, "It did not come all at once, we started small, learned to grow stuff of the best quality at the time it was wanted. We have a succession of crops thruout the year and the storekeepers know that we can keep them supplied. We treat them square and ask what we consider fair prices."

"Hunt and Peck" Aids Business

I BROKE into better business methods by finally buying a typewriter. There were business letters to write, as in every farm business, and my dislike for this task did not make them any easier to decipher. I had no idea how much easier a typewritten letter was to read and how much more prompt were the answers to these letters until after I purchased my second-hand machine.

Even tho I use the "hunt and peck" system, I find that I can write a letter much faster and easier than by hand. Business firms appreciate typewritten letters. Besides sending a legible letter I use carbon paper and make an identical copy for reference.

While a new machine costs too much for the average of us, second-hand or rebuilt ones are cheap. I secured mine from a merchant in our home town who was getting a new one. As he was going to trade it in on a new machine at a very low price he sold it to me very cheap. In the several years I have been using it I have found it very useful.—R. L.

They Prepare for Winter

Plodding around in the winter in mud and slush ankle deep doesn't add much pleasure to caring for the stock. Between busy seasons many farmers are using a small engine, concrete mixer and wheelbarrow to build walks and feeding floors before cold weather sets in.

He Will Tell You

CHESTER J. HOKE,
York, Pa.

Twenty days after Chester J. Hoke, our York County representative, called on Chas. M. Martin, Dillsburg, Pa., and secured his application for a travel-accident insurance policy, Mr. Martin met with a fatal automobile accident. His beneficiary received a check from the Federal Life Insurance Co. for $2000.00.

$2,000.00 for Only $1 Invested

Can anyone who drives an auto afford to be without this protection for the small amount of $1.00 per year?

It is not the careful driver that escapes injury. Many times he is at the mercy of the other fellow who is less careful. This Travel-Accident Insurance Policy issued by the Federal Life Insurance Company to readers of Pennsylvania Farmer and their families at $1.00 per year for each policy pays $2000.00 death benefits for automobile accidents.

Ask any representative of Pennsylvania Farmer about this policy. They will be glad to explain it to you and take your application. Or you can send your application direct to

PENNSYLVANIA FARMER
261 So. 3rd St., Philadelphia, Pa.

Here is what it is worth to you

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

A few of the many claims paid to Pennsylvania Farmer readers

CHAS. M. MARTIN, Dillsburg, Pa.	$2,000	K. B. DEEMER, Reynoldsville, Pa.	$70.00
HENRY D. LAWRENCE, R. 1, Bridgeton, N. J.	$2,000	JOHN P. SHEA, 1182 Westwood Ave., Columbus, Ohio.	$60.00
A. R. MILLER, R. 8, Towanda, Pa.	$150.00	JAMES W. FELTON, 3707 N. 5th St., Phila.,Pa.	$60.00
WILBERT POWELL, Pedrickstown, N. J.	$82.86	WM. B. GAILEY, Finleyville, Pa.	$45.71
SAMUEL E. WEAVER, New Holland, Pa.	$52.86	JOHN WILSON, R. 1, Sewell, N. J.	$40.00
CHAS. R. KEHRES, Rebuck, Pa.	$38.57	CLARK B. JOHNSON, R. 8, Towanda, Pa.	$40.00
FRANK MOLLO, Smethport, Pa.	$28.57	CLARENCE S. KATES, Glenlock, Pa.	$38.57

CHAS. F. BOSTWICK, Athens, Pa.	$11.43	CLARENCE D. CAREY, R. 5, Coatesville, Pa.	$15.00
HENDRICK VAN CLEEF Cliffwood, N. J.	$10.00	WM. H. JOHNSON, R. 1, Erie, Pa.	$14.28

This policy is offered to readers of Pennsylvania Farmer for only $1.00 a year for each policy. If you already have a policy renew it before it runs out as by so doing you will add 10 per cent value to all parts of your policy except the $10.00 weekly indemnity clause.

☐ NEW POLICY ☐ RENEWAL POLICY

If you are sending for your renewal policy, check above where indicated and fill in below ONLY lines 1, 2 and 3. If you are sending for a new policy, it is necessary for you to fill in every line, otherwise there will be a delay in issuing the policy to you.

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and carefully. Illegible names will delay the delivery of your policy.

The Combine Proves Itself in the East

(Continued from page 8)

nearly four acres per hour. When the harvesting is finished the cutter-bar can be raised, as on a mowing machine. With the bar up, the combine is only 11 feet wide. That simplifies the moving and storage problem.

People don't like to live on islands, it seems. That is why Mr. Ziegler has bought a combine and other modern labor-saving equipment. He had retired but when he could no longer find someone to work his place he decided to do it himself.

When he removes a few more fences he will have 120 acres in one field. Most of it will be sown to wheat this fall. A three-bottom plow behind the tractor turns over eight or ten acres in a day. A nine-foot disc, a ten-foot spring-tooth harrow and a 10-foot cultipacker put the seed bed in good condition with the minimum of labor. A 16-hole disc drill does the seeding.

Will Grow Wheat Every Year

Mr. Ziegler plans to grow wheat on this land year after year, keeping up the soil fertility by use of commercial fertilizers.

The combine on Mr. Ziegler's farm worked under a handicap this year, but he was enthusiastic about it, nevertheless. The handicap was heavy grass in the wheat. The season was so wet the grass and weeds grew almost as fast as the grain.

Looking back over the experience of the combine owners we visited this season, we are convinced that this great labor-saver is destined to play a very important part in Pennsylvania agriculture.

The fear of having too much moisture in the grain has worried prospective combine buyers. For many years this doubt about our eastern climate led manufacturers to refuse to sell combines in the East.

We asked Mr. Brinser what his experience had been during the eight years he has used a combine. "It all depends on the weather," he explained. "Some years we spread our grain out on the barn floor. Other years it was dry enough to store as it came from the field."

Gotwalt and Fahs were selling their wheat as fast as it was harvested. To the buyer equipped with a dryer, combine-harvested grain is no problem, no matter how wet the season. Mr. Ziegler had had frequent rains. He was playing safe by spreading his grain out on the barn floor, about ten inches deep.

The Questions Everyone Asks

One of the western combine experts with whom we talked thinks the damp grain problem will solve itself when eastern farmers learn to let the wheat ripen fully. "We cannot keep them out of the field," he exclaimed rather peevishly. "As soon as the crop is ready for the binder they want to go in with the combine. There is no danger of shattering when the combine is used; they should wait until it is really dry."

"Isn't the combine too cumbersome a machine for our small eastern fields?" We found our answer on Mr. Meyers' farm, where a 12-foot machine was being handled with perfect ease in a 10-acre field.

"What if we want to save the straw for livestock?" The Schlenker brothers of Berks County showed how that could be done. The handling of heavy straw puts the greatest strain on the combine. Cutting high and leaving most of the straw standing makes the task easiest. The man who wants to cut low and save all of a heavy crop of straw will need a machine with plenty of power.

"How about hillside harvesting?" The manufacturers have adopted various devices to insure clean threshing when the combine isn't running on the level. The machine has its limit, but we doubt if the ordinary farmer would want to take a reaper and binder into a field too steep for the smaller combines.

Doesn't a combine require too large an outlay of capital for the average Pennsylvania grain grower?" A little arithmetic is required to answer that one.

Add up the labor cost of cutting, shocking, hauling and threshing grain by the old methods. Put in a figure to cover the interest on investment and depreciation on a binder and threshing rig. Then compare that total with the interest and depreciation on a combine, plus the small labor cost where a combine is used. There is the answer.

A 12- or 15-foot combine probably will be found too costly for the average Pennsylvania grain grower, unless he goes into partnership with his neighbors or does custom work. On the other hand, the grower can buy a small machine. The eight-, nine- or ten-foot combines certainly will save enough labor to make them paying investments on hundreds of eastern farms.

It is estimated that 90,000 fewer harvest hands were needed in the western wheat states this year than in 1920, due to the increased use of combines. In the East, too, the combine enables the grain grower to harvest without extra help and to complete in a few days an annual task that formerly was strung out for weeks. No wonder the combine has "arrived!"

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW GONE DRY.—I have a cow which gave a 14-quart bucket of milk until a week ago. She suddenly went dry. She has gotten very thin. Any advice you can give me will be greatly appreciated.—E. R. G., McCrea, Pa. There is evidently something radically wrong with this cow. A careful examination would be desirable and without such examination one would find it difficult to determine the cause of the trouble. There might be a foreign body or an intestinal obstruction. Try giving a tablespoonful of the following twice daily: 1 pound Glauber salts, ½ pound soda, 2 ounces powdered nux vomica, 2 ounces powdered gentian.

CATS HAVE DISTEMPER.—Can you tell me what to do for kittens that have distemper?—Mrs. D. W. G., Laurel, Pa. As you no doubt know, distemper is a highly contagious and infectious disease of cats and dogs, spreading rapidly from one animal to another. Treatment should follow along the lines of the symptoms shown, bearing in mind that the disease runs a rather definite course of 10 days to 4 weeks. Feed lightly and give a course of calomel every few days. Give one-quarter-grain tablets an hour apart until a grain or 1½ grain has been given. Follow with a dessertspoonful or better of castor oil. Small kittens had best be given just the castor oil without the calomel. For the eyes use yellow oxide of mercury ointment.

CALF BLOATS.—I have a fine Holstein calf about two months old that did well until a little more than a week ago. He had three severe attacks of bloat, each one seeming to get worse. I have changed feed, giving him a little dry dairy feed and a little corn meal. What and how should I feed him?—H. R. G., First Fork, Pa. Try daily doses of one tablespoonful of castor oil. Cut down the ration for two or three days and allow the digestive tract to get cleaned out. Feed milk twice daily or calf meal according to directions. Allow access to good pasture. It is possible that there is some foreign material such as hair in the rumen that prevents the proper movement of food.

Mistress—Can you serve company?

New Maid—Yes; either way.

Mistress—Either way?

New Maid—Yes, ma'am; so's they'll come again, and so's they won't.

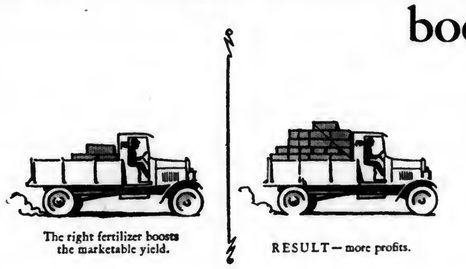
HEY PAP! TH' GRAIN SHED IS BURNIN' DOWN!
FINE! NOW I WON'T HAF TA BOTHER MIXIN' WOOD ASHES WITH TH' GRAIN — JUST LEAD TH' COWS UP AN LET 'EM FEED
NO HUM, WHAT A RELIEF
LAZIEST GUY ON EARTH
Use this tonic to improve digestion
½ LB. GENTIAN - ½ LB. BICARBONATE OF SODA - ¼ LB. NUX VOMICA - 1 DRACHM ARSENIC
MIX AND FEED ONE TABLESPOON PER COW NIGHT AND MORNING IN MOISTENED GRAIN
ARE YE SURE YE FED THAT COW TONIC, MARTHA?
WELL, I FED ER THAT STUFF YOU SAID YOU HAD TO TAKE FER YOUR INDIGESTION.
H-M-M-PF HIC!

TIGHT BINDING

How a slight extra cost boosted spinach yield 150%

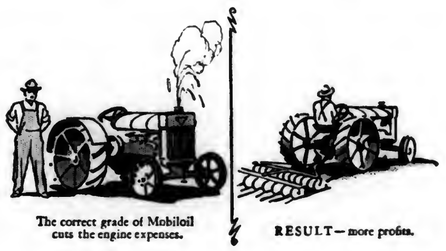


The right fertilizer boosts the marketable yield.

RESULT—more profits.

Spinach was planted in two fields, side by side, at the New Jersey experiment station. One field was left unfertilized. It produced 198 crates of spinach to the acre. The other field had 1600 pounds of a 9-8-3 fertilizer at planting time, *and yielded 507 crates per acre.*

Use "fertilizer" logic when you buy oil



The correct grade of Mobiloil cuts the engine expenses.

RESULT—more profits.

Any farmer knows that he usually gets back more money than he puts into the right fertilizer. But do you realize you get back more than the extra few cents you put into Gargoyle Mobiloil? An immediate cut in oil consumption of from 10% to 50% frequently brings the cost of Gargoyle Mobiloil below the cost of other oils. Other savings come in lower repair bills, less time out for break-downs, less over-heating, and a marked cut in carbon troubles. Gargoyle Mobiloil brings you these savings because it has an added margin of safety in lubrication to meet every engine need.

Tractor oil . . . automobile oil . . . and—?

YOUR guide—if your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors. And remember that . . .

609

automotive manufacturers approve it!

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc."), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Oils are frequently bought and sold under misleading terms. The terms "tractor oil" and "automobile oil" are used as though that described the correct oil. But tractors vary greatly in design. So do automobiles. So do trucks. The Mobiloil Board of Engineers has made a special study of all engines, yours included. And their recommendations are so accurate that 609 makers of automobiles and other automotive equipment do not hesitate to approve them.

You will find that Mobiloil is not only worth its extra price but is worth a trip to town where this is necessary. Take advantage of the substantial savings on barrel and half-barrel orders of Gargoyle Mobiloil. The complete chart at all Mobiloil dealers' tells you just which grade of Mobiloil to use in each of your motors.

A silo is the best insurance against the dangers that threaten this year's corn crop—an early frost and the corn borer. ***Page 3.***

ASK THE BEST FARMER
IN YOUR COMMUNITY
In the great farming sections of America thousands of successful farmers depend on Swift's Red Steer Fertilizers for larger yields per acre, for crops of better quality

Swift's *high analysis* cuts fertilizer costs say successful farmers everywhere

Talk with successful wheat growers who have used *high analysis* fertilizer. They will tell you they would use no other. They know it gives them their plantfood for less money. It's concentrated—so they save on bagging, labor, freight and hauling.

That's the reason more farmers everywhere are using *high analysis* fertilizer. It cuts the fertilizer bill, reduces production costs.

These farmers know that the *right kind* of fertilizer will give them larger yields *per acre*. That means "extra bushels" beyond the yield needed to pay production costs.

That isn't all. With the *right kind* of fertilizer they get a better *grade* of wheat—and that means higher prices; they get a good clover catch—and that means more hay.

Be sure of your fertilizer

If these are the facts, why take chances with the kind of fertilizer you use?

Successful farmers don't. They put their faith in Swift's Red Steer Fertilizers. They know they can depend on these fertilizers because they are *Swift's*. They know the Swift name on any product means something—that for more than 50 years it has meant the best product of its kind.

See your A. S. A. now

Follow the practice of these successful wheat growers, the advice of practical crop experts. Plan now for more wheat *per acre*, a better *grade* of wheat—by using Swift's Red Steer Fertilizer this fall. Don't forget that with Swift's Red Steer Fertilizers you can plant late and avoid the Hessian fly.

See the A. S. A. (Authorized Swift Agent) in your community *now*. He knows good fertilizer practice in your locality. He co-operates with Swift & Company and keeps informed on the work of your Agricultural College. He can help you select the *kind* and *amount* of Swift's Red Steer Fertilizer to make you the most profit. Look for his sign.

A Silo Insures Against Corn Crop Losses

Dangers of Jack Frost and the Corn Borer Need Not Worry the Dairyman

By A. A. BORLAND
Staff Contributor and Adviser

THE condition of the corn crop on August 1, according to the Federal-State Crop Reporting Service, is only 68 per cent of normal as compared with 85.6 per cent, the average on August 1 for the last ten years. The indicated yield for 1927 is 34.7 bushels per acre while the average yield in Pennsylvania for the last five years has been 42.6 bushels.

It is evident that the corn crop is away below par at this season. This situation is largely due to a late planting season and poor germination. Unless warm weather continues unusually late a lot of corn is likely to be caught by killing frosts before it is mature. Every farmer knows the result—a lot of soft, sappy corn, high in moisture, lacking in food value and likely to spoil before it is fed up. Furthermore, the winds soon whip off a considerable portion of the brittle frosted leaves while the rains leach out their food value.

Borer Cannot Survive

Another menace to the corn crop in the northwestern part of the state is the European corn borer. Fortunately, the farmers in this section by whole-hearted cooperation with the authorities and by a lot of hard work cleaned up practically all of last year's crop before the flight of the corn borer moth. Undoubtedly, however, some borers escaped and only renewed vigilance will prevent this pest from spreading to other sections.

Making Up for Lost Time

This farmer's crops were destroyed by the disastrous Mississippi floods this spring. The water receded, his fields dried off and he attempted to catch up with the season by day and night work with this new tractor of the latest type.

Fortunate, indeed, is the farmer who has a silo this year for the silo is insurance against both Jack Frost and the corn borer. The corn crop can with safety be allowed to stand until the best stage of maturity for ensiling,—that is, when the kernels are well dented,—without endangering the feeding value of the crop, for if a severe frost should occur little loss will be sustained provided the corn is put into the silo within the next few days. No corn borer can survive the cutter and the fermentation process in the silo. By cutting the corn as low as possible and turning the stubble under in the late fall or early spring the borer is permitted no place "to hang up his hat and make himself at home."

Can Easily Handle Stover

If a farmer has more corn than his silo will hold, or if he wants to husk some corn, the silo makes an excellent way of handling the stover, after the regular silage has been fed out sufficiently to make room for the cut stover. Plenty of water should be added when dry corn stover is being cut into the silo, three to four times as much water by weight as stover. While corn stover silage is not so palatable as green corn silage, stock eat it readily.

What Is Your Fall Building Program?

WHAT do you want in a roof? First, of course, you want it to be waterproof. It must shed rain not only when it comes down straight, but also when it comes driving and drizzling in an east wind, and creeps in and around every crack and cranny, or when snow and sleet pile up in winter and water soaks thru where you thought there wasn't any leak. On a low pitched roof the problem is more difficult than on a steep roof.

A roofing manufacturer says that the chief cause of trouble with roll roofing is too narrow a lap on low pitched roofs. The rain, unfortunately, does not always come straight down in an orderly manner. Composition shingles or any shingles cannot give good results on a low pitched, nearly flat roof.

Fire-resistant Roof Is Necessary

Your roof must also stand wind. If you want to appreciate this factor get the ladder and climb up on the roof some day next January or February when the gale is howling and bending the trees, and you will realize what a roof has to endure. That means that it must be well nailed and that it must be of sound materials which will stand the strain. One attractive composition shingle now on the market is tapered, having a thick heavy butt and the upper edge of normal thickness. This kind of shingle lies solid and snug in any wind.

If you are sensitive to the menace of fire, and most farmers are, you want a roof that is safe from sparks. Any of the good modern slate surfaced roofings or shingles are "fire resistant," and there is practically no danger of fire from sparks. They are not actually "fire-proof," for they can be burned, altho with considerable difficulty. For a roof that is absolutely fireproof, that won't burn even if you build a bonfire on it you have the modern asbestos-portland cement shingle. This shingle might be called a form of tile, and it greatly resembles slate except that it is uniform in size and thickness. It is extremely tough and rigid. These asbestos shingles have been very popular for farm houses in some sections, because of the fact that they put an end to the possibility of roof fires, the chief source of fire loss in the farm house. They also have some insulating value in keeping the upper part of the house from becoming hot in summer.

Metal roofs have a good deal to recommend them, and are making a bid for popularity. The metal roof, now made in several attractive forms, can claim not only protection from water, wind and fire but also if properly rodded and grounded is practically a guarantee against lightning.

The only way you can be sure of getting the best of the modern quality in roofing you buy, is to give the subject some serious study between now and this fall when you will probably be making your actual purchase. Talk to your lumber dealer, write to roofing companies, ask for samples and information, and learn all of the splendid improvements that you can now obtain in roofing materials.—Arthur C. Page.

Wall Board Gives Satisfaction

IN a recent issue you ask readers who have used wall board to report how they have used it and what satisfaction it has given.

Seven years ago we wanted to install a bathroom. Having two rooms of the same size on the south side of the house we decided to tear down the partition between them and make a bathroom seven feet wide out of the back room and throw the rest of that room into the front room. This would make the room larger and more comfortable.

For the new partition we used wall board and found it quite satisfactory. We had the trouble you mentioned where the wall board joins. The first paper we put on cracked at the joints. The next time we papered we pasted strips of unbleached muslin over each seam before applying the paper. Since then we have had no further trouble.

The Walls Are Not Sound-proof

The only objection I have to wall board is that it is by no means sound-proof. Possibly if felt paper were put under the wall board to deaden sound this objection might be overcome. It is certainly much less expensive and much easier and less "messy" to apply than the ordinary mason's plaster.

I most heartily endorse your motto, "Keep the men out of the kitchen." It is certainly a nuisance to have the men and boys at the kitchen sink when I am dishing up dinner. In sheer desperation I devised a plan to rid myself of this nuisance when we have silo fillers or threshers.

Under a tree by the back door I place a bench with two large wash basins, a pail of water and dipper and two cakes of soap. Then I hammer some nails in the trunk of the tree and hang several clean towels, a mirror and a comb on a string. The men like it better and come into the house straight to the table and everybody's satisfied.—E. M. G.

Comments on the Week's News

GOVERNOR RITCHIE, of Maryland, besides being worked up over the prohibition law, is now worried over what may happen to the cities because of rural meddling. In a recent speech he is reported as saying that the influence of the rural sections in the making of laws is hampering the life and development of cities, and that something must be done about it. Maybe we have the wrong slant on it, but we have always been under the impression that it was rural products in the shape of people, food and moral sentiment that enabled the cities to exist. Before the Governor becomes too much exercised we would recommend that he re-read "The Deeline and Fall of the Roman Empire."

✣ ✣ ✣

There are indications that the International bankers are about to exert their influence in favor of tariff reduction. Tremendous sums of money have been loaned in recent years to foreign governments, and to business interests in foreign countries, and the bankers feel that those countries must have greater freedom to sell their products in this country if the borrowers are to be able to pay interest. While the big industries need heavy financing in this country, Wall Street was with the American manufacturers in demanding high tariffs. It will make an interesting fight if the tariff people divide against themselves now.

✣ ✣ ✣

The August crop estimate puts the 1927 corn crop about half a billion bushels below the crop last year, and the crop of 1926 was a hundred million bushels below that of the five-year average. The condition in almost every state except Kansas, Oklahoma and Texas, is from one to twenty-seven points below the ten-year average. Poor seed and unfavorable weather conditions are the chief causes of the poor prospects.

✣ ✣ ✣

There are rumors now, supposedly from headquarters, that the long-looked-for and much-talked-of federal tax reduction cannot be made by the next Congress. When they figure up the cost of the Mississippi flood and control measures, the amount needed to finance a probable farm relief measure, and the hundreds of millions which the navy building program requires, it looks as tho the big income makers would have to continue paying the present rates for a while at least. The hypothetical farm relief bill is given as one of the causes by the city papers but, as a matter of fact, the increased sums to be devoted to the army and navy programs are the chief items of increased expenditure.

✣ ✣ ✣

In a movie theater in Philadelphia the other day, the pictures of possible candidates for President—Coolidge, Hoover, Hughes, Dawes, Longworth, Borah and Lowden—were thrown on the screen, serially. They were viewed in utter silence. Not a hand-clap was heard. Then was shown the picture of Dempsey as he appeared just after the big prize fight, and there was a roar of applause. What must one do to receive the acclaim of the populace? It would seem that we are not so much different from the people who attended the Roman arena fetes, or the Spanish and Mexican bull fights.

✣ ✣ ✣

The school boys of former generations used to break each others' slates in the frequent rough-and-tumbles which occurred. But people take better care of their slates now. The Vare organization in Philadelphia has just made a new one, and it is likely to be kept intact and laid away with the big collection from previous years which the "contented" people of that city have been afraid to break.

A Whale of a Crop

WE HAVE a letter from a reader in which he gives the information that Milton Campbell, on his farm near Easton, Maryland, raised a crop of wheat which yielded sixty and one-half bushels to the acre. We would like to know whether this has been equaled or exceeded this year, or ever. When it is remembered that the average yield for the United States is only about one-fourth this much, the figure seems startling. We have no information as to the cost and net profit, but the writer, who is not a farmer, closes his letter with this paragraph:

"I have just figured that there is no return which we know of in any manufacturing line that would pay as handsomely as this yield of wheat. . . . Besides, there is no life that one can enjoy as much as farm life and no place that one can count on having as good health as on the farm. Since Mr. Campbell has shown that over sixty bushels of wheat can be grown to the acre, why leave the farm to look for prosperity in the city, when it is right on the farm looking for the individual, and the only thing required is good cultivation, the best seed wheat, and the best fertilizer?"

Still No State Fair for Us

WHILE other states are again preparing to hold their annual state fairs and exhibitions, Pennsylvanians cannot look forward to any such educational outing at home, because we have no state fair. And the worst of it is, little or no progress is being made towards the establishment of one. Some work has been done in the matter of surveys and investigations, all of which tended to emphasize the importance and possibilities of a state fair, but little of a concrete nature has been accomplished. No state in the Union could make a bigger and better display of agricultural and manufactured products, and no state has better highways and methods of transportation for carrying exhibits and visitors, still the people have not aroused their latent sentiment sufficiently to impress the law-makers and officials. The attendance at the State Products Show in January, and also the various county fairs, is sufficient proof that the citizens of the state are interested in such exhibits. Why don't we move forward?

The Peach Market

THE peach growers are deserving of the good prices prevailing this year. The supply of this perishable fruit has been in excess of the demand for some time past in the East, but this year the short crop in many states makes for a better price in all markets. Eastern growers may be actuated by selfish motives, but they are earnestly hoping that the differences between the canners and peach growers of California may be settled speedily. Normally, the bulk of the California crop is canned, but this year they have not been able to agree upon prices, and their failure to do so would cause immense quantities of peaches to be shipped to eastern, or at least mid-western markets.

Potato Crop Prospects

THE government's August report on potatoes indicates a crop larger than last year's by about twelve per cent. An estimated increase is shown in practically every state. Last year the crop measured 356,123,000 bushels, whereas, the estimate for 1927 is 410,714,000 bushels. We are quite sure that blight has made a change in the conditions existing when the figures were made, and that the final report will show a loss from this estimate. Other factors, also, are to be reckoned with before the entire crop is harvested.

Incorporated Families

IF YOUR family income is in the neighborhood of one hundred thousand dollars annually, you may join other tax dodgers by incorporating the family. The federal tax law puts a higher rate on individuals than on corporations, and the reports show that several interest-collecting and coupon-cutting families have been incorporated. Their federal taxes are much lower as a consequence.

Editorial Sidelights

THE title under the picture on the cover of this issue really should be, "How not to paddle a canoe." The common habit of sitting on the thwarts to paddle is said to be the cause of most of the tragedies where an upset canoe is involved.

The proper posture is kneeling on the bottom of the shell, the body braced against the thwarts, Indian fashion. That brings the weight of the canoeist below the water line and makes the canoe a stable craft. The one in our picture this week is exceedingly unstable.

SOMEONE asks if we finally got to sleep in that Clearfield hotel, in spite of the jazz. We did, thanks to soundproof doors and walls. Someone closed a door late in the evening that cut off nearly all the sound. But occasionally the door would open and let out a blast upon the stillness that was like a winter blizzard tearing open the door of a warm house.

To report further upon the same trip, we returned eastward by way of the Lincoln Highway from Pittsburgh. A person hasn't seen Pennsylvania and doesn't know Pennsylvania mountains if he never has climbed those 2600-foot ridges of the Alleghenies between Pittsburgh and Chambersburg.

In some parts of the state the highways go around the hills. Down in those southern tier counties they go over them. And unhappy is the motorist whose engine isn't pulling its best and whose brakes aren't in good order.

SUBMIT BUDGET

Revives 35 Year Old Relief Plan—Curtail Smuggling of Aliens—Combines Replace Many Laborers.

Washington, D. C.

LESS than a generation ago a billion-dollar Congress was held up to the public as a climax of government extravagance. Today a three-billion-dollar budget for the federal government attracts little attention. Director of the Budget Herbert M. Lord has submitted to the President and received his approval of a budget of government expenditures for 1928 totaling $3,582,000,000.

On the basis of this total the budget director estimates the surplus for the current fiscal year would be $338,000,000 compared with $635,000,000 last year. This estimate, however, does not include any appropriations that may be made for flood control, farm relief or the Boulder Dam project.

Proposes New Relief Bill

It is an off day that someone does not propose a new federal farm relief measure. Representative Hull, of Illinois, has a so-called new farm relief plan which is the revival of the old Farmers' Alliance subtreasury plan of 35 years ago. He would have the government build elevators for the purpose of storing the surplus grain during the fat years and holding it over until the years of lean short crops.

Warehouse receipts would be issued to the farmer for surplus grain stored by him in these government elevators and a loan of 80 per cent of the value of the grain on the market day it was stored should be loaned to the farmer thru the medium of the federal banking system at a rate not to exceed four per cent, and carried for the farmer until the grain is finally marketed.

Under the old sub-treasury plan the warehouse receipts were to be issued in denominations corresponding to the paper money of the United States and were to be legal tender for the payment of debts and in trade.

Would Register Aliens

A powerful move will be under way in the next session of Congress to secure legislation requiring the registration of all aliens. The attitude of many foreigners in the Sacco-Vanzetti case has accentuated this movement.

It is said that in all of the important European countries aliens are compelled to register with the police after a limited period of time. This being true, it is held that the aliens in this country will have no cause to complain if such a law is enacted.

Many aliens have been smuggled into this country since the enactment of the immigration restriction law. The government is being put to great expense in its efforts to prevent this smuggling of aliens and in deporting those found to have surreptiously entered the country. It is believed that a rigidly enforced system of registration, such as has long been in operation in European countries, would have a tendency to curtail the smuggling of aliens and put a curb on some of the radical acts of imported communists and anarchists.

Harvest Hands Plentiful

The labor supply has been ample this season to meet the needs of the harvest fields, at from $3.50 to $5 a day, according to the Farm Labor Bureau of the United States Employment Service. At no time has there been a shortage of labor. In Kansas in former years it required from 30,000 to 35,000 laborers to harvest the wheat. Only 18,000 were needed this year, due to the increasing use of combine-harvesters. It is estimated that 10,000 of these combines were in use in Kansas during the recent wheat harvest.

Grape Crop Large

With a grape crop 20 per cent larger than the average production of the past five years, the Department of Agriculture specialists say the grape growers and shippers are faced with the problem of how to profitably dispose of this immense crop. This season's total grape crop of some 2,500,000 tons probably will be 8 per cent heavier than last year's large crop. Eastern grapes may be a relatively short crop, but in spite of this the aggregate yield will be difficult to market without loss to the growers unless new markets can be developed. A reduction in the rail rates on fruit from California points, by order of the Interstate Commerce Commission, will undoubtedly be of some assistance in solving the grape marketing problem so far as it concerns the California vineyardists.—E. E. R.

MAKE SCHOOL INQUIRY

Vigorously Enforce Corn Borer Quarantine—Mark Grade Crossings—Will Enforce T. B. Testing.

Harrisburg, Pa.

GOVERNOR FISHER'S members of the State Commission to inquire into the questions connected with state aid to school districts have been appointed and with those previously announced by the presiding officers of the two houses have been informed of their selection. It is expected Dr. John A. H. Keith, state superintendent of public instruction, will take personal charge of the preliminaries to the investigation as he is named as chairman in the legislative measure creating the body. The inquiry will be confined the first year to the fourth class districts, comprising the smaller boroughs and townships.

Establish Fifteen Stations

Official announcement of establishment of fifteen stations to regulate the quarantine for the corn borer is taken to mean the prohibition of shipments will be vigorously enforced in the western and northwestern counties where the pest has been prevalent. It is the plan to make the work of prevention this year severe so that results can be used to appraise the value of the effort to check the borer. The sum of money to be required for next year will be heavy and complete information is wanted.

Start Signal Survey

Men of the State Highway Department have started a study of grade crossings in the state, particularly in the country where lighted signals should be installed, with a view to listing the localities on main state highways and those leading to county and market towns to be handled speedily. This action follows the ruling of the Public Service Commission that there should be uniform flashing signals, a step much discussed the last year or so.

New Pollution Study Made

The state authorities in charge of streams will put into effect this fall some new ideas on study of pollution due to industries. It is believed discharges from creameries and other plants can be reduced to a minimum.

Is Not Debatable

Word has come from the State Department of Agriculture that officials here do not deem the questions raised on testing of cattle for tuberculosis in York County as debatable. The statement is that enforcement is to go right on.—T. C.

PLAN EXHIBIT

Ask Better Secondary Road System—Steal Fruit From Orchards—Distribute New Peach Buds.

Trenton, N. J.

THE New Jersey State Poultry Association has made rapid progress during the summer toward one of the largest poultry expositions in the country, to be held in Atlantic City in October. The annual meeting of the state association will be held at the same time. A number of innovations have been made and the show will be split into six major divisions. One will be a purebred poultry show, another the exhibition of producing stock, a third an egg show and fourth a poultry meat show. The fifth and sixth sections will contain educational exhibits and model buildings and equipment. John H. Weed, of Vineland, prominent poultryman and with long experience in poultry exhibits, has been appointed secretary of the show.

Good Roads Program Started

Thomas J. Wasser, of Hudson County, represents New Jersey and is president of the County Highway Officials' Association, recently organized at Washington and endorsed by the Farm Bureau. It has as its job the standardization of construction and maintenance of county roads and with the secondary highway system so pertinent to the needs of the farmers, the program of the new association has aroused considerable interest. In New Jersey the secondary road system includes the roads that at present are not receiving the aid they have the natural right to expect, considering their importance to farmers traveling to market.—W. H. B.

White Potatoes Inspected

"So far this year more cars of white potatoes have moved out of New Jersey under U. S. inspection than were shipped during the entire season of 1927," says E. A. Mercker, chief of the Bureau of Markets. The season, according to the market director, is hardly one-half over with a possibility of 800 to 900 cars of potatoes being inspected before the last car is marketed.

Give Reward for Arrest

The stealing of high priced fruit from orchards has led the New Jersey Farm Bureau to call the attention of its members to the reward feature of $25 offered for the arrest and conviction of anyone found stealing from the orchards. With apples at $2 per bushel and peaches at even higher prices, thieves can remove as much as $100 to $200 per night from an orchard in a few hours under cover of darkness. While established primarily to stop the stealing of chickens it is being pushed on account of the serious depredations in fruit orchards.

Offer Buds of Golden Jubilee Peach

The New Jersey Agricultural College is offering buds of the new Golden Jubilee peach to growers in lots up to 1000 per farmer. This new variety, coming just before the Carman, is a yellow-fleshed fruit that is being widely recommended for New Jersey conditions. It is being grown with success in many parts of the state in a small way by growers who have given it a thoro trial.—A. K.

MILK PRICES RISE

New York Milk Graft Charge Renewed—Summer Resorts Serve Skimmilk to Guests Is Accusation.

Ithaca, N. Y.

THE Dairymen's League has made good its promise to farmers of an increase in milk prices sufficient to warrant such extra care and feeding as is needed to meet the demand for milk in New York City in November and December. The increase amounts to 42 cents per 100 pounds and went into effect August 15th.

Charges Milk Graft

Silence has followed last fall's political charges of milk graft at that time not uncovered. Until now Judge C. H. Kelby, after more than a year's investigation files his findings. He claims that graft began 10 years ago, but became organized in 1923. The thousands of uninspected cans of milk and cream accepted by grafters are regarded as one reason for the period of depression in the dairy industry in the East, as they created a surplus and lowered prices paid to farmers. The findings fill 199 envelopes, each containing testimony for the grand jury to go over. It is considered that powers and facilities at Judge Kelby's disposal did not go far enough to cover the situation. Yet something may develop in so great a volume of testimony.

Adulterate Milk at Summer Resorts

The dairy and food bureau of the state announces the worst situation yet uncovered at Adirondack and Catskill Mountain resorts. After three weeks of investigation, K. F. Fee, of the bureau, finds that milk has been skimmed and the residue sold at 10 cents a glass, as whole milk. He believes that more than half the northern resorts are serving adulterated milk to guests who flock to the resorts in search of health. Mr. Fee says that every resort in the state is to be visited and some violators of the law will receive second visits.—M. G. F.

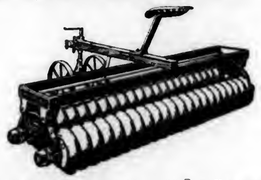
PULVERIZER



Save Money On Fall Seeding

Spreaders

Disc Harrows

Black Hawk Planters

This pulverizer will save money for you on fall seeding in three ways.

1. It saves power and labor because one operation each with disc harrow and pulverizer will put a plowed field in shape for the drill.

2. It saves at least one-third of the time you would take with other tools to fit the same seed bed.

3. It saves by giving a firm, moist, mellow soil in which ALL the seed will sprout and get a good stand before winter comes.

This tool will help you raise your crop for less money.

Ask your dealer for a demonstration right on your own farm.

The Ohio Cultivator Co.
Bellevue, Ohio

DON'T WORRY ABOUT YOUR CORN CROP!

INSTEAD have a reliable Silo in readiness for any emergency. Then if your belated corn fails to mature; is nipped by an early frost, or becomes infested with the corn borer you won't suffer loss. In a Unadilla Silo all such corn becomes succulent, nutritious feed.

The Unadilla is easy to erect and safe to use. Its patented door opening is continuous, with the door fasteners forming a safe ladder all the way up. With a Unadilla, there is no need for the hard lifting or pitching of silage—you simply *push* the silage out at any level.

With its great convenience and unique safety features, it is no wonder that the Unadilla is the favorite silo of most leading dairymen.

We have all sizes of Oregon Fir or Spruce silos ready for shipment immediately. The time to order your silo is *now*. Then have it erected and ready to fill at the most opportune time.

You can either take advantage of our liberal cash discount offer or buy a Unadilla on the easy time payment plan. Write for catalog, prices and terms.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KESTER

A READER of this column with whom I was talking the other day remarked that he noticed frequent references to the weather. Well, why not? We have more of it than anything else. Also, it is the most common subject of conversation. It is the easiest way to open a conversation with a stranger, and when ideas are few and there is nothing else to say, the weather offers an inexhaustable fountain. But there is a very definite reason why farmers think more about the weather than does any other class of people; their lives and fortunes depend upon it.

◆ ◆ ◆

I HAVE noticed that city people know little about the weather or the signs that indicate approaching changes. Except when it inconveniences them, or prevents a proposed trip or outing, they give little thought to weather or weather signs; whereas, the first thing a farmer does in the morning is to glance at the sky and read the forecast for the day. Some of them become very expert at it. My grandfather did not have, and did not need, the daily weather forecast. He was able to make his own and, as I remember it, he was almost invariably right. But there is a little story suggested here which I shall leave to another time.

◆ ◆ ◆

THERE are still some old-time hustlers in the land, even when they are working for someone else, as I found out to my grief the other day. We were ready to grade the grounds around the new house by moving the piles of dirt taken from the cellar. I engaged a neighbor farmer who came from Poland, but whose name I can't spell, to come with his team and dirt-scoop. I volunteered to drive the team while he handled the scoop. So steadily did he work, so hard did he push the team that I was mighty glad when it was time to quit. My legs were so sore for three days I could hardly walk. We did in one day what I had estimated would take two days.

◆ ◆ ◆

THIS man has been in this country twenty-one years, coming with nothing but his two hands and a willingness to work. He now has a nice little farm near town, bought an additional tract recently, has four horses, and has raised a family of seven children. He speaks perfect English, and I found by his talk that he is a good manager as well as a good worker, as is also the whole family.

◆ ◆ ◆

ALTHO we "wormed" the peach trees pretty thoroly last year, we found a good many worms in them this spring. We took them out of about half the trees the latter part of May. Other work pressed and I bought paradichlorobenzene (PDB) for the balance. This was applied on the twelfth of June and left around the trees about two weeks, when it was pulled away. As far as we made examination, every borer was dead. We shall apply it to the other half during the fore part of September.

◆ ◆ ◆

WE PLAN to start in early next year and carry thru a regular spray schedule on our peach and apple trees. We have not done so because they are young and are not expected to bear much. But I notice unmistakable evidence of brown rot on the peach trees and scab on the apple trees. These diseases show on leaves as well as on fruit, and both will injure and kill blossoms, and prevent the setting of fruit. Both the peaches and apples blossomed a good bit last spring, and we blamed the late frost for the non-setting of fruit. Maybe it did, but I am not sure that a proper spray program carried thru would not have produced fruit from many of the blossoms. The wet weather is developing brown rot signs now on cherries and peaches as may be seen by the yellow leaves. Scab produces brownish, dead-looking leaves on apple trees.

◆ ◆ ◆

WELL, this finishes another week's grist. You have no idea how difficult it is to write every week and have anything to say that is worth saying. In fact, I feel that I fall most of the time.

The Cheerful Plowman

Tots and Tubs

HOT water is a nasty thing when little tots are near, and mothers washing clothes should have a proper sense of fear. There's Mrs. Rufus Cuzzlewink who has a little child who plays about the mother's feet quite carelessly and wild.

That foolish mother fills a tub with water boiling hot without a thought, it seems to me, about the little tot! She rinses clothes in boiling suds a dozen times or more with baby playing at her feet right there upon the floor! She leaves a kettle on the stove without a thought, it seems, while on the hearth another boils, and sputters, bubbles, steams! One little slip, one random step—who knows the consequence? Such carelessness with little tots is such a grave offense!

The morning paper's filled with tales of tragedies galore befalling helpless little ones that play about the floor while thoughtless mothers at their tasks forget that life and death are separated merely by a shadow or a breath! When will the lesson go across with force enough to show that children act before they think when racing to and fro? When will the housewife everywhere absorb the simple truth that grown-up heads are never perched on shoulders in their youth? When will good Mrs. Cuzzlewink wake up and change her way,—will it not be till tragedy has made her old and gray? When will she see that danger lurks in wash-day's subtle ways, when water boils upon the stove while little daughter plays?—J. Edw. Tuft.

Friendly Talks

By EDGAR L. VINCENT

"NOT my feet only, but also my hands and my head."

All farmer folks have watched cows when they were with their little calves. Almost the first thing the mother cow does is to lick her little one all over with her rough tongue. Leave the calf with the cow as long as we may, if we stay near them long enough, we shall see this same loving act done. It is the mother-love showing itself out in th's way to the creature she loves.

It Helped Me to Understand

In my boyhood days it happened to me that I went to school at an academy. During that time I had my home with a very dear old aunt who lived two miles away from the school building. In the morning I walked the two miles and at night back again; and when Friday night came there was one thing I knew would always happen. After supper Aunt Eliza would bring out a bucket. Into this a generous supply of good warm water would be poured. Over the back of my chair in the kitchen she would hang a towel, neatly folded and as clean as a snowdrift. These were for the washing of my feet. The dear old lady knew that my feet would be tired and soiled from the journeys I had made and wanted to rest me in this way. She did not herself get down on her knees and wash my feet; that my boyish spirit would have rebelled against; but all the rest she did out of her kind heart, even to bringing me a clean pair of stockings.

I never have forgotten this kindly deed on the part of my aunt, long since gone home on her reward. I think it has helped me to understand better the thought behind that scene of long ago when a hot-headed, impulsive man, after once refusing to permit the Saviour to wash his feet, came to a realizing sense of the real meaning of this act, and said, "Not my feet only, but also my hands and my head."

We Lose the Reward

Two things, it seems to me, grow out of this wonderful act on the part of the Master. In the first place, few of us are as ready as we ought to be to think of ways of making those about us comfortable and happy. Often we are too busy. Sometimes the thing seems too insignificant—far rather would we rather do some great thing. How we work when a neighbor's house is on fire! But when a rail is off his fence away at the back side of the farm, how apt we are to pass it by, even when we know the cattle may get into his corn and damage his crop seriously. We drive carefully around the deep hole in the road, leaving it to somebody else to fill the place up and make the highway safe for travel.

And so we lose the reward which never fails to come for doing simple, kindly, everyday deeds for one another.

It Is Robbing Ourselves

And then, what do we really mean when we say, "I thank you?" Do the words come from far down in our hearts, or are they the faint expression of relief that we are getting thru a task we know we ought to do? "I thank you, but I want to get thru with it and get to doing something else."

Whom do we rob when we treat our neighbor thus? Do we not take from him one of life's richest treasures, the acknowledgment of a good deed done, demanded by the commonest courtesy? But we rob ourselves a thousand times more than we do anybody else. There is such a thing as stealing one's own pocketbook. We cannot do it more surely than when we withhold heartfelt gratitude for the simplest thing that is done for us out of a kind heart. One prayer we all should offer up most frequently is, "Help me to be more thankful!"

Announcing The

OAKLAND ALL-AMERICAN SIX

At New Low Prices!

Body by Fisher

Built to meet every American demand for Reliability, Style and Performance

All-American—that's the word! No other word describes it!

* * *

American design. American lines. American endurance for the roughest American roads—proved on General Motors' great American proving ground and built by American workmen using American precision-production methods!

* * *

A bigger, better, brilliantly beautiful car. New bodies by Fisher—new chassis—new engine. New standards of performance, endurance, and value—and . . . *NEW LOW PRICES.*

* * *

Low, graceful, fashionable lines emphasized by sweeping full-crown fenders. Arresting new Duco colors. Rich new upholsteries.

* * *

***In the chassis*—new factors of reliability and endurance—factors that people have long hoped to get—but never in a car of Oakland's price.**

* * *

A longer, deeper, heavier frame, more rigidly braced. A new and softer clutch. A new and smoother transmission. New elements of steering ease. 4-wheel brakes for safety. Smaller wheels (19"), larger tires (29 x 5.50), a longer wheelbase (117"), and an exceptionally low center of gravity for better roadability. And a new engine of 212 cubic inches displacement—the largest used in a car of Oakland's price.

* * *

A 78½-lb. crankshaft, counterbalanced and incorporating the Harmonic Balancer—a crankcase of bridge truss construction—Oakland's famous rubber silencing principle—and a new combustion chamber design from General Motors' Research Laboratories.

* * *

Value? None like it in all America today!

* * *

See this latest triumph of America's automotive supremacy—the new Oakland All-American Six!

Important To Employers!

The Workmen's Compensation Act became effective Jan 1, 1915, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1926 and 1925) when their premiums were above the minimum.

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Bean Beetles Invade Logan Spring Farm

I EXPECT August 3, 1927, is a day that will long be remembered on Logan Spring Farm. The advance patrol of invading Mexican bean beetles arrived and won in the first skirmish by completely destroying more than a hundred hills of Kentucky Wonder beans before they were discovered. A few days later the enemy suffered severe losses when an acre of Sure Crop wax beans which were almost thru cropping anyway was plowed down earlier than it might otherwise have been. The vines were literally alive with the spine-covered yellow "worms" or larvae and I hope they perished by the million in their sudden interment.

The Mexican bean beetle has been known in Pennsylvania only a few years but is spreading rapidly and promises to become a serious pest. The adult beetles secure winter shelter in fence rows, in woodlots adjoining gardens, in stone piles, or in any convenient trash. The overwintering beetles lay eggs on young bean plants early in the season.

Horde of Larvae Turned Loose

The hatching eggs turn loose a horde of larvae which feed tremendously. By August these have developed to adult beetles, light brown, stocky fellows about one-quarter of an inch long with eight small black spots on each wing, as a rule. More eggs are laid and a second brood of larvae come on in time to develop plenty of adults to carry over winter. Apparently it will be worth while to elliminate, so far as possible, winter hiding places adjacent to our gardens. Also to plow all bean patches as soon as harvesting is completed.

Today we found a few infested plants here and there in a half-acre bean patch. How beneficial it will be in the long run I do not know but we loaded some straw on a one-horse wagon and driving thru the patch laid down a four-inch mulch between the rows and well under the injured plants. Burning the dry straw wiped out these isolated colonies of the pest.

Bean foliage is easily susceptible to injury from insecticides but the Pennsylvania Department of Agriculture in General Bulletin No. 447 suggests:

Controls with Dust or Spray

"For sprays use magnesium arsenate, two pounds to 100 gallons of water; or calcium arsenate, one and one-half pounds and three pounds of lime to 100 gallons of water."

For dusts use one pound magnesium arsenate and five pounds of hydrated lime, or one pound calcium arsenate and nine pounds of hydrated lime."

"Any magnesium arsenate used for dust or spray mixtures should not contain more than five-tenths of one per cent of water soluble arsenic pentoxide. Any calcium arsenate so used should not contain more than two-tenths of one per cent of water soluble pentoxide."

The dust may be mixed in a churn, barrel or can with tight-fitting cover. Add some small stones to facilitate mixing and rotate or roll the container to insure a thoro job.

Application should be made in such a manner as to reach the under leaf surfaces and in areas where the beetle is prevalent should begin as soon as the bean leaves open. Weekly applications may be necessary.

Calcium arsenate and magnesium arsenate are quite soluble in water. The bulletin just referred to states:

"Green beans intended for food, gathered from sprayed or dusted plants, should be washed sufficiently to remove all spray residue; usually two thoro rinsings in clear water should be enough.

Gleaview Farm

Nest Box Notes

WE HAVE been getting some of the houses ready for pullets and have made several improvements in the interior furnishings. The old nest boxes were made all in one piece, containing a dozen or eighteen compartments. They were heavy to move when cleaning the house, and mean to clean and whitewash. We are installing a new type of wall nest which we tried out last year in their place. These nests are made in tiers, six or eight to a tier. The bottom of the arrangement is a wide board resting on brackets two feet from the floor. Each tier consists of a top, two ends, the divisions, and a two-inch strip nailed across the bottom in front to hold the divisions in place and keep the nesting material in. The wall of the house forms the back of the nest, and the top of the tier below forms the bottom. The tiers are fastened to the wall with screw hooks, and can easily be taken down for cleaning and whitewashing.

• • •

Another thing we are doing is to rip out the remaining wall mash hoppers and make trough hoppers out of the lumber. This gives more eating space for the layers. We use a box-like hopper about six feet long, fifteen inches wide, and eight inches deep. This is set up on legs about two feet from the floor to the top of the box. The hens and pullets seem to like this hopper. It is always in the light, they do not chafe their combs on it as they did on the wall hoppers, and they do not waste or dirty the mash.

• • •

Still another improvement is to put the water pans on a shelf supported by brackets about eighteen inches above the floor. The water is within each reach but there is no danger of having litter scratched in it.

• • •

I have often heard farmers say that just as soon as they get some new wheat to feed they will expect a better egg yield. I don't take much stock in this. Some never feed a laying mash, but if they see that the layers have plenty of mash before them all the time, and learn to cull out the biddies that have stopped laying, they won't have to worry about the new wheat.

• • •

A neighbor told me the other day that his chickens seemed to eat a great deal. However, they were laying well. No one ought to begrudge chickens what they eat, because if they are properly handled they will pay for it and pay well. Of course, if a man doesn't cull his flock, and keeps a lot of summer boarders in the henhouse, he is bound to claim that chickens don't pay. The place to keep summer boarders is in the farmhouse, and the henhouse type of boarder had better grace the table on Wednesday and Sunday for the other kind. City folks do like chicken fricassee, with the pieces all nicely browned and lots of potatoes and gravy. Ice cream for dessert.

How to buy a Kitchen Range

The purchase of a new kitchen range is an important event in the farm household. You will want your new one to be the best possible all-around range for cooking and baking, convenient to use, easy to keep clean, economical to fuel, attractive in appearance, and handy to work with. To get all of these things you must first "see before you buy" so that you can picture with your own eyes just about how it will look in your kitchen and how it will fit your conditions in size and convenience.

To be sure of the service your new range will give you need the friendly advice of an experienced hardware man—one who lives near you and has your interests at heart.

You will find just the man to help you at your "Farm Service" Hardware Store. He specializes in stoves and ranges and knows just what is best in them. He will assure you absolute satisfaction, too, for he is your neighbor, right where you can go to him at any time for help and information about putting it up and making it work properly.

There is only one way to buy a kitchen range wisely, and that is to find a "tag" store, for there you can go in with absolute confidence that you will get greater value for your money.

Your "Farm Service" Hardware Men

Discuss Production at World's Poultry Congress

ATTENDING the various sessions of the World's Poultry Congress was almost as much of a problem as solving a cross-word puzzle. Each morning on our way to attend the congress we had to pass several of the brilliant red-coated mounted police who had been assigned to assist visitors. These stalwart young officers looked every bit as picturesque as they have been made out to be in the fiction that has been written about the Canadian Northwest and they were extremely courteous and helpful to those attending the congress.

On getting to the congress sessions we found the groups discussing questions of breeding, feeding, care of baby chicks, controlling disease, marketing, etc. There was so much to hear that our job was to try to get the things of greatest interest.

In the earlier days, except in a few instances, poultry breeding was a hit or miss proposition with more attention paid to the shape of the feathers and the color of the wattles than to egg production.

Hatcheries Cull Flocks

Today a vast revolution or rather evolution has been brought about thru the influence of the commercial hatchery. There are over 10,000 hatcheries in the United States with an estimated capacity of 100 million eggs. It is in these eggs and the flocks that produce them that the biggest opportunity lies for improvement in the poultry industry. Thru careful selection of the flocks from which they secure eggs the better hatcheries have been able to bring about a great increase in egg production of American farms. Now the good hatchery not only picks its flocks carefully but culls them for disease, standard disqualifications and egg production. Then in addition many hatcheries are furnishing their flocks with male birds from high production ancestry.

Perhaps the biggest breeding project in the world, and it has a direct relation to the quality of chicks one is able to get from the better hatcheries, is the Record of Performance and registration work as it is being carried on in various states of the Union and Canada.

As this work spreads, and more states are taking it up in the United States, the way will be clear for the farmer to keep up a high egg production per hen from real purebred stock.

Will Raise Pullets in Broodery

Altho we did not hear it discussed on the program at Ottawa we did talk with several poultrymen who are convinced that in addition to the commercial hatchery the commercial broodery will soon become a national institution. Today, already in many places, the business of raising chicks in batteries is being tried out with success.

In this manner the farmer will be relieved of buying chicks and putting in many trying hours tending the brooder stove and watching the health and conditions of the baby birds. The chicks will be raised in huge batteries, story on story, fed only on perfect sanitary surroundings, subject to constant violet rays to replace the sunshine and cod-liver oil now so necessary, and when they are old enough the pullets will be sold to farmers very much as baby chicks now are, and the male birds will go to market when they reach the broiler stage.

The hatchery when this system comes into vogue will not have to worry about unsold chicks and the broodery will become a year-around plant and the big end of the business. That's one development that's predicted for the poultry business that will be as revolutionary as the development of the commercial hatchery, if it materializes and who can say it will not after all the other remarkable developments of the twentieth century.

Feeding chicks was one of the big questions of the World's Poultry Congress. Of all the papers on

(Continued on page 17)

Hoffman's Seed Wheat

Kinds that yield better, costs you very little to buy them— Write today!

You can raise 5, 8, maybe 10 more bushels to the acre

Hoffman's selected strains of heavy-yielding varieties produce more wheat. Just as selected purebred cows produce better than scrubs. This has been proved over and over again for twenty-eight years—and by thousands of farmers.

Our seed wheat is grown here on the rich soils of Lancaster County. It is plump and full of vigor. Harvested right, well cured, healthy and sound. Cleaned and recleaned in our big, modern plant with special machinery.

Free from rye, garlic, cockle, cheat and weed seeds

Hoffman's Seed Wheat is selected from crop that shows no trouble with smut. It is sound plump wheat, no rye or weed seeds.

8 Tested Varieties

Smooth—Chaff and Bearded Kind

"Leap's Prolific"—Most popular variety ever sold—now offered for the sixteenth season. Beardless; early; hard, dark red berries of good size; reliable and profitable.

"Forward"— Growing more popular each year; good yielder. Also a beardless variety; large grain, mills well.

"Pennsylvania 44" a fine bearded variety; "Trumbull", beardless; "Lancaster Fulcaster", bearded; "Red Wave"; "Penna. Blue Stem", beardless; "Stoner's Miracle", bearded.

Write for new Seed Wheat Catalog and Samples

Gives full details—describes our "Leap's Prolific", "Forward", "Trumbull", and other heavy-yielding varieties. Written especially for wheat farmers by folks who know wheat. Tells you how to raise more bushels at less cost per bushel, also how to have wheat that millers like and pay well for. Write for your copy and FREE Seed Wheat Samples.

TIGHT BINDING

OUR HOME PAGE

Conducted by

Mrs. GERTRUDE S. STEWART

A Real Delicacy for Winter Use

ONE of our readers has asked for a discussion on canning chicken. I wish you could have seen a chicken canning demonstration I saw in June. Let me tell you about it as well as I can. If each point is observed carefully, you will have a shelf of real delicacies ready to serve on a moment's notice.

First of all choose sound birds and kill them at least six hours before drawing. Bleed well, remove all feathers, then singe and cleanse the skin very thoroly. This may be done with soap and water, rinsing well when clean, or many rub the birds well with soda or nice clean bran. Use your favorite method, but be sure to do it well.

Prepare as for Fried Chicken

Now cut up just as you do for fried chicken, cutting the back in two pieces, separating the drumstick from the thigh at the joint, and cut the white meat off on each side of the breast bone. Spread all pieces on a tray so that you may pack quickly.

Use clean hot jars, and holding the jar in the left hand, place first a drumstick along the side of the jar. Lay a thigh next, then the two wings, fitting the elbow of one wing into the other. In the very center place the neck, rib-end down. This is for a double purpose—air space during the process, and quick removal when you want to serve the chicken next winter. Pull the neck out first. Around this neck piece lay the backs and spread the white portions outside. Fit in as many remaining pieces as the jar will hold, depending on the size of chicken.

To each quart of packed chicken add two level teaspoons salt. Place the ring and partially seal. Add no water if you wish chicken to retain its flavor. Process in a steam pressure cooker for one hour at 15 pounds. If water bath must be used, process for three and one-half hours. Remove from canner and seal at once.

Altho not necessary, it is very nice to can the giblets in half-pint jars all by themselves.—G. S. S.

Let's Take a Vacation

I HAVE been hearing of folks who can't afford a vacation trip managing a real rest period by camping a week or two right on their own farms. Doesn't that sound restful? No tiresome planning for the long absence, and no need to worry over a caretaker, either. Anyhow, the idea is worth a trial, so let's hunt the dearest spot on the farm grounds and get a vacation.

The ideal plan is the automobile camping trip, but not all can have this indulgence. Many country people are glad for "a day at a time," and that is fine. Whichever way it is, let's have a vacation! It's good for everybody.

There are so many delightful picnics in all communities, and too often we think we would like to attend if we could. Now the only thing to do is decide that we WILL. Food never tastes better than in the big out-of-doors, and we are never more care-free than while picnicking.—Mrs. E. M. Anderson, N. Y.

LET us not be ashamed to be friendly or to show any friendly feeling we may have.

Let us be the first to give a friendly sign, to nod first, smile first, speak first, give first, and if such a thing is necessary, FORGET first.—Jarvis A. Wood.

Normal Child Has Own Personality

"IT IS not only impossible but undesirable to try to make children obey strictly, absolutely and blindly," states Dr. Nellie Perkins, of the New York State College of Home Economics. "Blind obedience is possible only with sick, abnormal or stupid children, and even then it is not desirable unless one wants to develop puppets.

"Children cannot be molded easily to suit the desires or ambitions of their parents, for they have personalities which desire expression, and which are in constant danger of becoming stifled thru unwise training. They should be taught what they may do and what they may not do, but, so far as they can understand, they should be given reasons for these rules.

Intelligent Obedience Possible

"Intelligent obedience is possible and is highly important in properly developing a child's personality. One of the common traits of all children is their impulse to be active, and they should be given as much freedom as possible, taking care not to let them annoy other people.

"A child is naturally sociable, and it is important that he associate with other children of a similar age so he will learn how to be agreeable.

"The child wants to do things; he wants to do them successfully; he wants to be approved; and he wants to give pleasure. If the parents will take this knowledge of the child into consideration, will keep cool when an emergency arises, and will use all the kindness and common sense they possess, they can't go far wrong."

They Have a Nook of Their Own

No Longer Do We Hunt for Chairs Unoccupied by Toys

WE THINK we have hit on a rather nice way to take care of our two children's special needs for their indoor play or occupation. For lack of space no room in our house could be set aside especially for them, so we gave them a "nook."

We have a living room fourteen by fifteen feet, and the southeast corner has been transformed for the children. This corner has a wall space of five feet each way from the corner to windows on the south and east sides, and into this nook are tucked the treasures and furniture belonging to them.

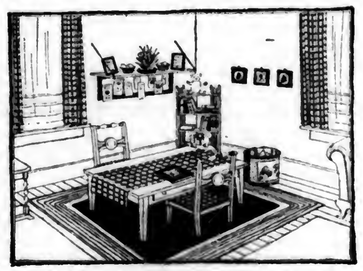
The table, their chief delight, was an old kitchen table, which bore the marks of time but was otherwise all right, and it boasted a drawer. The legs were sawed off to make them the correct height, and two bedroom chairs, not often used, were modified to fit also. An old magazine rack was placed in the corner and a metal paper basket gets constant use. A good strong frame 18 inches by 36 inches was removed from a discarded incubator, and neatly padded and covered with gray cloth. This is hung on the wall, and holds worthy school work as well as cut outs of all sorts, and fine drawings. Above this frame we placed a shelf. Today it holds a vase of flowers, two framed coupiets and two sewing baskets. In winter there is a pretty fern there and blooming narcissi, daffodils and tulips in season.

The children selected the verses for framing from among some we had, and I am proud of the choice. The older one chose, "It matters not how straight the gate; how charged with punishments the scroll, I am the master of my fate; I am the captain of my soul." The younger one selected a Stevenson rhyme, "It is very nice to think, the world is full of meat and drink.
With little children saying grace in every Christian kind of place."

The magazine rack is home for their books, water colors, crayons and pencils, a doll or two, Teddy Bear and the elephant. All odds and ends of interesting things may be found there from time to time.

Our living room woodwork is finished in ivory enamel, and we treated all of this furniture in that fashion. The chair cushions are of beautiful gingham to match the hangings at the windows. The table runner is of the same clear, bright gingham and is always in place when business does not clutter the table top.

We tell you this because our nook is a decided success. No longer do we need to hunt for a chair that is not busy with a doll, a book, or blocks. The paper basket has promoted habits of tidiness. Seldom do I now remind them to clean up after a cutting period; the paper basket seems to suggest that. This is their corner—their dearest treasures are here. It is an attractive place and they love it.—Lillian Edey.



Fall Planting Speeds Spring Flowers

AFTER we get thru the rush of gardens, chickens and spring sewing, we often find that we have forgotten to plant some of our favorite flowers. To overcome this drawback the seed should be sown in the late fall just before the ground freezes. Many flowers will bloom earlier and have larger blossoms if planted in autumn.

The seed will lie dormant during the winter and will come up early in the spring. The ground should be well prepared, the same as for spring planting. Pulverized manure may be mixed with the soil and the seeds covered with earth pressed firmly over them. In the spring they should be kept free from weeds and given ordinary care. Certain varieties which do not transplant easily should be planted where they are to bloom the coming year.

Poppies sown in the autumn will start blooming almost as soon as the tulips are gone. Larkspur, sweet alyssum, snapdragon, calliopsis and many others will put out a profusion of blossoms.

Pansies may be transplanted late in the fall and if covered with a light mulch of straw will bloom early the following spring.—Mrs. L. H. Funk.

Glue Removes Kinks

RUGS that curl up at the corners or insist on wrinkling may be kept in their place if they are resized. When machine-made pile rugs have been cleaned the sizing on the back, which gives the rug its stiffness, wears off. Re-sizing can be done at home, and it will make the rug wear longer as well as improve its appearance. Flake glue which can be bought at most hardware and drug stores is used for the sizing.

The State College of Home Economics at Ithaca, N. Y., gives the following directions for the process: Stretch the rugs, face down, tight and straight on the floor of a little-used room or on a porch and tack it down firmly. Dissolve the glue in hot water in a double boiler, allowing one-fourth pound of glue to one-half gallon of water. Sprinkle the back of the rug generously with this solution and then let it dry undisturbed for at least twenty-four hours.

Mustard Pickles That Need No Sealing

DEAR HOME PAGE EDITOR:—Please publish a recipe for sweet mustard pickles that can be used right along from the crock and to which more pickles can be added as long as the season furnishes cucumbers.—Mrs. O. E. P.

The most satisfactory open crock pickles I have ever eaten are made as follows: Wash very carefully the freshly-gathered pickles and arrange in a perfectly clean crock. Make a brine with proportions of 1 cup salt, 1 cup ground mustard, 2 cups sugar mixed thoroly in 1 gallon of cold vinegar that has not been heated. Pour this over the pickles when all is entirely dissolved. Cover with a cup of grated horseradish and place clean weights on clean wooden covers that fit inside the crock.

Ready for the First Day of School

5895.—Four sizes: 8, 10, 12 and 14 years. To make the coat for a 12-year size as illustrated will require 2⅞ yards of 40-inch material with ⅝ yard of contrasting material for facings at pocket openings and on collar and fronts. Pattern, 10 cents.

5982.—Three sizes: 16, 18 and 20 years. To make this style for an 18-year size will require 1 yard of 27-inch lining for the underbody, 1⅝ yard of 40-inch material for the blouse with ½ yard of contrasting material for facings on blouse, belt and for pocket facings and 1¾ yard for the skirt. Pattern, 10 cents.

Send 16c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns; waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

Serve Hot Sandwiches for Luncheon

DEAR MRS. STEWART:—Please tell us how to make hot sandwiches of cheese, etc., and how to serve them.—Mrs. F., Pa.

Nearly every sort of sandwich can be made a hot sandwich by using freshly crisped toast. Cheese sandwiches, however, the ones that are called "dreams" have a slightly different method. Use the best cream cheese procurable and arrange a generous slice between buttered slices of whole wheat, white or rye bread. Toast on both sides of the finished sandwich. The warmed cheese oozes out a tiny bit at the edges and the fragrance itself almost induces pleasant dreams. Serve immediately; hot plates are a help. This sandwich with a plate of good vegetable salad, on a crisp leaf of lettuce, is a pretty good meal and has many vitamins.

Fresh tomatoes make a delicious sandwich on buttered slices of fresh toast, and may be served with cold meats and fruit or fruit salad.

Men always enjoy the so-called scrambled egg sandwich. Slices of any bread, toasted or fresh, are well buttered and generously filled with seasoned eggs scrambled with 1 tablespoon of milk to each egg.—G. S. S.

DRIED FRUIT SANDWICHES

Dried fruits of any kind or of several kinds mixed together may be used. Soak over night in warm water. Cook till tender in the same water. Stir almost constantly. Add sugar to taste, and when the water is all absorbed, you will have a mass of tasty filling. Spread on thinly sliced, buttered bread.—C. R.

The Roof Over Your Head

Features of Fisher Roof Construction

1. The roof of every Fisher body is practically a separate assembly, resting as securely upon the body's pillars as does the roof of a home upon its framework.

2. Slats and bows form the sturdy structure of a Fisher roof deck. The bows are twelve inches apart; the slats three inches apart.

3. The bows used in a Fisher roof are cut to shape, not steam bent. They retain their shape permanently.

4. A layer of sound-absorbing cotton batting laid on the Fisher roof framework between two sheets of cotton cloth, reduces drumming noises.

5. All Fisher roofs are covered with extra durable weather-proof fabric—specially constructed to stand up under all conditions of weather.

Important information for every closed car buyer

Everyone realizes the importance of roof construction in the building of a home;—roof construction of a closed car is equally important, because the roof of the closed car is not only subjected to the elements but to severe strains and stresses as well. That is why in a Body by Fisher the roof is always so strongly, staunchly built. . . . The structure and the strength of the roof, as of the entire Fisher body, adds greatly to the safety of travel in all cars equipped with Body by Fisher. The Fisher roof is also far more durable . . . In selecting your next car, *examine* the roof. Ask questions about it. Find out whether it has the Fisher advantages of roof structure detailed herewith—advantages which mean greater strength, greater durability, and greater safety.

Light Up!

Electric Light and Power

for only $295!

No farm is modern without electric power. Why should you try to get along with old-fashioned oil lamps and lanterns for lighting and with hand power for all your small machinery? Oil lanterns are dangerous around a barn and oil lamps are unsatisfactory in the home. Do away with them by installing a Genco Light Genco-Light and Power Plant No. 600 is efficient and economical, its gasoline motor can be used to furnish power for many small jobs while it generates electricity—that means a saving in operating cost.

OUR YOUNG PEOPLE'S FORUM

Letters From Forum Members and Friends

Dear Cousin Ruth:—I like to read the recipes the girls send in. I wish some of the girls would write and tell me how to make a good frosting or icing for a cake. I shall look for it on our page. I live on a farm and go to school and I am going to be in the eighth grade next year.—Helen Stankay, Erie County, Pa.

I'm sure some of your Forum cousins will help you. Just as soon as I receive a frosting recipe I'll have it printed.

THE FORUM EDITOR.

Dear Cousin Ruth and Forum Friends:—I have a garden of my own and I have planted cabbage,

PALS
George W. Christman, (X), Bucks Co., Pa.

peas, pop corn, peppers, potatoes and carrots. I won first prize at the corn show at the Pleasant Valley High School for mangel beets.

I am sending a picture of myself and my Collie dog.—George W. Christman, (X), Bucks County, Pa.

Dear Forum Friends:—I am sending a recipe for "Health Cookies." They are very good.

HEALTH COOKIES

3 cups bran
1½ cup flour
2 teaspoons baking power
Raisins
Two-thirds cup milk
1 cup sugar
½ cup butter
2 eggs

Cream butter and sugar, add beaten eggs, add milk and raisins. Sift flour and baking powder together and mix with bran. Add the mixture. Drop onto a buttered tin and bake.—Emma Perry, nine, Caroline County, Md.

Dear Forum Friends and Readers:—We have three sheep. They are very tame. In the evening they stand by the barn door and wait until we open it. We do not leave them out over night as the dogs are likely to catch them.

Here is a cake recipe which my mother makes often. We all like it.

CHOCOLATE FUDGE CAKE

3 teaspoons lard
½ teaspoon vanilla
1 cup flour
1 egg
¼ teaspoon salt
1 cup sugar
2 tablespoons cocoa
One-third cup milk
1 teaspoon baking powder
½ cup nut meats

Melt lard, add sugar and unbeaten egg. Mix well, add cocoa, vanilla and milk, add flour which has been sifted with baking powder and salt. Add nut meats. Mix well, spread thinly on greased shallow pan and bake in slow oven (300 degrees F.) 20 to 30 minutes.—Mary Bachman, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I have three goldfish. The smallest one will eat from my hand and come to the surface of the water when I whistle. I often put them in the bathtub but it is very hard to catch them again.

Mother and I are going away next week for a visit in the country. I will write and tell you about it.—Margaret Cummins, Indiana County, Pa.

Don't forget your promise, Margaret. I'll be looking for your letter.

THE FORUM EDITOR.

THE Forum is for all boys and girls who read Pennsylvania Farmer. Membership pins are sent to those who send in particularly good contributions of letters, pictures and drawings. Forum friends who have been made members because of especially good contributions to the page have the (X) appearing with their names. All Forum mail should be addressed to: Forum Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa.

Dear Cousin Ruth:—I have a little kitten, his name is Bill. I am sending you a recipe for chocolate caramels.

CHOCOLATE CARAMELS

2 cups granulated sugar
1 cup of rich milk or cream
1 cup molasses
¼ cake of chocolate
Butter size of a walnut
Flavor with vanilla

Boil 20 minutes. These caramels are very good.—Charlotte Werking, nine, (X), Frederick County, Md.

Dear Cousin Ruth and Forum Friends:—Our dog knows lots of tricks and we are teaching her more. She sits up on her hind feet and begs all the time we are eating. She likes ice cream and buckwheat cakes. Our Collie dog shakes hands and jumps high. She also jumps thru your arms and will roll back and forth when you tell her. Her name is Fanny. She is a very good dog only fat and sassy. We also have a fine riding horse. She can jump a three-rail fence. My brother drives her to high school and back every day.

My baby sister started to school this fall. She is having her tables. Have any of you Forum friends read the Elsie books? I have read several and I think they are very good books. If you have time I think it's a good idea to read one book or more a week.—Mildred Tomlinson, (X), Bucks County, Pa.

Dear Cousin Ruth:—I live in the country where you can have lots of fun and good times. Last summer I had two pet groundhogs. One was wilder than the other. Their names were Billy and Tommy.

I am going to high school this fall. I will go to Clymer. I am going to take some pictures and maybe I will send you one.—Virgina Ackerson, twelve, Indiana County, Pa.

Dear Cousin Ruth and Forum Friends:—For my pets I have two little kittens. One is black and the other one is blue. We have 18 little ducks and they go to the creek and wash themselves every day. On the last day of school our teacher took

MY SISTER BELLA
Violet J. Ott, Fulton County, Pa.

us on a fishing trip. We caught 36 fish.—Helen Barton, Frederick County, Md.

Dear Cousin Ruth and Forum Friends:—We have 1000 young chicks. We have about 150 old chickens. I gather eggs quite often and help to take care of the young chicks. The old chickens try to get the young chicks' feed.

We live on a truck farm of eight acres. My father takes different kinds of products to market. He attends market Wednesday and Saturday.—Kathryn Miller, (X), Centre County, Pa.

Dear Forum Editor and Friends:—I am enjoying my vacation very much altho I haven't gone on any large trips. I have a new puppy dog. I think he will make a good watch dog.

My birthday was July 19th. I like to read very much so my mother gave me two books.—Edith E. Renner, (X), Carbon County, Pa.

I'm sure you'll enjoy reading the books your mother gave you as a birthday present.

Dear Forum Friends:—Do any of you like to write poems? I do, and here is one of mine for you to read.

RAINBOW POPPIES

I am a poppy, and a dear one, too.
My face is so pink, my dress so blue,
I am tall and graceful, as I nod my head,
To every one that passes this flower bed.

We always try to keep in line,
That's the reason we look so fine,
But one night the wind did blow,
So we thought 'twas time to go.

We sailed over grass, weeds and rocks
But left behind our pepper box.
Full of seedlets, oh! so wee,
Each one to be a poppy just like me.—Bertha Rupert, (X), Clinton County, Pa.

We'll Have a Letter Box

OUR Contest is now a thing of the past. Just as soon as I possibly can do so I'll let you know the prize winners. Won't you anxiously await this announcement?

While we're waiting to get this settled I'll tell you what we'll do. We'll have a Letter Box. All can enjoy this. To join the Letter Box you simply have to write a letter. There is going to be one rule only. And that is—mail your note promptly so that it reaches me by August 31st. Try to make your contribution as interesting and entertaining as you possibly can. I have a SECRET for the best letter submitted by Forum friends over twelve and I also have a SECRET for the best letter written by Forum friends twelve and under. I wonder who is going to share these SECRETS with me? Of course, you may write about anything you choose but strive to make your letter interesting. All Letter Box mail should be addressed: Forum Editor, care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa.

George Wagner, Emma Krape, Grace Etzel, Evelyn Etzel, Ella Keller, Ethel Mumma, Myrle Light, Bernice Rupert, Hilda Myers, Gladys Seitz, Francis Reisner and Alice Rosso have written asking to be made Forum members. On the page this week you will find full instructions regarding membership in Our Young People's Forum. If you read these carefully I'm sure before long I'll be sending pins to all of you.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Some of you I know very well, some of you I am just beginning to know and some new Little Folks will be coming in right along. But I can tell you something about something that belongs to you, and for each one of you it's different. The queer question in the puzzle can be answered by drawing lines as follows:

Draw from the dot beside 1 to the dot beside 2 to the dot beside 3; from the dot beside 4, to 5, to 6, to 7; from 8 to 9, to 10, to 11; from 12 to 13, to 14, to 15, to 16; from 17 to 18, to 19, to 20; from 21 to 22, to 23; from 24 to 25, to 26, to 27, to 28; from 29 to 30, to 31, to 32.

Let me have your answer—either in a letter or on a postcard—by September 3rd. REMEMBER TO TELL ME HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the August 6 puzzle, in which you changed the first and last letters of words to make parts of our bodies is: HAND (from "sane"); FOOT (from "cool"); EYE (from "xyz"); HEAD (from "meat"); EAR (from "bat"); NOSE (from "cost"); LEG (from "set"); CHIN (from "this"); ARM (from "ore"); NECK (from "sect").

The prize winners are: Gilbert Cornog, age 6, Glenmoore, Pa.; Marie L. Gnatinger, age 9, Barnesville, Pa.; Paul Hess, age 8, Manheim, Pa.; David W. Jackson, Jr., age 9, Cochranville, Pa.; Margaret Maloney, age 12, Denton, Md.; Clayton Musser, age 7, Rebersburg, Pa.; Howard W. Reber, age 11, Auburn, Pa.; Virginia Shaner, age 11, Lemaxtine, Pa.; Margaret A. Smith, age 12, Landenberg, Pa.; Dorothy Stratton, age 10, Bridgeton, N. J.

THERE IS SOMETHING WHICH BELONGS TO YOU BUT YOUR FRIENDS USE IT MORE THAN YOU DO. WHAT IS IT?

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—The design for a memorial chapel to be erected at Aisne Marne, in honor of American soldiers who fell at Belleau Wood in the World War, has been approved by the American Battle Monuments Commission.

2.—Since 1875 an annual "Old Settlers' Picnic" has been held near Chicago. A dancing contest, which was won by Mrs. Apfel, 96, oldest woman present, and her partner, 81, was featured this year.

3.—Dr. Charles G. Abbott, of the U. S. National Museum, went to California last month to measure the heat of the stars. He took with him the most delicate heat recording instruments in the world. The apparatus shown is used in calculating the readings of sensitive thermometers.

4.—Governor-General Leonard Wood, who died in Boston on August 7, after an operation. He was buried in Arlington Cemetery with military honors.

5.—"Crane and Sea Horse," an unusual sculpture in soap.

6.—A severe flood near Newark, N. J., marooned this South Orange trolley car and made transportation by canoes popular.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

"HERE is the difficulty," Thomson went on, "this shipment will go by water to Wilmington, thence up the Cape Fear River to Cross Creek, and thence by wagon to the Regulators. But the Regulators must guard it. To that end, we have already sent one messenger down to Newburn to go west across country with word to Hunter. But Governor Tryon is on the alert, the militia of the eastern counties is out, and I fear me he may be held. Carnes will go on from Cross Creek to find Hunter, but that may be too late. What we need is a man to take the great wagon road down the valley of the Shenandoah and on to the forks of the Yadkin with a message to Hunter."

"And may the balls we take to them end their last journey in the carcass of His Excellency, Governor Tryon," added Carnes viciously.

I was dumbfounded. This talk of arms, of Regulators, of death to the King's Governor, struck me speechless for a second.

"But this—this is rebellion," I whispered finally.

"What else?" Carnes almost snarled. "Rebellion in North Carolina may lead to rebellion elsewhere. May we be ready."

"Gentlemen," I cried hoarsely, "I am a good subject of His Majesty. I cannot take any part in such treasonable work."

The men stared at me. Carnes swore. Thomson gave a grim laugh.

"Good subject or not," he declared. "Major Dunston has enough friends here to see you hanged or jailed. The duel has few advocates in this state. A case can be made out against you, and will be. Consider whether it is better to be a dead subject or a live rebel."

His tone became kinder. "Here, lad, I know you are sound at heart, or you could not be your uncle's kin. Go down to Carolina and you will see that which will make you as good a rebel as the rest of us. We ask of you nothing but that you carry a message for us. And in payment for that, we shall arrange your journey south. If you refuse us, what is there for you? You would have to ride south for your life at any event. And where would you get money or a horse or the goods you need? By this time your home has a guard over it; there will be someone ready to nab you at your lawyer's office; tomorrow the town will be scoured for you.

"Look you. We will outfit you for the journey and give you money to pay your way. We will start you on the road by morning. In return, deliver this message to Hunter, and after that go enlist with Colonel Fanning if you want to."

I was beaten. "I will take the message," I said.

"Your word of honor?" insisted Mr. Thomson.

"My word of honor," I repeated.

"And no word to anyone except Hunter of what has been told you here tonight?"

"That, too."

"Good," he said. "Carnes, fix him up a place on the Reading coach for morning. Get the clothes he needs, Berry, take Craig to a room and let him get some sleep."

He squared himself away before a table with writing materials on it. Before I left the room, his quill was scratching over the paper.

TIRED tho I was, it was hard for me to go to sleep. What a tangle I had tumbled into! Vaguely I connected my uncle's words about Husband and Regulators with these new tidings from Thomson and Carnes. It seemed that the settlers in the western counties of North Carolina, most of the men from Pennsylvania who had followed the Shenandoah Valley down to the Yadkin, were at outs with the Royal Governor and that the Tidewater colonists were siding with the governor, against them. What their quarrel was, I had no notion; nor did I care greatly. In my mood then, it seemed that all this coil in the South had come into being simply to make a murderer and a fugitive out of me.

So I fell asleep, very miserable, and had a curious and unpleasant dream in which I was being marched to the gallows by a rifle of red-coats. The hang-man, dressed in black, with a curious red smear on the front of the tunic, put the noose on me and as he stepped back to survey his handiwork, I saw his face. It was Major Dunston.

I awoke in the gray dawn to find Carnes shaking me. He had the air of a man with a grievance, so much so indeed that I forgot for the moment my own complaints and asked him how he did.

"Badly—and good reason. Stir yourself, my lad, we've no time to waste. I'll tell you."

It seemed that Carnes, being confronted with the job of getting together for me a box of necessaries, including a heavy suit, a great coat, shirts and so on, had decided that the easiest way was to go to my home and—so to speak—steal my own truck. He tried it and found that Thomson's prediction about the house being watched was too true. Two fellows gave him a hard run for it and he barely escaped.

"But you fixed me up?" I inquired, in some anxiety. I had no desire to travel over the country in a laced coat and slippers.

Carnes nodded. I was outfitted after a fashion, but he would fight the whole city watch again before he went to so much trouble. Not a wink of sleep, and curses by the wagonload from sleepy tradesmen he had disturbed.

He paused to thrust out a pair of boots.

"These were the worst," he said: "I took your slippers along for the measure."

A PLAIN hat substituted for the one I had worn the night before and a great coat covered up my ornate dress. My other garments, I learned, were in my box, and I could make the rest of the change the next night at Pottsgrove or Reading.

A breakfast was waiting for me downstairs. I was half way thru it when Thomson came in. He held out a little buckskin bag with a thong attached.

"The message is in this," he told me. "Put it around your neck like a medicine bag. Remember, it is for James Hunter and no other man."

I opened my shirt and slipped the bag on next to my skin. "How do I find your man?" I asked.

"Go to the guest house at Bethabara and ask for Gottfried Steup. He will direct you further."

"But this Bethabara—"

"It is the Moravian town. Every one knows it. Be careful there, of all but Steup. Most are friends of the Governor."

He went out, after bidding me remember him to my uncle, putting a purse in my hands, and Carnes let me eat a second longer and then dragged me out.

The streets were still gray, and there was a cool, damp fog in the air. By the door, Carnes hung back and swung a small box to his shoulder.

"This is yours," he told me. "You travel like a lord. At Harris Ferry or sooner, tho, you must throw away the clothes you have on and the box, too. Look like a farmer or a storekeeper, or there will be questions asked."

I had begun to wonder why I should not go right thru to Harris Ferry and not go roundabout by Reading. I asked Carnes.

"NO COACH runs that way. You would have to buy a horse, or hire someone to drive you. It would be remembered and our friends here would be after you. Here you take the coach to Reading like any respectable citizen. You will reach there before any hue and cry over this. No one will pay much attention to you. But that is not to say that you can waste time. Someone here may get the thought to send a man to Harris Ferry to watch for you, or even to Williams Ferry. If you get past those points, then you can breathe a bit easier."

He added other direction which I tried to fix in my mind. Then we were come to a stable yard, with lanterns yellow in the dusk, stable boys swearing, and a lumbering coach. My box went up behind. The guard thrust me into a seat.

Carnes put his face up to the window. "You are Daniel Janes—I almost forgot. Keep your mouth shut, and keep moving."

The wheels began to move. He dropped back. I heard him call out: "A profitable journey to you, Mr. James," and laugh.

The instant after we whirled out on the street and were away bumping over the cobblestones. I took a last look at the familiar brick houses, at the quiet gardens in the outskirts, and then we were among farm lands and driving over a rutted dirt road.

I pulled my coat close about me, put my head on my chest, and was miserable. The dangerous and treasonable journey ahead worried me, of course. Yet what hurt most of all was that I was leaving Philadelphia in disgrace and probably forever.

The roads were heavy, and we stopped at Potts Grove for the night, some miles short of Reading. In my room at the inn, I went thru my box and found a rather complete assortment of clothes, together with a pistol, ammunition and a long knife in a sheath. The fact that Carnes thought I would need arms gave me a second's alarm. There had been no Indian troubles on the road for six years or so. Of course, Indians were not all I had to fear. However, I resolved to let the arms stay in the box. I put on a clean shirt and left the rest, resolving to make the complete change Carnes had recommended, a day or two later. Indeed, the coat and small clothes he had bought me were of coarse material and fitted me hardly at all, so that I really had a foolish dislike of putting them on.

At Reading, where we arrived fairly early in the day, I made myself as inconspicuous as possible. After an hour's walk in the town, I came back to the inn and told the landlord that I had business at Lebanon and asked him if he knew of a conveyance.

HE WAS busy and hardly looked at me. There was, it seemed, no coach—at least not today. If I cared to, I might talk to yon fellow by the fire. He was bound for Lebanon and further.

In response to this advice, I sought out the fellow by the fire in the inn parlor. He was a man of middle age, sandy haired, and with the big, capable hands of a farmer or workman.

"Our host tells me you go south," said I, after apologizing for the intrusion. "So do I and as soon as may be. Can you tell me where I can find someone to carry me?"

To my surprise, he got up promptly and gripped me by the shoulder. "Lad, it's like finding silver in the road to see you," he declared. "There's a Dutchman up here all ready to start, once he gets a load. One more passenger he was waiting for, and wouldn't budge until he came or I made up the difference. And that last," he added, "I was a bit slow to do."

With a boy carrying my box, we hurried down the street together. At our joint urgency, Steiner, the driver, hunted up his other potential passengers. In an hour, we were across the Schuylkill and on the road to Lebanon.

This was worse riding than from Philadelphia to Reading. Steiner had no coach; his conveyance was a sort of wagon, with a top and four benches. Side curtains could be lowered in case of a storm. Our boxes were crowded under our feet. Even with a blanket spread on them, the board seats were unbearably hard.

Yet somehow we endured it and came, stiff and half frozen, to the door of the Lebanon inn along some time past midnight. I went to bed pretty well worn out but fairly well content. I had been making good time, and felt that I was far ahead of any possible pursuit.

NEXT morning, after some delay over a change of horses, we went on again toward Harris Ferry. I sat with the Scotchman I had met at Reading. His name, I found, was Urquhart. Up in front with the driver sat the only other passenger—the two who had started out with us from Reading had left at Lebanon. This other passenger was a surly, black-visaged fellow of uncertain age who said nothing except for a curse or two at the road or the weather, and who wore his cap unusually low on his forehead. A jolt of the wagon made it slip up once, and I saw why. There was a great red scar on his forehead. Altho I could not see it plainly, I had little doubt that the scar traced the letter "R" and that the fellow had once been a runaway redemptioner. "Redemptioner" was the name we gave those unfortunates who sold their labor for a term of years to pay their passage across the Atlantic. The punishment meted out to those who tried to escape their bargains was barbarous; yet some of them, ex-convicts and skilled at villainy, were able to pay back their masters in quite thoro fashion for whatever they suffered.

My Scotch friend had not said two words to me since we started. It was dull work sitting down and counting the aches in one's back as the wagon creaked along, so I began to talk, in the hope of getting him into conversation. Naturally, if foolishly, my words were of Philadelphia, of the last play of the Southwark Theater, of hunting, of horse racing.

To all of this, Urquhart said nothing but looked more dour than ever. It was only when I happened to mention that my father had spent his youth in Ulster that he even looked at me.

"Your father was a dozen years or so ahead of me," Urquhart hazarded. "Well, every lad of spirit leaves the country as soon as he gets old enough to make his way and saves enough to lay aside his passage money. Thousands have come and thousands more will come. This very road was thick with the wagons of Ulster folk last summer and will be in the summer coming.

"Yet some fools ask why they come. This is no playground. Eight years ago the towns down the valley were burned by the savages. The ground is hard to clear; often we have no market worth mentioning for our grain and cattle. Yet it is better than Ulster.

"I tell you, lad, the English put us over there in Ireland to keep down the rebels, and we've done it. If it had not been for us, time and again, there would not be an English soldier left alive in the island. And in spite of that, they treat us worse than the Papists themselves. We are dissenters and may not hold office, or serve on a jury, or do aught save pay our money to the Church of Ireland. And by trade laws they have wrecked our cattle growing, and our sheep growing and our weaving business. What is there to do for an Ulsterman but to migrate or starve, and lay his curse on the English as he goes?"

THIS surprising outburst was all I had out of him. After that, Urquhart sat silent except along late in the afternoon when we passed a heavy wagon drawn by three yoke of oxen. To the men who trudged along by their side, my companion cried a greeting and a question. The answer I did not catch, but it set Urquhart scowling.

"He'd best stay here where he's well off," the Scotchman said to me shortly.

"Where is he bound for?" I asked.

"Carolina and a mint of trouble," was the answer that woke me to a keen interest.

"Why do you say that?" I put in, and added unthinkingly, "I am going that way myself."

Urquhart gave me a look. "You're over fine for that work, I'm thinking," he commented. "It's a rough road and rough times at the end of it. You'll find a country where a poor man may work for five years and have all of his gain taken away by taxes and fees for clerk and sheriff."

We came into Harris Ferry in late afternoon. It had been agreed to stop here for the night and then go on. Carlisle was as far as Steiner would take us and as far as Urquhart wanted to go. There I expected to buy a horse and go on by myself.

When I entered the tavern door, I had my mind made up to a good night's rest and a leisurely journey the next day. The second after I desired nothing so much as to put distance between the Ferry and myself.

TWO men were inside talking to the landlord as I came to the door. I heard my own name mentioned and stepped back.

"He has not passed thru here," the landlord was saying positively.

"Then we shall stay with you till he comes, the first man said. He was a total stranger to me. "We are old friends of his and bring him some good word from Philadelphia."

I beat a quick retreat. How I cursed Carnes for not sending me by the direct route. How now could I escape capture?

Steiner and my two fellow travelers were still in the yard by the wagon. Steiner was bargaining for a cheaper rate for his team and Urquhart was making inquiries about a place to sleep. I beckoned the three to me.

"Doc" Entertains the Visitors

"Doc" was kept busy in the old days when the city cousins visited the farm. With the coming of the automobile he retired to a life of ease.

"I have unexpected news that makes it necessary for me to push on with all speed," I declared. "Your horses are in fair shape. How much will you take to go on tonight and try to make Carlisle?"

The three looked at me in some astonishment. I was so excited my voice shook. Every second I expected those two fellows within to wander out and catch sight of me. No doubt they had been given an accurate description of me, so that my change of name would do little good.

Steiner began to protest that it could not be done, that his horses could not go father. I broke in on him.

"Name your price, man, name it!"

But he would go on mumbling on about the needlessness of such haste. Urquhart appeared to stand with him. Strangely enough, however, the redemptioner came to my aid. "It's easy money, friend," said the fellow to Steiner "Go on and make him pay.

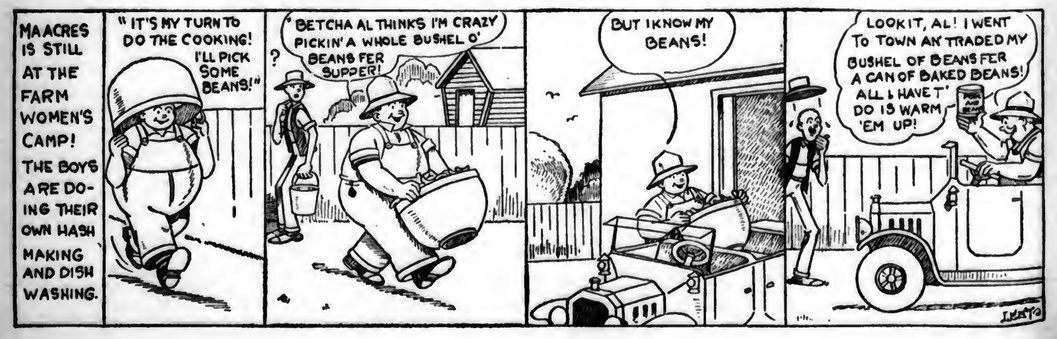
It occurred to me that he might have reasons for haste somewhat like mine. All the same, I welcomed his help.

(To be continued next week)

The foreman looked him up and down. "Are you a mechanic?" he asked.

"No, sorr," was the answer. "O'im a McCarthy."

Activities of Al Acres: *Slim didn't get this idea out of Ma Acres' cook book* : By Leet



MA ACRES IS STILL AT THE FARM WOMEN'S CAMP!
THE BOYS ARE DOING THEIR OWN HASH MAKING AND DISH WASHING.
"IT'S MY TURN TO DO THE COOKING!
I'LL PICK SOME BEANS!"
BETCHA AL THINKS I'M CRAZY PICKIN' A WHOLE BUSHEL O' BEANS FER SUPPER!
BUT I KNOW MY BEANS!
LOOKIT, AL! I WENT TO TOWN AN' TRADED MY BUSHEL OF BEANS FER A CAN OF BAKED BEANS! ALL I HAVE T' DO IS WARM 'EM UP!

Did you ever hear this one?—

The defendant who was held in court on a charge of keeping a dog without a license repeatedly tried to interrupt the evidence, but was hushed each time by the court.

Finally the clerk turned to him and said, "Do you wish the court to understand that you refuse to renew your dog license?"

"Yes, but—"

"We want no buts. You must renew your license or be fined. You know it expired January 1."

"Yes," said the defendant, "and so did the dog."

Small Brother—Say, Sis, can I hang up one of your stockings Christmas Eve?

Big Sister—What on earth do you want to hang up one of mine for?

Small Brother—So's I can see what I got without getting out of bed.

"Do you believe in dreams, Riley?"

"Oi do," said Riley.

"Well, phwat's ut a sign of if a married man dreams he's a bachelor?"

"That's easy. It's a sign he's goin' to meet wid a great disappointment when he wakes up."

Charles—But I told you, dearest, to keep our engagement a secret for the present.

Claire—I couldn't help it. That hateful Ella said the reason I wasn't married was because no fool had proposed to me, so I told her you had.

"Do you attend a place of worship?"

"Yep; every Sunday night. I'm on my way to see her now."

Salesman—Don't talk to me that way. I take orders from no man.

Sales Manager—I noticed that on the report of your last trip.

The lady shopper had ordered about everything hauled down from the shelves.

"I don't see just the right thing," she decided at last. "I want to surprise my husband on his birthday."

"Well," suggested the exhausted clerk, "why don't you hide behind a chair and yell 'boo!' at him?"

"Guilty or not guilty?" asked the judge sternly, of Rastus, charged with chicken stealing.

"Not guilty, Judge."

"What is your alibi?"

"Alley by which?"

"You heard me. Have you an alibi?"

"You mean th' alley by which ah got away, Judge?"

The following sounds like a "Feed of Nations:"

Are you Hungary?

Yes, Siam.

Then Russian to the table and I'll Fiji.

All right; Sweden my coffee and Denmark my bill.

Preacher, calling on one of his flock, was met at the door by Little Johnny, age six.

Preacher—Sonny is your father at home?

Sonny—No, sir. Pop hasn't been home since last Christmas, when Mom caught Santa Klaus kissing the cook."

"Wheah you-all bin?"

"Lookin' foah work."

"Man! man! Yoah cu'osity's gonna git you into trouble yit."

Hogs—Receipts, 725; heavy weight, 250@350 lbs, medium, good and choice, 250@$11; medium weight, 200@250 lbs, medium, good and choice, $11@12; light weight, 160@200 lbs, medium, good and choice, $11.25@12.25; packing sows, rough and smooth, $8.50@9.50.

Cattle—Receipts, 2700. Calves, 100.

Steers—1300@1500 lbs, good, $11.50@12; steers, 1100@1300 lbs, good, $11.25@12.50; steers, 950@1100 lbs, good, $10.25@12.25; steers, 950 lbs up, medium, $9.50@11.25; common, $8@10.50.

Heifers—850 lbs down, common and medium, $6.50@7.50; heifers, 850 lbs up, choice, $9.50@11.25; good, $8.50@9.50; medium, $7.50@8.50.

Cows—Choice, $7.50@9; good, $6.25@7.50; common and medium, $4.50@6.25.

Bulls—(Yearlings excluded), good and choice, beef, $7.50@8.50; cutter, common and medium, $5.50@7.50.

Vealers—Milk fed, good and choice, $14.50@16.50; medium, $11.50@14.50; cull and common, $6@11.50.

YORK PRODUCE

Butter and Eggs—Country butter, 50@55c; separator, 50c; eggs, 30@35c.

Poultry—Hens, 16@20c; springers, 18@25c; dressed, 25@32c ea.

Vegetables—Potatoes, 15@30c ¼ pk, $1.25 bu; cabbage, 3@10c hd; lettuce, 8@25c hd; celery, 10@15c stalk; horseradish, 5@10c glass; onions, 5c bch, 10c box; beets, 5c bch; boiled, 2@8c ea; turnips, 10@15c ¼ pk; soup beans, 15@20c qt; lima beans, 25@35c pt; radishes, 5c bch; peas, 20@40c ¼ pk; beans, 15c ¼ pk; tomatoes, 2@6c ea, 10@15c qt; squash, 3@10c ea; corn, 20@45c doz.

Fruits—Apples, old, 15@20c ¼ pk, new, 10@20c ¼ pk, $1.25@2 bu; plums, 10@15c qt; blackberries, 13@15c qt; peaches, 15@20c pt, 15@35c ¼ pk; strawberries, 40c qt.

Wholesale Grain Market—Wheat, $1.27; corn, $1.18; rye, 90c; oats, new, 40c; bran, $34 ton; middlings, $45 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 44c; choice, 43c; dy, good, 42c; do, ordinary, 41c; do, blocks, 43@45c; do, ladles, 35@34c; Md and Penna, rolls, 32@34c; Ohio and W Va, rolls, 31@32c; store-packed, 31@32c; dairy prints, 32@34c; process butter, 38@39c.

Live Poultry—Old chickens, old hens, 4½ lbs and over, 25c; do, 4@4½ lbs, 23c; do, 3@4 lbs, 18@20c; Leghorns and other light stock, 16@18c; old roosters, mixed colors, 14@16c; do, Leghorns, 12@15c.

PITTSBURGH MARKETS

PRODUCE

Vegetables (wholesale prices)—BEANS, 75c. CARROTS, doz bchs, 20@25c. CORN, bu bskt, $2.50@3.50. LETTUCE, leaf, box of 2 doz, 50@75c. ONIONS, bundle of 2 doz bchs, 15@20c. PARSLEY, doz bchs, 20@25c. SPINACH, bu bskt, summer, 50@75c; winter, $1.50. TOMATOES, 10-qt chip bskt, 75c@$1.25.

Fruits—APPLES, bu bskt, Va and W Va, Maiden Blush, $2.50@2.75; Flippins and Wealthies, $2.25@2.50; Md and Del, Maiden Blush, $2.50; Wealthies, $2@2.50. CANTALOUPES, Calif, Turlock section, crate, jumbos, $4@4.25; standards, $3.50@4; flats, $1.50@1.65; Md and Del, crate, jumbos, $2@2.50; flats, $1@1.15; Texas and New Mexico, pink meats, flat crate, $1.50@1.85; Colo, flats, $1.40@1.65. IPACHUES, bu bskt, Illinois, Elbertas, $1@3.25. Indiana, Elbertas, $3@3.50; Md and Del, Georgia Belles, $2@2.25; Calif, box, Elbertas, 85c@$1.

NEW YORK MARKETS

PRODUCE

Butter—Firm; creamery, higher than extras, 43¼@44c; creamery, extras, 92 score, 42¾@43c; creamery, firsts, 88@91 score, 39@42c; seconds, 37@38c; centralized make, No 1, 42@42½c; do, No 2, 41c.

Eggs—Irregular; fresh-gathered extra firsts, 31@34c; do, firsts, 28½@30c; do, seconds and poorer, 25@28c; nearby henery whites, closely selected extras, 40@51c; nearby white mixed, extras, 37@40c; whites, firsts to average western henery extras, 33@36c; nearby pullets, 28@31c; nearby hennery brown extras, 29@34c; Pacific Coast whites, extras, 46@49½c; do, extra firsts, 42½@44c.

Cheese—Firm. State, whole milk, flats, fresh, fancy to fancy specials, 25@26½c; state, whole milk, flats, held, 27½@28½c; do, average run, 25½@26½c.

Live Poultry—Dull; chickens, fresh quotations; broilers, by express, 18@21c; fowls, by express, 18@26c.

Dressed Poultry—Dull; chickens, fresh, 23@27c; do, frozen, 20@34c; fowls, fresh, 18@30c; do, frozen, 17@29c; old roosters, 14@19c; turkeys, spring, fresh, 50@60c; do, frozen, 30@40c.

LIVESTOCK

Cattle—Steady; steers, $9@12.75; state bulls, $4@5.75; cows, $3@6.25.

Calves—Steady; veals, common to prime, $9@18; lightweight culls, $10@11; buttermilks and fed calves, $7@10.

Sheep and Lambs—Weak; sheep, $2@6.75; culls, $2.50@3.50; lambs, choice to prime springs, $15@15.75; medium springs $11@14; spring culls, $9@12.50.

Hogs—Steady; light to medium weights $11@11.50; pigs, $11.50@12; heavy hogs, $10.25@10.75; roughs, $7.50@8.25.

HAY AND GRAIN

Hay and Straw—Hay, old or new, large bales, timothy and light mixed; No 1, $25.50@26; No 2, $23@24; No 3, $20@21; poorer, $18@21. Straw, large bales, rye, $23@24.

Grain—Wheat, No 2 red, c i f, dom, export, $1.53¾; No 1 dark spring, c i f, domestic, $1.64¾; No 2 hard winter, f o b, export, $1.53¾; No 2 northern Manitoba, in bond, f o b, export, $1.73¼; No 2 mixed durum, c i f, domestic, nominal. CORN, No 2 yellow, $1.27½; No 3 yellow, $1.24½. OATS, No 2 white, 56½c; No 3 white, 55@55½c; No 4 white, 54c; ordinary No 3 white, 52@53c. BARLEY, fancy white, clipped, 61½@63¾c. RYE, c i f, export, $1.09¾. BARLEY, malting, c i f, domestic, 89½c.

CHICAGO LIVESTOCK MARKET

Hogs—Light lights and pigs, slow, few sales, 10@15c lower; others steady to with Friday's average; meager supply. 182@200 lbs, $10.60@10.65; top, $10.65; packing sows, mostly $7.75@8; few 210@240 lbs, $9.75@10.25; finished 300@320-lb butchers, $8.85@9.

Cattle—Yearlings, 50@75c higher, highest since 1920; best heavy steers, mid-weight, 1460 yearlings, $14.50; light yearlings, $14.25; heifer yearlings up to $13.50.

Sheep—Native steady, $12.75@14; culls mostly $9@9.50; fat lambs closing steady, sheep weak and feeding lambs strong, fat range lambs, $14.70; native lambs, $14.35; fat yearlings, $11.50; fat ewes, $7.25; range feeding lambs, $13.75.

WOOL MARKET

Boston, August 26, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 45@46c; ⅜-blood combing, 44@45c; ⅜-blood combing, 43½@44c. Michigan and New York fleeces—Delaine, unwashed, 42@44c; ½-blood combing, 42c; ⅜-blood combing, 43@44c; ¼-blood combing, 43¼@44c. Wisconsin, Missouri and average New England—¼-blood, 37@38c; ⅜-blood, 42@44c; ¼-blood, 41@42c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, August 26, 1927.

Clovershed, cash, current, $14; October, $17 bid; December, domestic, $16.50. Alsike, August, $16; December, $16; December, $16.10 bid; January, $16.25. Timothyseed, new, $2 asked; December, $2; March, $2.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, August 22, 1927. Quotations cover sold car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$
Spring bran	35.50@35.75
Soft winter wheat bran	37.50@38.50
Hard winter wheat bran	36.50@37.50
Standard middlings	39.00@41.00
Soft winter wheat middlings	47.20@50.00
Flour middlings	47.50@54.00
Red dog flour	53.00@54.00
White hominy	44.75@45.20
Yellow hominy	44.70@44.75
Gluten feed	38.70
36 per cent cottonseed meal	41.25@43.00
41 per cent cottonseed meal	44.00@45.00
43 per cent cottonseed meal	45.75@47.00
34 per cent linseed meal	52.70

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .42⅞	$ .41½	$ .41½	$ .42¾
Eggs, fresh gathered extra firsts (N. Y.)	.32½	.32	.33	.33¼
Steers, good to choice (Lancaster)	11.62½	11.62½	11.50	9.00
Hay, Number 2 timothy, baled (Phila.)	18.00	18.00	18.00	24.50
Wheat, No. 2 red winter (Philadelphia)	1.45½	1.45½	1.46¾	1.43
Oats, Number 2 white (Philadelphia)	.60½	.61½	.57⅝	.51¾

Storage Eggs Make Market Dull

Review of the Week Ending August 20

EGGS—The New York market was generally dull due to the competition with storage stock. Most of the storage eggs are from dealers' own stock and there was a tendency for daily receipts of fresh eggs to accumulate. The finest grades are generally steady but most other grades sold at lower prices. Receipts of Pennsylvania, New Jersey and other nearby white eggs were light and the market advanced on top grades. Prices were about steady on fair to average stock but the demand was rather slow. Only a small proportion of the nearby eggs were suitable for the best trade.

POULTRY—The New York live poultry market was firm toward the close of the week with fowl selling at higher figures. Leghorn fowl were in demand and both these and broilers were higher. Leghorn chickens advanced and old roosters were firm. There were limited supplies of live poultry that arrived by express. Receipts of fresh killed poultry were moderate and trading was rather slow.

HAY—The markets were steady with light receipts and a slow demand. Timothy hay was steady in the eastern markets and the better grades sold readily. Poorer grades were slow and draggy. There was a good demand for top grades of timothy and clover mixtures. Alfalfa hay markets were generally steady.

FEEDS—Light flour production has resulted in smaller offerings of bran and middlings and the market was firm with higher prices. In general offerings of wheat feeds are not ample for the demand. Linseed and cottonseed meal prices were higher but the demand was less active. Gluten and hominy fed were scarce and firm.

LIVESTOCK—The Chicago hog market was weak and top prices were about 25c lower than a week ago. Beef steers were unsettled but closed steady to 25c higher while vealers and heavy calves advanced. Stockers and feeders held steady. Fat ewes, fat lambs and feeding lambs were generally steady.

GRAIN—The grain markets were slightly weaker. Wheat prices dropped due to favorable weather in Canada and the Northwest. Export inquiry was only moderate. Corn was about steady but the market showed a weaker tone on account of the decline in other grains and to the heavier receipts. Oats were unsettled while rye was lower.

County News and Notes

Adams County, Pa.—The weather has been seasonable and corn has made rapid growth with prospects of a fair crop. Much threshing being done. Oats yielding well. Wheat of poor quality, yield about 10 to 12 bushels per acre due to extensive damage by fly. More clover on the stubble fields than for years. Early peaches $2@2.50 at orchard. Early apples, $1@1.50. There is considerable seed due to wet spring and lack of sufficient sprayings. Wheat, $1.28; oats, 40c; corn, $1.20; eggs, 26c.—A. F. B., August 16.

Broome County, N. Y.—Broome County fair was held this week at Whitney Point. It is said to have been the most successful ever held. This county was visited in places by a severe hail storm on August 7, whole fields were entirely ruined. In places the hail was not entirely melted in three days. There is much haying to do yet. A number of farmers are cutting oats green and putting them in to feed. Stores pay 47 for butter and 50c for eggs.—E. M. C., August 15.

Carroll County, Md.—Due to light rainfall in July soil was becoming very dry but rain fell July 31 and August 1 and 2 and has helped light grains since. Farmers have been preparing soil for wheat, hauling manure, threshing grain and hauling wheat to market. Stinking smut has spread over a greater portion of the county. Wheat yield about 60 per cent of normal. Oats a good crop and yielding well. Corn was greatly improved by the rain and is looking good, having a fine color. Pastures have shown improvement. Gardens are looking fine, early tomatoes are ripening and early corn is being pulled. Earliest planted potatoes have been dug and yield has been reported fine. The early apple crop was small. Peaches are ripening and promise a fair yield but pear crop will be very light. Blackberries yielding a good crop of good quality berries. Prices: wheat, $1.23; eggs, 28c.—H. I. R., August 13.

Cumberland County, Pa.—This past year wheat demonstrations conducted by the County Agricultural Extension Association on the farms of Jacob Hertzler, Hampden Township, on limestone soil, and George Mentzer, Lower Frankford Township, on shale soil, showed that the bearded varieties outyielded the smooth varieties. Four varieties were included in each demonstration, Red Rock, Pennsylvania 44, Leap's Prolific and Forward. Wheat about all threshed and oats harvesting done. Potatoes being dug. Digging of early potatoes has begun; yield good. Prospects for late potatoes are good, blight is light thruout the valley. Corn is from two to three weeks late and indications are for a light crop. Hay is a good crop and pasture is improved by frequent rains. Peaches about one-third crop and apples one-half crop. Prices: eggs, 25c; butter, 50c; potatoes, $1.40; wheat, $1.20.—A. L. H., August 15.

Greene County, Pa.—We have been having some fine rains. Much needed for pastures and corn. Corn crop will be small. Hay nearly all harvested, heaviest crop for several years. Oats and wheat also good. Potato threshing not yet begun. Potato crops will be average. Not so many Mexican bean beetles as last season. Small crop of peaches. Apple crop also light. Public schools open August 29 for eight-month term. Butter, 30c; eggs, 25c.—C. M. K., August 15.

Lackawanna County, Pa.—Farmers are making hay as fast as the weather permits. Potatoes looking good. Some farmers spraying to prevent blight. Corn crops show an uneven growth. Curb markets are open and a variety of vegetables, fruits and flowers have been placed on sale. Cabbage sells for $1.00 per bbl.; cauliflower, 30@35c hd.; cucumbers, $1.50 per 11-qt. basket; chickens, 28@30c; apples, 10c qt., 50@75c basket; eggs, 45c; butter, 45@53c; new potatoes, 37c pk.—E. A. S., August 11.

Mifflin County, Pa.—Ground in fine condition for plowing. Most of oats cut and some hauled in. About half of corn fields are shooting ears and promise a good crop, while others will need two full months in which to mature a perfect crop. Hay was very plentiful. Early potatoes good and a few more good showers will make the late ones. Apples and peaches not so plentiful. Some threshing done, wheat and oats yielding fairly well. Old wheat, $1.25; corn, $1.15; oats, 50c; potatoes, $1.50; eggs, 25c; butter, 55c; chickens, 25c.—J. H. B., August 16.

Monroe County, Pa.—The annual farmers' excursion under the auspices of the Agricultural Extension Association will tour to Doylestown, August 17th. Frost was noticed on the Pocono Mountains on August 3rd. Oats crop is being harvested and a big yield assured. Few farmers have begun fall plowing. Corn is showing good prospects of a crop if season is late. Potatoes are blighted, early crop light and most all dug and marketed. Japanese beetle has done no damage yet. The West End Fair will be held August 31 on the new grounds near Gilberts. The apple crop will be very light this year. Haying is finished, big crop reported.—G. S., August 15th.

Passaic County, N. J.—All crops are showing the effects of the wet weather of the last month, especially beans of all kinds, which are a complete failure. Corn, as a general rule, looks poorly, especially on low ground. Peppers have not loaded up very well showing indications of a light crop unless the late setting sticks on the vines. Tomatoes are inclined to be small. Plants are loaded fairly well. The markets are fair and the prices quite good for this time of the year. Beets about $2 per 100; carrots, $3.50@4 per 100; cabbage, 75c@$1 bbl. but slow demand; tomatoes, the best grade, $1.50@2 basket but the demand slow owing to a large amount of South Jersey goods being shipped in, peppers in good demand, the price being $1 basket; blackberries are in good demand and $2 at 20@22c qt.—N. D., August 9.

Snyder County, Pa.—Warm weather has helped corn and oats, harvest is about thru with an unusual yield. The Susquehanna Valley picnic, August 10, at Rolling Green Park, was large. Farmers and others from Snyder, Union, Northumberland, Juniata, Mifflin, Huntingdon and other nearby counties attended. New potatoes doing well and bringing about $1@2 per bushel, according to grade. Apples yield well in spots where sprayed and orchards given proper attention. Peaches slight crop. Berries plentiful. Many farmers threshing to make room for immense oats crop. Farm work well advanced.—W. August 13.

Tioga County, Pa.—Haying well under way. Some have finished. Frequent showers have delayed the work but have done more good to other crops than have to hay, thus turning fast. Cutting will follow close on the hay. Wheat cut, a good crop and threshing beginning. Quite an acreage of buckwheat planted this year. Early potatoes a fair crop. Pastures rather short. All kinds of fruit and berries a short crop. Prices: heavy broilers, 25c; eggs, 25c; potatoes, 90c.—P. W. L., August 12.

Warren County, Pa.—County Agent Henry Reist reports that the farmers have completed the heaviest hay crop since 1917. The heavy rains have made very long grass. The corn crop is very short, estimated as being 60 per cent of normal. The oats crop is very good this year. Eggs, 45c; butter, 48c; potatoes, $2; beef, 12c; chickens, 25c; cabbage, 5c; tomatoes, 15c; cucumbers, 3 for 25c.—H. C. J., August 15

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

PEOPLE in the large cities cannot become greatly concerned about farm relief. When they have a hankering for succotash and go to the green grocers and pay 75c per dozen for sugar corn and forty-five cents for a quarter of a peck of lima beans in the pod, they forget all about farm relief and begin to think about consumer relief. When on the same day they pay 25c a pound for tomatoes and 25c for a flavorless cantaloupe they begin to feel even more sorry for themselves.

Those were the prices we paid in a residential suburb of Philadelphia on Friday, August 12th. The same morning on the Dock Street market I saw those lima beans selling at $2.50 per bushel, the corn at about 42c a dozen, the tomatoes at $1.25 per five-eighths basket and the apples at $1.50 a bushel. The farmer received these prices minus a ten per cent charge for selling. They are fairly good prices to the farmer but there is a wide gap between them and what we had to pay.

Volumes have been written about the spread of farm prices. Perhaps there is nothing new to add, but I learned a few things that are at least interesting. From what I have told you it would seem that the farmer received a fair price. The commission man did not take a very big slice for his share, but after it left his hands the price surely did soar. If we are given to jumping to conclusions we might say the retailer is gouging the public. I admit I had that notion, but I thought it would be only fair to talk to several retailers and see what they had to say in their own defense.

High rents was one of the chief reasons they gave for the high prices they charged. One man with a good corner location on the main street was paying $250 per month as rent. Others were paying more and a few less. They had from two to five men working for them regularly and extra help at the week-end. This would mean a payroll of $120 to $500 per month. Many of them were running delivery trucks at an expense of at least $50 a month and probably double that. Some were receiving their best orders over the telephone and did a credit business.

An average store would have a monthly overhead of $400, not counting the fact that perhaps half of the income would be tied up in charge accounts for a large part of the month or longer. It must sell a large amount of fruits and vegetables even at the high prices to cover the overhead. Naturally, the owner wants a profit for himself and he must build up capital to carry on the business.

One retainer near here does his own buying. He reaches the wholesale market around 5:30 A. M., buys his load, drives his truck to the store, unloads, arranges the stock and remains until 8 P. M. on week days and 11 P. M. on Fridays and Saturdays. He is making some money, but he does not have much time for enjoyment.

These facts explain to a large extent why the retailer must charge so much for his produce but this does not help your pocketbook or mine. The retailer says that the consumer is to blame for the high prices since he demands service. You can imagine what the average consumer would say about that.

I learned a number of other things about the problems that retailers have and how they affect both the consumer and the farmer, but if I wrote them all in this column the editors would have to purchase smaller type. I will tell you about them soon.

Discuss Production

(Continued from page 9)

feeding the one on the all-mash method for both chicks and chickens by D. C. Kennard, of the Ohio Experiment Station, seemed the most practical. Mr. Kennard gave credit to Wisconsin for the popularizing of this method of feeding chicks, altho he said it had long been known. The ration used commonly is as follows: ground yellow corn, 70 parts; winter wheat middlings, 20 parts; meat scrap (50 per cent protein), 5 parts; poultry honemeal, 4 parts; common salt, 1 part. This mixture is placed before the chicks in hoppers so protected as to keep the chicks out of them and fed with milk and other customary supplements such as green feed, cod-liver oil or sunlight.

One method, which, while new, but popular where tried, is the practice of growing chicks on a screen of hardware cloth of one-quarter- or even a half-inch mesh. This removes all danger of eating droppings and cuts down the spread of disease and makes necessary the all-mash feeding method.

Most discussion of diseases centered around white diarrhea, the one poultry disease that is carried from mature stock thru the egg to the chick.—W. H. Lloyd.

Inspect Delaware Vineyards

AN INCREASING interest in the development of the commercial grape growing industry in Kent County, Del., was clearly demonstrated on August 10 when approximately seventy growers took part in the fifth annual grape tour conducted thru the commercial vineyard districts of Smyrna, Dover and Wyoming, under the direction of the Kent Grape Growers' Association and the Kent County Farm Bureau in cooperation with County Agent Russell E. Wilson and representatives of the Delaware Agricultural Experiment Station.

The tour started at the vineyards of Ed Willim, W. S. Short, George P. Hudson and S. J. Hall, near Dover. After inspecting these four vineyards of Concord grapes, the growers motored to the Smyrna district to visit the vineyards of Henry Hartman, Ralph E. Spruance and George H. Carter. Attention was called to the spraying demonstrations which are being conducted in the Carter vineyard this season by Dr. Thomas F. Manns, plant pathologist of the University of Delaware, and Kent County Agent Russell E. Wilson, to show the importance of the early applications of the Bordeaux spray in the control of the black rot, and other fungous diseases that are common to the grape crop in this county.

Compare Spray and Dust

After inspecting the Carter vineyard, the growers returned to Dover where an excellent dinner was served to them in the Capital Grange Hall by the ladies of that organization. The program during the noon hour consisted of short addresses by B. B. Chase, president of the Kent Grape Growers' Association; Dr. Thomas F. Manns, plant pathologist; Dr. H. L. Dozier, entomologist, and Director C. A. McCue, of the University of Delaware.

Mr. Chase urged the growers to become associated with the grape association which has for its aim the cooperative marketing of the grape crop. Dr. Manns discussed the grape-spraying program from the standpoint of disease control, and Dr. Dozier mentioned the work which is being started in this area on the control of the grape leaf hopper and the berry moth. The subject of vineyard fertilization was discussed by Director McCue who is conducting some experimental work in the vineyards of B. B. Chase and N. W. Taylor in the Dover district.

The schedule of the tour during the afternoon included the farms of A. G. Massey, W. V. Cosden, Dr. Alfred Smith and Son, B. B. Chase, N. W. Taylor, J. H. Hilpwell, F. F. Danner and John M. Roe.

At the vineyard of Dr. Smith and Son, the visiting growers were shown the comparative results in the use of the liquid Bordeaux, and the dust treatments for the control of black rot. This type of disease control work has been carried on in this vineyard for the past three years under the supervision of Dr. Manns and County Agent Wilson. The fertilization experiments which were started in the vineyards of B. B. Chase and N. W. Taylor in the spring of 1924 to determine the proper kind of fertilizer to use to maintain the growth of the vines, and to secure a maximum yield of fruit have been interesting features of the tour each year.

Taking the grape area as a whole, the vineyards this year are in a very good condition for the growers are following better cultural and spraying practices. The yield this fall has been estimated to be reduced about one-third as compared to last year's crop.—R. E. W.

NEY

Boost your milk profits

INCREASE milk profits by giving your cows the advantages of clean, sanitary surroundings.

Ney Dairy Barn Equipmeot provides the healthful, sanitary conditions so necessary to greater milk production. Your cows will not only deliver more milk but richer milk. That means more dollars in your pocket.

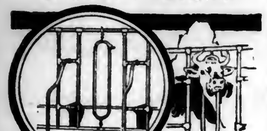
A Ney equipped dairy barn is easy to keep clean—barn chores are reduced to a minimum. Satisfied farmers, in fact all Ney users are saving time and labor with Ney Dairy Barn Equipment.

Sold by reputable dealers everywhere. Write us today for your copy of the Ney Catalog No. 51 and name of dealer ready to serve you.

Complete Dairy Barn Equipment including stalls, stanchions, water bowls, pens, litter carriers, "King" ventilators, etc.

Complete line of Haying tools including hay carriers, hay forks, hay knives, etc.

THE NEY MANUFACTURING COMPANY
Established 1879 • Canton, Ohio
Minneapolis, Minn.; Council Bluffs, Iowa



Fights Corn Borer —Pays a Profit

Rowell Trojan Ensilage Cutter actually helps fight the dreaded Corn Borer. It blows this pest into the silo, where it can do no harm.

There are a dozen other good reasons why you should own a Rowell Trojan. For example: Cut your ensilage when the corn is right which means better ensilage. Fill silo at your own convenience, not at someone else's. Save money by doing your own silo filling. Make money by filling your neighbor's silos. You get a cutter with a guaranteed-for-life flywheel, Hyatt roller bearings and other equally important features that assure years of satisfactory service. 10 H. P. engine, or equal power, runs it.

Write for catalog and free copy of valuable Government Silage Bulletins Index.

Butler County Leads in Better Sires

PENNSYLVANIA with 64 purebred bull associations has more of these organizations for the advancement of the dairy industry than any other state. And Butler County, Pa., leads the entire United States in purebred sire association work. These facts were emphasized by Professor E. H. Fitts, State College Dairy Extension specialist, at the bull association banquet given by the Butler County National Bank at the Nixon Hotel, Butler, on August 5th.

A large percentage of this county's bull associations have been sponsored by the bank, thru its agricultural specialist, R. C. Wiggins, who was formerly Butler's county agent, and in cooperation with the present county agent, W. F. Mandeville.

Besides the bull association members, the banquet guests included: Dr. R. R. Graves, of the United States Department of Agriculture; E. M. Harmon, editor of the Dairy Farmer; M. S. Prescott, editor of the Holstein World; M. T. Phillips, president of the Pennsylvania Guernsey Breeders' Association; L. C. Copeland, manager of the Register of Merit Department, American Jersey Cattle Club; L. L. Rummell, of the Ohio Farmer; E. S. Bayard; C. L. White, of the Pennsylvania Farmer.

W. C. McKay, chairman of the Agricultural Committee of the Pennsylvania Bankers' Association, presided. Among the other speakers were John V. Ritts, president of the Butler County National Bank; Elias Ritts, vice president, and R. C. Wiggins.

Show Fine Herds

CUMBERLAND COUNTY'S finest cattle were shown August 10 and 11 at the second annual Cumberland County Dairy Show held at Mt. Holly Springs, Pa. Over 200 high type grade and purebred cattle were judged by R. H. Olmstead and C. R. Gearhart, State College dairy extension specialists.

The herds of Paul Gibble, John L. Bashore, Hugh McCullough and Abner Rider demonstrated the results of better sires and efficient herd management, and showed how dairying might be both profitable and a pleasure.

Officials of the Cumberland County Cow Testing Association, the Cumberland County Holstein Breeders' Association and the Cumberland County Agricultural Extension Association under whose combined auspices the show was held look forward to its becoming a permanent annual event.

Many Join New Jersey Dairy Tour

ON TUESDAY, August 9th, 35 dairymen and their families from Burlington County, New Jersey, joined the state-wide dairy tour to Washington, D. C. The party of 115 people from the entire state arrived in Washington Tuesday evening. Wednesday morning they went out to Beltsville to the government experimental dairy farm. Here the party was divided into two groups and shown the buildings and dairy herd. The herd consists of about 250 head of purebred Holsteins and Jerseys and with this herd many experiments are being carried on. Mr. Turner, in charge of this work, is carrying on line breeding with the Holstein herd. The Jerseys are being used for in-breeding experiments.

A very enjoyable lunch was served by the Dairy Department. Sandwiches made from Swiss cheese made in the laboratory of the Dairy Department and ham cured from pork produced at the farm, along with milk produced by the dairy herd and ice cream, were very much enjoyed.

Going back to Washington the visitors were addressed by Doctor Larson, head of the dairy department, and Mr. McDowell, who has charge of the cow testing association records from all over the United States.

Visit Experimental Farm

The next point of interest visited was the Field Crops Experimental Farm located at Arlington, across the Potomac from Washington. Here experiments are being carried on in the testing out of various sources of seed and different kinds of cover crops. It was at this station that the Marglobe tomato was developed. One of the experiments being carried on that aroused the most interest was that of the comparison between foreign-grown red clover and native-grown seed. The results were so striking that there is no question in the minds of those who saw it about which kind of red clover they will use in the future. Actual yield results show a return of as high as one ton of additional hay in favor of the native-grown seed.

A banquet was held Wednesday evening. This ended the formal program and on Thursday, after looking around the city and seeing many points of interest, most of the party returned home.

New Book Published

"ROOT Development of Vegetable Crops" is the title of a new book by John E. Weaver and William E. Bruner, published by McGraw-Hill Book Co., 370 Seventh Ave., New York. A great deal of study and investigation has been given every other part of a plant, but comparatively little exhaustive effort to finding out the nature, extent and variation of the root systems of the different plants. This latter work has been well done by the authors and this book describes in detail the structure and habits of the underground part of all the common vegetables. The purpose of the authors evidently is to give the grower an understanding of the nature and habits of the roots of the plants he grows so that he may practice cultural and fertilizing methods more intelligently and effectively. The book is generously illustrated by original scale drawings and illustrations from photographs. The price is $4.

Celebrate Tenth Year

AGRICULTURAL extension work has been in progress in Indiana County for ten years. The executive committee of the Indiana County Agricultural Extension Association decided at a recent meeting to hold a ten-year celebration.

A banquet will be held on Monday evening, August 29, at 6:00 P. M. at the United Presbyterian Church at Indiana. The speakers will include Governor John S. Fisher, Dr. Charles G. Jordan, State Secretary of Agriculture, and M. S. McDowell, State Director of Agricultural Extension at State College. All farmers and their wives in the county are invited to attend this banquet. The fee will be $1.00 per plate. Speeches will be short so that the meeting can be over by 8:30.

Appointed Director

PROFESSOR F. B. MORRISON, of the University of Wisconsin, has been appointed director of experiment stations of New York to succeed Dr. R. W. Thatcher who resigned to accept the presidency of Massachusetts Agricultural College. Professor Morrison was acting dean of the Wisconsin Agricultural College and acting director of the experiment station from 1924 to 1926. He will take up his duties in New York State October 1st.

A Silo Insures Against Corn Crop Losses

(Continued from page 3)

Green clover makes good silage and if the weather continues wet at the time the second cutting is usually harvested, the wet clover can be cut into the silo. Plenty of water should be added to the clover if it is partially dry when put into the silo, since any crop when ensiled must be thoroly saturated with water in order to insure its preservation.

Experiments at the Pennsylvania State College showed that a ration containing clover silage and a moderate allowance of clover hay produced 10.3 per cent more butterfat than a ration containing no clover silage but a sufficiently greater amount of clover hay to furnish an equal amount of food nutrients.

Can Ensile Alfalfa

The last cutting of alfalfa can also be ensiled if it comes at a time when it can be mixed with corn; otherwise the alfalfa had better be made into hay since without a carbohydrate crop such as corn or sorghum the ensilage does not contain enough sugar in proportion to protein to undergo the normal fermentation process.

In addition to the insurance a silo provides against early frosts, it occasions a smaller loss of the corn crop thru weathering and fermentation than does field curing. Furthermore, the succulence provided in silage with its consequent effect in sharpening the appetite of cattle and in keeping the alimentary tract in good condition results in increased milk flow as compared with a dry ration.

"At the Vermont Station green fodder corn, converted into silage and fed with hay and grain produced 11 per cent more milk than the same amount of dried corn fodder fed with the same allowance of hay and grain." Every one of nine different trials at four different experiment stations including Wisconsin, Vermont, Pennsylvania and New Jersey have shown that the silo method of harvesting the corn crop results in more milk than the dry field curing method. The average of the nine trials shows an increase of 7.4 pounds of milk from 100 pounds of dry matter in the silage ration as compared with the ration containing fodder corn.

Produce More Milk on Silage

Since an acre of corn at the silage stage contains approximately 8900 pounds of dry matter, this means over 650 pounds more milk per acre from the corn crop if harvested thru the silo. At this rate it is not difficult to figure the largely increased returns from the corn crop fed as silage instead of dry corn and stover.

Likewise, the steer feeder with a silo has a big advantage over his neighbor without one. The average of 29 trials at five different stations including 377 two-year-old steers showed that when silage was added to a ration of clover hay, shelled corn and cottonseed meal, the feed cost of 100 pounds gain was reduced from $3.47 to $2.25, a saving of $1.22 on the feed cost of each 100 pounds gain.

At the Illinois Station it was found that an acre of corn when fed to steers as silage was worth 30 per cent more than the shock corn from the same area.

No dairyman or steer feeder can afford to be without a silo this year. Even if he has to borrow the money to buy one he will be ahead of the game in a comparatively short time. Now is the time to act, so as to have the silo built and ready for the corn crop at silo filling time.

NEWTON'S Compound
Heaves, Coughs, Conditioner, Worms. Money back if not satisfied. Two cans manufacturers' list prices or money back $1.25 per can. Dealers or by mail. The Newton Remedy Co. Toledo, Ohio.

DAIRY

DUCK & DOE RUN VALLEY FARMS—Hereford and Poland China Hogs. Sold out on boars; choice gilts for future delivery. Herd boar in charge of College Livestock. THE SAINT AMOUR COMPANY, Mortonville, Pa.

GOATS WANTED Angora does and 1 buck, not akin. State price. Write 1000 Hill, Pennsylvania Farmer.

GOATS 850 each; $45 Pair World's Best Pure White Angoras, Registered Northern growth. Thousands to Pick From. Satisfaction Guaranteed. Lloyd Goldsboro, Mohnton, Pa.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should start history and symptoms of the case in full; also full name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

MARE HAS ITCH.—I have a gray mare in good condition except she has some sort of itch in warm weather and has spells of striking belly with hind foot.—M. J. C., Lerayesville, Pa. The mare should have a laxative diet, that is, a diet that results in a regular and free bowel evacuation. Grass, oil meal and bran mashes will aid in securing this condition. Avoid corn and feed oats principally. The striking with the hind foot may be due to an itching along the belly. Try bathing the abdomen with a warm soda solution or with a two per cent solution of one of the common dips.

DROPSY.—I have a dog that has had dropsy for about three months. Is there anything I can do for him? —Mrs. J. P., Mays Landing, N. J. This is a condition evident in aged dogs and probably is due to faulty heart action. Watch the diet closely and feed sparingly. Meat and milk should furnish the major portion of his food. See that the bowels move regularly. Give a teaspoonful of castor oil every other day for one week.

EYES ARE BLOODSHOT.—I have a year-old Collie which lately has been troubled with bloodshot eyes, matter collecting in the corners. The dog seems to be healthy otherwise. Will you please state the cause and the remedy?—R. E., Flanders, N. J. This is probably due to an infection. Bathe with a warm boric acid solution. Put a drop or two of five per cent argyrol or of two per cent merchurochrome in the eye daily, using a medicine dropper.

A farm expert, after giving a lecture in an agricultural district, announced that he would be glad to answer any question that was put to him.

A voice from the audience:

"You seem to know a lot, sir, about a farmer's difficulties. May I ask a question about a very important one? How can you tell a bad egg?"

The lecturer waited until the laughter had died away.

"If I had anything to tell a bad egg I think I should break it gently," he answered quietly.

"Yes, I heard a noise and got up, and there, under the bed, I saw a man's leg."

"Good heavens! The burglar's?"

"No, my husband's. He heard the noise, too."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 160,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions. 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate ($5 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry, Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

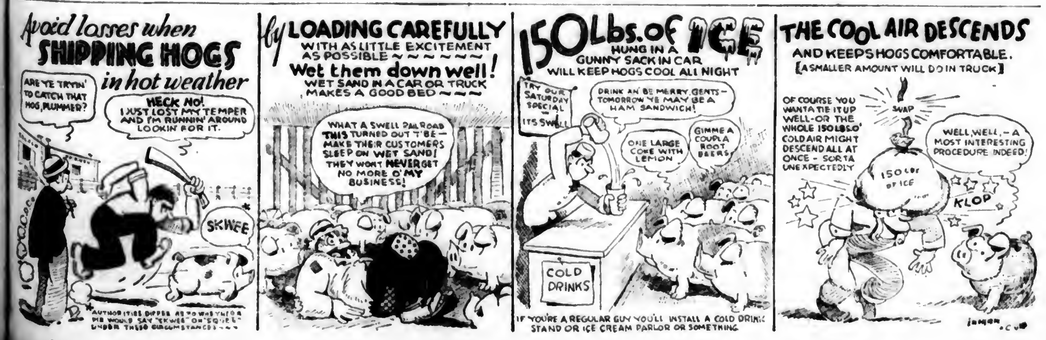
Herb the Handy Man Tells How—



BULLDOG
Pipeless Furnace
Comes Completely Erected

Heats 8 Rooms
at about the
Cost of One!

"My 8 room house has 7 windows on the northwest side downstairs, so it takes SOME heat! The Bulldog doesn't burn very much more coal than my old stove used to, and it heats the whole house, where my stove would heat only the one room it was in."—Ernest H. Marzoli, 72 South Street, Milford, N. H.

3 Tons Heats 8 Rooms

"My furnace has been in use for 3 years and our eight room house is always warm, including floors. I used 3 tons of hard coal last winter to heat our eight room house. You can use anything that will burn in the Bulldog. We often warm and remove the dampness during a stormy period in summer with waste paper."
—Lester F. Coons, Ellenville, N. Y.

Cuts Coal Bills in Half!

"I had a hot air furnace in our seven-room house before I got the Bulldog and our house was always cold. With the Bulldog it only takes *half as much coal* and we had weather below zero, and the house was nice and warm in the morning when we got up."
Jese. T. Conrad,
1211 W. Arch St., Shamokin, Pa.

2½ Tons Heats 5 Rooms

"There is no heater to compare with the Bulldog. I burned 2½ tons of coal last winter and heated 5 rooms and a bath."
—Walter Geary, Gloucester, Mass.

Fuel Saved Pays for Furnace

"This is the second winter I have used the Bulldog and the savings in my coal bills have paid for my furnace."
—Milton E. Spain, Casey, Ia.

No Money Down! Small Monthly Payments—Installed Almost as Easily as a Cook Stove!

Bulldog Furnace Co. [BABSON BROS. Sole Distributors]

CHEVROLET

Consistent Progress and Proved Design- have resulted in the most *Amazing Quality* in Chevrolet History!

The vast resources of General Motors and the tremendous manufacturing facilities of Chevrolet have made possible this amazing quality.

GENERAL MOTORS

The Chevrolet Motor Company is a unit of the General Motors Corporation — the greatest automotive organization in the world. Utilizing the vast resources and engineering facilities of this organization, Chevrolet enjoys, to the fullest extent, these manufacturing advantages—a fact that is largely responsible for Chevrolet's amazing values.

PROVING GROUNDS

The General Motors Proving Ground comprises a tract of 1245 acres. The entire tract is criss-crossed with roads of every type—from a concrete speed track, to deep-rutted clay lanes. There are hills that vary in steepness from a slight inclination to 24%. Fleets of Chevrolet cars are under constant test at the Proving Ground—driven day and night under every conceivable condition of road and load.

TWELVE GREAT FACTORIES

Chevrolet cars are manufactured in 12 great factories, located at strategic shipping points throughout the country. Every factory is equipped with the most advanced modern machinery known to engineering science—performing every manufacturing operation with exacting scientific precision and maximum efficiency.

Today's Chevrolet embodies the most amazing quality in Chevrolet history—the result of 14 years of consistent development and improvement.

In carrying out this policy of consistent betterment, the Chevrolet Motor Company has profited immeasurably from its close association with the General Motors Corporation—the world's greatest producer of automotive products.

The General Motors Research Laboratories, under the direction of the most famous scientific staff in the automotive industry—

—the General Motors Proving Ground, the greatest outdoor testing laboratory in the world—

—the General Motors engineering staff—

—the vast General Motors resources—

—all have been constantly utilized in making Chevrolet the world's finest low-priced automobile!

Go to the display room of the nearest Chevrolet dealer and see today's Chevrolet. One inspection of its custom beauty, one ride at the wheel of your favorite model—and you will know why thousands are investigating the market each day . . . and turning to Chevrolet!

Smut-the Great Black Destroyer

Losses to Pennsylvania's Wheat Crop Can Be Prevented by Seed Treatment

By R. S. KIRBY, Pennsylvania State College

THE way stinking smut of wheat has become the great black destroyer of Pennsylvania wheat within the past six years and the successful battle waged to control it is one of the most interesting stories in modern agriculture.

Stinking smut this year has caused the following losses:

1. The replacement of over one bushel of good wheat per acre on the average in Pennsylvania with one bushel of smut. Further, much greater losses occurred in many of the best wheat-producing counties in the southeastern part of the state.

2. A smut discount of from 5 to 45 cents on every bushel of wheat which smells of this smut or has over two smutted kernels in each 300 grains, since such smutty wheat is unfit for making flour until it goes thru an expensive cleaning process. Field inspectors indicate that in sections where smut is severe, over one-half of the wheat will be docked for this smut.

3. Inability of farmers in Pennsylvania to sell thousands of bushels of smutted wheat at any price, since many grain dealers are unable to dispose of this type of wheat.

Losses due to stinking smut: Black, over two bushels per acre; shaded, over one bushel; while, less than one bushel.

A simple outfit for treating wheat seed, designed by the Penna. State College

It Is a Parasite

Smut is a plant which must rob a food-making plant like wheat if it is to exist. A stinking smut plant thus passes most of its life as a parasitic fungus growing inside the wheat plant.

A smut plant is similar to a wheat plant in that both reproduce themselves by seed (smut seed usually called spores). Both types of seed remain dormant for years if placed in a dry place but start to sprout at once if placed in moist soil having the right temperature. The smut seed (spore) sprouts by sending out a minute strand-like root which soon starves to death if it is unable to come in contact with a sprout of wheat a few days old.

Thus smut can enter the wheat plant only during the first couple weeks of its growth. If the smut strands gain entrance into the young plant, they grow up inside the stem until the head of wheat is formed. This smut usually grows into every young grain on a head and replaces all of each wheat kernel except the seed coat with from one to four million smut seeds.

Threshing Machine Spreads the Pest

Many of the smut-filled kernels are broken open during threshing, thus allowing the tiny smut seed to become spread over the wheat kernels of the crop being threshed as well as the next three or four crops threshed by the same threshing machine. Smut seed must in practically every case be planted with the (to page 23)

Buyers Organize-Why Not Sellers?

FIFTY years ago farmers consumed 80 per cent of the production of their land, and sold but 20 per cent. Today they consume 20 per cent and have to sell 80 per cent of their production. Marketing is the farmer's biggest problem. Last year, out of a total production valued at 12 billion dollars, the farmers had to find a market for 9½ billion dollars' worth of products. Even in these days of big business that is a tremendous output for one industry.

When the farmer had to sell only 20 per cent of his production, it was not a difficult matter. Each individual could tend to his selling and he fared rather well. But marketing 80 per cent of production is another matter. It is beyond the ability of the individual to handle so as to safeguard his own interests. There are millions of sellers and only a few thousand buyers. And the buyers can set the price.

This economic revolution, largely, is responsible for many of the difficulties besetting agriculture today. It has demanded from the farmer an alteration of all his methods, aside from production. It has handicapped him particularly during a period of depression that followed the post-war boom.

In this struggle the farmer has had no experience to guide him. He has tried this and that scheme which promised relief. Many have failed; some have met with moderate success. But the problem is still without solution and the situation from a marketing point of view is growing more serious every year.

The weakness in the farmer's position is that he sells as an individual. Sellers of farm products are numbered by the millions in the United States. Not so the buyers. They are well organized. A few thousand firms and individuals buy the 9½ billion dollars' worth of crops and livestock produced annually.

Must Play Fair with One Another

It is possible to bring about something like parity in this relationship between sellers and buyers thru the development of cooperative marketing. If farmers will abandon the old individualistic notion, band themselves together, apply business methods to their procedure, keep faith with one another, and properly merchandise their production, they can have as much influence on prices as the buyers of their production.

The difficulty is not the price that farm products bring from the consumer. The consumer pays enough today. The trouble is that the farmer gets too small a portion of what the consumer does pay. The farmer gets approximately one-third of the retail price of his products. Two-thirds of the price the consumer pays goes to the buyers, the speculators, the manufacturers and the distributors. The cost of distribution is twice as great as the price the man who grows the products receives.

This division of the consumer's dollar is unfair. It cannot be justified. It should not be tolerated. It need not continue.

Farmers can greatly improve their economic situation thru the development of cooperative marketing, which is another name for organized selling, to compete with organized buying. A good start has been made. Between a fourth and a third of all farm products of the United States were marketed cooperatively last year. Canadian wheat growers have demonstrated the practicability of cooperative marketing as applied to grain. In Denmark, in England, in Germany and many other places, the work-ability of cooperative marketing repeatedly has been demonstrated.

Comments on the Week's News

IT IS evident that five more lives have been sacrificed in efforts at trans-oceanic flying. An airplane race between Los Angeles and the Hawaiian Islands was staged and four planes started. Two of them arrived without mishap, but the other two,—one of them carrying a woman and two men,—have not been heard of nor found. The Navy Department has had a score of vessels and several hydroplanes combing the Pacific for a week to no avail. The number of fatalities and the extreme hazards of ocean flying are creating strong sentiment in favor of prohibiting the offering of prizes for such attempts.

✣ ✣ ✣

The last act in the most sensational legal drama in the United States in years was played on the night of the twenty-third when the two convicted men, Sacco and Vanzetti, were executed. For seven years this case has been before the public. So strenuously was it fought that it aroused sentiment all over the world. The condemned men were pronounced and self-aeknowledged radicals,—anarchists. The charge was made that, because of this, they did not get a fair trial. So emphatic were the charges made that they were being persecuted because of political beliefs, that many people having no sympathy with radicalism joined in requests for new trials. The case was carried consecutively to the Supreme Court, the Governor, the United States Supreme Court Judges, and even to the President. Careful reviews of the case found no evidence of unfairness and all legal authorities and courts refused to grant a new trial. Both men protested their innocence to the last.

✣ ✣ ✣

The city papers with their usual perspicacity (?) are stating that the recent price of cotton is making $200,000,000 "velvet" for southern farmers. They forget the debts that have been piling up because of the ruinously low former prices, and the heavy expenses of cultivating the acres which were sufficient to raise a big crop. But then the city editors seem to think that every dollar the farmer gets is "velvet."

✣ ✣ ✣

Are some tenant farmers disfranchised by the tax revision law? That is a question which is being asked in some places in Pennsylvania. The officials are not so much concerned, however, by the possible disfranchisement as by the reduction in amount of county taxes. The new law removes livestock from the list of taxable property, and since farmers in some counties pay no occupation tax, those owning no real estate have no taxes charged against them, hence will have no tax receipt for county taxes,—the legal passport to a voting booth.

✣ ✣ ✣

The situation referred to above is causing officials to look around for some other tax resource. Why not look around for some place to cut expenses? When farmers and other business men find their revenues running behind they begin to look towards retrenchment. But not so the public spenders. Armed with legal authority they proceed to "get the money" with which to pay their salaries and maintain pet enterprises.

✣ ✣ ✣

The strict embargo on shipments of produce from the Philadelphia district was modified on August 23 to allow the shipping of green goods after they have been inspected. Most growers, as well as some of the official investigators, are convinced that the spread of the beetle cannot be stopped and that more of the public money should be expended in teaching the public how to fight the beetles by proper spraying.

✣ ✣ ✣

Because of the general public apathy and inactivity, about the only source of political excitement in Philadelphia is when the Organization stages a row within itself. And they have been doing this during the last few days. Charges of graft, police protection, and extravagant expenditure have been made by the organization candidate for mayor against the present organization officials. But nothing is likely to come of them. No doubt, we will hear them singing, "Hail, hail, the gang's all here," before election day.

"Good Farming and Poor Living"

AN EXCHANGE contains the following editorial which we wish to pass along:

"The representative of the National Farmers' Union of England, visiting the fertile fields of Oregon, says that good farming and poor living go together; that high standards of intensive cultivation are impossible without cheap labor, content with a low standard of living.

"The American idea is to substitute power for human labor, wherever possible; to put steam and gas and electric power into the fields in lieu of overworked men and women and children, and so make humanity free.

"The basic facts are alike, in England, America, everywhere—that cheaper, stronger, more tractable labor is essential. But here we vision it in machines, like the marvelous tractor and in a reasonable tariff to protect American production, not in low-browed, bedraggled, despairing serfs toiling for an overlord who is a "Good Farmer."

Watch Out for the Dope Fiend

THE peddling and use of dope has thus far been largely confined to the cities, but the vigor with which most cities have been trying to stamp it out has caused efforts to be made towards extending the trade to the smaller communities. There have been reports of activity in small towns and rural communities near the big cities. Young people in their teens, and even children, have been given small quantities, it is said, to start the craving. Such nefarious business merits the strongest penalty that can be devised.

Dope is one of the foundations of modern crime. Its use by an increasing number of young people is shown by the lessening age of convicted criminals. Thirty years ago the average age of convicts sent to the penitentiary was between thirty-two and forty-two years. Today, the average is between twenty-two and twenty-five years, and nearly one-third are under twenty-one years. It has been found that a majority of the big crimes are committed under the stimulus of dope. If this is a result of following the modern philosophy of the young, may we speedily return to the older if more puritanical standards.

Milk Price Raise Blocked

FOLLOWING the announcement by the Dairymen's League that the price of milk in League territory would be advanced on August 15, came the statement that the plan had been blocked by the refusal of Sheffield Farms Company to raise its price. This is the principal competitor of the Dairymen's League organization and its action made it impossible for the League to carry out its plans for raising the price. It is claimed that the failure to put the raise into effect is causing a loss to the producers of a million dollars a month.

It is said that the Sheffield Farms Company has been advocating the enlargement of the New York milk shed so that a greater quantity of milk may be shipped into New York City. If this should be done it will, of course, make it difficult, if not impossible, to raise the price when necessary. A supplement to the Dairymen's League News says:

"It is reported that prior to the buyers' meeting with the League Executive Committee, Truman Cole, John J. Dillon and C. W. Newton appeared before the New York Milk Conference Board and stated that there should be no raise in the price of milk before October 1st, and that milk should be bought and sold on their proposed two-price plan."

How Much Are You Taxed?

ONE of the pet claims of the big business man is that capital pays the taxes and that the laboring man pays comparatively little of the expenses of government; therefore, the big man should have the most to say. Listen to what William Bennett Monroe, of Harvard University, says about this:

"Every income earner in the United States pays, on the average, at least $350 per year in taxes of one sort or another, in other words, about a dollar a day.

"People who own property and earn large incomes are the ones who actually hand the collector his tax money, to be sure; but they merely give him, for the most part, money which they have collected from others.

"The owner of the apartment house collects taxes from his tenants in the form of rent; the storekeeper collects taxes in the price of his goods, the lawyer and the doctor collect taxes when they charge fees. Taxes are an element in the cost of everything, an element just as certain as interest, wages, or profit.

"Taxes do not usually stay where they are levied. They are shifted from one shoulder to another until they finally reach someone, usually the ultimate consumer, who cannot unload the burden upon anyone else."

The ultimate consumer supports the government. Remember this when you vote increased taxes.

REDUCE FREIGHT RATE

Reforestation Policy Should Be Expanded—United Kingdom Buys More Apples—Workers War Against Pests.

Washington, D. C.

THE recent decision of the Interstate Commerce Commission ordering reductions in the freight rates on deciduous fruits from California to Eastern points is the first time the commission has given producers the benefits of a lower rate, due to the Hoch-Smith resolution which directs the commission to give agricultural commodities affected by depression the lowest rates that it is possible to give without running counter to the provisions of the Interstate Commerce act and the carrier rights under the federal constitution.

The commission's order reduces the rate on fresh deciduous fruits other than apples, in carloads, from $1.73 per 100 pounds to $1.60 per 100 pounds.

It is probable that an effort will be made to secure the application of the same principle to the transportation of fruits and vegetables originating in the East.

Not Favorable to Reclamation Policy

A strong, healthy sentiment is developing against the government's reclamation policy. In a recent address, Nils A. Olsen, assistant chief of the Bureau of Agricultural Economics, said that much of the farmers' troubles has been due to federal and state land policies which stimulated unwise extension of agricultural production. He advocated a federal land policy which would prevent the present great reserves of potential crop land from being brought into use so rapidly as to cause chronic surpluses of farm products.

Mr. Olsen believes the outgrown homestead policy with its stimulus to land settlement should be abandoned, our reforestation policy should be expanded, and a system of regulation applied to the uncontrolled open range of the West.

Apple Imports Increase

British imports of apples from the United States are steadily increasing in volume. This is largely due to the "Eat more fruit" advertising campaigns conducted thruout the United Kingdom by the dealers during the past few years, according to the Department of Commerce.

American-grown apples to the amount of 3,939,000 bushels were marketed in the British Isles in 1921; 3,461,000 bushels in 1922; 6,762,000 bushels in 1923; 8,394,000 bushels in 1924, and 6,443,000 bushels in 1925. United States statistics show approximately 10,583,000 bushels of American apples were exported to the United Kingdom in 1926, but in that year there was a poor apple crop in Europe and a bumper crop in the United States.

Farmers Will Depend on Science

Farmers in the future will depend more largely upon science and research than they have in the past in their war against insects, says Dr. Austin H. Clark, biologist of the Smithsonian Institution. "Just as the modern army owes its effectiveness to the labors in the past of a relatively small minority of men, largely unconnected with a military life, so the farmers in the future more and more will be dependent upon the labors of the research students who, by concentrating on some special line in entomology, parasitology, chemistry or other science and spending all their lives investigating special problems, will form their diplomatic, ordnance and small arms departments."

No Overproduction of Canning Crops

There will be no overproduction of cannery crops or the cannery pack this year, according to the National Canners' Association. The pea pack this year is estimated by reliable authorities to be at least one-third less than a year ago. The sweet corn crop is estimated by the government crop reporters at 450,400 [illegible] compared with 803,600 [illegible] year.

Cooperatives Make Rapid Growth

Reports to the Department of Agriculture indicate that cooperative activity among the farmers of Pennsylvania is making a rapid growth. The total cooperative business in Pennsylvania for 1925 amounted to $30,913,614 and the total of 1926 was $35,177,009.

It is explained that these figures include only the business reported as having been transacted by Pennsylvania farmers. Seven large-scale associations operating in several states, including Pennsylvania, report having transacted business with Pennsylvania farmers in 1926 to the amount of $28,876,419, and 95 local organizations report sales to the amount of $6,300,000.—E. E. R.

TESTING CONTINUES

State Money Allotment Estimated Sufficient to Meet Demands—Increase Acreage of Wheat.

Harrisburg, Pa.

ACCORDING to officials of the Bureau of Animal Industry, testing of cattle for tuberculosis in eastern counties is going ahead with every prospect that it will continue thru the winter at an extensive rate. State authorities are keeping in close touch with Washington so there will be no delay on the score of funds, the allotment of state money until the summer of 1929 being estimated as sufficient to meet the demands. The report for the summer months will run close to a record-breaker for cattle tested.

Wheat Acreage Is Greater

Latest estimates of the Department of Agriculture at the State Capitol show over 1,200,000 acres will be planted in wheat this fall, a considerable jump over those actually planted in 1926, altho the planting of last year slumped owing to unfavorable weather conditions. State officials are calling to the notice of farmers generally the great importance of careful selection of seed wheat and pointing out the loss in actual dollars and cents incurred by wheat so filled with weeds and disease as to grade very low. In many sections of the state plowing is actively under way and ground being made ready. Threshing has been followed by immediate shipment in quite a few of the big wheat counties. One of the interesting facts to be ascertained this fall will be on how many of the close to 200,000 farms in Pennsylvania wheat will be grown. Some authorities here declare there are not 200,000 farms which can be called farms in the state now. They predict a noticeable decline when the figures are in.

Borer May Spread

Fears have been reported here from the central counties that the corn borer may spread into the Susquehanna Valley next year in spite of the elaborate campaign being conducted against the pest. Farmers in the big corn raising counties of the southeastern section, who have been cooperating in the crusade against the Japanese beetle are frankly apprehensive of the invasion of the borer. One report is that corn raising will be considerably decreased in some counties next year as a voluntary means of lessening opportunities for spread out of the area quarantined at present. State and federal officials are making close observations of conditions in the infested districts.

Great Road Operations

While Pennsylvania has gotten used to road building on a tremendous scale the facts are there are now nearly 200 contracts in force in the state and the rate of building is said to be large. The state maintenance force is said to be at the peak both in numbers and extent of operations. Announcement is expected shortly of offering of more projects for closing up of gaps in lines of improved road. The closing of the sixty or more gaps of an aggregate of 130 miles will mean opening of a thousand miles of improved road.—T. C.

MILK LAW EFFECTIVE

Causes Loss to Small Producers—Want Better Tomato Seed—Inspect Irrigation—Business Gains.

Trenton, N. J.

THE statute requiring all milk to be from tubercular tested cattle or pasteurized is rapidly improving the quality of New Jersey milk, but, on the other hand, is expected to cause considerable confusion and possibly loss to farmers who do not have a proper outlet for their supply. The law primarily affects many small retail milk dealers and scores of farmers who have been selling their milk to consumers in nearby cities. It means that these folks are not permitted to sell milk from their herds unless their cattle are tested or unless the milk goes thru a pasteurizing plant. As a pasteurizing plant costs some $20,000 to $25,000 there is little alternative left to small milk dealers but to deal in milk from tested cows, or quit. In some cases where the effects of the new law would be most keenly felt, the farm organizations have taken steps to aid their membership and the gain in tested herds within recent months has been without parallel in New Jersey.

Ask Tomato Certification

With good tomato seed one of the most important factors in can-house production in the southern part of the state, several of the leading farmers are discussing the advisability of having the New Jersey State Department of Agriculture certify seed fields, along lines similar to the potato certification work. The State Department has taken the matter under advisement and plans to develop at least a tentative method of certification in time to be of some help to the farmers this season.—W. H. B.

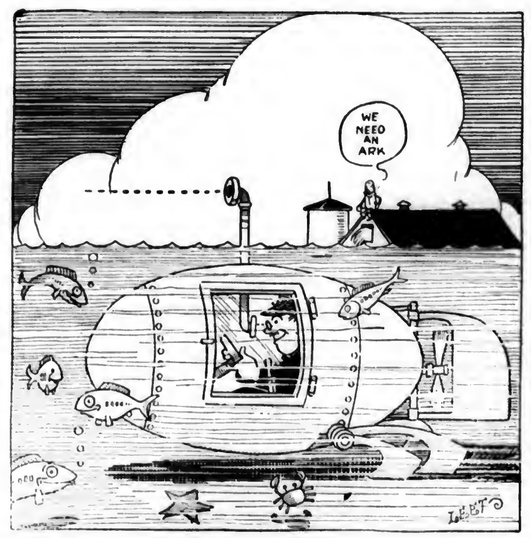
Burlington County Farmers Tour

A group of Burlington County farmers have just completed a trip thru Cumberland County inspecting some of the irrigation farms in that district. There is a growing interest in overhead irrigation in Burlington County. Indications point to a big increase in that county of the overhead irrigation next year. Among the farms visited were those of Jack Thornboro and Bert Keen, Millville; the Sheppard Farms, Cedarville, and Joseph Shoemaker, Fairton.

Roadside Markets Do Big Business

Conservative estimates by market officials in New Jersey place a value of $125,000 on the farm products that will be sold this year on the roadside markets of the Roadside Market Association. A gain of approximately $50,000 over last year is anticipated from the big growth in the business of these stands. No record is available on the amount sold on the non-member stands, but it is estimated that this will run close to another $125,000.—A. K.

THE SUBMARINE TRACTOR—FOR USE DURING WET SEASONS



FIND HESSIAN FLY

Wheat Crop Suffers Loss Because of Fly—Cortland County Fair Has Record Attendance and is Success.

Ithaca, N. Y.

THE Hessian fly is found much more plentifully here this year than usual. Wheat sowing is being delayed until after September 20 wherever the danger is understood. Grain is largely harvested now, threshing has begun, and plowing for wheat is under way.

Local Efforts Save a Fair

The 59th annual session of the Cortland County Fair has just closed with a record attendance and sale of tickets, also with record entries. This is a fine demonstration of what common people can do in support of an old institution of this sort. After many years of being regarded as the finest and largest county fair north of Hagerstown, Md., this fair last year became insolvent. Its management made an earnest appeal to the Farm Bureau and to the people to take an active hand in reorganizing and directing the fair along new channels with the alternative of closing the gates if cooperation was not given. The people met the appeal and gave practical suggestions as to changes. A lot of inconsequential classes were dropped and premiums were increased on the exhibits that depict actual leading activities of the section. Cattle classes were fewer in number, but the increased prizes called out a real cattle show. Family season tickets were resumed and sold in advance in such numbers that bad rain ruined the program the fair would have been assured of success financially.—M. G. F.

Get the Moult Over

Increase Egg Production All Winter

Eggs and feathers are made of practically the same elements. Hens can't make both at the same time—they don't lay until they stop moulting. The whole key to winter eggs is now in your hands. Read what J. C. Fishel & Son say. Heed their advice on helping your hens thru the moult.

Why do successful poultrymen like Fishel, Holterman, Farrow, Kerlin, Keeler and thousand of other breeders use Dr. LeGear's Poultry Prescription? It is simply because it is profitable for them to do so.

Follow the success of successful breeders by using

Dr. LeGear's Poultry Prescription

MINERAL-IZED

Dr. L. D. LeGear, V. S.
1st Surgeon's Robe
Graduate Ontario Veterinary College, 1892
35 years' Veterinary practice.
Noted authority on ailments of Stock and Poultry

Contains essential MINERALS for egg production, rich blood, bone tissues and feathers—TONICS for the blood, nerves and egg organs—CONDITIONERS for the digestive organs—LAXATIVES for the bowels; all being vital ingredients lacking in home or commercial mixed feeds, without which best results cannot be obtained from poultry.

Every successful poultryman knows that ordinary feed does not supply ample bone, feather and body-building ingredients. He knows how vitally important proper feed is to maximum egg production and fertility—and that an easy, quick, dependable method of feeding is to mix Dr. LeGear's Poultry Prescription in all laying and feed mash. Get a pail or package from your dealer. Use it up. If you are not fully satisfied with results, return empty container, and he will refund your money.

Dr. LeGear's Lice Powder—nothing like it for ridding nests, poultry, etc., of lice, mites, etc.

Dr. LeGear's Dip and Disinfectant—should be used regularly to keep poultry houses, barns, etc., sanitary. A positive exterminator of vermin, lice and many disease germs.

FREE—New Poultry Book "Dr. LeGear's Complete Poultry Guide and Feeding Manual," an up-to-date treatise on every conceivable poultry question, including feeding formulas. Ask your dealer for a copy or send us 6c in stamps to cover mailing.

Dr. L. D. LeGear Medicine Co., St. Louis, Mo.

Ask Your Dealer for Dr. LeGear's Poultry and Stock Remedies

Dr. L. D. LeGear Medicine Co.,
St. Louis, Mo.

Gentlemen: We can honestly say that Dr. LeGear's Poultry Prescription will aid in quick maturity and even growth of young chicks, and is invaluable as a conditioner for laying hens. It will slip hens through the moult and return them to laying condition in a marvelous manner.

What the poultryman needs is something to help nature, and you certainly have it in your Poultry Prescription.

We can also recommend your poultry remedies. I know Dr. LeGear and his ability, therefore have no hesitancy in recommending Dr. LeGear's Prescription and Dr. LeGear's Poultry Remedies to all poultry raisers. Wishing you continued success, which you so richly deserve, we remain,

Very sincerely, J. C. FISHEL & SON,
Per Carl J. Carter, Prop.

CAMBRIA FENCE

pays you in long service

CAMBRIA FENCE is a good investment because it will protect your farm for years.

It is made of good, clean, steel wire, heavily coated with zinc by our own process. Cambria Fence is a standard hinge-joint, cut-stay field fence with all the advantages of that type, so that you can depend on it to be permanently uniform and tight.

Ask your* Dealer *for Cambria Fence—it will pay you

BETHLEHEM STEEL COMPANY, Bethlehem, Pa.

BETHLEHEM

FOR some reason or other our earliest sweet corn did not fill as well as it usually does. Many of the ears failed to fill up evenly. This was especially true of the Golden Bantam. Whether it was because of the wet, cool weather we are not able to make out. The white varieties are doing better in this respect. Two of the best white early varieties we have are the Early Malcome and the Vanguard.

✦ ✦ ✦

IT IS about eighteen years since we planted the first Earliana tomatoes, then called Spark's Earliana. They were early, and those that came to maturity were nice, but the plants were lacking in vigor, died quickly, and many of the tomatoes succumbed to blossom-end rot as soon as they began to ripen. Thanks to the work done by the gardeners at State College we now have the Penn State Earliana, a larger, better and more vigorous early tomato. In our experience it is the only strain of Earliana that is worth planting.

✦ ✦ ✦

WE ARE well pleased with the Marglobe tomato, a cross between the Marvel and the Globe. Seldom have I seen a stronger, more vigorous and disease-resistant tomato plant than is the Marglobe. The fruit is firm, solid and meaty, and beats the Earliana in that it ripens evenly over the stem end. It matures only a few days later—possibly five or six—than the Earliana.

✦ ✦ ✦

OUR first planting of celery was put in rather deep furrows on almost level land. The extremely heavy rains made it necessary to draw the washed-in soil away from the young plants once or twice. But it is growing nicely and is ready for the first handling. The later planting is fairly jumping along. We had very large plants,—almost big enough to use when they were set, but they had good, fibrous roots and the tops were cut far back. Moist, cool weather gave them a good start.

✦ ✦ ✦

WE HAVE been conducting the roadside market with very good success. Corn, beets, cabbage, potatoes, squashes, onions, blackberries and tomatoes have been the chief stock so far. Of course, we have many calls for products we do not yet have, and have not as yet had any big leader such as melons, but the trade is all we expected and prices have been fairly good. Our motto is, good fresh produce at fair prices. The public is looking for that kind of treatment.

✦ ✦ ✦

BUT the public does not always get what it is looking for and has a right to expect. There are some roadside markets, mostly conducted by "gyps,"—those who buy cheap stuff at wholesale markets and go out and set up stands,—and these have made many people wary of such markets. But it is surprising how many repeat orders one gets when it becomes known that customers are treated fairly. Anyone who starts out on the principle that it makes no difference since the custom is transient makes a big mistake and will soon be out of business. Here, as everywhere else, the old motto holds good,—"Honesty is the best policy."

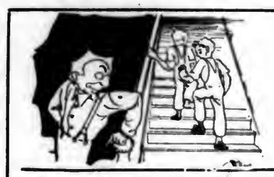
✦ ✦ ✦

WE GOT a good calling-down from the better and not always silent partner last spring when she learned that we had not put manure under the melon hills as usual. Well, they have been growing fairly well, taking the weather into consideration, and a good many melons are growing nicely. However, I think we will use manure after this. The vines have been sprayed six times, but still a good many of them are going bad. Spraying melons by hand is a big job, and I wish the experts would settle their differences and develop a dusting process on which they could agree and which would do the trick. And another thing: Seed growers must produce better melon seeds. I am convinced that success depends as much on good seed as on any other factor.

A man was taken ill and his wife hurried him to the hospital.

"Has he got pajamas?" said the matron, as she arranged for his admission.

"Pajamas?" exclaimed the wife, "I dunno what it is, but he's got an awful pain in the stummick."



The Cheerful Plowman

Regular Habits for Boys

MY SISTER'S sons are twelve and ten, they're bright and healthy little men, they're filled with pep, and zip, and go, their eyes and cheeks are all aglow! They are not cranky, cross, or mean, their skin has such a ruddy sheen! I often wondered why those lads had health and colors in such seads until they stayed with us a spell and then I saw the reason well!

Such habits! Why, they hit the hay right on the minute every day, and they are up so blithe and hale right on the dot without a fail. They eat a certain, sane amount, then stop precisely on the count! I do not know, I am not sure, that habits are a perfect cure for every ailment in the air that threatens kidlets everywhere, but I do know that while these boys are masterpieces, full of poise, my other sister's little lad is always cross and always bad.

Why, sister Mary's little Ned has no set time to go to bed! I've seen him time and time again sit up till thirty after ten; I've seen him rise at six o'clock, before his father fed the stock, and then again I've seen him sleep until his father fed the sheep! His mother never seems to care just what he eats, or when, or where! He isn't sick, he isn't well, just grumbling, cross, and pelly-mell! I figure steady habits serve to steady growing children's nerve, I figure they acquire powers, in part, by keeping steady hours!—J. Edw. Tufft.

They talk about you

It's a fact that most of those who offend by halitosis (unpleasant breath) are unaware of it.

The one way of putting yourself on the safe and polite side is to rinse the mouth with Listerine before any engagement — business or social. Immediately, every trace of unpleasant odor is gone, and with it that dread fear of offending. And the antiseptic essential oils combat the action of bacteria in the mouth which is the source of most cases of halitosis.

⅓ Had Halitosis

120 hotel clerks, 40 of them in the better class hotels, said that nearly every third person inquiring for a room had halitosis. Who should know better than they?

Face to face evidence

Really fatidious people keep a bottle of Listerine always handy in home or office to combat halitosis. It's a good idea for everybody to follow. Lambert Pharmacal Co., St. Louis, U. S. A.

LISTERINE

—the safe antiseptic

FALL IN LINE!

Millions are switching to Listerine Tooth Paste because it cleans teeth whiter and in quicker time than ever before. We'll wager you'll like it. Large tube 25c.

Seed Wheat

—Kinds that yield better, costs you very little to sow them

You can raise 5, 8, maybe 10 more bushels to the acre with Hoffman's selected strains of heavy-yielding varieties. Our Seed Wheat is selected from choice crops that show no smut. It is sound, plump wheat, harvested right and well-cured.—

free from rye, garlic, cheat and weed seeds

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Loss of Soil Nitrogen is Not Rapid

LAST year, in the spring of 1926, cabbage and strawberries were planted in adjoining plots of ground. The area where the cabbage was grown was by all odds the poorest piece of land on the whole farm. To help insure a worth while crop one ton per acre of high grade fertilizer was harrowed in before planting. The strawberries on the adjoining plot which was then more fertile received a half ton per acre of the same fertilizer. Subsequent events provide an interesting lesson in the residual effects of heavy fertilization.

After the cabbage was harvested in 1926 continued wet weather prevailed. No green manure crop was planted but a thick growth of timothy and other grasses came in during the unusually rainy fall months. This spring the volunteer sod following last year's cabbage looked so good that an acre of it was left for hay and produced two tremendous loads.

Plant Food Carried Over

Immediately afterwards this sod and the adjoining berry patch were plowed and were drilled on the same day with oats, for a green manure, at the rate of four bushels per acre. Neither of these plots received any fertilizer this year. The soil in both is a gravelly loam, fairly susceptible to leaching. In addition, the fall of 1926 and spring of 1927 have been unusually wet, providing ideal conditions for loss of nitrates.

I wish all who read this might see the difference in those two pieces of oats today, both now being a little more than three weeks old. Where the cabbage received one ton of fertilizer per acre last year the oats is three or four inches higher, beautiful and dark green and so heavy the ground cannot be seen. Where the berries received a half ton of the same material the oats is uneven, yellow and spindly.

Unquestionably there has been a very considerable carry over of nitrogenous plant food. All of which supports the contention that the loss of soil nitrogen is not as rapid as has sometimes been thought.

Fertilize Cover Crops

The condition of the poorer of the two plots of oats just described leads us to the question of fertilizing green manure crops. In the present instance I am certain it would have been advisable to have drilled several hundred pounds of a good, highly nitrogenous fertilizer along with the oats. It is now too late to do that so we are broadcasting over this yellow oats 200 pounds per acre of sulphate of ammonia. The oats will then convert this comparatively cheap chemical nitrogen into organic matter that will upon decomposition next spring and summer continually release organic nitrogen for hungry growing crops. Where cash crops have been liberally fed, fertilizer for the green manure is certainly unnecessary. On the other hand, it does not look like good business to go to the expense of starting a green manure crop and then have its development seriously limited by lack of available plant food.—Gilbert S. Watts.

Berry Crop Fails

We have tried to raise strawberries but don't seem to have any success with them. About four years ago we set out about 500 plants of Big Ben, Wm. Belt and Gandy's in the spring. They were well cultivated, the runners being cut off till about the first of August and looked fine in the fall. We didn't mulch them for the winter so about half of them froze out. Part of those blossomed out normally and we had quite a few berries, but the other part blossomed out later and the cluster spread out on top of the plants in a vine-like form. We had a frost about that time so no berries matured, just little brown nubs forming. The next spring we took plants from that old bed and reset about 300 plants in a new plot. This year there was an abundance of plants as well as blossoms but most of the blossoms were of vine-like type, spreading out on top of the plant, no berries maturing. It seems to me under normal conditions I should have had at least 100 quarts of berries, as it was, I didn't get over six quarts. Can you tell me what the trouble is? Could anything be done so as to have plenty of berries from this bed for another year? Would it be advisable to reset another bed, using any of these plants? Mrs. R. S. W., Wyoming County, Pa.

I do not believe anything can be done after this date to greatly increase next year's crop from your old strawberry bed. I would mulch as usual after the ground freezes hard. If the land is not rich, top dress next April with 200 pounds per acre of nitrate of soda. Apply when leaves are dry.

It would hardly be advisable to set another plantation from the plants you now have considering the unsatisfactory experiences you have had with them. You might try some Premier, Wm. Belt, Chesapeake and Big Joe set in ground where you have not grown berries for several years.—Gilbert S. Watts.

Fertilize Garden Ground Heavily

The piece of ground on which we hope to plant our family garden next year is planted to buckwheat this year. I will not have any stable manure next year. Will you please tell me the kind of fertilizer to get and how to apply it to put the garden spot in first class shape and keep it so?—T. M. T., Allegheny County, Pa.

On the land which you described I expect that liberal amounts of fertilizer will be necessary, especially as no stable manure is available.

For intensive crops such as lettuce, onions or celery I would suggest one ton per acre (or one pound to twenty square feet) of a good potato or truck fertilizer analyzing about 4 per cent ammonia, 8 per cent phosphoric acid and 6 per cent potash. This should be broadcasted and harrowed or raked in before planting.

For sweet corn, tomatoes, etc., half or two-thirds of this amount should be sufficient.

If the land has not been limed recently it will probably be desirable to apply from one to two tons per acre of pulverized limestone or some other form of lime.—Gilbert S. Watts.

Tomato Plants Diseased

What is the cause of "tomato wilt" and is there any remedy?—Mrs. C. A. W., Clearfield County, Pa.

It is impossible without examination to be sure of the exact nature of the "tomato wilt" which you have reported.

However, prevention is of primary importance in the control of diseases of this sort. The plants should be started in seed bed soil that has never grown tomatoes. A rotation in which tomatoes are planted on the same area only once in four or five years should be practiced. Diseased plants should be removed and burned as soon as they appear.

Marglobe, a wilt resistant mid-season variety of vigorous growth is now available from several seed houses and is worthy of trial.—Gilbert S. Watts.

Clean Culture Control Method

I would like to know if there is any way to control the Harlequin cabbage bug?—F. H.

Clean cultural methods are considered of prime importance in controlling the Harlequin cabbage bug. This includes plowing down all refuse cabbage or related crops as soon as harvesting has been completed. It is also advisable to plow down rank weeds, clean up fence rows, destroy rubbish and keep down plants of the mustard family growing in the neighborhood.

In the fall and spring the insects are sometimes lured to trap crops of collards or kale planted here and there in the infested fields and are destroyed by spraying with pure kerosene or by burning straw between the rows.

As a supplement to trapping hand picking the adults in late winter and early spring is considered worth while.

For complete information write the U. S. Department of Agriculture, Washington, D. C., for Farmers' Bulletin No. 1061.—Gilbert S. Watts.

Boys Cooperate

ALERT young Pennsylvanians are practicing cooperative marketing.

Thirteen boys in a garden club at Lititz, in Lancaster County, are pooling their vegetables and selling them in a market booth in Lititz. Each brings in his vegetables prepared as he thinks they should be. Then the boys watch which bunches or packages the customer selects. In this way the good ones demonstrate their value and the boys then act accordingly.

One of the boys whom J. F. Kelm, assistant state club leader of the Pennsylvania State College, visited recently had 30 kinds of vegetables in his garden at the time and he had finished marketing several other species.

Pennsylvania Grangers Meet

MORE than 200 Pennsylvania Grangers attended the annual Grange Leadership Conference held at Centre Hall, Centre County, during the week ending August 20th. The conference was held under the joint auspices of the State Grange, Centre County Pomona Grange and the Pennsylvania State College.

H. G. Elsaman, lecturer of the State Grange, called the conference to order on Tuesday morning. The forenoon program was devoted to a discussion of "Health Needs of Farm Boys and Girls;" an organized play session directed by R. G. Bressler, deputy secretary of agriculture, and an address by J. A. Boak, overseer and acting master of the State Grange.

Campfire Program Was Feature

Walter H. Whiton, lecturer of the New Jersey State Grange, addressed the first afternoon session and then there were laboratory exercises in playground equipment, improvement of grounds around Grange halls, leadership of music for Granges, making of stage scenery, improvement of the interior of Grange halls, and rural athletics. A campfire program, led by Mr. Elsaman, Mr. Bressler and W. R. Gordon, extension rural sociologist of the Pennsylvania State College, featured the first evening.

The next three days' speakers included Fred Brenckman, representative of the National Grange at Washington; Charles G. Jordan, Secretary of Agriculture, Harrisburg; Robert C. Shaw, deputy superintendent of public instruction, Harrisburg; John A. McSparran, Furniss, past master of the State Grange; Charles M. Gardner, Springfield Mass., high priest Demeter of the National Grange; Dr. Charles C. Rankin, West Chester, ritualist of the State Grange; Harry A. Caton, master of the Ohio State Grange; President R. D. Hetzel, of the Pennsylvania State College, and Dean R. L. Watts, of the Penn State School of Agriculture.

Hubby—Your check to the grocer came back with "no funds" on it.

Wife—That's funny. I saw an ad in the paper yesterday which said the bank has a surplus of over $3,000,000.

WARD'S FALL CATALOGUE NOW READY FOR YOU

"We have bought in the great cities—the savings are larger at Ward's."
Bringing to you lower prices than even the big city stores can offer, has been our work for fifty-five years. No one store in any city offers you the opportunity of saving on such complete assortments of the things you need.
MONTGOMERY WARD & CO.
Catalogue Number 107 Fall and Winter 1927-28

FALL—the changing seasons, bring to your home the need of many things new. Fall is the season of buying.

Therefore, this advertisement is printed merely to tell you of your opportunity—to place before you an opportunity for more economical buying, to give you *your best opportunity for the largest saving.*

Ward's new Fall and Winter Catalogue is Now Ready—is Now Ready for You. One copy is to be yours, free—*if you ask for it.* To have this book in your home is to profit by the biggest bargains—*is to save the most by buying the cheapest.*

A $50.00 Saving in Cash Is possible this Fall for You

Over Sixty Million Dollars in cash has been used to secure low prices for you. And cash buys at the lowest price—always. Bright new merchandise has been bought by the train load—to secure low prices for you. There is for you a saving of $50.00 in cash if you send all your orders to Ward's.

We never Sacrifice Quality To Make a Low Price

It is easy to sacrifice quality. It is easy to make a price *seem low.* But at Ward's, Quality has always been maintained—Quality has come first for Fifty-five years.

Your satisfaction with the goods you buy—your lasting, regular patronage—is our aim. Therefore, we sell only goods of standard, reliable quality. *And in a few years, this policy has brought us over three million new customers!*

You, too, can profit by this *real saving* on goods that give *greatest service.* One copy of Ward's Fall and Winter Catalogue is offered you free. You need merely fill in the coupon below.

Fairs Need Better Exhibits

Will Your Produce Measure Up to These Standards?

TOO few fruit growers and market gardeners take advantage of the opportunities offered by the county fair. This fact is shown by a glance at the usual horticultural exhibits. Not that the exhibits are uninteresting—often they are quite striking. The trouble is that they are too frequently without a point or purpose. The ones who lose the most on this account are the growers.

Condition, uniformity, size, form and general appearance are fully as important with vegetables as with fruit. Variety type must be considered. In addition, there are details of each kind of vegetable, which are noted in judging because they are signs of quality. Some of these details are included in the following standards for vegetable exhibits.

ASPARAGUS—Bunches of commercial size (½ to 3 lbs., depending on locality). Shoots thick, smooth, tender, of medium length (6-8 in.) and with scales tightly clasped over the tip. No signs of branching.

BEANS, SNAP OR STRING—At least a dozen pods, sometimes up to a quart. Straight, smooth, fresh pods filled with good-sized, tender beans. Should snap readily without strings. Free of rust.

BEETS—Smooth specimens with single small tap-root and without side-roots. Long beets not more than 2½ inches in diameter, round, not more than 3 inches. Color as dark red as possible. Free from cracks and scab spots. If bunched, tops should be free from dead leaves, insect or fungous injury. Not less than 3 in a bunch, or five on a plate.

CABBAGE—Size and shape should be typical of the variety or type, not over 4 lbs. for pointed or 6 lbs. for round heads. Heads solid and heavy for size, free from mechanical, insect or fungous injury. Should not be too closely trimmed—one or two green leaves should be left attached. Three heads, at least, for an exhibit.

CARROTS—Crown should not be too large, nor green colored; tap-root single, small; roots should be smooth and gradually tapering, free from side roots. Color should be bright. Not less than 5 in exhibit, uniform in size and shape and typical of the variety.

CAULIFLOWER—Heads should be firm, white in color, without small leaves, and showing no signs of breaking. Form should be round, with full convex surface. Trim should be neat and not too close. At least 3 heads for an exhibit.

CELERY—The stems should be of medium thickness, with full heart well carried up. Ribs should not be too prominent. Blanching should be well done, except in winter varieties, where partial blanching only is necessary. No rust or other injury should be present. Stalks may be exhibited individually, or in bunches of three or more, in which case the stalks must be uniform in all respects.

CUCUMBER—Small pickling should not be over 2½ inches long. These should be straight, uniform in size, dark green in color. Large pickling, from 3 to 4½ inches in length, not over 1½ inches in diameter, smooth, straight, uniform in size and shape, and of even diameter well carried out to the ends. Color should be dark green. Large slicing should be dark green in color, smooth, as nearly cylindrical in shape as possible, uniform in size and shape. Should show no white streaks at blossom end, and little or no constriction at the stem end. At least five large slicing and twelve pickling cucumbers should be required for an exhibit.

EGGPLANT—Specimens should be solid, heavy for their size, uniform in size and shape, dark purple all over. Three specimens.

LETTUCE—Leaf varieties should be shown in pots, or with roots in moist sand, to keep them fresh. Color should be light green. Leaves should be finely crinkled and crisp, absolutely free of lice, and not overmature. Heads of good size, solid, round, heavy, free from tip-burn or rot, fresh and without signs of seed stalks. Stem should be small and leaves close-set. Three heads or plants to an exhibit.

MUSKMELONS—These should be in edible condition, shown by the free separation of the stem from the fruit. Aroma should be high. Netting should be close, and ribbing even. Three uniform specimens.

ONIONS—Dry bulbs should be well matured, typical in shape for the variety, with small, well dried necks, clean but not peeled, heavy and firm, without doubles. Twelve specimens to a plate. Sets should be smooth, clean, firm, well matured, with small necks, and about ¾ inch in diameter for all except bottle varieties. Exhibits should contain at least a pint. Green bunch onions should be smooth, white, fresh, with fairly thick stalks well blanched, leaves evenly trimmed, and bases trimmed not too closely. Bulb should not be too large. Bunches of commercial size according to locality.

PARSNIP—Five or more fairly large roots, straight, gradually tapering, smooth, with well-hollowed, broad crown, firm, free of side roots.

PEPPERS—Red or green should be exhibited separately, at least five uniform specimens to a plate. These should be smooth, firm, and typical of the variety in size and shape. Free from rot or other injury.

POTATOES—Typical in shape for the variety, smooth, clean but not washed, with shallow eyes. Firm and heavy, free from all diseases or injuries. Five uniform specimens to a plate, weighing between ten and fourteen ounces each.

RADISH—Firm, smooth, even and bright in color, according to the variety, without side roots, free from splits or other injury, uniform. Bunches of commercial size, or plates of 12 small or 6 large winter types.

RHUBARB—Stalks of uniform, fairly large size, tender and crisp, bright red in color, straight, with leaves not too closely trimmed. Bases should not be cut. Three bunches of three stalks each.

SPINACH—Plants should be exhibited with roots in moist sand. Leaves should be fleshy, dark green, heavy, free from all damage, clean, without coarse or discolored outside leaves, and showing no signs of seed stalks. Three plants to an exhibit.

TOMATOES—Five or more ripe but not over-ripe specimens to a plate, of bright, even color, free from cracks, wrinkles, green color on shoulder, insect or other damage, of well rounded shape, firm and solid. Blossom scar should be small. Pinks, reds and yellows should be exhibited separately.

TURNIPS—Specimens should not be over 3 inches in diameter, smooth; solid, uniform in coloring, which should be typical of the variety. At least 5 specimens to a plate.

PUMPKINS AND SQUASHES are usually the prize mix-up of the horticultural exhibit. The standards of judgment are not well defined, and the classes are often not distinctly drawn up. The latter difficulty is hard to overcome, because of the generally hazy notions as to which are squashes and which pumpkins. Botanically, the ones with ridged stems are pumpkins and those with fleshy stems are squashes. Summer squashes, however, have ridged stems and, therefore, botanically are pumpkins. For convenience, four main groups should be made, and classes drawn up in them. These main classes are sweet pumpkins, field pumpkins, summer squashes and winter squashes.

In conclusion, it should be emphasized that the improvement of horticultural displays at county fairs can be brought about by the offering of attractive prizes to worthy exhibits, on the part of the fair committees, and the selection of entries on the basis of market requirements, on the part of the exhibitor.—W. B. Mack.

Rambles of a Pennsylvania Fruit Grower

XXI In the Santa Clara Valley

THIS most intensive fruit growing district on the Pacific Coast merits more than the casual inspection I am able to give it. Within an hour we have dropped down from the beautiful Santa Cruz Mountains, which have a rainfall and snowfall of sixty inches and a flora as verdant as that of central Pennsylvania, into a district having but sixteen to twenty inches of rainfall and a semi-arid agriculture. The Valley is only sixty miles long and twenty miles wide yet it produces one-third of the prunes of the world, and its forty canneries ship over one-third of the canned fruits of California. Practically all of the really desirable fruit land has been planted, totaling about 115,000 acres, of which 64,000 are prunes, 17,000 apricots, 6000 peaches, 5000 pears, 4000 cherries, 12,000 grapes, with extensive plantings of apples, berries, walnuts and plums for good measure. Truly it is a fruit growers' paradise. I should like to stay here—until the lure of Pennsylvania hills becomes too strong to be resisted.

Climate Is Moderate

It is entirely orthodox to begin a description of this Valley with a few remarks about its climate. That is the invariable starting point for conversation anywhere in this state of amazing contrasts and most amazing self-sufficiency. It can best be described as moderate, having neither the summer heat of the Great Valley, just over the mountains, nor the winter cold of certain other parts of California which I dare not mention for fear of a just retribution. Proximity to the coast, and especially to San Francisco Bay, which touches the Valley, tempers both seasons. There is no rain between May and October.

Irrigation is practiced except in the foothills, where the rainfall runs up to twenty-five inches or more. The water is derived from deep wells, 250 to 1000 feet deep and flowing 150 to 1200 gallons a minute. They cost $3500 to $5000 each. One well will supply fifty to 100 acres. Irrigation is mostly by the check and square system, flooding each tree separately, but furrow irrigation is gaining favor. Orchards are commonly irrigated twice a year, in May and after the crop is harvested, applying six to ten acre inches each time, according to season, soil and crop. In dry years an additional irrigation is given before the crop ripens. The cost of irrigation is about $12.00 an acre yearly. Throughout the summer a dust mulch is maintained; the word dust is used advisedly.

Little Fertilizer Needed

The Santa Clara Valley, like many other California valleys, is of alluvial origin. The silty soils are many feet deep; after sixty years of fruit growing they show little need of fertilizer. They do need organic matter and most fruit growers sow green manuring crops after the crop is harvested, in September and October. Melilotus or sweet clover is used most; also burr clover and winter vetch. Melilotus seed costs less than $1.00 an acre and gives a tremendous quantity of organic matter to dise under in February or March, as it grows continuously during the winter months. At this time of the year (May 23) some of the orchards look as tho they had been mulched with straw, so heavy was the cover crop that was disced under.

These are lean years for the Valley. Fruit growers have made little or anything for three or four years. During and immediately after the war profits of $1000 an acre were the rule rather than the exception. Even the best growers consider themselves lucky to break even. The depression is not yet reflected in orchard values, however. I was told that possibly I might be able to buy a good pear orchard for $2500 to $3500 an acre, and a first-class prune, cherry or apricot orchard for $1500 to $2500 an acre. I do not think I shall buy today, thank you; I want to look around awhile. No growers will say that their orchards are now paying interest on this valuation but they confidently expect you to see that it is worth that much to be privileged to live in the Santa Clara Valley. What little unplanted fruit land there is costs about $500 an acre. This is no place for a poor man. Fruit growing in California is becoming more and more a capitalistic enterprise.

Requires Little Spraying

The French prune has been the mainstay of the Valley since it was introduced in 1856. I saw forty-year-old orchards that apparently are good for forty years more. One-half of the prunes of the United States are produced here, averaging 120,000,000 pounds a year and worth about $10,000,000 to the growers. The prune tree requires little spraying, usually but once a year with oil for scale and sometimes a summer dusting with sulphur for red spider. There is no curculio and brown rot is not serious on prunes, so it does considerable damage to apricots. The fruit is not thinned.

Just before harvest, which is the latter part of August, the orchard is

Smudge pots in a Santa Clara Valley apricot orchard. These help to ward off the frosts.

cultivated until it is as level as a floor. The ripe prunes drop upon this dust without injury. They are picked up by contract labor, for $4.50 to $7.00 a ton, graded as to size, washed, dipped in a kettle of lye to check the skin so as to favor evaporation, run over a pricking board to help accomplish the same purpose, and then are spread out in shallow trays to dry in the sun. They are sun-dried for seven to twelve days, being turned over occasionally, then the trays are stacked for fifteen to twenty days to complete the drying process. The cost of production runs around $130 an acre. The price is graduated according to size, the size 80 to the pound being the basis of price, larger sizes bringing a premium. A yield of two and a half tons an acre of dried prunes is a reasonable expectation. The present price is four and a half cents a pound for eighties; it should be at least six cents to make the industry profitable. The California Prune and Apricot Growers' Association control about seventy per cent of the acreage of the state.

Apricots have been somewhat more profitable than prunes in recent years, even tho the frost hazard is greater and heating is necessary in many orchards. The Blenheim is grown almost exclusively. Formerly the fruit was dried but now most of the crop is canned. Yields of four to eight tons of fresh fruit are common and fifteen tons an acre have been produced. The canner's price has been $60 to $90 a ton. Apricot pits, formerly discarded, now are worth $40 a ton, being used in making confections and salad oil. Bordeaux is used for brown rot, which reduced the set of fruit heavily this year.

The peach is a long-lived tree here. I saw one thirty-five-year-old orchard still yielding around ten tons an acre. The varieties are of Pacific Coast origin and are unknown in the East. The J. H. Hale is grown slightly in California and apparently has no pollination handicap here. Yellows is unknown and brown rot is not a problem. Practically all the fruit is canned, clingstone varieties bringing around $60 a ton and freestone sorts about $50. Yields of eight to ten tons an acre are common and fifteen tons is not too high a mark to shoot at.

Pear Flourishes Like the Bay Tree

The pear flourishes here like the bay tree of the scriptures. Fire blight is practically unknown. An annual county-wide inspection of orchards by the County Horticultural Commissioner keeps what little there is under control. I did not see a blighted limb in the Valley. Forty-year-old orchards are apparently good for forty years more. There is no psylla or leaf blight but still there are enough pests to require four or five sprayings a year, beginning with a dormant application of lime-sulphur or oil, followed with Bordeaux in the cluster stage, arsenate of lead alone at petal fall and again two weeks later.

The best growers spray at a pressure of 450 to 500 pounds. I saw one central spray plant operated by electric motor which takes care of a fifty-acre orchard. The spray pipes leading from the central vat are sunk in the orchard two feet deep and are four rows apart. The owner reports that there is no sediment problem provided the system is flushed out with clear water after each use; that a pressure of 500 pounds is easily maintained; and that there is a saving of at least one-third as compared with the use of field sprayers.

"Long" Pruning Practiced

The pruning is very severe, keeping the trees low, open, and well supplied with new wood. Long pruning, as it is called here, which is simply thinning out, has replaced short pruning, which is the heading back of the annual growth to three or four buds. Leaders on young trees that run up too high are bent over and tied down to stakes set a few feet from the trunk. This promotes early bearing, spreads the tree and prevents suckering. Trees on Japanese roots are dying out while those on French roots stand. Some growers have saved trees by inarching young French stock set a few feet from the trunk.

The Bartlett leads and is grown almost wholly for canning. Yields of fifteen tons per acre, or about 700 bushels, are not infrequent, and certain orchards have reached twenty tons. The cannery price in 1926 was $40 to $45 a ton. Cost of production estimates vary from $220 to $500 an acre. The fruit is picked for size, a number one canning pear being two and a half inches and

(Continued on page 25)

There's no economy in "cheap" tires

FIGURE it for yourself—in a tire that costs $13.95 you get a good deal more for your money than you do when you buy one that costs $8.95 and gives only half as much mileage.

As for expecting to get the same mileage from the $8.95 tire that you would from the better one, it is the sad experience of most of us that in this world you seldom get any more than you pay for.

Whether you buy Kelly-Springfield tires or not, buy *good* tires—it pays. And if you want to be *sure* of getting good tires, buy Kellys.

They don't cost any more than a lot of other tires.

"Kelly dealers everywhere—there must be one in your town"

The Favorite Hammer Gun

WHEN Marlin built the 42-A Hammer Gun, they provided a man-sized hammer that won't slip from under your thumb in cold weather. This feature is appreciated by shooters who prefer a visible hammer shotgun which tells instantly day or night whether the gun is cocked or not. For a gun with long range and power, the Marlin 42-A has no equal. You'll get rabbits and quail a-plenty. Order at your dealers now.

Marlin also makes a 12-gauge Model 43 and a 20-gauge Model 44, Hammerless.

Send for the Complete Catalog. Expert Repair Department.

Marlin Shotgun Model 42

12 ga. take-down, Visible Hammer, 30 or 32 inch Full Choke, 28 inch Modified Choke or 26 inch Cylinder Bore, Matted barrel, 6 shots. Solid Steel Breech. Inside as well as out. Solid Top. Side Ejection.

GLASS CLOTH
Est. 1916—Pat'd

Admits Ultra-Violet Rays
Brings Winter Eggs

Hens quit laying in winter because glass windows stop the sun's ultra-violet rays. Give them a GLASS CLOTH scratch shed and they start laying like it was June. GLASS CLOTH admits ultra-violet light freely. The hens exercise. Egg paralysis disappears. Egg glands function. It is common for 400 hens to lay $100 worth of eggs in the cold months. A $5.00 roll of GLASS CLOTH makes you treme'dous profits. Half a million successful users. Try it this winter. Make big egg money. Order a roll at once. It will pay you.

New super-strength material just out. "Tough as boot leather." Strongest material of its kind on earth. Transparent, waterproof, weatherproof. No additional cost.

SPECIAL TRIAL OFFER $5.00 brings big roll 45 feet long and 36 inches wide. Samples and Book, "Feeding for Eggs," free. Catalog showing uses, on request. If your dealer does not have it, order direct from us.

Worms Upset Health of Poultry

I have been having a lot of trouble with intestinal worms in my flock of White Leghorns I raised last year. Several have died. I examined and found two worms about two inches long and two or three smaller ones. I never had this trouble before and have taken care of chickens for years. What are the causes? I had 41 last fall and they are down to 25 now; just two or three get weak at a time. Are the ones that are heavy now and seem to be all right likely to go, too? Would it be better to kill them off and use them before they get light? Could the trouble come from the ground? Their yard is just clay, no sand or stones. I carry them sand from the creek for the dust bath and cut grass every day to give them.—B. T. B., Butler County, Pa.

Poultry are troubled by several species of intestinal worms, both roundworms and tapeworms, and it is only recently that the harm these parasites do has been fully realized. Aside from the direct harm caused by the worms, they also affect the digestive tract in various ways, upsetting the general health of the bird, causing lameness, weakness, emaciation, and also making the birds more susceptible to colds and roup.

Roundworms lay eggs and these eggs passing out with the droppings of the bird infect the soil or the litter, so that the surroundings may be contaminated in a very short time. The eggs, taken in with food, hatch in the intestines of the bird and develop into worms which continue the cycle as before.

The common treatment for roundworms is to use tobacco dust in the mash at the rate of two pounds per hundred of mash, feeding the tobacco mash for three weeks, skipping three weeks, and then continuing three weeks, etc.

In treating a flock for worms it is advisable to screen the dropping boards with poultry netting so that the hens cannot scratch there, and to remove the droppings frequently. The litter should be changed often, too.

Advises Double Yarding System

I use a double yarding system for my grown birds in which they are pasturing off a green crop in one lot while the other is being plowed up and sown to a crop to be picked off in turn. I consider this a much better practice from every standpoint than to keep fowls in one bare yard all the time. Frequent liming also helps with sanitary measures.

Tapeworms of fowls pass part of their life cycle in flies, so that a bird would have to eat a fly with the parasite in it to get a tapeworm. In some sections where a great deal of poultry is kept it has been found necessary to raise the young stock in screened enclosures in order to keep the worm-carrying flies away. Kamala, in 1 gm. capsules given to the birds is a remedy for tapeworms.

I think that if you try the tobacco treatment which is very inexpensive it will help, and you can sell off your present flock as the birds stop laying. I don't think there is any reason to sell off the layers now.—R. L. S.-H.

Blackhead Practically Incurable

Can you tell me what to do for my young turkeys? I have lost eleven out of twenty. They get dumpy and very thin and act sick before they die. They have good appetites all the time, but after being sick awhile their bowel passages are yellow. Cholera medicine has not seemed to do any good. I do not think what few hens they have would do it.—Mrs. E. C., Mercer County, Pa.

From the description of the sick young turkeys they probably have the blackhead, a disease which is practically incurable, and which has wiped out the turkey raising business in many parts of the country where it once flourished. Turkeys afflicted with this disease have an abnormal liver, usually marked with yellow or green spots.

In some cases of blackhead, the ipecac treatment seems to be effective. Sick birds are separated from the rest of the flock and given 10 drops of fluid extract of ipecac three times a day for three days, then twice a day for three days, then once a day for three days. As a preventive treatment well turkeys may be given a teaspoonful of powdered ipecac in the mash twice a week, this being the amount for each twenty turkeys. It is always a good idea to keep turkeys away from common fowls, and to raise the young ones on clean ground whenever possible. —R. L. Scharring-Hausen.

Goslings Go Lame

Can you tell me what to do for two-month-old goslings which are losing use of their legs? I have them in clover and at present am feeding them cracked wheat. Would the damp weather affect them? I kept them in a pen with a roof over it and moved this pen from place to place. At first I gave them wet bread, rolled oats and cottage cheese with some sour milk or buttermilk to drink. For the past four or five weeks I have been feeding only the cracked wheat.—Mrs. R. S. S., Armstrong County, Pa.

Young goslings are subject to a form of rheumatism that comes from contact with damp ground or damp floors at night, and are especially susceptible during such wet spells as we have had lately. It is a very good plan to put goslings in a shed with a dry board floor littered down with dry straw for the night. This straw must be changed frequently on account of geese being such mussy creatures.

As a remedy, you might try keeping the lame goslings in a dry pen for a time, and giving them a few drops of cod liver oil each day. You might also feed a chicken growing mash or even a laying mash to all the goslings, adding codliver oil at the rate of a pint and a half of the oil to 100 of mash. Oil seems to promote bone growth and tones up the system for all sorts of animals, and while it is hardly necessary for healthy young goslings on good pasture in ordinary seasons, I think that in the case of yours it will prove beneficial.—R. L. Scharring-Hausen.

Will Turkeys Affect Chicken Raising?

I have received the information that some disease following turkey raising infests the ground and surrounding buildings, making chicken raising unsuccessful. If this is true, please give me some method of cleaning or disinfecting ground to make it sanitary for raising chickens.—J. E. C., Mercer County, Pa.

It is commonly recommended that turkeys be raised away from ground on which fowls have been running on account of the danger of contracting various ailments, but I have never heard of the situation being reversed.

There is a great deal being done lately in raising chicks free from exposure to worm infestation and disease. This involves the problem of clean ground for them to run on; and it is commonly advised that the brooder houses and range houses be moved to a new location each year as a measure of control. Disinfecting the soil is not altogether satisfactory. However, it is possible to help matters by frequent plowing of the range, liming heavily with burned lime and sowing some green crop. If turkeys have merely ranged over a given area, I doubt that any serious results would occur if chickens followed another season, especially if the ground had been plowed or was in sod. It is only when poultry run on the same bare ground year after year that disease germs and parasites become so concentrated in the soil as to cause trouble.—R. L. Scharring-Hausen.

Bruises Cause Bumble Foot

I have some chickens that have lumps on their feet which look like stone bruises. One chicken had a lump about the size of a hickory nut. I lanced it and nothing but blood came out. Our yard is rather stony. Could that be the cause?—C. F., York County, Pa.

Your hens have the bumble foot, a condition that comes from a bruise that results in an abscess. These bruises often are caused by jumping from a high roost to a hard floor without litter, or from jumping out of the house to hard, stony ground.

If you have a large flock you will probably find it best to sell off such individuals, as they are not active enough to compete for food with the other members of the flock. If you keep only a few hens, you will have more time to treat them as you have been doing. Of course, the condition that is causing the trouble will have to be removed. — R. L. Scharring-Hausen.

Nest Box Notes

WE FED up several loads of wheat in the sheaf to the young pullets on range this year. They enjoyed scratching it out, and did the threshing free of charge. After they had scratched it over the straw was sufficiently broken up to make good manure, so we loaded it up and spread it on the field.

• • •

Ordinarily I am not in favor of feeding sheaf grain to stock in the houses. You never know just how much you are feeding, and it is quite a nuisance to drag a lot of bundles around every day. Then too, there is more straw in the houses than is desirable. However, if the sheaf grain can be fed on range as we fed the pullets, it works out very well.

• • •

A great many people have the idea that if they spray and whitewash the poultry buildings every year that they will be rid of lice. This is a mistake. There are two classes of external parasites affecting poultry—lice and mites. The mites stay in cracks about the roosts and walls during the day, and crawl on the hens at night. Spraying and whitewashing will do away with these pests. The lice stay on the hens all the time, and no amount of spraying, disinfecting and whitewashing will have any effect on them whatever. The way to combat lice is to dust each individual bird with sodium fluoride. This is an inexpensive white powder which dusted in the feathers is probably the best louse killer for chickens there is.

• • •

Once we understand the peculiarities and differences of lice and mites, it is much easier to know just what to do to control them.

• • •

Young pullets that have just been housed must have sanitary quarters. They have been used to clean range, and if their house gets dirty they may get sick. As soon as the litter gets damp or dirty, it should be cleaned out immediately and be replaced. It is not a bad idea to clean off the drops at frequent intervals in between times. Some poultrymen clean off the dropping boards every morning.

• • •

A clear floor space helps about cleaning out the litter, as there are no posts and obstructions to clean and sweep around except the supports of the dropping boards.

• • •

The pullets that we have housed in the past few years seem much tamer than those we used to put up. I think that their excellent condition is the cause of this. They weigh around 3½ to 4 pounds and are nice and plump. We always make some slight noise to let them know we are coming when we enter the pen, but they don't seem to pay much attention to us. I have seen the air full of pullets in the pens when going into the pens, and that is not good for them.

• • •

Anyone who has early pullets ought to get them up as soon as they start to lay. They will get the peewee eggs out of their systems in time to lay some real eggs for the fall high prices. Perhaps they will molt and perhaps not. They should have plenty of grain to keep them in good flesh and be provided with greens and cod-liver oil to maintain their health and vigor.

Lancaster Poultrymen Take Inspection Tour

LANCASTER COUNTY poultrymen traveling in two large buses on August 18 inspected many of the latest type poultry houses and best methods of production practiced in southeastern Pennsylvania. With H. Myer Snavely acting as guide, the party motored to Lebanon where they were met by Professor H. D. Monroe, of State College.

The first poultry plant visited was that of John E. Smith. Mr. Smith's poultry houses are of his own construction of the semi-Missouri type. The eggs from this farm are carefully graded and sold locally where they bring as much of a premium as in the New York market.

Penn State Type of House Used

Mr. Snavely constructed the Penn State type of laying houses on his own farm, which is located north of Lebanon. A semi-monitor type of house was found at A. J. Myers' place near Annville. He produces eggs for the New York market and capons for local trade.

After stopping at Hershey Park for lunch and inspecting the Hershey Chocolate Company's plant, the poultrymen drove on to the farm of Clayton Gingrich, south of Hershey. He is using a 30'x30' Missouri type house. This house is very practical for general farm use. It is lighted from all four sides, easily ventilated, and has storage space in the loft for feed and straw. A horse and wagon can be driven in one side of the house to do the cleaning.

There were eighty men and women on this annual poultry tour. Mr. George Zeiset, of Brownstown, was chairman of the transportation committee.—H. S. S.

Leghorns Lead in Egg Production

THE flock of 237 White Leghorn pullets owned by John Tolvonen, Girard, Erie County, led demonstration farm pullet flocks of the state during July by laying 23 eggs each, the monthly report of the Pennsylvania State College poultry extension service reveals. Tolvonen's birds have averaged 185.8 eggs each during the demonstration farm year which began November 1, 1926. This puts them far in the lead for first honors. H. C. Riddle, Harrisville, had 150 White Leghorns which averaged 22.9 eggs for second place among the flocks of 100 or more pullets.

Two hundred White Leghorns in the flock of S. G. Green, Rome, laid 21 eggs each to capture the leadership of the flocks of 50 or more hens. Lone Oak Farm, Emporium, had 96 White Leghorns in second place with 20 eggs each.

Flocks of 100 or more hens and pullets were led by 179 White Leghorns in the flock of S. F. Hassenplug, Newton Hamilton. They laid 22.6 eggs each. J. M. Dunlap's 113 White Leghorns at Shippensburg, produced 22.4 eggs each for the second best record of the month.

Mother—Why is baby crying?

Nurse (in next room) — He wants—

Mother—Well, give him what he wants.

The baby howls louder.

Mother—Why didn't you give him what he wanted?

Nurse—I did. It was a bee!

WHY KILL'EM?

Bees Need Winter Protection and Care to Produce Honey

OLD bees, bad food, no protection, sure death and disaster. Young bees, abundance of good food, ample protection, life and success. Forty per cent loss of colonies last winter and bad spring dwindling, the result of bad wintering, are the reasons for a short white honey crop in most northern states this summer. Since the 1928 honey crop depends more upon how the bees winter than upon any other beekeeping factor, it is time to consider the problem. The story is brief and is comprehended in the first two sentences in this article.

Re-queen in August or early September and supply ample food of good quality and the question of a good sized cluster of young bees for winter will be practically settled. Sometimes when the late honey flow fails it pays to stimulate late brood rearing by stimulative feeding in September. No matter what else is done if the winter cluster is old bees the colony will not survive. If honeydew or honey from late fall flowers compose the winter food, disentery will result. In such localities a syrup of granulated sugar and water must be fed about the time that the last brood emerges. The syrup should be thick, using about two parts sugar to one part water. The quantity of food for winter and spring breeding should not be less than fifty pounds. A well-wintered colony will not consume much in the winter but it must be well supplied for brood rearing next spring. This provision must be made this fall.

A good sized cluster of young bees, well supplied with good food, will stand a lot of winter cold but it pays to protect them. Protection from the wind and the hive insulated against the loss of heat are highly important factors. No apiary that is exposed to the wind can give best results and no colony without ample insulation should be expected to build up rapidly in the spring. It is easy to supply all that is needed for the prosperity of the bees.

Why so many beekeepers neglect the opportunity to produce one of the finest cash crops on the farm is hard to understand. It is a simple matter to care for the bees so that they will supply the farm table and the tables of neighbors with honey.—G. H. R.

Bulletin No. 438, Licensed Nurserymen in Pennsylvania; Bulletin No. 439, Peach Yellows; Bulletin No. 440, Control of Japanese Beetle Grubs; Bulletin No. 443, County and State Agricultural Organizations (List of 1927 County Fairs); Bulletin No. 447, The Mexican Bean Beetle; Bulletin No. 448, Pennsylvania Weeds; and Bulletin No. 450, Standard Grades for Farm Products.

Will Visit Poultry Farms

AN AUTO tour of poultry farms in Wayne County, Pennsylvania, and Orange County, New York, will be taken by Keystone chicken men next week.

Leaving Honesdale Tuesday noon, September 6, visits will be paid to the Sands' Poultry Farm at Hawley and the Homestead Poultry Farm near Honesdale.

Meeting at Artmann's Fairmount Farm, Middletown, New York, Wednesday morning, the touring poultrymen will next visit the Mapes Poultry Farm nearby, the Ace Farm at Monroe and the White Cloud Farm at Rock Tavern.

More Eggs
Less Feed
More Profit

There's the story of Quaker Ful-O-Pep Egg Mash in six words. It goes farther because it's chock-full of just the things hens must have to lay regularly. You use less feed—you make more money. These are facts demonstrated every month by some of the most successful poultry raisers in the country. Ful-O-Pep Egg Mash is *the economical feed* because it contains a generous quantity of pure, fresh oatmeal—a wonderfully efficient substance; to this are added the essential ingredients, including minerals and proteins, that a hen must have to make eggs. And it contains *Cod Liver Meal*—just the right amount to keep the hen's organs toned-up for steady production. Buy Ful-O-Pep Egg Mash now—this week—and prepare your flock for the most profitable winter you've ever enjoyed. See the Quaker Dealer in your neighborhood.

"Healthy, Heavy Hogs" Hog Feeder.

WHAT STATE COLLEGE FOUND

Two lots of fifteen hogs each were fed for ninety days on a ration of cornmeal, buckwheat, middlings and tankage, self-fed to one group and hand-fed to the other. Here was the result:

	Self-Fed	Hand-Fed
Gain per day	1.3 lbs.	.88 lbs.
Cost per cwt., gain	$5.78	$7.17
Profit above feed cost	$7.61	$3.18

This test shows what a Self-Feeder will do for you.

Head of the Department of Dairy Husbandry
Pennsylvania State College

Dairy Herds Are Abortion Free

ABOUT five years ago only one herd was blood tested for Bang Bacillus Disease in Jefferson County. Today Jefferson County leads the whole state, or maybe the nation, in abortion work. Out of 55 abortion-free certificates issued by the Bureau of Animal Industry, a little over 30 were sent to Jefferson County breeders. Over 100 herds have been tested, some will be eligible for their certificate late this fall.

Since the inauguration of the campaign against the Bang Bacillus Disease over 1000 animals were blood tested, which is about one-twelfth of the cattle population of the county.

The disease is well under control and the farmers of this section are very proud of the eradication of the disease from their herds. Cattle dealers very well realize the importance of having clean herds. In the last three months over six carloads of cattle were shipped out of the county to New York State markets.

Cannot Exhibit Untested Cattle

The executive board of the fair association passed a ruling again this year, prohibiting the exhibition of cattle unless blood tested and free from Bang Bacillus Disease. This is the first fair association to take such advanced steps, with reference to the prevention and control of abortion disease.

The complement fixation test has been found a very satisfactory method for the detection of the reactors. By a systematic testing the reactors can be eliminated very promptly.

The breeders of the county are very much indebted to the officials of the Pennsylvania Bureau of Animal industry for their splendid cooperation in the campaign. Speakers from the bureau are sent to meetings of various livestock organizations and they are instrumental in pushing this work ahead. The Jefferson County Farm Bureau is also to be commended for placing the abortion elimination work among its main projects for this year.—C. M. C.

Revise Rules

AT THE Annual Convention of the delegates of the Holstein-Friesian Association of America on June 1, 1927, the following bylaws were adopted:

"No animal shall be eligible for registry whose dam was not at least one year old at the time of service."

"No animal shall be eligible for registry whose sire was not at least nine months old at time of service."

Requirements in the advance registry rules were revised downward. The revised requirements for Classification A and B in yearly test are 310 lbs. fat for a heifer freshening at just two years of age or younger, and 400 lbs. fat for a cow freshening at five years of age or older, with the intermediate classes in proportion. The yearly increase for age is 30 lbs. fat, making the daily increase .0822 of a pound of fat. The requirements for Classification C in yearly tests are 90 per cent of the requirements just mentioned for Classification A and B. If tested in the Ten-Month Division the requirement is 85 per cent of that for the Yearly Division.

Bulls Are Slaughtered

REALLY high-class dairy bulls are going to the butcher at the rate of one every eight minutes from daylight to dark every day in the year according to a careful estimate made by Dr. J. C. McDowell, of the Federal Bureau of Dairy Industry.

A study of cow testing association records shows which are the good bulls and which are the inferior ones. Unfortunately, by the time these records are available most of these bulls have been slaughtered. It is of little use to learn how good the animal was after it has been slaughtered, says Dr. McDowell. He urges that some system of exchange be started by owners of well-bred animals in order that such bulls may be kept until the daughters have demonstrated their sire's true value.

Grange Lecturers Hold Conference

ALL Grange interests of the Middle Atlantic States were centered at New Brunswick, August 23-25, on the greatest lecturers' conference the organization has ever seen. Delegates representing 215,000 Grangers discussed the future plans for entertainment and advancement of the 2150 subordinate Granges represented. The states of Delaware, Maryland, Pennsylvania, New Jersey and New York were represented and one of the most constructive programs ever considered was worked out.

A new angle to Grange matters was laid before the delegates by National Master Lewis J. Taber, Columbus, Ohio; Governor A. Harry Moore, New Jersey; ex-Senator Joseph Frelinghuysen, Far Hills, New Jersey; State Master David Agans, New Jersey, and others.

Discuss Rural Problems

The Grange was important 60 years ago to the farmers and it is even more needed today. The biggest problem today is organization and the farmer is completely lost if he continues without building around him the line of defense other business has. American agriculture is keeping pace with the needs of civilization for food and clothing despite the fact that 600,000 people left the farms last year.

The program for Grange development was divided into special periods for education, recreation, community work and problems of the farm and home. With elaborate and constructive programs, each state filled a definite part in the three-day conference that inspired the 300 delegates with a new vision of Grange work.

With the assistance of several members of the New York delegation, Raymond Cooper, state lecturer, Oswego, New York, portrayed the feature of education in the Grange. Delaware and Maryland joined hands in showing the part that recreation has in the life of a live Grange or community. In the absence of Mrs. Sarah Weeks Mulligan, Berwyn, Maryland, the problem was handled by Edward A. Evans, Cheswold, Delaware, assisted by representatives from the Maryland delegation.

Representing one of the largest delegations, Howard G. Elsaman, Pennsylvania's state lecturer, gave a most impressive story of Grange activities.

Under the direction of Dr. W. H. Whiton, lecturer of the New Jersey Grange and the founder of the conference, the problems of the farm and home were brought before the audience in a vivid manner.

Following the close of the conference on Thursday night, many of the delegates visited points of interest in the state before returning to their homes.

Water Regulates Strength of Concrete

IT HAS recently been discovered that the amount of mixing water used with each bag of cement in making concrete is of the utmost importance. The strength of concrete is regulated by the amount of water used in mixing. For given materials and conditions of manipulation, the strength of concrete is determined solely by the proportion of the volume of water to the volume of cement so long as the mixture is plastic and workable.

The new method suggested is to use the water and cement to make a paste in which the sand and crushed stone or pebbles are added to cheapen the mix by making the whole mixture yield a larger bulk of concrete. Strange to say the aggregate neither adds nor detracts from the strength of the concrete since the strength depends upon the ability of the glue to withstand the wear and loads exerted upon it. Therefore, the more water added to the cement, the weaker will be the paste while it follows that the less water used with each sack of cement the stronger will be the paste and therefore the concrete.

It is understood that the aggregates must be sound and clean and that 50 per cent more stone is used than sand.

Thoro mixing as well as careful curing increases the strength. To cure cover the newly-made concrete to prevent the evaporation of the mixing water. A chemical change takes place between the cement and water which is called the "set." It is this action that gives the concrete the attributes of durability and permanence.—N. S. G.

Eliminates the Icehouse

The dairyman who has electric power on his farm can now be independent of ice and other milk cooling inconveniences and worries. This practical electric milk cooler has a storage capacity of eight ten-gallon cans for the night's milk. The morning's milk is cooled over the aerator to below 50 degrees F. immediately and sent directly to the receiving station.

Friendly Talks

By EDGAR L. VINCENT

EVERY now and then when I am out on the road I meet an old man, now quite well along in the nineties. Always this man is walking. I do not think I ever saw him riding in any kind of vehicle; and he never fails to have a smile and a kindly word for everybody he meets. It seems sometimes as if everybody knows this old man and that he knows everyone. Certainly he does speak to all, whether he knows them by name or not. In all this community there is no man who is more sincerely loved and trusted and respected than is this good old friend of the smile and kindly word.

Not long after I met this old gentleman the last time, I fell in with another man who for a good many years held an important position in the affairs of the county. We had not been together long before our thoughts turned to the one who is fast nearing the century mark; and my friend said:

"That man came to this town in February, 1874, and I the following May. I have known him and loved him ever since. Everybody knows him, and he has not an enemy in the world."

Not an Enemy in the World

Not an enemy in the world! Active, energetic, interested in all good causes and taking a part in most of them, and yet without an enemy! It is a record to be proud of; and we cannot help wondering at it. What is the secret of this universal confidence, this unbounded esteem in which this man is held? Some people number their friends by the score; but almost always they have some enemies. Others live in out of the way places where they do not come in contact with many of their fellows. Often it can truthfully be said that their list of friends is not a very long one; but wherever they live and whoever they are, they can rarely say, "I have not an enemy in the world." How does it come about, then, that one with such a wide acquaintance as that of the man of whom we are speaking should have been able to reach this good old age and still be known as "the man without a single enemy?"

Here Is the Answer

I am sure I have found the answer to this question. It came to me in a gathering of young folks where the old man was present. No person there had a younger heart than he. He was the center of a little group all the time, and for and with them all he had a kindly word and a hearty smile. Young folks loved him because in his heart he was as young as the youngest of them.

Another much loved man I know. When children see him coming they run to meet him and put up their arms for him to take them up. Pure of heart, friendly to everybody, how could it be otherwise than that he should be loved and trusted?

It is all in the heart. Find a tree that is sound at the heart and you will find one every inch of whose lumber is firm and free from rot and all of whose branches are perfect. But when the heart of the tree shows signs of decay look out, for the lumber may not be worth cutting.

Sometimes I have heard men and women say, "I wish I had a million dollars." I have made that foolish wish myself. But that would not be best for me, else it would have been given me; but most of all do I covet the clean heart, which will help me to win the love of God and man! With that treasure really ours, it would not so much matter how little of this world's goods we have. We would always be rich in the things that count for most.

MORE SHEEP were shorn in the United States this year than in 1926. The amount of wool was 11,477,000 pounds greater, yet the average weight per fleece was one-fifth pound less in 1927 than last year.

There are more DELCO-LIGHT plants in use than all other makes combined

ONLY a few years ago electric light and power on the farm was practically unknown. Then came Delco-Light—bringing a new contentment, a new freedom—bringing modern conveniences to the farm home.

Soon Delco-Light was known everywhere. Soon it was being recommended by users in almost every community. And now, today, though many makes of farm electric plants have been placed on the market, Delco-Light's position in the farm electric field is stronger than ever before.

There are more Delco-Light plants in use than all other makes combined.

This outstanding leadership that has been won and held by Delco-Light has an important meaning to every farmer. It means that such an overwhelming preference could be the result of but one thing—*value*—value that is represented by proven ability to furnish dependable light and power at the lowest possibie cost.

If you are not yet acquainted with Delco-Light advantages and Delco-Light value, ask the nearest dealer for all the facts and a complete demonstration. Or, if you prefer, mail the coupon below for full details.

Delco-Light electric plants are priced as low as $225 f. o. b. Dayton, and may be bought on the General Motors convenient purchase plan.

Caution Is All Right, But—

Mary Ellen Found That Too Much is Dangerous

MANY a young mother loses hours of enjoyment and profit, and her children are robbed of much that is essential to young life, by being overly cautious. If the baby falls down she must pick him up and pity him until he thinks himself terribly hurt, and if anyone in the neighborhood offers to keep him while she takes a breath of fresh air or goes to evening church services she declares that she would be so nervous that she could get no profit out of being away.

Often this feeling passes with the coming of the second baby, but some timid mothers never lay it aside. A visiting grandmother who watched the preparations of the young mother in the home for a half hour's business trip to a store, laid down her work to give the results of the little observations she had taken.

"Mary Ellen," she said pleasantly, "you have made Bobby promise five times to be a good boy while you are away, you have told Josephine eleven times that she must mind Grandma and not go out in the cold, and you have told me six times exactly and in detail how to manage the two children. Now I have raised seven sturdy children to manhood and womanhood and I am perfectly competent to cope with two good little children."

The daughter held her tongue but she was deeply offended. She went on her way without another word, but she determined to show her mother that it was no light task to take care of two lively urchins on a street where hundreds of automobiles passed hourly. She would take her time for her shopping and let "Grandma" make some discoveries.

Not What She Expected

Three hours later she entered her own home with an air of outward unconcern. Inwardly she had a different feeling. The two children were placidly cutting out pictures on the floor and her mother was getting the noon meal. "Good as gold!" said the elderly lady briefly. "Did you have a nice time?"

Without saying anything on the subject the children's mother stole out more and more frequently during her mother's visit. The young husband was amazed and pleased, but he had the good sense not to mention his pleasure. And then a thing happened that set them all to thinking. A child of eight was injured in an accident and the family doctor in commenting on the case said, "It is simply a case of too much mothering. If the child had been allowed to learn how to be cautious he might have escaped, but his over anxious mother kept him like a baby all these years when he should have been learning self reliance."

So "Mary Ellen" became a better and happier mother, and the children enjoyed life much more after the affectionate nagging ceased. Husband and wife enjoyed simple, innocent pleasures together and one more woman joined the ranks of normal, contented, sensible beings who can make a happy home for all without becoming nervous, anxious, fault finding and too devoted.—Hilda Richmond, Ohio.

Our New Fashion Book

ARE you trying to decide how to make up that new material you bought the other day? Are you planning your winter wardrobe and wondering just what to make for the children?

Our new fashion book will help solve your sewing problems by showing you about 500 designs from which to choose your fall and winter styles. In addition the catalog contains an article on dressmaking and gives instructions for making various stitches and simple trimmings.

The Fashion Book costs only ten cents. Address Pattern Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The Kitchen Cabinet

Watermelon Preserves

Requested by Mrs. W. G.

1 watermelon
½ teaspoon alum
2 lemons or 1 quart vinegar
Sugar and spices

Cut into uniform cubes the white section of watermelon rind, being careful to remove all green and pink parts. Soak overnight in a weak salt solution using not more than a tablespoon of salt to a quart of water. Drain thoroly in the morning and parboil for a few minutes in alum water to harden and clarify. Then drain again. Two preserving recipes follow.

I.

Make a rich syrup using 3 parts sugar (granulated) to 1 part water. Add the two lemons cut in very thin slices, 1 teaspoon whole cloves and 1 large stick of cinnamon. Add the melon to this syrup and boil slowly till the rind is tender. Seal while hot in clean jars.

II.

This recipe uses vinegar and no lemons. Make your syrup using the 1 quart vinegar and 2 pounds brown sugar. When the syrup is boiling add 2 tablespoons stick cinnamon crushed and ½ tablespoon whole cloves. These spices are tied in a clean cheesecloth and removed before melon is canned. Add the rind pieces to the boiling syrup and boil for a few minutes. Pack in clean jars and seal immediately.

For general hints on successful canning we will mail you our free leaflet on Canning Secrets if you send a stamped, self-addressed envelope with your request to Home Page Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

GRAPE EGGNOG

1 egg
½ cup grape juice
1 teaspoon sugar

Beat yolk and white together with a fork. Add sugar and grape juice and pour it into a glass. This nourishing drink will seem especially enticing if the child may drink it thru a straw.

When We Fill the Lunch Box

Appetizing Foods Which Provide Vitamins

Brown Sugar Cookies

Cream a cupful of butter with two cupfuls of brown sugar, add a teaspoonful of vanilla, two well beaten eggs, one-third cup of milk in which three-fourths teaspoonful of soda is dissolved, and add gradually three cupfuls of flour. Drop by spoonfuls on buttered tins, bake in a moderate oven. A cup of chopped black walnuts or other nutmeats may be added to this recipe for variety.

Prune Rice Pudding

Wash a tablespoonful of rice and cover with a quart of milk, place in a moderate oven, in half an hour add one-half cupful sugar, one-half teaspoonful vanilla, and one-half teaspoonful salt. Stir and cook slowly for an hour then add a cupful of prunes cooked, drained, pitted and cut in small pieces. Continue baking one hour longer. For the lunch box fill paper drinking cups with the pudding when cold, sift a little powdered sugar over the top and cover with paraffin paper.

Stuffed Eggs

Hard cook the eggs, and drop them in cold water, remove shells, and cut in halves lengthwise. Take out the yolks and chop fine, adding any cold ham or bacon that may be at hand. Salmon or sardines may also be used. Season nicely and moisten with a little mayonnaise. Fill the cavities in the eggs, and put the halves together, wrap in paraffin paper, twisting the ends slightly to hold firmly.

Peanut Butter and Lettuce Sandwiches

Spread thinly sliced whole wheat or graham bread lightly with peanut butter, and arrange lettuce leaves washed and carefully dried, on half the slices. Put together sandwich fashion, press lightly and wrap in paraffin paper.

School Days Are Gingham Days

GINGHAM is the mother's friend in dressing her children. Neither the sun's rays nor soapends can mar its colors and the gingham dress or suit may be outgrown before it is outworn. One thing, however, must be remembered—always shrink gingham before using it.

Brother and sister will be dressed appropriately for their first adventure in school life if they start off in these suits of novelty checked blue or green gingham with red dots, or tan with blue dots.

Pennsylvania Farmer patterns 5709 for the dress and 5246 for the suit may be had in sizes 2, 4 and 6. Order from Pattern Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa. The price of each pattern is ten cents.

Scraps Form Hats

A TWENTY-FIVE cent hat pattern and the scrap bag, with perhaps the addition of a few cents' worth of tailor's canvas, may suggest one or more children's hats.

Many of these hats are of velvet in two colors, making it possible to utilize left overs. Others often are of the same material as the coat. If the colors you have do not suit you, perhaps you can dye the material. The trimmings in most cases are simple ribbon ornaments.

Get a pattern with very accurate directions and then follow them to the letter. That is the secret of success. Some patterns do not give directions for stitching the brim. If you wish to do this after basting crown and brim together to be sure they fit, take apart, then stitch near outer edge of brim first, working in, until all is stitched. Use a rather long stitch. I find that a fine buttonhole twist is very satisfactory on both bobbin and spool.—P. W. L.

I Keep Cider Sweet

I HAVE always had a great liking for cider—that is good cider just out of the press and made of pure, undiluted apple juice. Each fall I make about 260 gallons from the apples in my little orchard as I have no place to store the fruit. The cider is fine as long as it stays sweet. The difficulty was that it speedily got hard, which spoiled it for drinking purposes.

So I cast about for a way to keep it sweet, and finally found a very satisfactory one. I set aside forty gallons of the usual amount, for I was not quite sure of complete success. In this forty gallons I placed one pound of horseradish roots well washed. Then I set the cider aside to become seasoned.

I was delighted to find at the end of a month that the cider was still sweet and had quite a harmless "kick," resembling that in carbonated drinks. The cider retained none of the horseradish taste.—M.S.

THREADED NEEDLES

IF YOU want the latest thing in shades for kitchen or living room, the cost is within the reach of any purse. From the garret bring down discarded shades to fit the windows. Remove the rollers, and the sticks from the bottom. Purchase cretonne, gingham or print in color to match your furniture and cut the same size as the discarded shade material. Do not hem edges but buttonhole stitch with fine thread to prevent raveling. Fasten cretonne to the rolls and slip the sticks in the hems at the bottom. If material the exact width of the shade can be secured, you are saved the trouble of finishing the side.—L. M. T.

• • •

To repair a run in a stocking, use a fine crochet hook, catching the loop with it, then draw the first cross thread thru it and continue until all the threads are taken up, after which the remaining loop is carefully fastened.

• • •

For a very thin place not yet broken, use sewing silk threaded in a fine needle, and make parallel rows of chain stitches lengthwise of the hose, until the worn spot is covered.

• • •

When there is a hole, run a thread around it to bring it into shape. Then run fine threads close together across it after which chain stitches in parallel rows can be made on the cross threads.

• • •

White hose will not yellow in washing if dried properly. Wash them after dark and hang them out. By morning they will be dry enough so that the light will not affect them. —Helen Manning.

Note.—Or dry them between Turkish towels. Hang in the shade. —G. S. S.

• • •

If stockings are washed each time after they are worn, they will wear longer.

Slenderizing Lines

5891—Eight sizes: 28, 30, 32, 34, 36, 38, 40 and 42 inches bust measure. A 44-inch size will require 4¾ yards of material 40 inches wide with one-half yard of contrasting material for lining the flare, and for band and vestee facings. Pattern, 10 cents.

5906—Three sizes: 2, 4 and 6 years. A 4-year size will require 2⅛ yards of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Cousin Ruth:—We have two rabbits and about 30 little peeps only a day old. We get Pennsylvania Farmer. I like to read the Forum page very much. I am sending some riddles for our page.

1. What is the difference between an old penny and a new dime?
2. Who always enjoys poor health?
3. Why does a miller wear a white cap?
4. What object has two heads and one body?
5. What part of London is in France?
6. What is it that we all like to give but few like to take?—Myrtle M. Steffy, (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—We watch for the mailman the latter part of the week to see if he has Pennsylvania Farmer. We all enjoy it very much. We have been getting it for about five years. I like the letters on the Forum page because they are generally about pets.

My cousin, whose name is Ruth, is coming to visit us for a week. We always have fun together altho she is sixteen years old.—Eunice R. Patrick, (X), Lehigh County, Pa.

Dear Cousin Ruth and Forum Friends:—I would like to become a member of the Forum. We have two cows. Their names are Blacky and Daisy. We went to Rocky Springs Park on the 4th of July.

DOROTHY AND I
Grace E. Ressler, Lancaster County, Pa.

I am sending you a picture of my little sister, Dorothy, and myself. —Grace E. Ressler, Lancaster County, Pa.

Dear Cousin Ruth:—I am going to tell you of my holiday in the summer. We go to Rocky Springs with the Sunday school. This last summer when we went to Rocky Springs a girl friend and I went before dinner to see the seals. They came from the coast of California. I took my sister Elizabeth on the merry-go-round and then went with two of my girl friends on the caterpillar and from there to the airplanes. At half-past four we started for home. —Esther Moore, Lancaster County, Pa.

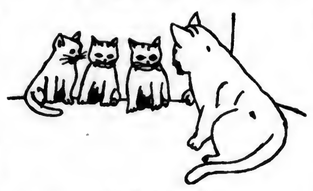
Dear Cousin Ruth and Forum Friends:—As this is my first contribution I think I must make myself known as to the place where I live.

I guess many members have been to a place in Maryland called Tolchester Beach. In going to Tolchester you must pass thru the town of Chestertown. Three miles in the southwest direction you will find my home.

I work on the farm and do a lot of work for a boy of fifteen. I have many birds that roost in the barn. These birds stay with me all of the year.—Norman Sutton, Kent County, Md.

Dear Cousin Ruth:—I hail from Fayette County, Pa. I'm from the county where lies the body of General Braddock. I suppose all the Forum boys and girls have read of General Braddock and also Washington Springs where George Washington took many and many a drink of good cool water during the Revolutionary War.

I'm also close to Fort Necessity. General Jumonsville, an Indian general (or rather a chief) also is buried close to here. Sometime I will send you a snapshot of General Braddock's grave. There are lots of interesting things here in Fayette County that we read about in our history.



PUSSY'S CLASS
Thelma Woodiens, Chester County, Pa.

General Braddock's Monument is very tall and it stands right along the roadside. The road is concrete now. It doesn't look today as we read about it in the history.

Washington Springs is an interesting place also. The initials of lots of people are carved on the stones that form the spring top. The water is so nice and cool.

General Jumonsville was the Indian commander. He was shot if I'm not mistaken, by General Braddock. His grave is at what is now called Jumonsville where the orphan's home used to be. Jumonsville's Grove is a desolate place. It stands back in the woods and gives a person the creeps. When you stand there gazing down upon that little mound you can imagine lots of things. Just think, I've been standing there where lots and lots of Indians trod years and years back.—George T. Ramage, eleven (X), Fayette County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending a recipe for the Forum page.

DATE PUDDING

1 cup sugar
Yolks of 2 eggs
Add 1 cup chopped dates and beat
Add ½ cup milk
6 tablespoons flour
1 spoon baking powder
½ cup chopped walnuts
Add beaten egg whites
Steam 45 minutes

—Zora Applebee, (X), Erie County, Pa.

Dear Cousin Ruth:—We have three little calves. One is red and white, one red, and one black and white. We have some little chicks, too. I've got an old mother hen of my own but she killed quite a few of the chickens.

Do you have a garden? We do. It is pretty late this season on account of the weather.—Margaret Marieson, twelve, Warren County, Pa.

Dear Cousin Ruth:—I am at grandpa's during my vacation. I have five little kittens and a little dog named Happy. I have one sister and one brother.—Lois Dietterick, eight, Columbia County, Pa.

Dear Forum Friends:—I have a chicken I call "Pet." When he was little and our family used to sit on the porch he would come and fly upon our laps and shoulders and go to sleep. He used to eat out of my hand.

I have more pets, including a pigeon, a cat named Blue and a dog which we call Bouncer. I will tell you some of their tricks later.—Anna Grinnell, (X), Crawford County, Pa.

Dear Friends:—I'm sending you a picture of brother and myself with some of our pets. We also have two geese and some Bantam chicks. We like to take care of them all. We have a tame berry patch and like to pick the nice big blackberries. When we get our bucket full then we sure do eat our share. We have a pond and have a good time catching crabs in it. We like to help mother do up her work and help dad with his work, too. We like to work in the garden pulling weeds. We have a nice garden and our flower garden is very pretty.—Arthur and Harry Hansen, Washington County, Pa.

WITH SOME OF OUR PETS
Arthur and Harry Hansen, Washington County, Pa.

Dear Cousin Ruth:—Here is a recipe for cocoanut squares.

COCOANUT SQUARES

1½ cups sugar
½ cup milk
2 level tablespoons butter
1 cup shredded cocoanut

Cook the sugar and milk together until it forms a soft ball in cold water. Add the butter and cocoanut and boil for exactly two minutes more then pour it into a greased pan and mark off into squares while still soft.—Mary Jane Barber, Mercer County, Pa.

Dear Forum Friends:—I will tell you about my dog Jocko. He is very playful and can do many tricks. If I hold a stick high in the air he will jump and grab it or if I throw a stick or ball he will run and get it and bring it to me. I also have a nice riding horse, a calf and a kitten. I like them all very much.—Cornelia Brown, (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a pet dog. We call her Shep. She has three very nice pups. Daddy said I could have one so I am going to call him Rover. We have a radio and I sure do enjoy it.

I am sending a good old fashioned brown sugar cake recipe. I baked it myself last week.

BROWN SUGAR CAKE

2 cups brown sugar
1 cups flour
4 teaspoons baking powder
2 eggs
1 cup milk
½ cup butter

Rub sugar, butter and flour together first, then take ½ cupful out to sprinkle on top of the cake. This recipe I got over the radio. Perhaps, quite a few of you have it already.—Thelma Hendy, Berks County, Pa.

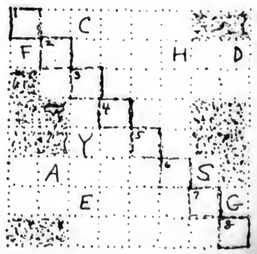
DEAR LITTLE FOLKS:—This is not exactly like a cross-word puzzle, altho it looks something like one. I have placed letters in certain squares to help you find the words to be made. The first line across will spell the name of something important to a ship which does its work when it is thrown overboard. The word on the second line means "completed," and I have given you three letters in it. The word on the third line spells the capital of the state of New Jersey. The fourth line has a word meaning "monkeys." The fifth line means to shout, and I have given you the first letter. The sixth line gives you the name of a tropical fruit which is long and yellow. The seventh line spells a word meaning what we are doing with our money when we go out for a good time. The last line gives you the first name of the first President of the United States. If one line troubles you, try the others and when you come back to the hard one again, you'll probably see what it is. When you have placed the letters correctly for these eight words, reading across, you will also find on the blocks numbered 1, 2, 3, 4, 5, 6, 7, 8, (going downstairs), the name of something many people have been speaking and thinking about these days. It is something you would be very much surprised to see coming downstairs, tho, but I think you will all know where to look for one—or at least which way to look if you thought one was near you.

When you have found the name of this interesting object, let me hear about it, sending in your answer on a postcard or in a letter which should reach me by September 10th. PLEASE TELL ME HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY.



The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the August 13 issue (the picture to be made by filling in certain spaces) is: A HORSE.

The prize winners are: Mahlon Adair, age 11, Lititz, Pa.; Sybella Byers, age 8, Linesville, Pa.; Mary Coley, age 12, Oscoola Mills, Pa.; Elmer Cooke, Jr., age 8, Hamburg, N. J.; Melvin Farvour, age 9, Masonville, N. J.; John Kobaly, age 9, Monongahela, Pa.; Leon McFarland, age 9, Rossiter, Pa.; Alice Rosso, age 8, Princeton, N. J.; Rose Sefcik, age 11, Monongahela, Pa.; Allene Thorpe, age 10, Lemont Furnace, Pa.

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—Henry Ford took his first airplane ride with Col. Charles Lindbergh in the Spirit of St. Louis. He is shown with Col. Lindbergh in the cockpit of the plane.

2.—Senora Dona Amelia L. de Alfaro, wife of the Minister from Panama to Washington, with their children, Iran, Rogell, Amelita and Yolanda. The portrait was made at Blue Ridge Summit, Pennsylvania, where they spent the summer.

3.—One of the most startling stunts ever attempted was accomplished when a German woman took the place of a bullet. She was shot from a cannon and landed in a net 40 meters away.

4.—Admiral Sir Charles Madden, who succeeded Lord Beatty as First Sea Lord of the British Admiralty. Admiral Madden often is mistaken for King George as his resemblance to the King is striking.

5.—This huge, cigar-like raft consists of six million feet of timber and was towed a thousand miles, from Washington to San Diego, California. Approximately eighty rafts, each as large as this one, have been towed the length of the Pacific Coast during the last twenty-five years.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

The Story Thus Far

"BOY, I'm your uncle," he said. How I stared at the roughly dressed backwoodsman who had forced his way into the house. I reckoned myself a young gentleman of Philadelphia. Could kin of mine be nothing but a trader of the frontier?

It was true enough. Worse yet, it was he who had supplied my income since my aunt died. And he planned to take me back with him some time to Carolina. That was horror added to horror to a delicately bred lad like myself.

Some matter connected with the Regulators, rebels against the authority of His Excellency, Governor Tryon, called him back before he could carry out his threat to take me south with him. Yet I knew he would return and that my gay life in that Philadelphia of 1771 would vanish like a bubble. I dreaded the day.

One evening, at the George Inn, I heard my uncle's name, Daniel Craig, the same as my own. A big Major of Carolina militia was cursing him out for a coward. For a moment I remembered only that Daniel Craig was my uncle and forgot he was a rebel and a backwoodsman.

"Liar!" I cried out at Major Dunston across the sudden silence that fell. He chose pistols and we adjourned to the water-front. Carnes, a little terrier from Boston—he talked like a rebel and claimed friendship with my uncle—seconded me.

When the word was given, I swung the pistol down in line with the man ahead. Set on a hair, it spat fire into the darkness almost before I knew that I had touched it. Dunston went down and I was untouched.

Yet as Carnes hurried me away, I knew I was in a bad case. Dueling was not at all popular in Pennsylvania. The law and the friends of Dunston would be after me. Flight seemed my only course.

This was the view that the local committee of the Sons of Liberty presented to me. Carnes, a member of the Boston group, took me to them at once. It seemed they were sending a load of powder down to help the Regulators and needed a messenger to tell Hunter, the chief of the Regulators, when it would arrive. They offered to fit me out and start me south, provided I took this message.

"I cannot take part in such treasonable work," I cried. "This is rebellion."

"You will have to consider if it is better to be a dead subject or a live rebel. We only ask that you carry the message for us."

Finally I consented and took coach next day for Reading. From there I rode south. At Harris Ferry, I had a great scare. Two men were looking for me. I overpaid the driver of the stage to go on.

That was why I had paid so liberally. It was no duty of an honest man to stay by a bargain made by a criminal.

Urquhart smiled at this. "If I thought like you, I would save money. I have not yet settled with you. Perhaps I should not. After all, I am an honest man, and as to you, Steiner, I have heard tales that lead me—"

"Put the boy in and be quiet," the driver snarled. So we rode together to Carlisle.

As we got down Urquhart put a hand on my shoulder. "Where now, lad?"

"Carolina."

He pondered. "It's a long way." A hand wormed down into his pocket. "You'd best go back to your kin in Philadelphia." The hand came out with a purse in it. "Yet if you must go—"

IT WAS too plain that he was nerving himself to spare me some money. And his money, I knew, parted from him somewhat less easily than a leg or an arm. I was grateful, but I could not accept anything from him.

"I shall do very well," I assured him. "A young fellow like me can make his way anywhere. And I have some money the rascal missed."

"Oh, have you so?" he commented in great relief, and put his purse back. He put out a big hand. I took it.

"Experience is aye a rough teacher, lad," he said. "But, oh, you'll learn things on this trip that'll be worth more to you than a degree from Edinburg." And with that he took himself off.

As for me I started south again mainly because there seemed nothing else to do. Someone pointed out the road to Chambersburg, and I set off.

I had lied to Urquhart, of course. Actually I had not a cent on me. The pouch with the message to Hunter still swung around my neck, but my pockets were picked clean. Yet there was no going back. I knew there were men from Philadelphia on my trail. Forward, then, and meet trouble when it comes.

I started out with a certain rebound of spirit. The night before I had sunk so far in misery that there was no dropping further. Something might turn up, I thought. After all, I was young and hearty and could work my way somehow.

This feeling lasted just a little past noon. Two things killed it. One was the increasing hollowness of my stomach, and the other the soreness of my hitherto pampered feet. Added to this was the fact that the wind was a searching and cool one. It was almost spring in the valley, of course, with grass showing up green and yellow forsythia coming out in an occasional cluster of woods. Yet the ground was damp and the wind cold and these signs of spring mere harbingers of a summer whose comfort was still a long time away.

Nevertheless, I plodded on. Along in the middle of the afternoon, I came to a creek and stopped beside it to drink and drink, in the hope that the water might stay my stomach. Instead, it gave me a queer, sick feeling, and I went on with less heart than ever.

Slow tho I was, yet I caught up with a lumbering wagon with two thin oxen pulling it. Three or four children frolicked along the road; more sat with the mother in the wagon. To the man who plodded by the oxen, I gave a greeting as I passed.

In his reply I caught the accent of Ireland, and looked at him with more curiosity. He was lean, dark and rather careworn. Neither he nor his family wore boots, and a shirt and small clothes appeared to be his only garments.

IMMIGRANTS like this had been pouring in by the thousands, so fast that Quaker merchants talked about putting some sort of an embargo on them. Yet they made the lands of the frontier more valuable, and so were tolerated.

I was getting so tired that I gained but little on the oxen, and so was only a half mile ahead of them when I noticed them stopping for the night. I looked back from a little knoll, saw the camp fire spring up, and wondered what would be in the pot.

Nothing for me, at any rate, I thought, with a sort of shame that I should be thinking with envy of a meal a wild Irish kern was about to eat. Yet I did think of it as I went on, and watched the road for a farm house. I had the notion of asking for supper and a place to sleep and offering to pay for it by work on the morrow. The thought of going to strangers with such an offer irked me sorely, but a hungry belly drives hard, and the hungrier I got the less particular I became about the method of getting it filled.

When a farm house, a log cabin set back in the field, did come in sight, I strode boldly up and gave a halloo that should have brought the goodman out in a hurry. No one came. I went closer. No dogs barked. The house was empty.

I was too tired to go farther. I found a well, drank more water, crawled into a pile of hay in the shed to keep warm, and finally went to sleep.

Early in the morning I woke, very cold and stiff and hungry. Having nothing better to do, I went on. It was one of those damp mornings in early spring with the fog shutting you in and hanging wet blankets on brush and grass. I was soaked thru before I had gone far.

All in all, with the dust of the day before, the damp of the morning on me, and my clothes showing some signs of the hay-pile that was my bed, I was not a figure to inspire confidence. I should have thought of this, but failed to. It was so clear to me that I was a gentleman of Philadelphia, temporarily in some distress, that altho I was mortified at my appearance it seemed certain that my essential quality would show thru my attire.

This illusion was stripped from me about nine o'clock. I had come to a rather neat looking farmstead. The house had several rooms and the stump pasture a dozen head of cattle. By a shed I saw a man tinkering with something.

Somewhat diffidently I went up to him and stated my case. It was, briefly, that I was a gentleman from Philadelphia, southward bound, who had been the victim of robbery and craved food. I added, of course, that I would be willing to work for it.

The fellow did not look up from the plow he was mending.

"Keep going," said he. The answer was so far from my expectations that for the moment I did not understand, but stood and gawked at him.

"What do you mean, sir?" I asked finally.

He did not answer me at all, nor even look at me. Instead, he laid down his tools, walked a few steps toward the house and whistled.

A big dog came bounding down to meet him. At the house a door flew open and a woman put her head out.

"Another scamp to pester me," he called to her, and then to me: "Begone, before I set the dog on you."

So I left that place in a fit of fury and dismay. I had regretted shooting Dunston; but this fellow, I felt, I could pistol with a light heart. That I could not harm him was not a fact to soothe my spirit.

After the anger had burned off, I was conscious of a growing fear. It had never occurred to me that a man might ever go hungry, that he might even starve to death. It had seemed clear to me that whatever else might happen to a man, this was impossible. In the society in which I was brought up, no one did hunger, and I instinctively thought of starvation as something that happened to unfortunates in far countries, but never in Pennsylvania.

No doubt the flood of emigrants on the great wagon road brought plenty of undesirables with them. Farmers along the way probably bilked poultry and other things. It was quite likely that they gave hospitably to honest folk, with an ox team and with a plow in the wagon to prove their intentions. But to masterless and broken men? No! It struck me with a sense of irony that the Irish family laboring behind me might get a welcome where I had been driven out.

At any rate, that was the end of my attempts. The farms were few. Once, indeed, I plucked up courage to approach a man in a barnyard, but his very air as he waited my coming froze my courage and I walked on.

Along toward afternoon I found that my hunger no longer tortured me so. Every feeling was subdued into a gray weariness. I picked up one foot and put it ahead of the other. In a fashion disinterested and mechanical, and thought nothing at all.

Toward evening one incident startled me. Thru my daze a sound of creaking axles and harness came to me. I looked around and saw, not one hundred yards behind, the ox team I had passed the day before. The driver saw me and waved.

I PRESSED on more quickly. I must be getting weak indeed, if slow beasts like those could outfoot me. Again I resolved to try to get food at the next farm house.

But when I found it, the fear of being denied seemed for the moment worse than the lack of food. So I went on a little past, struck a cow path that led back into the woods, and at the end of it a rough shelter, a sort of lean-to of branches. Under it were two cows and a horse. I took one corner, scratched together some clean grass to lie on, and spent another wearisome night.

The morning found me in bad shape. My throat was swollen so I could hardly swallow. There were darting pains all over me. Worse than everything, I was so weak that it seemed I could not start out again.

For the first time I began to wonder if I would live thru this experience. I thought of taking a fever and lying here with these four-footed creatures until sickness and lack of food famished me. It occurred to me that even this would not be, for the owner of the hut would surely come and turn me out to die by the road. Oddly enough, it was this thought that sent me out. In a queer, crazed way I had the thought that I must hunt for a hidden place where I could die peaceably.

Of that day, I can remember very little. I found the road again and pressed on south. How long I walked or how long I rested, I cannot say. I only know that some time later the blur that covered my mind was cut by the sound of a man's voice.

"If it was home in Donegal that I saw him, I would know what would be ailing him. But here—"

A woman's voice came in. "He's sick and hungry, poor lad; that's what he is."

Someone took me by the shoulder. As I came to myself, I realized that I was sitting on a log by the road. An ox team with a wagon behind it had halted opposite me. Four concerned faces were turned toward me. I recognized them—the Irish family I had been racing with since I left Carlisle.

One last spurt of pride took me to my feet.

"Thank you," I mumbled, "I shall do very well."

WITH that I took two steps forward and then for me the whole scene was blotted out.

What happened after that is somewhat blurred. I remember finding myself by a fire with my head in someone's lap and the warmth of some hot liquid trickling down my insides. Later there was a swaying and creaking under me that puzzled me sorely for a time. Weak and feverish and light-headed as I was, I lay and wondered if somehow I had got aboard ship. Presently, with some return of sanity, I noted the boards of the wagon box at the sides, the canvas roof over me, and realized that I was in a wagon. How I got there or where I was going, I did not at the moment have vigor enough to consider.

Presently I was lifted out, laid on the ground by the fire and given something more hot to drink. From that I went into a long sleep and woke in the early morning, weak and tired, but otherwise quite myself again. I dragged myself out of the wagon and slipped to the ground.

It was still gray in the east, but the birds were beginning to chirrup in the boughs above us, and the oxen, a few yards away, were up and tasting, without particular enthusiasm, the tender shoots of brush. The fire by my feet was burned down to coals. Around it lay several bundled figures, with the dew wet on the blankets that covered them.

One of the bundles moved, fell apart and took form as a slight man with a kindly but rather worried-looking face. He came over to me quickly.

"You are well again?" he asked. "Good. Ride in the wagon one more day and you will be fit again for the road."

That notion of mine that the world was all hostile was still in my head, and his words struck thru me with a great surprise. It was but yesterday that I had dreamed that whoever found me would turn me out on the road to die.

(To be continued next week)

A Taste of What's Ahead

COLONEL EDMUND FANNING, loyalist and scoundrel, who preyed on the men of the back country of North Carolina, is a historical character who appears in this story. Daniel Craig, the hero of "The Road to Carolina," tested Fanning's mettle a few minutes after he first met him. Fanning had ordered that he confess the details of his errand to the Regulators or be shot. Let Craig tell the story:

They pushed me back into the straw-stack. The four men lined up in front of me. The deputy stood to the left.

"We'll make it a short five minutes," said he. "What have you to say, prisoner?"

I could not have spoken if I had wanted to. I seemed to be suffocating and had hard work to keep from panting with my mouth open. For the rest I was only conscious of the straws pressing into my neck from behind, and of the four quiet figures in front of me.

"Two minutes more," warned the deputy.

Could I hold out that much longer? Every second seemed a year. Life seemed so sweet and death like this so horrible. I feared to weaken and yet at the same time hoped I would.

"One minute."

I shook my head.

The deputy turned to the squad. "Make ready," he ordered, "aim at his heart and fire when I give the word."

Activities of Al Acres: *Ma Acres makes a painful discovery : : : :* By Leet

MY GOODNESS! IF PA AN'AL COULD ONLY SEE ME NOW.
DOSN'T THAT SUN FEEL GOOD ON YOUR BACK, MRS. NEWCOMER?
YES, THE ULTRA VIOLET RAY IS FINE FOR THE NERVES, MRS. ACRES.
OH! MY POOR BACK!
OUCH! OUCH! WHERE IS THAT COLD CREAM, MRS. ACRES?
THAT NIGHT
FARM WOMEN'S CAMP

Did you ever hear this one?—

A farmer had hired a raw Irishman to plow. "Now, Pat," said he, "you want to make your first furrow straight, so you'd better choose a mark and plow at it."

Ily and by the farmer came out to see how Pat was getting along. He found that the plow had been wandering zigzag all over the field. "Why, Pat," he exclaimed, "I thought I told you to choose a mark and plow at it!"

"Sure, and I did, sor," replied Pat. "I plowed straight for the cow on the hill beyant, but the crayture wouldn't kape still!"

An old countryman, who had been to London for the first time on business, returned in a bad temper.

"At the hotel," he complained, "they kept the light in my bedroom burning all night. I couldn't get a wink of sleep."

"Why didn't you blow it out?" asked his wife."

"Blow it out?" said the old man. "I couldn't. It was in a bottle."

Willie had been naughty and was being sent to bed by his mother without his supper. He was naturally aggrieved at the feminine sex and tumbled between the sheets without a word.

"Willie," she said, "say your prayers."

"I won't."

"Don't you want to go to heaven?"

"Nah. I'm going with papa."

A well-known official of a telephone company was rudely aroused from his slumbers by the ringing of the telephone. After bruising his knee on a chair, he reached the phone.

"Hello," he growled.

"Are you an official of the telephone company?" asked the voice.

"Yes, what can I do for you?"

"Tell me," said the voice, "how it feels to get out of bed at two o'clock to answer a wrong number?"

Modern girl (to fiance)—Hugo, what a charming little ornament you have sent me. But what is it? It's made of gold, but it's not a brooch, nor a ring, nor a bracelet. I have never seen anything like it.

Hugo—A thimble.

Queen Elizabeth, of Belgium, was stopped by the police in Brussels to allow Lindbergh to pass. When she found out the reason, she exclaimed, "Delighted!" And that's not the first time a queen has bowed to an ace.

Little Neighbor (after watching the process of the baby's bath)—How long have you had your baby, Mrs. Brown?

Mrs. Brown—Six months, dear.

Little Neighbor (after a glance at her battered doll)—My, but haven't you kept it nice!

Chester—I've worked under the same boss for twenty years.

Lester—I can beat that. Next week is my silver wedding anniversary.

Father—Isn't that young man rather fast?

Daughter—Yes; but I don't think he'll get away.

Judge—Guilty or not guilty?

Female Prisoner—Er—what else have you?

The Winning Name for Lee Buttonless Work and Play Suits is WHIZIT

FROM thousands of suggestions this name has been selected to represent the already famous Lee Buttonless Work Clothing. From every state, indeed from every county, the names came indicating interest beyond our expectations. The convenience, durability, appearance and time-saving features of the new Lee garments with the Hookless Fastener, have won nation-wide approval. Thousands of working men have put them to the test and found them easy to put on or off and remarkably long wearing. Thousands of Mothers have saved time and trouble by dressing their children in the new buttonless play suits. Ask your nearest dealer to show you LEE WHIZIT UNION-ALLS, OVERALLS and PLAY SUITS.

THE H. D. LEE MERC. COMPANY
Factories: Kansas City, Mo., Trenton, N. J., South Bend, Ind., Minneapolis, Minn., San Francisco, Calif.

Lee Union-Alls, Overalls and Play Suits are also available in styles having buttons instead of Hookless Fasteners.

The winners in the Lee Prize Naming Contest were chosen only after consideration was given to every entry. Each prize was awarded on the basis of the name submitted together with the reason for the choice of the name. The Lee Company wishes to thank the thousands of persons who submitted names, for their interest in the naming of the new garments.

First Prize—$250—Geo. W. Mock, Seattle, Wash.
Second Prize, $125—Mrs. William Gallup, Casselton, North Dakota.
Third Prize, $75—Mrs. Mildred Steele, Elkhart, Indiana.
Fourth Prize, $50—Mrs. G. F. Rose, Brockton, Mass.

One Hundred Prizes of $5.00 each awarded to the following:

J. Corry Baker, Pueblo, Colo.
Dan M. Davy, Burlington, N. D.
Dean Harris, Klamath Falls, Ore.
Abraham Wolff, Aiken, S. C.
Mrs. Don Peterson, Wentworth, Minn.
Mrs. H. Seser, So. St. Paul, Minn.
C. L. Bruce, Webster City, Iowa
Edison C. Sevier, Easton, Pa.
Mrs. H. W. Rice, Collingwood, N. J.

Soil Scientists Meet

Foreign Delegates Go Home Favorably Impressed

Editors' Note:—This article on the First International Congress of Soil Science of which Doctor Lipman was president this past year is late in appearing in this paper because of Doctor Lipman's hurried departure to Europe. He and Dr. Edwood Mead, Chief of the United States Reclamation Service, were commissioned to make an agricultural study of Palestine. The following letter accompanied by this article was received from Doctor Lipman after he sailed.

"We are due at Southampton tomorrow. After a brief stay at London we shall cross the channel and proceed to Marseilles and thence by steamer to Port Said in Egypt. An overnight journey by rail will take us to Palestine where I am to remain about three weeks in order that I might acquaint myself with the agricultural resources of the country and its possibilities as a producer of horticultural, agricultural and livestock commodities. In due time I shall write to you about some of my impressions. Meanwhile I wish to carry out my promise to say something about the First International Congress of Soil Science recently held in Washington."

AFTER a period of preparation which lasted about three years the sessions of the Congress were opened by President Coolidge. The meetings were held in the beautiful building of the United States Chamber of Commerce. There was an attendance of about 1500 people with a representation of something like 35 different countries. The largest delegation with 21 members came from Russia. Large delegations were sent also by England, Germany, Switzerland, Hungary, Japan, Poland and Canada. Many of the leading soil scientists contributed valuable papers which will appear in the five printed volumes (about 3000 pages) of the proceedings of the Congress.

Among the outstanding features of the Congress were a number of able papers dealing with the soil and food resources of the world. The discussion of the world's soil problems brought out more clearly than was ever done before the interdependence of nations, the competition of soils and their fertility in the food markets of the world and the wide sweep of the soil conservation movement. The relation of rocks and climates to soil formation and soil composition, lowering of plant food due to drainage and cropping, soil erosion, the growing importance of commercial fertilizers, lime and green manures all received attention at the hands of noted authorities. The more technical papers dealt with the physical, chemical and biological properties of soils and much new light was thrown on the nature of soil fertility and the conditions which influence the formation of available plant food and its use by crops.

Show Climatic Factors in Soil

The soil exhibits which occupied the wall and floor space of several large rooms attracted much attention. The Russian delegation contributed a carload of material consisting of soil columns and magnificent soil maps of European and Asiatic Russia. An examination of these exhibits showed at once how large a fact climate has played in the development of forest, steppe and marsh soils. Together with the soil exhibits from the United States, Roumania, Hungary and Austria, the Russian exhibits formed an outstanding contribution to our knowledge of soils from a world-wide point of view. This is particularly important at this time for the farmers of North America, since they must begin to think in a more systematic way about their future plans for the production of cotton, wheat, corn, oats, grass and other crops and the flow of staple crop surpluses into the channels of world trade.

The exhibits of apparatus and appliances for the scientific study of soils deserve more than passing mention. The investigation of soil acidity, soil organic matter, soil inoculation, eel worms (nematodes) one of the great scourges in sub-tropical and tropical regions, soil texture, soil analysis and of a number of other fertility factors was illustrated in a most interesting way by these technic." exhibits.

Are Graciously Entertained

Opportunity was not wanting for the foreign and American delegates to become acquainted with the official life of Washington. Secretary and Mrs. Jardine entertained the members of the Congress at the Pan American Union. It was a most delightful affair and did not fail to impress the guests with the graciousness of our hosts and the architectural charm of one of the finest buildings in the United States. Other social functions, among them a reception at the National Museum, a formal dinner at the Willard Hotel, a steamer excursion to Mount Vernon and receptions at several embassies, the Congressional Country Club, etc., served to impress our guests from abroad with the spontaneous friendliness and the good will of the American friends and acquaintances.

Take Transcontinental Journey

The meetings of the Congress were concluded on June 22nd. As retiring president of the International Society of Soil Science and of the First International Congress of Soil Science I turned over my official responsibilities to Professor K. D. Glinger, of Leningrad, who was elected as president of the Second Congress. The members and delegates were now ready to start on the transcontinental journey whose purpose it was to acquaint the members of the party with the vast extent of our territory, our soil and crop resources, our educational institutions, our industries allied to agriculture, our cities and countryside, our plains and mountains and the shores of two oceans. They saw all of these, but they learned of something of far greater importance, namely, the generous spirit of a busy people. The special train carrying 250 people left Washington on the night of June 22nd. On the following day Greensboro, true to its traditions of southern hospitality, overwhelmed the visitors with all sorts of attentions and kindnesses. The same story was repeated at Atlanta, Athens and Knoxville. It was truly a remarkable journey thru Missouri, Kansas, Colorado, Utah, Nevada and southern California. Wonderful landscapes and wonderful people and a story of achievement that spoke for itself. Then up the coast of the Pacific, from Los Angeles to San Francisco, thru Oregon and Washington, from Vancouver on the Canadian National, the awe inspired by the Canadian Rockies, and the great sweep of the plains beyond Winnipeg, St. Paul, Des Moines, Moline and Chicago all left indelible impressions. As I write this the twenty odd foreign delegates (part of the 125) who are returning on the Leviathan are still debating among themselves about our great experiment in democracy. They are taking home with them a vision of something that will help them as it will help us. And so the First International Congress of Soil Science has evidently been worth while not alone as a contribution toward the progress of agriculture, but also as a contribution toward better understanding and good will among the nations of the earth.—J. G. Lipman.

"Walter," said a traveler in a railroad restaurant, "did you say I had 20 minutes to wait, or that it was 20 minutes to eight?"

"Nayther. Oi said ye had 20 minutes to ate, an' thot's all ye did have. Yer train's just gone."

Him—You look like a sensible girl, let's get married.

Her—Nothing doing. I'm just as sensible as I look.

PROTECT—your barns —houses—sheds—silos—corncribs—grain buildings—tanks, etc., with old reliable "Globe" Brand Galvanized Roofing and Siding.

The only safe, long lasting, easily handled, moderately priced roofing and siding. Fire safe, lightning proof, weather proof, rot and vermin proof.

In your state GLOBE Galvanized Roofing and Siding has stood for three generations back—tested and proven by satisfied users. GLOBE Galvanized Roofing comes to you, backed not only by a record of service, but by a mill recommendation.

We recommend GLOBE Roofing because it is made in our own mills, formed in our own shops, subjected to every test possible, backed by the wisdom of many years of manufacturing experience.

Smut—the Great Black Destroyer

(Continued from page 3)

wheat seed if smut is found in the next crop of wheat.

Stinking smut has become more severe during each of the past six years and will continue to be severe until stopped by treatment because of a change in the date of wheat planting. Wheat is now being planted in most sections in Pennsylvania from two to three weeks later than it was seven or eight years ago.

Stinking smut seed seldom sprouts when planted in soil which has a temperature above 68 degrees Fahrenheit, but grows with increasing strength as the temperature drops from 68 degrees to 41 degrees Fahrenheit. It is known that the soil is usually warmer than 68 degrees Fahrenheit during early September in Pennsylvania. Previous to 1920, stinking smut very rarely was found since most of the wheat was planted when the smut seed could not grow and infect the wheat. Since 1920, wheat has been planted later and later to avoid the Hessian fly. This has resulted in the planting of the wheat when the soil temperature was usually well below 68 degrees Fahrenheit.

Avoid Two Pests Is Object

Since the entomologists claim that late planting is the only way to escape Hessian fly injury and stinking smut is increased by late planting, the only way to avoid both pests is to plant as soon as possible after the danger of fly injury is over and to treat the wheat in some way to kill the smut.

The object of seed treatment is to apply some form of a poison to the wheat seed which will not injure it, but which is strong enough to kill the smut seed. Formaldehyde, which is such a fine treatment for oat smut, also will kill wheat smut, but is so strong that it sometimes kills the wheat seed and is not to be recommended.

A concentrated dry dust form of Bordeaux, known as copper carbonate, has been found to kill the smut seed adhering to the wheat grains and does not injure the wheat seed. This poison seems to stimulate the wheat to grow better and yield slightly more when applied in the correct amounts.

The stinking smut plant with fiendish cleverness attempted to forestall all types of seed treatment, such as formaldehyde or copper carbonate, by making some of the smutted kernels so tough that the smut seed remains covered with the wheat grain coat even after threshing. The disinfectant does not kill the smut in these kernels, and if they are not removed, they will break open after treatment and still cause smut. Since these smut balls are lighter than good grains of wheat, the first step in successful smut control is to remove them by carefully cleaning the wheat.

The copper carbonate dust may be applied in any dust-tight mixer which will thoroly cover every kernel of wheat with copper carbonate dust.

The most thoro coating of dust can be applied to the wheat by having it treated either in a commercial power-driven outfit, such as about fifty Pennsylvania millers and grain dealers have installed during the past two years, or in the Pennsylvania State College type of home-made double-acting machine which nearly any farmer can make.

Both types of machines are equally efficient but farmers are usually rather busy at wheat planting time and prefer to pay the 10 to 15 cents a bushel charged by the operators of the commercial machines for cleaning and treating their seed wheat rather than take the time to treat it themselves.

At the present time there are two types of copper carbonate dust: (1) pure copper carbonate dust containing 50 to 55 per cent metallic copper, and (2) extended copper carbonate containing 18 to 20 per cent metallic copper. To date, the dust having the 50 to 55 per cent copper content apparently is slightly more efficient in controlling stinking smut.

Two and one-half ounces of copper carbonate dust should be used to each bushel of wheat. Therefore, one pound of the dust will treat approximately six bushels of wheat.

Warnings in Connection with the Use of Copper Carbonate on Wheat

As copper carbonate is a moderate poison, the following precautions should be observed:

1. Do not use or sell treated wheat for feeding purposes.

2. Extreme caution should be used when making the treatments to avoid inhaling the copper carbonate dust. The breathing of a quantity of this dust may cause sickness.

The commercial machines are usually fitted with a fan to remove the dust, which allows treatment to be performed indoors. When treating with a home made machine, the work should be done outdoors and the operators should always stand on the windward side when dumping the machine and handling the treated grain.

When using either of the above types of machines, a commercial dust-tight respirator should always be worn. If these are not available, a damp sponge or handkerchief tied over the nose and mouth will somewhat reduce the breathing of the dust.

Directions for Planting Wheat Treated with Copper Carbonate Dust

1. Treated wheat does not pass as readily thru the drill as does untreated grain. The proper amount of wheat can be planted only by checking the rate of seeding and setting the drill up accordingly. Most drills must be opened up from one-fifth to one-third further, or the oats side used.

2. Copper carbonate dust sifts into all the working parts of the drill. This necessitates the cleaning of excess copper carbonate dust from the seed feeds of the drill at the end of each working day.

Butter and Eggs—Country butter, 50@55c; creamery, 46@52c; fresh eggs, 36@38c doz.

Dressed Poultry—Chickens, $1@2.25 ea; springers, 50@$1 ea; ducks, $1.50@2.25 ea; squabs, 25@45c ea.

Vegetables—String beans, 15@20c pk; lima beans, 20@25c pt; beets, 5@5c bch; cabbage, 5@20c hd; carrots, 5@10c bch; cauliflower, 15@35c hd; celery, 5@10c bunch or stalk; cucumbers, 1@5c ea; pickles, 50@75c per 100; corn, 20@25c doz; eggplants, 10@25c ea; endive, 5@10c hd; lettuce, nearby, head, 5@10c hd; Iceberg, 10@25c head; onions, 20@25c ¼ peck; green onions, 5@8c bunch; potatoes, 20@25c ½ peck; $1.20@1.25 bushel; sweet potatoes, 20@25c ¼ peck; sugar peas, 18c qt box; poke, 5@10c bch; radishes, 5@8c bch; rhubarb, 5@10c bch; spinach, 15c ¼ pk; tomatoes, 10@15c qt box; 50@75c ⅝ bskt; turnips, 5c bch.

Fruits—Apples, 25@40c ½ pk; blackberries, 15@20c qt; cantaloupes, 8@15c ea; elderberries, 10@15c qt; huckleberries, 30@35c qt; pears, 15@25c qt; peaches, 10@20c qt; 50@60c ⅝ bskt; plums, 10@20c qt.

HAY AND GRAIN

Wheat, Hay and Straw (prices paid to farmers)—Wheat, $1.22; hay, baled, timothy, $12@15; straw, $8@9.

Feeds (selling prices)—Bran, $40.50@41.50; shorts, $48@49; hominy, $50.50@51.50; middlings, $53@54; linseed, $56.50@57.50; gluten, $43.50@44.50; ground oats, $3.50@4; corn meal, $3.25@3.50; medium, $3.75@4.25.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This Week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$. .43½	$. .42¾	$. .40	$. .43
Eggs, fresh gathered extra firsts (N. Y.)	.32½	.32½	.26¾	.34¾
Steers, good to choice (Lancaster)	11.62½	11.62½	11.50	9.25
Hay, Number 2 timothy, baled (Phila.)	17.00	18.00	18.00	23.50
Wheat, No. 2 red winter (Philadelphia)	1.45	1.42½	1.43	1.39½
Oats, Number 2 white (Philadelphia)	.38¾	.40½	.38⅝	.50¾

YORK PRODUCE

Butter and Eggs—Country butter, 50@55c; separator, 55c; eggs, 30@38c.

Poultry—Hens, 18@26c; springers, 18@25c; dressed, 1c@$2 ea.

Vegetables—Potatoes, 15@20c ¼ pk, $1.25 bu; cabbage, 3@10c hd; lettuce, 5@25c bd; celery, 10@15c stalk; horseradish, 5@10c glass; onions, 5c bch, 10c box; beets, 5c bch, boiled, 2@3c ea; turnips, 10@15c ¼ pk; soup beans, 15@20c qt; lima beans, 20@25c pt; radishes, 5c bch; peas, 20@30c ¼ pk; beans, 15c ¼ pk; tomatoes, 10@15c box, 25@35c bskt; squash, 3@10c ea; corn, 20@40c doz.

Fruits—Apples, old, 15@20c ¼ pk; new, 10@20c ¼ pk, $1.25@2 bu; plums, 10c lb, 15c qt; blackberries, 15@20c qt; peaches, 10@20c pt, 15@25c ¼ pk.

Wholesale Grain Market—Wheat, $1.27; corn, $1.10@1.20; oats, 40c; bran, $34 ton; middlings, $45 ton.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 45½ 46c; choice, 43½ 45c, do, good 41@42c, do, prints, 46@48c, do, blocks, 45@47c, do, ladles, 35@36c. Md and Penna, rolls, 32@34c; Ohio and W. Va, rolls, 31@32c; store-packed, 31@32c; dairy prints, 32@34c; process butter, 29@ 30c.

Live Poultry—Old chickens, hens 4½ lbs and over, 25@26c; do, 4@4½ lbs, 23@25c; do, 3@4 lbs, 18@22c. Leghorns and other light stock, 18@19c. Roasting, mixed colors, 15@18c; do, Leghorns, 13@15c. Young chickens colored 2½ lbs and over, 27@28c; do, smaller, 23@26c. Leghorns, 2 lbs and over, 25@35c; do, smaller, 22c. Young ducks, White Pekins, 4 lbs and over, 20@21c; Puddle 4 lbs and over, 18c; Muscovys, 4 lbs and over, 18c; all kinds smaller, 16@18c. Guineas, young, 1@1¼ lbs, 60@75c ea; do, 1½ lbs, $1 ea. Pigeons, young and old, pair, 20@30c.

PITTSBURGH MARKETS

PRODUCE

Vegetables (wholesale prices)—CABBAGE, bulk, bbl, Penna and N Y, $1@1.25. CUCUMBERS, N Y, bu bskt, $2.50. LETTUCE, Colorado and Calif, Iceberg, crate, best, $3.50@3.75; few $4; poor, $3; N Y, Big Boston, crate, best, 85@90c; poor, 25c. ONIONS, Ohio, Mass and N Y, 100-lb sack, yellows, $2@2.25; Indiana, 100-lb sack, yellows, $2@2.25; Indiana, 100-lb sack, No 1 white, $2.25@2.50. PEPPERS, bu hmpr, N J, 60@75c. POTATOES, N J and Long Island, 150-lb sack, No 1 Cobblers, $4.15@4.25. TOMATOES, 20-lb bskt, Ohio, $1; Missouri, best, 65@75c; poor, 10c; N J, 30c.

Vegetables (home-grown supplies)—ONIONS, bu bskt, $1.50@2. BEETS, doz bchs, 20@25c. CABBAGE, bu bskt, 50c. CARROTS, doz bchs, 20@25c. CORN, 5-doz crate, $2.50@3. LETTUCE, leaf, box 2-doz, 50@75c; ONIONS, bunch 2 doz bchs 15@20c. PARSLEY, doz bchs, 25@30c. SPINACH, bu bskt, summer, 90c; winter, $1.@1.25. TOMATOES, 10-qt chip bskt, 50@$1.

Fruits—APPLES, bu bskt, Va and W Va, Maiden Blush, $2@2.25; Wealthies, $2. Lowells, $1.25@1.50. N Y, Duchess, $1.50@1.75; unclassified, $1@1.25. N J, Wealthies, $2.

LIVESTOCK

Hogs—Slow, mostly 10@25c lower; top, $11.60; decline about equal to Friday's advance; butchers, 260 lbs and up, quotable $10@10.40, 200@260 lbs, $11 downward; bulk, 160@200 lbs, $11@11.50; 130@160 lbs around $11 down, light weights, including pigs, very scarce; quotable $10.50 downward; packing sows, $7.50@8.

Calves—About steady; quotable top, $16.50.

Sheep—Slow and lower; choice lambs quotable around $13.75.

NEW YORK MARKETS

PRODUCE

Butter—Firm; creamery, higher than extras, 44@44¾c; creamery, extras, 92 score, 43½c; creamery, firsts, 88@91 score, 38½@42c; packing stock, current make, No 1, 35c; do, No 2, 31½c.

Eggs—Irregular; fresh gathered, extra firsts, 31@34c, fresh gathered, firsts, 28@30c; fresh gathered seconds, 25@28c; nearby hennery whites, closely selected, extras, 43@51c.

Cheese—Steady; State, whole milk, flats, fresh, fancy to fancy specials, 25@25½c; state, whole milk, flats, held, fancy, 27½@28c.

Live Poultry—Nominal; no quotations.

Dressed Poultry—Quiet; chickens, fresh 23@25c; do, frozen, 20@23c; fowls, fresh, 18@20c; do, frozen, 17@20c; old roosters, 14@15c; turkeys, fresh springs, unquoted; do, frozen, 30@45c.

LIVESTOCK

Cattle—Steady; steers, $9@12.50; state bulls, $4@5.50; cows, $2.50@6.25.

Calves—Steady; veals, common to prime, $9@17; lightweight culls, $9@10; buttermilks and fed calves, $7@8.50.

Sheep and Lambs—Steady; sheep, $2.50@7; culls, $2.50@3.50; lambs, choice to prime springs, $13@13.25; spring medium, $12@12.50; spring culls, $8@9.

Hogs—Steady to firm, light to medium weights, $11@11.25; pigs, $11.25@11.50; heavy hogs, $10.50@11.25; roughs, $7.75@8.25.

HAY AND GRAIN

Hay and Straw—Hay, old or new, large bales, timothy and light mixed No 1, $24; No 2, $22@23. No 3 and poorer, $18@20. Straw, large bales, rye, $22.

Grain—WHEAT, spot, easy, c i f, domestic, $1.52½; No 1 dark spring, c i f, domestic, $1.60½; No 2 hard winter, f o b, export, $1.24½. No 1 North Manitoba, in bond, f o b, export, $1.74½; No 2 mixed durum, c i f, domestic, nominal. CORN, No 2 yellow, $1.25@1.26. No 3 yellow, $1.24@1.25½. No 2 white, 56½. No 3 white, 54½@55c; No 4 white, 53½; ordinary white, clipped, 53@53½c. OATS, fancy white, clipped, 60¾@63c. RYE, c i f, export, $1.14¾. BARLEY, malting, c i f, domestic, 93@96c.

CHICAGO LIVESTOCK MARKET

Hogs—Bulk 260@300 lbs, $9.35@10; 210@350 lbs, $9.50; few big weights, $8.90@9.15; most packing sows, $8@8.50; lightweights upward to $8.75.

Cattle—Fed steers, $11.50@13.50; western grass steers, $10.25@11.20; native grassers, $9.50@11.25; western grass cows, $6.50@8.25; natives, $6@7.75; western grass heifers, $7.75@9.25; fed, $10.50.

Sheep—Bulk of fat range lambs, $13.25@14; natives, $12.50@13.50; culls, $8.50@9.50; yearlings, $10@10.50; fat ewes, $5.75@7.25; range feeding lambs, $12.75@13.75.

WOOL MARKET

Boston, August 27, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 45@46c; ⅜-blood, combing, 44@45c; ⅝-blood, combing, 43@44c; ¾-blood, combing, 43½@44c. Michigan and New York fleeces—Delaine, unwashed, 43@44c; ⅜-blood, combing, 42c; ⅝-blood, combing, 43@44c, ¾-blood, combing, 43½@44c.

GRASS SEED—WHOLESALE PRICES

Cloverseed—Cash, imported, $14.25 bid; October, $17.50; December, domestic, $17.25 bid; December, imported $17.50 bid. Alsike, August, $16.; December, $16.10; January, $16.25. Timothyseed, cash, $1.70; December, $1.80; March, $1.95.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, August 29, 1927. Quotations cover sold car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$36.75@37.25
Spring bran	36.00@36.50
Soft winter wheat bran	37.50@38.00
Hard winter wheat bran	37.00
Standard middlings	40.00
Soft winter wheat middlings	41.00
Flour middlings	49.50@50.00
Red dog flour	51.00
White hominy	45.00
Yellow hominy	45.00
Gluten feed	48.00
36 per cent cottonseed meal	44.00
41 per cent cottonseed meal	46.50
43 per cent cottonseed meal	48.00
34 per cent linseed meal	52.50

Storage Butter Begins to Move

Review of the Week Ending August 27

EGGS—The New York egg market was generally steady during the week. The best grades sold fairly readily but the poorer grades were rather dull. The cool weather encouraged the use of storage eggs and these were in fair demand. Fancy brown eggs held steady. Nearby white eggs were irregular but prices showed little change.

POULTRY—The live poultry market in New York was rather unsatisfactory with offerings more than ample for the demand. Fowl showed a weaker tone but there was a firm demand for broilers and fancy chickens at steady prices. Much of the live poultry arriving by express was of inferior quality. Fresh killed poultry was in much heavier supply than last week and trading was unsatisfactory especially on frying sizes. Roasting sizes continued scarce and firm.

POTATOES—The eastern potato markets were stronger toward the close of the week with heavy rains retarding digging to some extent. Several markets reported higher prices. A decline occurred at New Jersey shipping points about the middle of the week but trading became more active at the lower prices and firmer tone resulted. Carlot receipts in Philadelphia were light but truck arrivals were ample for the demand. Several cars of Pennsylvania potatoes rolled during the week and many of the smaller markets are now supplied with home-grown stock.

BUTTER—The butter markets were active with advancing prices. Fancy butter was in light supply and other grades were not plentiful. The price advance brought the price level to a point where some stored butter could be moved at a profit. Some dealers believe that the higher prices will curtail consumption and cause more storage butter to come on the market.

LIVESTOCK—The Chicago hog market was stronger and prices advanced. Beef steers were unsettled but the better grades showed some improvement. Prices of she stock fluctuated while vealers and heavy calves were lower. Stockers and feeders were about steady. Fat lambs and yearling wethers were weaker but feeding lambs were steady.

HAY—The hay markets were generally steady with light receipts and a slightly better demand. Good timothy sold readily but most offerings were medium and lower grades.

FEED—Feed prices showed a firmer tone altho wheat feeds were rather irregular

County News and Notes

Cambria County, Pa.—Weather continues cold, especially at night. But three nights this season warm enough for "corn weather." Frost on July 21 and in August when wheat was being cut. Hay heavy and well made. Some oats cut, tall and well headed. Produce markets dull on account of coal strike. Feed dealers are selling large quantities of middlings for use instead of flour. Fruit scarce, very poor in quality and steadily diminishing in quantity. Buckwheat in good stand and blooming thickly. Potatoes are making a light set in the hill and crop will be short. Tomatoes are mostly going to vines and fruit is rotting badly. Cabbage is growing well and the acreage is large. Prices paid to farmers: cabbage, 2c lb.; eggs, 35c; blackberries, 20c qt.; chickens, old, 20c; dressed calves, 18c; no corn yet, bunch vegetables plentiful; prices very considerably but usually low.—S., August 18.

Chester County, Pa.—After a very cool, rainy harvest practically the entire crop is housed. Many farmers have been lucky enough to thresh their oats as they hauled it thus saving labor and also some very injurious weather for the season. Many wheat fields were affected with smut and the yield and quality was greatly lowered. The yield in many instances exceeded 40 bushels per acre. The corn has made rapid strides the past few weeks and with an open fall may make a good crop yield, even tho it had such a backward start in the spring. The past week many fields of alfalfa were sown. In some instances clovers were substituted as the past winter killed so much alfalfa. Blackberries have been plentiful and of a very nice quality. Dairy cows are in demand and the prices for the good ones are high.—F. H. G., August 25.

Dauphin County, Pa.—Temperature for month far below normal. Growth of corn, however, has been remarkable but is still back. Farmers busy threshing. Wheat not yielding so well, too much straw. Much plowing already done. Manure will be put on top. Sweet corn not plentiful and very high in price. Peaches also scarce. Local prices: corn, $1.30; new wheat, $1.25; potatoes, $1.50; eggs, 38c; butter, 55c.—I. F. M., August 22.

Lebanon County, Pa.—The Granges of the county held their seventh annual picnic on the fair grounds. Very many folks were present. All had a very good time. The boys' and girls' games were exciting. Fontana Grange won first honors for the fifth time in the contests. John Hershey and County Agent Berger did their part with spirit which helped to make the day a success. The county fair will start August 30 and continue for four days. It looks as if the exhibits would outstrip those of former years. A combined potato, poultry and general farm tour into the adjoining counties was scheduled for the week end. The end of the month finds corn way back. Some is tasseling. Much second crop alfalfa turned yellow on the stalk. Oats about all away. Had good weather to cure with the exception of one heavy rain. Yield good. Much mowing for fall wheat is done. New grass in wheat stubble continues wonderfully well. Weather ideal; ground moist. Sweet corn is ripe. Can you do your daily dozen, still? I'm slipping. Best home made bolognas, 40c lb.

We saw Lindy fly and we heard Dempsey fight and make his little speech. We took this as a matter of course. What would really excite us would be the invention of weedless fields. Weeds beat—what Sherman said of war.—R. I. W., August 22.

Potter County, Pa.—A bountiful crop of hay nearly harvested. Oats thrifty and promising for the forming of heavy, well-filled grain. Corn growing rapidly but very late. Tomatoes, squashes and pumpkins running a race with early frosts, several of which have already arrived. A corps of veterinarians is at work in the county testing dairy herds for T. B. There is reason to believe that Potter County will qualify as an accredited area when their test is completed. More than one-half of the townships in the county showed no reactors last year. The picnic held annually by the Dairymen's League, Grange, Agricultural Extension Association, etc., was not attended by as many farmers this year as formerly. They were too busy in the hay fields. —M. C. S., August 12.

York County, Pa.—Grain crops harvested and quite a lot of threshing done. Farmers plowing for fall crops, threshing, clipping wheat stubble, hauling manure and digging early potatoes. Wheat generally a poor crop, yield was low. Oat yield better, most fields average over 50 bushels per acre. Hay crop was very good this year. Corn crop prospects have improved during the past two or three weeks but it is doubtful if it can mature before killing frosts. Potato spraying is showing its value this year. Fifteen farmers of the county are with the state potato growers' tour this week. Wheat, $1.26; corn, $1.18; oats, 40c; eggs, 38c; four per cent milk, $2.50 cwt.; chickens, 18@27c, according to age and breed; potatoes, $1@1.25 bu.—W. K., August 17.

Rambles of a Pennsylvania Fruit Grower

(Continued from page 11)

a number two being two and a quarter inches. Just before harvest, straw is spread beneath each tree so that dropped fruit, if not bruised, may go to the cannery. A number of varieties are grown primarily for shipping while fresh, mainly Hardy, Comice, Winter Nelis, Bosc. The California Pear Growers' Association controls over seventy per cent of the crop and has a loyal membership.

Santa Clara fruit growers have no use for the honey bee. It spreads fire blight. There are very few stands for bees in the Valley. But is not the bee essential to pollination? These men answer no, however different it may be elsewhere. Wild bees and other insects are not numerous either, since nearly the whole valley is under cultivation. There is no doubt that large crops of fruit are produced here without bees. This shows that it is not wise to generalize on any horticultural topic. In Pennsylvania we are quite sure that bees are good friends of the fruit grower, but California is a law unto itself.

Have a Race Problem

There is an alien race problem here, as in most other Pacific fruit growing districts. Foreign-born Japanese and Chinese cannot own land in California but their children who are born in America can, at any age. Some of the youngsters are becoming properly owners at a very tender age. The white man cannot compete with the yellow man in fruit growing and gardening. The Japanese laborer and his whole family work in the field fifteen hours a day and have a standard of living considerably lower than that of our race. The Japanese and Chinese, even those of the second generation, do not become assimilated, being prevented from inter-marriage by law. They are in America but not of it. Some growers fear that ultimately the horticulture of California will be dominated by the little men from the Celestial Kingdom. It is a knotty problem in international relations, but back of it lies possible tragedy.

The Santa Clara Valley impresses me as a very delightful place to live and raise fruit, but you should come with a fat pocketbook otherwise you will get no land. The Chamber of Commerce of San Jose announces, on the authority of a certain distinguished traveler, "The Santa Clara Valley is one of the three most beautiful valleys in the world." If this is so, and who would be unkind enough to discount in the slightest degree any statement put forth by any Chamber of Commerce in California, then I know one of the other two. It is the Nittany Valley, in central Pennsylvania, of course. Doubtless, readers of Pennsylvania Farmer can supply the name of the other. —S. W. Fletcher.

Smut—The Great Black Destroyer

(Continued from page 23)

3. After a drill has stood overnight, the feed shafts should be turned with a wrench to free the feed wheels, in order to reduce the chance of breaking the gears or twisting the feed shafts.

4. Oil the gear bearings abundantly and frequently.

The copper carbonate treatment for the control of stinking smut in wheat was first recommended by the Pennsylvania State College in 1924. Since that time, thousands of Pennsylvania wheat growers have adopted the treatment and have found if they follow out the following four essential steps, that they can overcome this new pest and usually save many dollars on each acre of wheat they grow:

Essential Steps in Stinking Smut Control

1. Obtain seed as free as possible from stinking smut. Do not use wheat for seed purposes which has over ten per cent smut.

2. All smutted kernels must be removed from seed wheat before treating if smut is to be effectively controlled. This can be accomplished only by cleaning the wheat very thoroly.

3. Treat all seed wheat known to have any stinking smut with copper carbonate dust before planting.

Note—Since practically every untreated wheat field in the southeastern part of Pennsylvania has some stinking smut and the threshing machines are likely to carry this even to the treated fields, the only safe recommendation for that section is for every farmer to treat all the wheat that is sown this fall.

4. Plant wheat as soon as possible after the danger from Hessian fly has passed.

Detailed directions for making the home made treating machines and the procedure to be used in treating wheat in them may be obtained from any county agricultural agent or by writing directly to the Pennsylvania State College for printed circulars.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

LAST week we were trying to determine just who is to blame for the wide difference between the price that the farmer receives and the high price that the consumer must pay. We tried to pin the blame on the retailer but he said it was due to his high overhead expenses, such as rent, help, delivery and the cost of doing credit business.

It has often seemed to me that if retailers would lower their prices that their sales would increase and they would have a more rapid turnover, but some of the men I talked to said this was not true. They said if they sell lima beans at 45c a quarter of a peck or at 20c the buyer will take the same amount. At most they will only buy a half peck and the profit is less than if they had sold half as much at the higher price. From the consumer's point of view this seems overdrawn and not at all convincing but these dealers have tried it again and again.

I do not know how true it is but one man told me about a chain of green grocery stores that about ten years ago handled carloads of produce every day. Now they have fewer stores, handle less than half as much and make more money than in the old days. This does not seem reasonable but there is likely to be considerable truth in it.

Need a More Uniform Pack

One retailer said, "If every basket of produce was the same on top and bottom we could pay more for it, sell for less and make a larger profit. We buy a basket of tomatoes and we must sort it in about four grades and sell each at a different price. Take corn, for instance, every woman wants the best in the lot. They sort all over it until there is nothing but ordinary stuff left. That poor stuff cost me as much as the good but I must drop the price way down or let the garbage man cart it away. Is it any wonder we must ask a fairly high price for the best?"

One man who has been in the business for years attributes higher prices and smaller sales to apartments and canned goods. Before the war he had a dozen or more customers who depended upon him to furnish their winter's supply of potatoes and apples. It was just like laying in the winter supply of coal. The district has now changed and apartments and small homes are most numerous. It is unusual for him to sell a bushel of potatoes or apples and the quarter and half peck are the usual purchases. As it costs more to do business this way he must ask higher prices.

"Women today," he said, "don't cook the meals they used to. They are either wiser or lazier, take your choice. They buy string beans in cans as it saves the labor and time of stringing them and spinach in cans because it does not have to have the sand washed out of it. It is the same way with lima beans and other things. They do not can peaches, nor make jams and jellies the way they used to. They say it does not pay when they consider the price they must pay for the stuff and the fuel and labor used to prepare it."

It is hard to draw any conclusions on this problem. The farmer is sure he is not getting rich at the expense of the consumer; the same can be said for the middleman, and the retailer. Each in turn blames the other or says it is the consumer's own fault. We can safely say that it costs too much to get the produce from the farm to the table. From what the retailers tell me it seems as tho the farmer could help himself and all others concerned by producing products of higher quality and practicing better grading and packing. I believe the consumer can help by buying such products as potatoes and apples in basket lots and by patronizing a dealer who is doing a cash and carry business.

JUST WHAT FOREST trees are most frequently struck by lightning? The Forest Service, United States Department of Agriculture, is making a careful study of the question this year. In view of the fact that lightning is the cause of an average of about 3450 forest fires in the United States every year, this study is considered of great importance. Studies indicate that pine, oak and spruce are the most subject to "lightning stroke" and beech perhaps the least, but the reason for this difference in attraction has not yet been answered.

your next winters heat

If your farm home was only half warm last year, be sure to go into your local "Farm Service" Hardware Store and inspect one of the new kinds of parlor furnaces. With the air circulating system of these new and modern heating plants you can keep your whole house warm from one room instead of just having a little heat in one room, as the old-fashioned stove gave. This new kind of heating plant has many advantages in the farm home that has no basement, for it will burn almost any kind of fuel, and make an additional fine piece of furniture that is attractive to the eye as well as satisfying and practical. Ask your "tag" store man for a demonstration.

Handy for Fall

Portable oil or kerosene stoves are a wonderful help in cool fall days. The new kinds give out enough heat to take the chill off a bedroom, bathroom or dining room, and they cost almost nothing to operate. Their cost is so small that you can hardly afford to be without one if you value your health and comfort.

Take all your heating problems to the "Farm Service" Hardware Store. You will get real help, the very best of equipment, and save money. See him before you buy.

Cross Bred Cattle Help Solve the Problem of Producing Milk and Raising Feeders

AN EXPERIMENT that will be of interest to many farmers in the eastern states has recently been conducted at the Wisconsin Experiment Station. The problem was to reduce the cost of producing beef under the intensive farming conditions in the state and to determine if the native dairy cows or grade cows might be more advantageously used in beef production. Three lots of steers were used in the test. One lot consisted of purebred Aberdeen-Angus steers, the second lot were sired by purebred Aberdeen-Angus bulls from Holstein dairy cows and the third lot were sired by purebred Holstein bulls. The cattle were all about the same age when the experiment began in the fall of 1926, as they were all calves of the spring crop. The cross bred and dairy calves were possibly in a little better condition of flesh and a little heavier than the pure steers because they were a little older. The calves were all fed the same combination of feed during the 189-day feeding period. The cross bred calves were raised by dairymen near Madison who used purebred Aberdeen-Angus bulls on Holstein cows and put two calves on one cow and were allowed to nurse until they were about six months old.

Holsteins Brought Smallest Price

When the calves were put on feed in the fall of 1926 the weights ranged from 473 pounds for the purebred Aberdeen-Angus to 545 pounds for the cross bred lot. The daily gains during the feeding period ranged from 2 pounds to 2.25 per head daily. The cross bred steers were all black or blue gray in color, and were all polled, giving them every appearance of beef type. They were not quite as blocky nor did they possess as much quality as the purebred Aberdeen-Angus steers. The Holsteins were poor type as beef steers for the feed lot or market, because they possessed dairy type and did not have the fleshing qualities of the other two lots of cattle.

At the close of the 189-day feeding period the three lots of cattle were shipped to Chicago where each lot was sold separately. The purebred steers were sold at $12.25, the cross bred at $11.50 and the Holsteins at $9.50. The net weight on the market and the price received were as follows: Cross breds, 908 pounds at $11.50, or $104.42. The Holsteins weighed 910 pounds at $9.50, or $86.45. The purebred Aberdeen-Angus weighed 878 pounds at $12.25 or $107.55 per head. The Holstein steers with more weight than the other two lots sold for $17.97 less than the cross bred and $21.10 less than the purebred Aberdeen-Angus.

Cross Breds Had Beef Type

The interesting part of this experiment is the fact that the steers sired by a purebred beef bull from dairy cows had the desirable beef type and conformation and sold for nearly $20.00 more per head than the dairy steers because of quality and finish. This experiment points a way for dairy farmers to produce their own feeders and get the type of cattle that will do well for them in the feed lot. This will hold true only on the farms where a surplus of cattle is produced and where the farmer wants to feed some cattle. It is essential, however, that all the calves, both males and females, from this combination are marketed and that none are retained to be put in the herd as milk cows. Since this work has helped to solve a problem for Wisconsin farmers who are not highly specialized dairymen it may help many farmers in the East who produce milk but also plan to feed some cattle. A group of farmers in a community could manage to own the necessary bulls on a cooperative basis. They could keep a purebred dairy bull for breeding the highest producing dairy cows or those from which they might want to select heifers for the herd and breed the balance to a purebred beef bull and thus do away with the necessity of one farmer owning two bulls.—W. H. Tomhave.

This Sow Was Prolific

BRADY STUM, of Cumberland County, Pa., owns a sow that has performed the phenomenal feat of producing twenty-six pigs in seven months,—thirteen on January 18, and thirteen more on August 3rd.

Steel Grain Bins Stop Rat Ravages

STORAGE capacity on farms was formerly a decidedly arbitrary matter. A central granary was usually built, and that usually established the storage capacity of grain of that farm. If the yield for any given year was more than the established capacity, there was a surplus to be taken care of by the most makeshift methods or else sold forthwith. This latter was the expedient thing to do in almost any event; but the trouble with it was that it usually meant a sacrifice of price.

Modern portable sheet steel grain bins have changed all that. They are simple and easy to build, requiring no special tools nor previous experience. Being sectional, they can be taken down at will and re-erected at other points. This makes threshing directly into bins entirely practicable and saves at least one handling of the grain.

Provide Mobility of Storage

A farmer using galvanized sheet steel grain bins may dispense with his granary entirely if he wishes, or if he has never built a granary, he will find it unnecessary to do, since the sheet steel bins give the flexibility of capacity so important from a marketing standpoint, and which a central granary does not provide. Their mobility, so to speak, is another reason why portable sheet steel bins are more desirable than a central granary. They can be set up anywhere and when not in use they may be dis-assembled and the sections stored.

Steel grain bins disprove the time-honored theory that rats are a necessary evil. Even in this enlightened age there are still farmers who regard the plague of rats in much the same way that fever and ague used to be regarded in the swampy areas of the South—something to be dreaded but borne as patiently as possible.

There are statistics compiled by various agencies, including the Department of Agriculture of the United States Government, which show that more than $200,000,000 annually is the toll taken by rats in the United States. A very large part of this huge sum is for grain eaten. It is said that the nation's yearly board bill for rats averages $1.82 per rat.

Steel grain bins stop rats. No rat can possibly enter one if proper vigilance is exercised to prevent his coming thru an open door.

THE first ton litter honors awarded for 1927 by the Keystone Ton-Litter Club go to John E. Houck, of Lawrence County. He raised ten Hampshires to weigh 2390 pounds, overreaching the ton goal by 390 pounds.

GOMBAULT'S CAUSTIC BALSAM

FOR 48 YEARS

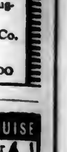
It Pays to Keep A Bottle Handy

A bottle of Gombault's—the old-time horse remedy. Have it on hand for use when you need it—keep your horses working. Used for 48 years for abscess, cuts, spavin, capped hock, curb, fistula, quittor and other ailments. Leaves no scars—no blemish. At your druggist, $2.00 a bottle.

The Lawrence-Williams Co.
Cleveland, Ohio

GOOD FOR HUMANS, TOO

SOFT BUNCH OR BRUISE



on ankle, hock, stifle, knee, or throat is cleaned off promptly by Absorbine without laying up horse. No blister; no pain; no hair gone. At druggists, or $2.50 postpaid. Describe your case for special instructions. Valuable horse book 8-S free.

A satisfied user says: "Colt's knee swollen four to five times normal size. Broke and ran for two weeks. Now almost well. Absorbine is sure great."

Reduced Factory Prices

Five Year Guarantee of Quality

650,000 customers—one out of every 35 families in the United States. They are not only Kalamazoo customers—they are *satisfied Kalamazoo customers*. That's the important thing—*satisfied customers*. And think of this: They are increasing at the tremendous rate of more than 50,000 *new* customers a year. Could anything more clearly or concisely prove Kalamazoo quality? Could anything more convincingly or conclusively prove that Kalamazoo is saving customers ⅓ to ½ by selling direct from factory to user?

Get Your Copy of this New FREE Book

Your **FREE** book is ready—alive with interest, full of new features. Reduced prices are in effect! A new 5-year quality guarantee is in force! See the Beautiful Porcelain Enamel Ranges in beautiful Delft blue and pearl gray—the very latest and most popular of all ranges. Look for the Mahogany Porcelain Enamel Heating stoves—the most popular of all heating stoves. Read about the new Hot Blast, improved fire box—more heat from less fuel, a clean fire without smoke or soot. See the latest improvements in warm air furnaces—pipe and pipeless.

200 Styles and Sizes

No matter what you are interested in—gas stoves, coal and wood ranges, combination gas and coal ranges, oil stoves, heating stoves or furnaces (pipe or one-register type)—you will find here exactly what you want. **Mail** coupon today.

Quality First—Values Unexcelled

Kalamazoo values cannot be equalled anywhere. When you buy from Kalamazoo you buy direct from manufacturer. There is nothing between you and our factory—but the railroad tracks. We are not a mail order house that collects a variety of merchandise from scores of factories to sell by mail—we are *specialized* manufacturers, making Kalamazoo stoves, ranges and furnaces complete in our own highly modernized factory and shipping direct to you, thus eliminating any other manufacturer or middleman of any kind. We build in large quantities. You get better quality at lower prices from a factory whose sole interest is making stoves, ranges and furnaces than elsewhere. This new catalog proves it. Fill out coupon for your copy.

Saved $80 to $100

I put up the furnace in a very short time. I saved from $80 to $100 on what it would cost me here. Am more than satisfied.
John Fischer, Warren, Pa.

Quality Baker

Stove works perfectly. Stoves costing $175 could not begin to compare with it in fuel economy, baking quality and in heating performance.
William Rock,
Rochester, Minn.

AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY

ESTABLISHED 1880 — PUBLISHED WEEKLY

Vol. 96 — PHILADELPHIA, PA., SATURDAY, SEPTEMBER 10, 1927 — No. 11

(Photo by H. Armstrong Roberts).

"Wh-e-e-e . . . . "

A flying trip across England and France with Dr. Lipman. Winter wheat growers answer some questions. Page 3.

The raw material of milk production is *digestible* feed

PRODUCING milk at a profit depends first, on the supply and *cost* of digestible feed; and second, on the efficiency with which the cow turns this raw material into milk.

There are two sources of digestible feed on most dairy farms. One is the home-grown feeds—grains and roughages. The other is purchased concentrates.

Amounts, kinds, and quality of home-grown feeds vary from farm to farm and from section to section. Yet to make the maximum profit in milk production every pound of the digestible feed in these home-grown grains and roughages must be entirely utilized on each particular farm.

This means that the purchased concentrates must fit into the supply of home-grown feeds without the waste of a pound of either. No *single ingredient* nor any *single mixture* of ingredients can possibly do this.

Amco Feed Mixing Service recognizes this fact. And Amco secures from the colleges of agriculture formulas for mixtures of concentrated ingredients which vary enough in cost and analysis so that a dairyman, after sizing up his own available stocks of digestible feed, may figure on purchasing at minimum cost just the right analysis and amount of digestible feed to go with his home-grown stuff.

For most dairy farms, one of the formulas shown below will furnish the cheapest raw material to utilize home-grown grains to advantage. You can get these feeds through any Authorized Amco Agent.
